This statement, the Minister said, did not include the interest charged, but there was a question on that subject on the order paper, which would be answered in due course by the Finance Department. The statement now made was more complete than any that he had been able to give the House. He might mention that the section of the line from east of Winnipeg to Superior Jct., had been operated during the past few months in assisting to carry the wheat crop of the west, joining with the G.T. Pacific Ry.'s own line at Superior Jct., and the traffic being carried thence to

the company's elevators at Fort William. It is being operated as a contractors' line rather than as a finished line, and the arrangement made with reference to its operation would be laid on the table in the near future. He had no information as to the rates being charged, but presumed they were the same as those charged on the C.P.R. and the C.N.R., between the same points.

In further explanation of figures given as to the cost of the N.T.R., to Dec. 31, 1910, the Minister of Railways stated Mar. 18, that $89,553,740.32 represented the amount of money paid out, and $93,920,956.16 the cost of work done. The estimated amount required to complete the line was $55,785.909.68. The equipment is to be found by the G.T.P.R. the operating company under the lease. In the figures given nothing was included for interest during construction, or for the seven years period after the line is handed over to the company, during which time no rental is collectable

In connection with the settlement of disputes between the G.T.P.R. and the Commissioners as to over classification and over break, on the Moncton-Winnipeg line, the Minister said: The inspecting engineers of the G.T.P.Ry. and the engineers of the N.T.R. Commissioners met and adjusted some of the differences. These settlements involved reductions from the contractors' estimates as follows: District "F"—Contractor J. D. McArthur, $73,022.20; District "A"—Contractors Lyons and White, $16,219.10; District "B"—Contractors M. P. and J. T. Davis, $1,714.00; Contractors Macdonnell and O'Brien, $22,116.62. Total, $113,071.92. The chief engineer of the company and the chief engineer of the commission were also able to agree in the determination of a portion of the disputes with respect to overbreak on the McArthur contract, which involved a deduction from the contractor's estimates of the sum of $173.667.09. The other point, which is not yet determined, is in reference to 106 cuttings on the McArthur contract. On this the engineers could not agree and they called in the arbitrator, C. Schreiber. Mr. Schreiber has made a report which was concurred in by the chief engineer of the Grand Trunk Pacific Company, and the chief engineer of the commission. It is difficult for a layman like myself to arrive at the exact meaning of the report on account of its technical language; but in discussing the matter with the Chief Engineer, I find that, in order to ascertain definitely the result of the award in regard to these 106 cuttings, the engineers are now figuring it out, and I hope to have their report at an early date. . . . . These 106 rock cuttings and overbreaks with the items in reference to over classification, covered all the objections raised by the G.T.P.R. as to classification and overbreak and practically will form a settlement of all the differences between the two bodies."

Press reports state that contracts have been placed with the Lake Superior Corporation for 35,000 tons of steel rails, and with the Dominion Iron and Steel Co., for 26,000 tons.

In answer to questions the Minister of Railways stated Mar. 13, that the figures he had given as to the cost of the line to Dec. 31, 1910, did not include anything for interest, or anything on account of the Quebec Bridge. The money was provided partly from revenue and partly from the proceeds of loans. No loans had been raised exclusively for the railway. Two 3% loans had been raised, one dated Feb. 1908, for £3,000,000, to provide for maturing obligations, the construction of the line, and general purposes; and the second dated Oct. 1908, for £5,000.000 for the railway and other purposes. Interest on these loans was paid out of revenue, and charged to interest on public debt. The total amount of interest paid to date on these two loans was $3,534,366.65, and $947,659.50 had been paid for expenses in placing them. The Commissioners had drawn by letters of credit on the Government through the Department of Railways and Canals for $89,553,740.32 to Dec. 31, 1910, and from that date to Mar. 6, an additional amount of $3,863,244.82.

Tenders were received to Mar. 28 by the Commissioners for the building of a coal handling plant at the Winnipeg shops power house, and for coaling stations, ashpits and cinderhoists at Transcona, Man.; Redditt, Ont., and Graham, Ont.

GRAND TRUNK PACIFIC RY.

The Minister of Railways presented the following general statement respecting the G.TP.R. in the House of Commons, Mar. 10:

Mountain Section.		
Total expenditure as certified to by Chief Engineer		$18,765,330 20
Total payments made to the company		11,763,509 61
Prairie Section.		
Total expenditure as certified to by Chief Engineer		$34,436,168 48
Total payments made to the company upon guarantee	$10,735,482 92	
Total payment made to the company on account of special loan	10,000,000 00	
		20,735,482 92

The amount spent by the G.T.P.R. for rolling stock, locomotives, etc., up to date is $14.744,[illegible].14.

The following memorandum had been given him with regard to the progress of the work on the Mountain section:—"The road is progressing from the terminus of the prairie division west, and from Prince Rupert eastward. During the last few months I had the privilege with the Prime Minister and others, of visiting Prince Rupert and going out on this line for a number of miles towards the mountain pass. It may seem peculiar to those who are not in a position to know, when I say that there are sections of the Transcontinental east of Winnipeg much more difficult of construction than any section through the mountains from Prince Rupert east. Going along the Skeena River there are distances of several miles absolutely level and the difficulty the contractors have is not to overcome obstacles of grade so much as to overcome the difficulty of draining the railway owing to the level country. We went out for a good many miles over this section, and I believe it will be found in the years to come that this portion of the road running from Prince Rupert east, will tap many fertile valleys of British Columbia, and of course, we do not know what it will open up in the way of mineral and timber wealth. From Wolfe Creek west the road is ballasted as far as Edson for several miles; track laying has been completed to the 57th mile, and grading, etc., has been completed to the 65th mile, and at intervals as far as the 117th mile. The contract for the work has been let as far as the 180th mile, and at Edson there is under construction a station house, engine house and a machine shop. Tracklaying has been completed to mile 102 east from Prince Rupert, and grading is completed at intervals beyond mile 102 to mile 184. The contract has been let to mile 240, dating from Nov. 1, 1909. At Zanadri Rapids, mile 8, a 625 ft. steel bridge has been completed; at mile 147 the portals of a 700 ft. tunnel have been completed, and at mile 135 a 180 ft. tunnel has been completed." The total percentage of work done, added the Minister, is not nearly so large as he would like it to be, but he hoped at a later date to be able to give a definite statement on this matter. The contractors believe that the work will be completed in three years, although they state that there is great difficulty in obtaining labor. It was certain that the contractors were offering very high wages, and the reason they gave for not getting on more rapidly was the difficulty of finding labor.

The G.T. Pacific Branch Lines Co. has been authorized to build the following lines in addition to those mentioned in the bill now under consideration by the Dominion Parliament:—From Calgary southwesterly to Medicine Hat, Alta.; from east of range 18 or west of range 19, west first meridian, northwesterly to a junction with the western division of the G.T. Pacific Ry. between the easterly limit of range 28, and the westerly limit of range 29, west of the first meridian.

The G.T. Pacific Ry. has removed its offices from the Somerset Block, Winnipeg, to the south wing of the new station at Fort Garry, in which wing the company will occupy three floors. E. J. Chamberlin, Vice President and General Manager, is reported as having stated, Mar. 11, that the company will begin the work of erecting a big hotel on Broadway, between Fort and Garry streets, this year. The preliminary plans, he stated, had been prepared, and the specifications were being prepared. The hotel would be built of stone, and would not have less than 400 rooms.

Negotiations are reported to have been completed for the building of a branch from Harte to Brandon, Man., about 30 miles. The company, it is said, has received an assurance from the Dominion Government that a subsidy on the usual terms will be granted, and that a further grant of 25% of the cost of a bridge across the Assiniboine River will be given. The company's estimate of the cost of this bridge is $200,000. It is said that the branch will be built this year, and that in the near future it will be extended southerly to the International boundary.

The Board of Railway Commissioners has approved the location of the station to be built at Yorkton, Man., on the branch from Melville northerly towards Hudson Bay.

The grading of the line southwesterly from Melville to Regina is reported to have been 75% completed, and it is expected to finish the grading and the tracklaying into Regina this season.

Some grading has been done southerly from Regina towards the International boundary, and more work will be done on it this season.

A line is projected from Regina westerly to Moose Jaw, Sask., and the Board of Railway Commissioners has approved location plans, from sec. 25, tp. 17, range 20, mileage 0.036 from Regina, to sec. 29, tp. 17, range 20, mileage 3.24.

The branch line northerly from Young to Prince Albert, Sask., upon 25 miles, of which track has been laid, and about 70% of the grading completed, will be pushed forward to completion this year.

The Board of Railway Commissioners has approved the location of station at Tofield, Alta., the point on the main line from which the line under construction, southerly to Calgary, starts. The grading of this branch is reported to be practically completed, and track laid to the Red Deer River. The branch is expected to be completed this year.

From Edson, the first divisional point west of Edmonton, right of way has been cleared for a branch to the Brazeau River coal fields, and some grading has been done. Further progress is expected to be made with construction during this year.

A contract is reported to have been let to Collins Brothers, Hamilton, Ont., and Heatherwood, Alta., for the erec-

Creek, where a large bridge is being built by the Dominion Bridge Co. This is expected to be completed by the end of May, when tracklaying will be resumed. It is expected that steel will be laid to Tete Jaune Cache, at the head of navigation on the Fraser River, about 50 miles west of Yellow Head Pass, by the end of the year.

In connection with the proposed branch from Fort George to Vancouver, D'Arcy Tate, the company's solicitor, is reported to have stated in Victoria, Mar. 8, that arrangements had been completed by which the company would obtain the land held by the Indians at Fort George, for townsite purposes. The final location of the branch is reported to have been completed by a party under M. A. Roby and W. F. Graham, and a press report states that a contract is likely to be let for building this branch at an early date. Another report from Vancouver states that a large area of water front land has been acquired at the northern end of Main St., sometimes called Westminster Ave., and that the site will be used for building an hotel.

In the prospectus a recent issue of bonds for the building of the Mountain section of the line, A. Smithers, Chairman of the G.T.R. Board, who is also Chairman of the London Committee of the G.T. Pacific Ry., said considerable progress had been made in the construction of the mountain section, both westward from Wolfe Creek, Alta., and eastward from Prince Rupert, B.C., and there only remained about 400 miles of line to be contracted for, tenders for which would be invited within a couple of months or so. When the contracts for the construction of this section have been let, the whole of the line from Prince Rupert to Edmonton, Winnipeg and Fort William, 2,188 miles, will be either under construction or completed.

In connection with the line easterly from Prince Rupert, B.C., the Board of Railway Commissioners has authorized the building of a bridge over Kyax River.

It was stated in Winnipeg Mar. 16, that the company expected to build 140 new station buildings on its lines during the current year. (Mar., pg. 283.)

◆

Eye and Ear Tests for Railway Employes.

The Board of Railway Commismissioners issued the following circular Mar. 16: "In accordance with secs. 5 and 6 of order 12225, Nov. 9, 1910, railway companies within the Board's jurisdiction are required to have their employes engaged in the operation of trains undergo a satisfactory eye and ear test by a competent person. In view of the diversified methods employed by such railways in the making of these tests the Board directs that a conference be held between the various railways subject to its jurisdiction and a uniform code of regulations drawn up governing the testing of hearing and eyesight of employes required to take such tests, these uniform regulations to be filed with the Board for approval within 90 days from the date of this circular."

◆

Railway Taxation in Saskatchewan.—It was stated in the Saskatchewan Legislature recently that there had been contributed to the provincial revenues under the Railway Taxation Act the following amounts:—

	1910.	1909.	1908.
C.P.R.	$54.000	$50,000	$50,000
Canadian Northern Ry...	9,972	9,972	9,972
G.T. Pacific Ry.	....	....	....

The C.P.R. contributed $25,000 for 1907.

tion of the concrete piers for a bridge across the McLeod River, near Edson, Alta., on the branch line to the Brazeau River coal fields.

On the main transcontinental line steel has been laid as far as Prairie

A Railway to Hudson Bay.

The question of the opening up of what was described as "the new route between the great west and the European markets, was referred to at some length in the House of Commons, Mar. 10, by the Minister of Railways in his general speech on transportation. The route, he said, had been used for many years, in so far as the waterway was concerned, but the project of the building of a railway to Hudson Bay was, although not new, something modern. About 1882, Hugh Sutherland, now Executive Agent Canadian Northern Ry., began discussing the project, and in 1885 he obtained from the Manitoba Legislature a bonus of $1,000,000 towards building such a railway. It was found to be impossible to raise the capital, so in 1886, the offer of aid was altered to a guarantee of 4% for 25 years, on a bond issue of $44,500,000, but even this failed to enable the promoters of the company to raise the necessary capital. About 1890, or a little later, the Government offered to give 12,800 acres of land and $6,400 a mile of a subsidy. That also failed, and he thought he might safely say that all private effort having failed to get the railway to Hudson Bay, the Dominion Government showed wisdom and courage in taking up the matter itself. In regard to the navigation, the Dominion Government had sent four or five different expeditions up to the bay and the straits. The ice difficulty on the route was not in the bay but in the straits.

At present, he did not think there was any land grant subsidy available for a railway to Hudson Bay, but he was not giving away secrets when he said that before the end of the session Parliament would be asked to discuss and consider a vote for the building of this line. The Hudson Bay railway route would afford an outlet for the products of the farmers of western Canada in the old country, the distance from Winnipeg to Fort Churchill being 945 miles, and from Fort Churchill to Liverpool, 2,946 miles, while the distance from Winnipeg to Montreal is 1.422 miles, and the distance from Montreal to Liverpool by the Belle Isle route is 2,761 miles and by the Cape Race route 2.927 miles. The Government proposed to proceed with the building of the railway. It was not a small task, and it was estimated that it would cost well in the vicinity of $25,000,000 to $30,000,000, which would, he believed, include elevators, wharves, etc. To this he was prepared to add another $5,000,000 or $6,000,000 because in working out the enterprise, an arrangement would have to be made with a steamship company, for without a steamship service the railway would not be of much use. One matter in connection with the steamship service was that Sydney, N.S., could be made a port of call, and a coal cargo taken on there for Hudson Bay. The present season of navigation in the bay was from three to four months, but there were those who believed that with the advances which were being made in science, it would not be many years before a way would be found to keep the Hudson straits open for a great deal longer than four months in the year. (Mar., pg. .207.)

◆

A recent press report from Moncton, N.B., stated that as a result of the development of the coal oil fields in Albert County, N.B., the oil may be utilized for fuel on I.C.R. locomotives. We have reason to believe that this report has no foundation. Oil would be too expensive on the I.C.R. Coal is much cheaper. We may add that G. R. Joughins, Superintendent of Motive Power, I.C.R., had a lot of experience with oil fuel when he was in the Santa Fe Rd. service a few years ago.

G.T.R. Betterments, Construction, Etc

Lachine, Jacques Cartier and Maisonneuve Ry.—In passing through Parliament the company's bill was amended by the addition of clauses providing that proceedings for the expropriation of lands in Montreal shall be completed within three months of the passing of the act; that the Board of Railway Commissioners shall be deemed to be substituted for the Provincial Commission of Public Utilities mentioned in certain agreements to which the company is a party; and authorizing the making of agreements with the C.P..R., the Canadian Northern Quebec Ry., and the Montreal Terminal Ry.

Round House, Ottawa East.—We are advised that plans are being prepared for some changes at the round house and machine shop at Ottawa East, but that at present it is impossible to state definitely what the changes will be, or when they will be made.

Ottawa Station, Etc.—The Board of Railway Commissioners has approved plans for the platforms and train shed for the central union passenger station.

Rideau Canal Bridge, Ottawa.—The company has in course of renewal the swing bridge over the Rideau Canal, which is situated west of Rideau Jct., where the line branches westward. The present bridge was built about 25 years ago. It consists of a single track plate girder span of equal arms and swings by hand power. The length over all is 106 ft. 9 ins., seven feed deep at centre, and two feet deep at the ends. This bridge was designed for a uniform live load of 3,000 lbs., per lineal foot. The new structure will be a similar kind of bridge, 120 ft. over all, 7½ ft. deep at centre, and 3½ ft. deep at the ends with a sustaining capacity double that of the present bridge, and it will be operated by an electric motor. On account of the heavier concentrated loading both the pivot and rest piers are being entirely rebuilt in concrete. The Dominion Bridge Co., is the contractor for the new superstructure, and the entire work is under the supervision of H. G. Kelley, Chief Engineer.

Canada Atlantic Division.—During the current construction season it is proposed to do considerable work in the way of filling in trestles, and to build several new bridges. The work of filling in trestles has been in progress ever since the G.T.R. took over the line, and it is expected that the whole work may be completed this year.

Brock Ave Subway.—The Board of Railway Commissioners has ordered the company to file new plans for the projected subway under the tracks at Brock Ave., Toronto, the question of the division of cost to be deferred until new plans are filed and approved.

Hamilton Improvements.—Press reports, Mar. 13, state that the company is seeking to secure a block of land on Ferguson Ave.. and that it is possible other property may be acquired in the vicinity for station and terminal purposes.

Galt and Elmira Branches.—U. E. Gillen, Superintendent Middle Division, informed a deputation representing Galt, Waterloo and Berlin, Ont., recently that he was favorably impressed with the suggestion that the Galt and Elmira branches should be electrified, and promised to have the whole matter looked into. (Mar., pg. 217.)

◆

Recent Manitoba Legislation.—An act regulating the taxation of railways, and another incorporating the Central Canada Rd. and Power Co. were assented to by the Lieutenant-Governor, among a number of general acts, Mar. 10.

RAND CLASS "R R 3"
AIR COMPRESSORS
Cross Compound Corliss Steam and
Two Stage Air Cylinders

The Class "RR 3" is one of the Rand new types and embodies every new and up-to-date improvement.

Some of its notably good features are the enclosed dust-proof frames, flood lubrication, improved steam and air cylinders and massive construction throughout.

C.P.R. Betterments, Construction, Etc.

St. John Improvements.—In an interview at St. John, N.B., Mar. 4, General Superintendent Downie is reported to have said that plans had been prepared for a warehouse about 400 by 40 ft., running parallel with Main St. In connection with this there would be six delivery tracks for teams, and track accommodation for 200 cars. It is also proposed to carry out some improvements at the Carleton elevator and wharves, and to make a beginning with the new yard accommodation in that section.

Atlantic Division Betterments.—General Superintendent Downie, in an interview at St. John, Mar. 4, is reported to have said that very considerable betterments will be carried out on the Atlantic division during the year. On the main line, in addition to the general work of ballasting, pile driving and filling, which had been in progress, the remaining wooden bridges will be replaced by steel structures; wooden culverts will be replaced by concrete ones; and 45 miles of light rails will be replaced by heavier ones. On the New Brunswick Southern Ry. new ties will be laid, concrete culverts put in, a good deal of riprap work will be done along the shores of Ludgate and Spruce lakes, and steel bridges will be put in at Linton, Pokologan, Didgeguash and Lancaster rivers. Additional sidings will be provided at Fredericton. On the St. Stephen branch some new bridges will be built, ballasting done, and sidings extended; 11 miles of track on the St. Andrews branch will be relaid with heavier rails; on the Woodstock branch six miles of track will be relaid with heavier rails, and two new steel bridges will be built; two new steel bridges will be put in on the Gibson branch; the Tobique branch will be diverted for a short distance at Rowena, and some miles of heavier rails laid; six miles of the Edmundston branch is to be relaid with heavier rails, a new steel bridge to be put in, and a 65 ft. turntable is to be put in at Edmundston; and on the Aroostook branch five miles of track is to be relaid with heavier rails. In addition to this a good deal of other work of a minor character is to be done.

Place Viger Improvements.—Press reports state that practically the whole of the steel work for the viaduct on Notre Dame St., Montreal, between Montcalm and Berri Streets, has been completed. As soon as the flooring and tracks are laid the bridge will be opened for traffic. When this is done the embankment over which the traffic is now being carried will be removed, and the land on both sides of the bridge laid out for yard purposes.

Ottawa Improvements. — An Ottawa press report states that a new 16-stall roundhouse is to be built at Hintonburg, Ont., west of the present one, a portion of which was burned down in the summer of 1910. The new building will be of concrete, and will, it is said, be started at once. Some rearrangement of the yards will also be made, and, it is also reported, tenders will be asked for the erection of a 500 ft. concrete bridge at Graham's station.

Timiskaming Branch. — The Board of Railway Commissioners has authorized the building of a bridge at mileage 0.85 on the branch line from Mattawa, Ont.

Smiths Falls to Bathurst, Ont.—A contract is reported to have been let to Jonas and Girouard, Ottawa, for the building of a second track from Smiths Falls to Bathurst, Ont., about 19 miles. Bathurst is the point on the Montreal-Toronto line from which it is said the new lake shore line to Locust Hill, near Toronto, also on the Montreal-Toronto line, will be built under the Campbellford, Lake Ontario and Western Ry.'s charter.

Georgian Bay and Seaboard Ry.—The Board of Railway Commissioners has authorized the building of a subway at Trespass road, lot 6, concession 11, Thorah tp., and the building of a bridge over the Scugog River, near Lindsay, Ont. The G.B. and S. Ry., and the Lindsay, Bobcaygeon and Pontypool Ry. effect a junction near where this bridge is to be built.

South Ontario Pacific Ry.—We are advised that tenders have been asked for the building of a line from Hamilton to Guelph Jct., Ont., and it is expected that a contract will be let at an early date.

The location plans show a line entering Hamilton south of the G.T.R. line, running westerly, and connecting with the Toronto, Hamilton and Buffalo Ry. In leaving Hamilton the line, after crossing the G.T.R., proceeds northerly, passing to the east of Waterdown village, and on to the 10th concession line of East Flamboro tp., where it passes into Nelson tp., and then on to Guelph Jct., where a junction is effected with the main line from Toronto to Windsor, and the line through Guelph to Goderich. The distance between Hamilton and Guelph Jct. is about 16 miles, and between Hamilton and Guelph 33.9 miles. J. E. Beattie is engineer in charge of the work at Guelph Jct., and he is reported as saying, Mar. 8, that the work would be started in about a month. W. J. Grant, C.P.R. agent in Hamilton, appeared before the Hamilton board of control recently, when it was arranged that the line should connect with the present C.P.R. line west of the Desjardins canal.

London, Ont.—Tenders were received to Mar. 25 for the building of a 22-stall engine house, with machine and boiler shops adjoining, at London, Ont. The new roundhouse will be built on Quebec St., near Elias St. Application is being made to the council for permission to change the location of Central Ave., and to exchange some pieces of land, so that the company may round out the area it has acquired in the vicinity for yard purposes, and to provide a suitable approach to the new roundhouse.

Toronto-Sudbury Line. — About two miles north of Bala, Ont., the line is carried across a muskeg by means of a trestle bridge, the safety of which is threatened by a creek running through the muskeg. Tenders are being asked for the boring of a tunnel 135 ft. long, five feet wide and six feet high, in order to divert the creek, and so enable the trestle to be replaced by an embankment.

Fort William Station.—The new station at Fort William, Ont., is reported to be completed, and the laying of tracks into it is being gone on with. It is expected that the business will be transferred from the old station at an early date.

Subway at Kenora, etc.—Tenders were received to Mar. 27 for the building of a subway at Kenora, and for bridges and culverts at various points on the Manitoba division.

Winnipeg-Brandon Second Track.—The Board of Railway Commissioners has authorized the opening for traffic of the second track from Rugby Jct., mileage two from Winnipeg, to Portage la Prairie, mileage 55. The grading for the extension from Portage la Prairie to Brandon has been practically completed, and the Board of Railway Commissioners has authorized the laying of the second track on this across the public highway at 37 points. Surveys are being made at the crossing of the Assiniboine river east of Brandon, with a view of determining whether it will be necessary to build a new bridge to carry the double track, or whether an addition will be made to the present bridge.

Brandon Station.—F. W. Peters, Assistant to the Vice President, informed the Brandon city council, Mar. 4, that an appropriation had been made for the building of a new station, and that work would be proceeded with this year.

Estevan to Forward, Sask.—Press reports say contract has been let to J. D. McArthur for 35 miles of grading to complete the branch from Estevan northwesterly to a junction with the line westerly from Weyburn, the junction point being at Forward, Sask.

Weyburn-Lethbridge Branch. — The Board of Railway Commissioners has approved the location of this line from mileage 316.78 to 400, and from mileage 400 to 449.9, Alta. A Lethbridge press report, Mar. 15, states that the location of mileage 449.9 is Montana Jct., on the Crows Nest Pass branch.

A contract has been let to Foley, Welch and Stewart for grading 20 miles westerly from the present terminus of the branch from Weyburn, Sask., towards Lethbridge, Alta.

Saskatchewan Division Buildings. — Tenders were received to Mar. 20 for the erection of the following buildings on this division:—Standard car repair shop, baggage and express building at Moose Jaw; freight shed at Regina; extension to machine shop, six stall addition to enginehouse, and six double cottages for employes at Sutherland; dining car stores building at Saskatoon, class A station buildings at seven points, and class 4 section houses at five points.

Qu'Appelle Valley.—Press dispatches state that the company has decided to build a branch line through the Qu'Appelle River valley, for a distance of 150 miles, and to erect a summer hotel at Fort Qu'Appelle, Sask.

Regina, Saskatoon and North Saskatchewan Branch.—The Board of Railway Commissioners has approved the revised location of this branch from mileage 77.95 from Regina to the north boundary of sec. 33, tp. 26, range 25, at mileage 95.8, and thence to sec. 1, tp. 35, range 28, mileage 132.69, where a junction is effected with the Pheasant Hills branch.

Swift Current, Sask.—Contracts have been let to Foley, Welch and Stewart for the building of two lines starting out of Swift Current, one for 45 miles southeasterly, and the other for 35 miles northwesterly.

Moose Jaw, Sask.—We are advised that a contract has been let to the J. G. Hargrave Co., Winnipeg, for the building of a second track from Moose Jaw east to Pasqua, seven miles, and from Moose Jaw west to Caron, 16 miles. In an interview, J. W. Hargrave stated that a small portion of the work would be sublet, but the main portion would be done directly by the firm.

Moose Jaw Branch.—The Board of Railway Commissioners has authorized the company to open for traffic without limitation of speed, the extension of this branch from mileage 14.5 (near Tuxford, Sask.) to mileage 118.75 (near St. Aldwyn, Sask.). A contract has been let to Foley, Welch and Stewart for the extension of this line from its present terminus for 35 miles. This will carry the line to a junction with the extension of the Lacombe branch.

Wilkie, Sask.—Contracts have been let to Dutton and Timson for the building of 50 miles of line northerly and southerly from Wilkie, on the Pheasant Hills branch. The northerly branch will be 25 miles long, and will be in the direc-

tion of the Cutknife district, while the southerly branch will be built into the Tramping Lake district for 25 miles.

Macklin to Kerr Robert.—The Board of Railway Commissioners has authorized the company to open for traffic the line from Macklin southeasterly to Kerr Robert, Sask., 46 miles. Macklin is a station on the Pheasant Hills branch line, and Kerr Robert is on a branch of the Moose Jaw-Lacombe line. A contract is reported to have been let to F. W. Downs for building a six-stall roundhouse at Kerr Robert.

Alberta Division Buildings.—Tenders were received to Mar. 22 for the erection of the following buildings at various points on this Division.—One six-stall addition to standard no. 2 engine house, and locomotive fireman's cottage at Red Deer, Alta.; standard no. 4 section houses at 24 points; standard no. 5 section houses at five points, one to have a 50 ft. freight shed attached; standard no. 10 stations at three points; standard no. 1 bunkhouses at two points; standard plan A stations and 50 ft. freight sheds at two points.

Medicine Hat Station.—Tenders are under consideration for the erection of a brick and stone addition 116 ft. long to the station at Medicine Hat, Alta.

Bridges on Alberta Division.—Following are some particulars of a number of the more important bridges on the western lines to be erected this year:—

The bridge across the South Saskatchewan River, about three miles west of Medicine Hat, Alta., will have a total length of 1,010 ft., and will consist of three through steel trusses on the west, each being 217 ft. over all, carried upon masonry piers 8 ft. 10 in. wide. On the east there is a swing span, on a masonry pier 30½ ft. wide. The trusses are 20 ft. centres, and 31 ft. 9 in. above the bed of the river, the base of rail being 3 ft. 3 in. above the bottom chords. At each approach to the bridge there is a deck plate girder 30 ft. long on masonry abutments.

The bridge at the first crossing of the Bow River, 3.5 miles east of Calgary, will consist of two through steel spans, with a total length of 420 ft., built upon a centre pier of concrete with masonry abutments, the pier and abutments being built on a skew of 58 degrees. Each truss is 201 ft. over all, 29 ft. in height, and has an average depth of 17 ft. above the bed of the river. The base of rail is 3 ft. 3 in. above bottom laterals.

A bridge across the Elbow River, about one mile east of Calgary, will consist of a single span of 157 ft. 11 in., on masonry abutments. The trusses are 18½ ft. centres, 26 ft. 3 in. high, and the rail level is 22 ft. above the bed of the river. The base of the rail portal is 22 ft. 10 in., and the bridge is on a three degree curve.

About seven miles west of Calgary a single truss single span 214 ft. 9 in. centre to centre of end pins, on masonry abutments, will be built across the Bow River. The east and west approaches of the truss will be deck plate girders, each 17 ft. 4 in. long. The base of rail is 3 ft. 5 in. above bottom chords, and the trusses are 14 ft. above the bed of the river. Almost adjoining this bridge is a second bridge across the Bow River, to be built on concrete piers and abutments, and consisting of an east approach 24 ft. 10 in. deck plate girder, a through steel truss span of 214 ft. 9 in., and a west approach of 17 ft. 4 in. deck plate girder; the base of rail is 3 ft. 6 in. above bottom chords, and the trusses are 17 ft. 2 in. above the bed of the river. These are called the "Twin Bridges."

The third crossing of the Bow River is 25.5 miles west of Calgary, and the bridge to be erected will consist of two through trusses, each having a span of 198 ft. 6¾ in., on masonry pier and abutments. The pier and abutments are built on a skew. The base of rail is 3 ft. 3 in. above bottom chords, and the trusses are about an average height of 28 ft. 2 in. above the bed of the river.

Kipp-Aldersyde Branch.—The Board of Railway Commissioners has approved revised location plans of this branch from mileage 28 to 63.06. Mileage 28 is at Carmangay, the present terminus, and mileage 63 is near Aldersyde, Alta. A further order has been issued approving of a revised location from mileage 67.06 to 84.18.

Lacombe Branch.—A contract has been let to Foley, Welch and Stewart for the building of a 60 mile extension of this branch, which now has its terminus at Castor, Alta. This extension will carry the line to a junction with the branch from Moose Jaw, the contract for the extension of which has been let to the same firm.

Old Man River Bridge.—A contract is reported to have been let to Digby and Grenier, Fernie, B.C., for the erection of a bridge across the Old Man River, near Fernie. The work includes 2,000 cubic yards of excavation, 500 piles, 1,000 cubic yards of concrete, and 1,500,000 ft. of timber. The structure will be 800 ft. long and 137 ft. above high water mark.

Kootenay Central Ry.—A contract has been let to Jamse and McDonald for the building of an additional section of 25 miles of this line, southerly from Golden, B.C. Ten miles of grading has been completed out of Golden, and the 25 miles now contracted for will make altogether 41 miles under construction southerly. From Galloway, on the Crow's Nest Pass branch, about 30 miles have been graded northerly under a contract let in 1910 to Foley, Welch and Stewart, and a contract for an extension of this section for 12 miles to Baynes Lake has been let to Janse and McDonald.

Pacific Division Betterments, etc.—A good deal of work in the way of betterments is to be done during the current year on the Pacific Division. An additional mileage is to be relaid with heavier rails; side tracks and station switches are to be extended, and considerable ballasting done. Tenders have been asked for a new station building at Field, B.C., and a number of buildings are to be built at different points. The station at New Westminster is to be remodelled; additional freight facilities are to be provided at Vancouver, and other work is to be done in the yards near Beatty St. in that city.

New Westminster Jct.-Coquitlam.—We are advised that the C.P.R. has bought several hundred acres of land in the vicinity of New Westminster Jct., but to what purpose it will be devoted, whether for yard purposes, or for the storing and sorting of cars, has not yet been announced. The land is not needed at present, but owing to the development of business at Vancouver, and throughout the country, the company made the purchase to meet future requirements. It is most likely that the land will be laid out as a yard for sorting and storing cars.

Esquimalt and Nanaimo Ry.—Grading is reported to have been completed into Alberni, on the extension of this line, and the bridge work is being pushed forward. Rails are on hand for the tracklaying, and it is expected that work will be started at Cameron Lake, the present end of steel on the extension early in April. The contractors for the bridge work are Culliton Bros., while the general contractors for the extension are Janse, McDonald and Timothy. (Mar. pg. 227.)

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Tate Jones & Co., Inc., Empire Building, Pittsburg, Pa., has issued circular 134, respecting its new portable fuel oil burner, compressed air type, copies of which will be sent on request.

The Detroit Lubricator Co., Detroit, Mich., has issued an illustrated pamphlet describing the Detroit no. 22 Bullseye Locomotive Lubricator, the special feature of which is the oil control valve, which starts and stops all feeds.

McCord & Co., Inc., Peoples' Gas Building, Chicago, Ill., has published in booklet form "Locomotive Lubrication," by W. J. Schlacks, which covers the subject very thoroughly and also describes the McCord system of force feed locomotive lubrication. A copy will be sent to anyone interested on request.

The American Vanadium Co., Frick Building, Pittsburg, Pa., has brought out the first issue of "American Vanadium Facts," a house organ which is to be published periodically in the interest of Amervan Ferro Vanadium. This issue described what Vanadium is and gives a lot of interesting information about Vanadium steel forgings, governor pins, steel castings and machinery castings.

Burton W. Mudge & Co., 122 South Michigan Boulevard, Chicago, have issued a beautifully printed booklet "Garland Car Ventilation," in which its application to passenger and refrigerator cars is very fully described and illustrated. This system of ventilation is the invention of one of the company's vice presidents, T. H. Garland, who was for many years in charge of the Burlington Rd.'s refrigerator system.

S. & F. Bowser Co., Ltd., 66 Fraser Ave., Toronto, has issued a comprehensive booklet "Bowser Railroad Oil Storage," in which its pumps, tanks, etc., are fully described and illustrated; the systems, including a wide variety of styles from signal tower oil outfits, to the largest and most complex systems designed for the storage and handling of thousands of gallons of oil of different natures, under the most varying conditions.

The Montreal Steel Works, Ltd., report for the year 1910 shows net earnings of $230,069.96, exclusive of dividends, directors' and auditors' fees and after providing for depreciation; $50,000 has been placed to the credit of reserve account, bringing the account up to $250,000; $10,000 has been added to special reserve account to provide for contingencies, bringing it up to $40,000; quarterly dividends of 7% per year on the preferred stock, and 10% per year on the common stock were paid, amounting to $126,000; profit and loss account was increased by $2,444.72, bringing it up to $164,091.27. Of the $1,000,000 first mortgage bonds authorized in August 1910, $750,000 were sold, principally to shareholders who had the first right to subscribe. The new works at Longue Pointe were commenced in October last and the foundations being put in and the construction and equipment will proceed early in the spring.

◆

The Kingston and Pembroke Ry. locomotive drivers and firemen recently sent a deputation to the management to request that consideration be given to the question of wage increases. It is stated that the matter is under consideration, and that it is likely that an increase will be granted.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for Jan., $25,340, against $40,375 for Jan. 1910. Cumulative net profits, exclusive of land sales, for seven months ended Jan. 31, $214,610. Railway traffic receipts for Feb. $18,214, against $25,851 for Feb., 1910. Cumulative railway traffic receipts for eight months ended Feb. 28, $220,101.

Canadian Northern Ry.—An issue was offered in London, Eng., Mar. 15, of a little over £1,000,000 of 3½% debenture stock at 94½, principal and interest guaranteed by the Dominion Government. The stock is made up of two different issues, viz., C.N.R. Co., £358,888, and Canadian Northern Alberta Ry. Co., £647,260.

Caraquet and Gulf Shore Ry.—Application is being made to the New Brunswick Legislature to authorize the Caraquet Ry. and the Gulf Shore Ry., to become consolidated with the title of the Caraquet and Gulf Shore Ry. and to issue bonds for $10,000 a mile. The Caraquet Ry. extends from Bathurst via Grand Anse to Caraquet, and thence to Sheppigan, 5 miles, and the Gulf Shore Ry., extends from Pokemouche Jct. to Tracadie Mills, eight miles. The two lines have always been operated under one management and for some years past have been under the same control. Bicknell, Bain, Strathy and Mackelcan, Toronto, are solicitors for the company.

Crow's Nest Pass Coal Co.—The profit and loss account for the year 1910 totalled $334,950.28, including $156,025.12 brought forward from the previous year and $18,054 dividends on securities owned. After paying dividends $210,734.28 was carried forward to the current year's account. The directors' report states that the Morrissey, Fernie and Michel Ry., which the company owns, carried forward from 1909, a deficit of $26,227.67. This loss was made up during the year, and on Dec. 31, 1910, there was at credit of profit and loss account of this company $11,296.81. Following is the board for the current year: President, E. Rogers, Toronto; Vice President, E. C. Whitney, Ottawa; other directors: Col. W. P. Clough, New York; H. B. McGivern, Ottawa; W. H. Robinson, Granby, Que.; Dr. Howland, Toronto; J. P. Graves, Spokane, Wash.

Dominion Atlantic Ry.—Gross earnings for Feb., $75,600, against $81,421 for Feb., 1910. Aggregate gross earnings for eight months ended Feb. 28, $896,606, against $964,004 or same period 1909-10.

The Grand Trunk Pacific Ry. Co. issued in London, Eng., Mar. 10, a prospectus of an issue of £696,000 4% mortgage sterling bonds due 1955, balance of a total authorized amount of £2,050,000 series B. (Mountain Section) bonds, principal and interest unconditionally guaranteed by the G.T.R. Co., the issue price being 92.

Grand Trunk Ry.—The Michigan State Commisioners, Mar. 22, authorized the G.T.R. Western Rd., the G.T.R.'s subsidiary company operating lines west of Detroit, to issue mortgage bonds for $30,000,000 for the purpose of buying the Pontiac, Oxford and Northern Rd. The acquirement of this line has been previously referred to, and the matter is now before the courts in an action arising out of the two-cent a mile fare law. It was ascertained in the course of the hearing that the majority of the company's stock was held by C. M. Hays in trust. Of the $30,000,000 bond issue, the company will control $23,000,000, the expenditure of the remaining $7,500,000 being subject to the approval of the State Railroad Commission.

Kaslo and Slocan Ry.—A press report from Nelson, B.C., states that a syndicate of Kaslo men has secured an option on the K. and S. R. from the Great Northern Ry. Co.

Manitoulin and North Shore Ry.—At a special meeting of shareholders of the Lake Superior Corporation at Camden, N.J., Mar. 1, a plan for the reorganization of the Manitoulin and North Shore Ry., one of the subsidiary companies, was approved. The reorganization plan provides for the sale of the line, 24 miles, under the powers given in the mortgage for $250,000, the amount of the bonds, and such bonds will be cancelled. The new capital will consist of $2,000,000 of common stock, $1,000,000 of 5% non-cumulative preferred stock, and $3,000,000 of 50 year 5% first mortgage redeemable gold bonds, the amount to be issued being equal to $30,000 a mile of completed railway. The Lake Superior Corporation guarantees the principal and interest of the bonds, receiving in return therefor $1,000,000 of common stock, and $8,000,000 of preferred stock, thereby having the controlling power, as preferred and common stock have equal voting powers.

Maritime Coal, Ry. and Power Co.—The Nova Scotia Legislature is being asked to amend the company's act of incorporation and amending acts, by authorizing the issue of $1,000,000 in shares bearing fixed cumulative, or non-cumulative dividends, at the discretion of the shareholders, at 7 per cent., preferred as to dividend and capital, and authorizing the directors to pledge or sell such shares; that four directors shall form a quorum, and also authorizing the sale or disposal of the plant and property and to acquire shares in any other company.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—A mortgage for $1,358,866 bearing interest at 4½ % was filed Mar. 7, with the Secretary of State at St. Paul, Minn., the proceeds of which are being devoted to the purchase of additional all-steel rolling stock.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—An increase of 21% of the capital stock has beem authorized by the directors, and it has been announced that the present stock holders will have the right to subscribe at par, in the proportion of seven shares of preferred and 14 shares of common stock for each 100 shares now held.

Morrissey, Fernie and Michel Ry.—The annual meeting was held, Mar. 10. The compamy does not publish any annual report. Following is the board for the current year:—President and Chairman, Elias Rogers; Vice President, E. C. Whitney; other directors, H. B. McGiverin, W. P. Clough, A. E. Stovel.

Ontario Sault Ste. Marie Ry.—Following is the board for the current year, elected Mar 14:—President, C. M. Hays; Vice President, W. Wainwright; Secretary-Treasurer, F. Scott; other directors, M. M. Reynolds, W. H. Biggar, K.C., E. J. Chamberlin, R. S. Logam, J. Hobson.

Pacific Coast Coal Mines Co.—The British Columbia Legislature has authorized the company to reduce its capital stock to $2,000,000, and to create debenture stock for $1,500,000 and to validate an agreement made between J. Arbuthnot J. M. Savage, J. C. McGarvin and the Vancouver Island Timber Co., of the first part; J. P. Hartman and C. C. Michener, of the second part; the P. C. C. M. Co., of the third part; E. Hodson and D. S. Spencer of the fourth part, and S. H. Reynolds of the fifth part. The company owns a railway at Fiddicks, Vancouver Island, and has power to build lines at other points in B. C.

The suit against J. Arbuthnot and others, brought by E. Hudson to recover 2,250 shares of the company has been settled by a reorganization of the company. The reorganization meeting was held in Victoria, Mar. 4, when the following officers and directors were elected: Chairman of the board, J. P. Hartman, President and Managing Director, C. C. Michener, Victoria; Vice President, L. D. Wishard, New York; Second Vice President, Dr. C. C. Kimball, New York; Secretary-Treasurer, J. F. Mosley, New York; other directors, C. H. Robertson, Victoria; R. N. Thompson, Seattle, Wash.

Quebec and Lake St. John Ry.—At a meeting of the prior lien, first mortgage and income bond holders, held in London, Eng., Mar. 17, an agreement of Feb. 16, 1911, with the Canadian Northern Ry., to exchange the whole of the bonds for new 4% debenture stock, guaranteed as to principal and interest by the C.N.R., was adopted and confirmed.

Earnings for Feb., $35,541.35, against $32,339.17 for Feb., 1910. Aggregate total earnings for two months ended Feb. 28, $76,314.78, against $69,994.01 for same period 1910. Mileage operated, 285.4, against 280 for same period 1910.

Quebec Central Ry.—Gross earnings for Jan., $63,771.66; expenses $57,057.02; net earnimgs $6,714.64, against $61,197.90 gross earnings; $54,944.93 expenses; $6,252.97 net earnings for Jan. 1910. Aggregate gross earnings for seven months ended Jan. 31, $684,608.31; expenses $469,817.82; met earnings $214,790.50, against $641,824.35 aggregate gross earnings; 443,306.69 expenses; $198,17.66 net earnings.

Temiscouata Ry.—The profits on operation for 1910, were $47,184.

Victoria and Sidney Ry.—The city council of Victoria, B.C., has for some time past had under consideration, its position under the agreement as to the guarantee of the company's bonds. In 1892 an agreement was made jointly between the company, the city and the province, whereby the company issued bonds for $300,000, the interest of 5% being guaranteed by the city, as to 3% and by the province as to 2%. Under this guarantee the city has paid $162,000 and the province $103,000, the company never having paid anything. The city solicitor, in reporting on the matter, states that all money paid by the city under the guarantee is, by the agreement, made a debt due from time to time to the city and the province respectively, and a charge on the company's assets ranking after the bond issue. During the earlier years of the company's existence there was no doubt of its inability to pay the interest, but of late years it has earned quite enough to pay the interest. He had been led to believe that earnings had been considerably understated, and that a large portion of what should have gone to the V. and S. R. has been absorbed into other lines and companies belonging to the contracting company (the Great Northern Ry.). It is said that the matter will be brought before the courts at an early date.

White Pass and Yukon Ry.—Gross earnings for seven months ended Jan. 31, $800,919.

◆

Railway Viaduct For Toronto.

The Judicial Committee of the Privy Council in London, Eng., has dismissed the C.P.R. Co.'s appeal against the Board of Railway Commissioners' order requiring the railway companies entering Toronto to build a viaduct along the Esplanade.

Canadian Northern Ry. Construction, Etc.

Speaking in the House of Commons, Mar. 10, the Minister of Railways said the C.N.R. would soon have a through line to Montreal and Quebec, and it must get to the seaboard in some way. He might be wrong, but he thought the Intercolonial Ry., if it lost the exchange of traffic with the G.T.R., should be linked up with the C.N.R.

Canadian Northern Quebec Ry.—It is generally thought that the company has definitely decided to abandon the Moreau St. terminal at present in use, and to erect a large terminal in the centre of of Montreal. In a recent interview Sir Donald Mann said all he would say about the matter was that the C.N.R. was going into Montreal.

The Board of Railway Commissioners has authorized the company to carry its tracks by an overhead bridge across Notre Dame St., and the Montreal St. Ry. and to connect its tracks with the Montreal Harbor Commission tracks, on the harbor front. The company will bear the entire cost of this crossing and is to complete it by Aug. 1. The company has also been authorized to rebuild the bridge over the St. Esprit River, near Ste. Julienne station.

Canadian Northern Ontario Ry.—In a recent interview Sir Donald Mann is reported to have stated that the new line from Ottawa to Montreal would be completed this year, but it was not likely that it would be opened for passenger service. The line between Ottawa and Toronto would also be completed this year. The grading was well forward, and the engineers were getting within sight of the finish.

In connection with the building of these two lines the Board of Railway Commissioners has issued a number of orders as to the diversion of roads, crossing of highways, bridges and buildings, and approving location of line through Lanark county, mileage 29 to mileage 37.8. It is expected that the first portion of the Toronto-Ottawa line to be opened will extend from Toronto to Belleville, 120 miles.

The question of the approval of the company's plans for its line across North Toronto came before the Board of Railway Commissioners Feb. 26, and opposition was withdrawn by the C.P.R., whose line will be paralleled. The city authorities favored the C.N.O.R. plans, and the Commissioners decided to go over the route before giving any decision.

After having considered for some time the plans for the company's proposed lines in Hamilton, the city council, Mar. 9, decided not to recede from the position it had assumed that no more level crossings would be allowed. It was stated on Mar. 10 that the company's engineers would be withdrawn at once, and nothing in the way of construction considered for a couple of years. The land agents are reported to be closing out the options on the property acquired, the tenants being notified that possession will not be required for at least two years. The city engineer stated Mar. 10 that he had been informed by H. K. Wicksteed, the company's Chief Engineer of Surveys, that when the plans for the route in the city were filed nothing objectionable would be found in them.

Press reports state that it is expected that construction will be started during the current year on the building of the line between the present end of track, on the line from Toronto, now terminating at Gowganda Jct., and Port Arthur, Ont. It is stated that work will be gone on with from both ends, and that it will be completed within three years. The Board of Railway Commissioners has approved revised locations on this line between mileage 65.9 and 69.5 from Sudbury Jct.; approved location from mileage 240 to 560 from Sudbury Jct., and approved revised locations between mileage 55.78 and 57.16, and between mileage 57.85 and 58.45 in Thunder Bay district.

Press reports Mar. 21 stated that the company proposed building a line of some sort from the line near Gowganda Jct., into the Porcupine country, surveys for which had been completed by the company's engineers. This report is premature, as, while consideration is being given to the proposal to build such a line, nothing has been decided.

Canadian Northern Ry.—We are advised that nothing is likely to be decided for some time with reference to the erection of a hotel at Fort Frances Ont., which press reports stated was to be undertaken immediately. The reports stated that the hotel would be built at Pither's Point, at a cost of $200,000.

Press reports from Cook, Minn., state that engineers are making a survey from the main line of the C.N.R., near that town, to Pine Island, and easterly through the Vermillion range to a junction with the Duluth, Rainy Lake and Winnipeg Ry., and the extension of the same, now under construction, to Duluth.

The Manitoba Legislature passed an act Mar. 16, guaranteeing bonds to the extent of $13,000 a mile for the building of the following lines:—Extension of Dale Point line 50 miles northerly; extension of Deloraine branch westerly to the provincial boundary, 60 miles; a line from Ste. Rose du Lac to Lake Winnipegosis, 50 miles.

Sir Wm. Mackenzie, President C.N.R., stated in an interview in Winnipeg, Mar. 17, that the work proposed to be done during the current year will include additional grading on the Wakopa branch, which will be extended to Deloraine, and in future years will be carried through to a junction with the Maryfield branch, near Bienfait. In Saskatchewan the Maryfield branch will be extended to Moose Jaw; additional grading will be done on the Rossburn branch, which will ultimately be extended to the main line near Canora; additional grading will be done on the Thunderhill branch, which, starting at the Swan River, will ultimately be connected with a line running into Prince Albert; the branch from Prince Albert to Battleford will be completed; additional work will be done on the Battleford-Jackfish Lake line; further progress will be made with the line under construction from Delisle, which is to be continued through Swift Current to a junction with the Maryfield-Lethbridge line. In Alberta, two lines will be completed into Calgary, the one the Goose Lake line, from Saskatchewan, and the other the branch southerly from Vegreville through Red Deer, the line from Stettler crossing the C.P.R. at Red Deer, will be continued towards the Brazeau River Coal fields, and further progress made with the lines westerly from Edmonton. On some of the lines mentioned by the President a considerable mileage of grading is ready for tracklaying, and additional mileage is under contract, and tenders have been received for the grading of a considerable additional mileage, the President stating that it was hoped to build 600 miles of line this year.

Press reports from Winnipeg, Mar. 21, stated that contracts had been let to the Cowan Construction Co. for the building of 200 miles of main line towards the Yellowhead Pass, and 205 miles on three branch lines, and to the Northern Construction Co. for 200 miles of main line, and 100 miles to complete the branch line from Vegreville to Calgary, Alta. We were officially informed by telegraph Mar. 24 that this report was incorrect, as no contracts had been let, nor would any be let for a couple of weeks thereafter.

The Board of Railway Commissioners has approved location of line through tp. 6, ranges 25 and 24, west of the fourth meridian, Alta., mileage 0 to 10.25.

Edmonton and Slave Lake Ry.—A duplicate of the original agreement for the amalgamation of the E. and S.L. Ry. with the Canadian Northern Ry., as sanctioned by the Governor-in-Council, has been filed with the Secretary of State at Ottawa.

The Canadian North Eastern Ry. is the name by which the railway originally started as the Portland Canal Short Line will be known, the British Columbia Legislature having authorized the change of name, and the building of extensions.

We are advised that during the winter the work done has been confined entirely to rock cutting, and this is expected to be completed by the end of April. The grading of the entire line to Bear River should be completed by the end of June. Track was laid last year for a distance of about three miles, and this work will be resumed in May, in the expectation of completing the line by the end of July. The work still remaining to be done includes about 1.75 miles of grading, 450 lineal feet of pile bridging, and 10.25 miles of tracklaying, together with the erection of the following buildings:—Freight shed and coal handling plant on the wharf at Stewart; small freight sheds at Glacier Creek, Bitter Creek and Red Cliff; turntables at Stewart and Red Cliff, a machine shop storehouse at Stewart. It is also intended to build spurs and track accommodation for the Red Cliff and Portland Canal Mines this year. (Mar., pg. 249.)

Canadian Northern Pacific Ry.—F. C. Gamble, Inspecting Engineer for the British Columbia Government, returned to Victoria, Mar. 11, from an inspection trip over the section of the line under construction from Port Mann to Sumas. It is reported that about 75% of the grading on the first 55 miles to Popkum, about 10 miles east of Chiliwack, has been completed, and that considerable grading has been done on the remaining distance to Hope Mountain, to which point the clearing had been completed. About seven miles east of Popkum there is a big rock cut, of about 50,000 cubic yards. It is expected that this section will be completed and in operation by the end of the year.

At Port Mann, the wharf has been completed, and the first steamer with steel rails for the new line arrived and landed its cargo Mar. 7. The townsite is being laid out on an extensive scale, under the direction of T. Darling, Manager C.N.R. Townsites.

Press reports state that an arrangement has been effected between the company's representatives and the Vancouver, Victoria and Eastern Ry., under which the Canadian Northern Pacific Ry. will build the line between Sumas and Hope, the V.V. and E. Ry. being given running rights over it.

C. F. Harrington, is in charge of an engineering party making a survey for the line from Spence's Bridge in the direction of Ashcroft, from which place a party under J. Handy, is working towards Spence's Bridge.

The company's plans for the entry into Kamloops are being prepared, and will shortly be submitted to the civic authorities, according to a report made to the council Mar. 7, by Mayor Robinson, after an interview with T. G. Holt, the company's executive agent in Vancouver.

Vancouver Island.—The contract let to Grant, Smith & Co., for the first portion of the C. N. Pacific Ry., on Vancouver Island, covers 40 miles, extending from 4.7 miles from Victoria to the

Rice Lewis & Son, Limited = Toronto

vicinity of Shawinigan Lake, at mileage 44.7 The contract includes clearing, grubbing, fencing, trestle, concrete work and grading. The work on the first 20 miles has already been sublet in sections of from one to four miles and a good part of the second 20 miles has also been sublet. Clearing has been commenced at several points, and excavation on two or three of the heavier cuts are under way. It is expected that the balance of the first hundred miles will also be put under contract as soon as the weather will permit of the completion of the location surveys. Construction was officially started Feb. 20, when the Lieut.-Governor of the Province, accompanied by the company's engineers, contractors' representatives and representatives of the Government went to Portage Inlet, and the Lieut.-Governor cut the first sod. D. O. Lewis is in charge of the work as construction engineer, with headquarters at Victoria, and G. B. Hughes, is assistant engineer in charge of surveys. Mr. Hughes was at Port Alberni, Mar. 10, arranging for placing a survey party in the field along Alberni Canal.

Duluth, Winnipeg and Pacific Ry.—We are advised that the grading and bridging on the extension of the Duluth, Rainy Lake and Winnipeg Ry., being built under this title, from Virginia to Duluth, Minn., is about 80% completed, and that track has been laid for 24.5 miles southerly from Virginia. The tunnel at Short Line Park is progressing favorably, but the rock is very hard, and progress has been somewhat slower than was hoped for. It is expected to have the line completed by Sept. Nothing has been done as yet in regard to ore docks at Duluth.

G. H. Shaw, General Traffic Manager, and other C.N.R. officers were in Duluth, Mar. 15, when the question of terminals was discussed, but no definite plans for the same were announced. (Mar., pg. 231.)

Alberta Railway and Irrigation Co. Ltd.

At the special meeting of shareholders in London, Eng., Feb. 22, to authorize the sale, conveyance, or lease of the company's property to the C.P.R., to which reference was made in our last issue, the proposal was described, at the request of the President, E. T. Galt, by the company's Solicitor, C. Bischoff. He pointed out that for the purpose of convenience, the agreement was divided into two parts. 1. for the long lease of the railway itself in consideration for a rental; 2. for a contemporaneous sale of the assets, other than the railway and that the combined effect of the lease and sale, for all practical purposes, was, that the shareholders would be parting with the whole of the assets, in exchange for an annuity.

The lease is to comprise all the company's existing lines, and any lines which it may be authorized to build, together with stations, shops, rolling stock and equipment, and it will be for 999 years, from Jan. 1, 1912, without prejudice to the rights of the debenture holders under the trust deed. The lessor is restrained from issuing, without the lessee's consent, any new stock, as an encumbrance on the leased properties, but with the consent, and at the request of the lessee, will make future issues of capital for purposes of the leased property up to the legal limits. The lessee binds itself to pay an annual rent equal to a dividend of 6% on the outstanding ordinary capital stock, viz:—$3,250,000, by half-yearly payments, on Jan. 1, and July 1, in each year, the first payment to be made July 1, 1912, direct to the ordinary stock holders, and by way of additional rent will pay enough to cover the interest on any new debenture stock it may require to be issued in future. The interest guarantee will be endorsed on the certificates, or otherwise properly evidenced. If any rent is in default 90 days, or the lessee fails to meet the obligations it undertakes, the lesor may resume possession. The second part of the agreement relating to the sale of all lands, irrigation works and generally all the assets of the lessor, except the property leased, provides that the sale is subject to the rights of the debenture holders and a sufficient sum will be reserved out of the sale, to provide the debenture interest due Jan. 1, 1912, and an ordinary dividend for the half year ending Dec. 31, 1911, at the rate of 5% per annum.

The President then explained that the C.P.R. holds 13,750 shares, or about 57% of the total shares of the company and he also outlined the reasons which had led the directors to adopt the course of submitting the resolution to the shareholders. The view held by the directors was that to meet the requirements of the company's business the lines would have to be improved in the near future, by laying heavier rails, ballasting the roadbed, etc., extensions would have to be undertaken to cover the territory tributary to the company's business, and the irrigation system would have to be extended at heavy cost to meet the requirements of the increasing population. Under these heads, several million dollars would have to be spent and it was considered injudicious to absorb the liquid assets of the company is undertaking these expenditures. He also stated that he was authorized to announce that the C.P.R. will purchase any shares at $150 each, plus an allowance of $3 a share for dividend since July 1, provided the holders of 8,000 shares notify the Secretary that they accept this option, which will remain open to May 1.

A. M. Nanton, Managing Director, in response to questions, stated that the company's lands had almost all been disposed of, and that future dividends would have to be largely derived from its ordinary business. The remaining assets consist mainly of the cash in hand, and the balances due to the company, which would, within a few thousand dollars, pay off the present indebtedness. The only remaining assets that can be used in conection with the common stock are, the balance of the lands, the railway, the colliery and the canal. The irrigable lands on hand, consist of from 25,000 to 30,000 acres, which, with the remaining non-irrigable lands, cannot be valued at more than $2,000,000, and only at that after a considerable expenditure for enlarging and extending the canal works. The railway consists of a line of about 120 miles long running from Lethbridge, Alta., to points of no great importance, and there is no doubt that with the business that is being done, the railway must be extended. The colliery is a paying concern, but growing competition may possibly reduce the future profits from this source. The canal cannot be considered as a cash asset, and altogether, the remaining assets do not aggregate more than about $200,000 of the $5,000,000, which is practically the offer made.

There was a certain amount of opposition to the resolution, which in view of the explanations made, was subsequently withdrawn, and the resolution was carried unanimously. The President undertook to request that the C.P.R. reduce the minimum number of shares which it had stipulated was necessary to have offered before it would pay cash for them.

The C.P.R. has, according to press reports, granted increases of 10% in wages to the trainmen on its Western lines, dating from Mar. 1, and it is said that an agreement on these lines has been signed by representatives of both sides.

Great Northern Ry. Lines in Canada.

Manitoba Great Northern Ry.—At a meeting of the Winnipeg city council held Mar. 15, an amended agreement with the company providing for its entry into the city was approved. The new plans provide that the line will come into the city on the level as far as Vera St., where a subway is to be built when ordered by the Board of Railway Commissioners on the request of the city; on to Isabella St., where there will be a subway; on to Ellen St., which is to be closed between Ross and Pacific streets, except that provision must be made for a footbridge; and that the company will build a station facing Paulin St. The plan shows a passenger station facing Paulin St., with the mail, baggage and express buildings along Ross Ave., to Ellen St., with four sets of double tracks and one set of single tracks, between which are to be covered platforms. Along Ross Ave., from Ellen to Isabel streets store buildings are shown. The area bounded by Isabel and Vera streets, and Ross and Pacific Avenues to be given over to freight tracks, with a freight house 1,000 ft. in length along Ross Ave., and 50 ft. deep to the tracks.

Considerable improvements are, it is said, to be made this year on the roadbed of the line from the International boundary near Gretna to Portage la Prairie, as well as on the connecting line south of the boundary to Neche and Grand Forks, N.D.

Vancouver, Victoria and Eastern Ry.—Grading had been completed westerly from Princeton, for 16 miles to Tulameen, B.C., when operations were suspended at the beginning of the winter. It is expected that start will be made with the grading early in April, and that about a month later tracklaying will be resumed. The route from Tulameen westerly will touch the coal fields being developed by the Columbia Coal and Coke Co., Coalmount. Nothing has been announced as to the route over the Hope Mountains, but local reports state that an arrangement is being made by which the company will have running rights over a section of the Canadian Northern Pacific Ry., line west of the Hope Mountains.

Grading is being pushed forward on the section of the line from Abbotsford to Sumas River, which is reported to be over 60% completed, and is expected to be finished in a couple of months.

The British Columbia Legislature has passed the necessary acts to enable the city of Vancouver to acquire certain lands and interests in certain lands at False Creek, and to make improvements on the same. These lands are being acquired in connection with the reclamation of False Creek, under agreements with the V., V. and E. Ry. Co., as ratified and confirmed by the Great Northern Ry., and now finally confirmed by the B.C. Legislature. Following on the confirmation of these agreements, work was started at the head of the creek, Mar. 13. Two steam shovels and a pile driver, are being operated, and a large sized gang of men are at work. The Board of Railway Commissioners has authorized the company to take certain lands in Vancouver, being the whole bed and foreshore of False Creek, east of Westminster Ave., with the exception of a portion reserved by the city.

Tenders are under consideration for the removal of the buildings on Pinder St., Vancouver, on the site of which an extension to the company's freight sheds is to be built. (Mar., pg. 219.)

The Niagara, St. Catharines and Toronto Railway and Navigation Co., has been admitted to membership in the Eastern Canadian Passenger Association.

Railway Rolling Stock Notes.

The Brompton Paper and Pulp Co. has received one Columbia locomotive from the Montreal Locomotive Works, details of which were given in our last issue.

The Toronto, Hamilton and Buffalo Ry. has received one ten wheeled locomotive from the Montreal Locomotive Works, details of which we gave in a previous issue.

The Temiskaming and Northern Ontario Ry. has received from the Canadian Locomotive Co., Kingston, Ont., four Pacific type locomotives, Nos. 133 to 136, details of which we gave in our Sept., 1910, issue.

The Canadian Northern Ry. has ordered 200 steel underframe flat cars, similar in design to those being built for the C.P.R., details of which are given in this issue, from the Canadian Car and Foundry Co., Montreal.

The Algoma Central and Hudson Bay Ry. has ordered 175 steel underframe flat cars from the Canadian Car and Foundry Co., Montreal, to practically the same specifications as those being built for the C.P.R., details of which are given in this issue.

The Canadian Northern Ry., between Feb. 15 and Mar. 15, received the following additions to rolling stock:—315 box cars and five baggage cars, from the Canadian Car and Foundry Co., Montreal, and 65 box cars from the Crossen Car Manufacturing Co., Cobourg, Ont.

The C.P.R., between Feb. 13 and Mar. 15, received the following additions to rolling stock:—23 first class cars, 24 automobile cars, two horse cars, one flanger and two snow plows from its Angus shops, Montreal, and seven G.1 and G.2 locomotives from the Montreal Locomotive Works.

The Laprairie Brick Co. has ordered one four-wheeled locomotive from the Montreal Locomotive Works, of which the following are the chief details:

Weight in working order	39,000 lbs.
Wheel base	4 ft. 9 in.
Driving wheel, diar.	33 in.
Cylinders	11 by 16 in.
Boiler, type	Straight top
Boiler pressure	165 lbs.
Tubes, no. and diar.	85 2 in.
Tubes, length	8 ft. 3½ in.
Tank capacity	750 U.S. gals.

The Intercolonial Ry. has ordered four shunting locomotives and three passenger locomotives from the Canadian Locomotive Co., Kingston, Ont.; 70 standard box cars, 60,000 lbs. capacity, and 21 Hart-Otis steel dump cars from the Canadian Car and Foundry Co., Montreal, and a further 30 standard box cars of 60,000 lbs. capacity. It has received one first class coach from the Preston Car and Coach Co., Preston, Ont.

The C.P.R., between Feb. 13 and Mar. 15, ordered the following rolling stock:—two G.1 locomotives, six compartment sleeping cars, one steel passenger car, one stores supply car, one freight refrigerator car, 82 box cars, 505 stock cars, five flat cars, two vans, one ballast car, at its Angus shops, Montreal; two steel flat cars from the Canadian Car and Foundry Co., Montreal; two Lidgerwood unloaders from Allis-Chalmers-Bullock, Ltd., two steam shovels from Montreal Locomotive Works, and two wrecking cranes in the U.S.

The Victoria Harbor Lumber Co. has ordered one four wheeled locomotive from the Montreal Locomotive Co., of which the following are the chief details:

Weight in working order	56,000 lbs.
Wheel base	6 ft. 3 in.
Driving wheel, diar.	36 in.
Cylinders	13 by 18 in.
Boiler, type	Straight top
Boiler pressure	165 lbs.
Tubes, no. and diar.	100 2 in.
Tubes, length	10 ft.
Tank capacity	1,000 U.S. gals.

Following are the chief dimensions of one Columbia locomotive (2-4-2-T-80), which the C.P.R. has ordered from the Montreal Locomotive Works:

Weight in working order	80,000 lbs.
Weight on engine truck	9,000 lbs.
Weight on drivers	58,000 lbs.
Weight on trailer	13,000 lbs.
Wheel base, driving	7 ft. 0 in.
Wheel base, engine	22 ft. 6 in.
Driving wheel, diar.	44 in.
Cylinders	14 by 22 in.
Boiler, type	Straight top
Boiler pressure	165 lbs.
Tubes, no. and diar.	106 2 in.
Tubes, length	11 ft. 8 in.
Tank capacity	1,200 U.S. gals.

The Nova Scotia Steel and Coal Co. has ordered one six coupled switching locomotive from the Montreal Locomotive Works, of which the following are the chief details:

Weight in working order	124,000 lbs.
Weight of tender	67,000 lbs.
Wheel base, engine	11 ft. 6 in.
Wheel base, engine and tender	38 ft. 6 in.
Driving wheel, diar.	59 in.
Cylinders	19 by 26 in.
Boiler, type	Straight top
Boiler, pressure	180 lbs.
Tubes, no. and diar.	259 2 in.
Tubes, length	11 ft.
Tank capacity	3,000 U.S. gals.

Macdonnell and O'Brien, railway contractors, National Transcontinental Ry., La Tuque, Que., have ordered two mogul locomotives from the Montreal Locomotive Works, of which the following are the chief details:

Weight in working order	130,000 lbs.
Weight on engine truck	17,000 lbs.
Weight on drivers	113,000 lbs.
Weight of tender	115,000 lbs.
Wheel base, driving	12 ft. 6 in.
Wheel base, engine	20 ft. 6½ in.
Wheel base, engine and tender	49 ft. 4 in.
Driving wheel, diar.	50 in.
Cylinders	19 by 26 in.
Boiler, type	Extended wagon top
Boiler pressure	180 lbs.
Tubes no. and diar.	275 2 in.
Tubes, length	10 ft. 5¼ in.
Tank capacity	5,000 Imp. gals.

Following are the chief details of the 11 D. 10 locomotives, which the C.P.R. is building at its Angus shops, Montreal, as mentioned in previous issues:

Weight on drivers	142,000 lbs.
Weight, total	193,000 lbs.
Cylinder	21 in. by 28 in.
Valves	11 in. piston
Boiler, type	Extended wagon top
Boiler, pressure	200 lbs.
Heating surface, tubes	2,238 sq. ft.
Heating surface, firebox	180 sq. ft.
Heating surface, total	2,418 sq. ft.
Heating surface, superheater	409 sq. ft.
Equivalent heating surface	3,032 sq. ft.
Tubes, no. and diar.	240 2 in., 24 5 in.
Tubes, length	14 ft. 2⅞ in.
Firebox	8 ft. 6⅛ in. by 5 ft. 9⅛ in.
Grate area	49 sq. ft.
Capacity water	5,000 gals.
Capacity coal	10 tons
Axles. Main 9½ in. by 12 in., others 9 in. by 12 in	
Brakes	Westinghouse ET6
Headlight	Pyle National Electric
Valve gear	Walschaert
Superheater	Vaughan-Horsey

The 750 steel underframe flat cars, which the C.P.R. has ordered from the Canadian Car and Foundry Co. are practically of the standard design, using the deep fish belly girder sills at the centre, with 10 in. rolled steel channels for the side sills. There is, however, one detail which is somewhat different from the general run of similar cars, in that, for the intermediate floor stringer, a 3 in. rolled steel Z bar is being used, to which the floor is bolted at certain intervals. In previous cars this member was usually composed of timber, to which the floor was nailed. Following are general details:—

Length over deadwoods	42 ft. 2 in.
Length, centre to centre of trucks	31 ft. 2 in.
Width over side sills	8 ft. 10 in.
Width over floor	9 ft.
Height top of rail to top of flooring	4 ft. 2¾ in.
Flooring	2⅜ in., ship-lapped
Couplers	Simplex
Bolsters	Simplex, C.P.R. standard for 40-ton cars
Brake beams	Simplex, 6 in. I beams, inside hung
Side bearings	Susemihl frictionless
Air brakes	Westinghouse K.C. 812
Wheels, cast iron	C.P.R. Standard
Journal boxes	McCord M.I.
Journal bearings	Canadian Bronze Co.
Axles	Open hearth steel, 5 by 9 ins.

The Algoma Central and Hudson Bay Ry. has ordered five consolidation and five 10-wheeled passenger locomotives from the Canadian Locomotive Co., Kingston, Ont. Following are the chief details:—

	Consolidation.	Ten-wheeled
Weight on drivers	175,000 lbs.	141,000 lbs.
Weight, total	197,000 lbs.	190,000 lbs.
Wheel base, engine, rigid	15 ft. 10 in.	14 ft. 10 in.
Wheel base, engine, total	24 ft. 4½ in.	26 ft. 1 in.
Wheel base, engine and tender	55 ft. 3½ in.	54 ft. 10¼ in.
Heating surface, firebox	161 sq. ft.	180 sq. ft.
Heating surface, tubes	2,218 sq. ft.	2,233 sq. ft.
Heating surface, total	2,379 sq. ft.	2,413 sq. ft.
Driving wheel, diar.	56 in.	63 in.
Driving wheel, centres	Steel and iron	Cast steel
Driving journals— Main, 9½ in. by 12 in., others 9 in. by 12 in.		
Cylinders	22 in. by 28 in.	22½ in. by 28 in.
Boiler, type	Extended wagon top, wide firebox	
Boiler pressure	200 lbs.	180 lbs.
Tubes, no. and diar.	224 in., 24 5 in.	240 2 in., 24 5 in.
Tubes, length	14 ft. 2½ in.	14 ft. 4 in.
Brakes	Westinghouse American	
Weight tender, loaded	175,000 lbs.	127,000 lbs.
Capacity, water	5,000 gals.	5,000 gals.
Capacity, coal	10 tons	10 tons
Truck, type	4-wheeled with outside equalizer	
Wheel, diar.	34 in.	34 in.
Wheel, type	Steel tires and retaining rings	
Journals	5½ in. by 10 in.	5½ in. by 10 in.
Brake beam	Simplex high speed	

Following are the chief details of the cabooses and Pintsch gas car, when the Intercolonial Ry. is building at its Moncton, N.B., shops, as mentioned in our last issue:—

Six Cabooses.

Length over platform sills	35 ft. 6 in.
Length over nailing strips on end sills	30 ft. 0 in.
Width over nailing strips on side sills	9 ft.
Height, top of nailing strips to under side of plates	6 ft. 8 in.
Length inside	29 ft. 6⅛ in.
Width inside	8 ft. 6⅛ in.
Height inside, top of floor to under side of carlin	7 ft. 1¼ in.
Outside of end sill to centre of body bolster	5 ft.
Centre to centre of cross frame braces	6 ft. 4 in.
Height top of rail to centre of drawbar	2 ft. 10½ in.
Wheel base of truck	5 ft.
Door opening, side	2 ft. 10 in.
Door opening, end	2 ft. 3 in.
Distance between truck centres	20 ft.
Platforms, steel	Standard Coupler Co.
Brake equipment	Canadian Westinghouse Co.
Brake beams, simplex	Canadian Car & Foundry Co.
Journal boxes, McCord	The Holden Co., Ltd.
Couplers, Janney	Canadian Car & Foundry Co.

One Pintsch Gas Car.

Length over end sills	40 ft.
Width over side sills	9 ft.
Length over floor	40 ft. 1½ in.
Width over floor	10 ft. 2 in.
Outside of end sill to centre of body bolster	5 ft.
Centre to centre of cross frame tie timbers	9 ft.
Height, top of rail to centre of drawbar	2 ft. 10½ in.
Wheel base of truck	5 ft. 6 in.
Distance between truck centres	30 ft.
Length of gas tank	35 ft. 9¾ in.
Diar. of tank, outside	8 ft. 2 in.
Capacity of tank	1,724 cu. ft.
Body and truck bolster	Simplex, Canadian Car & Foundry Co.
Brake beams, Simplex	Canadian Car & Foun. Co.
Couplers, Janney	Canadian Car & Foundry Co.

◆

Railway Lands Patented. — Letters patent were issued during Jan. in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	252.57
Canadian Pacific Ry. grants	1.32
Canadian Pacific Ry. Souris Branch	673.80
Grand Trunk Pacific Ry.	457.26
Total	1,384.95

The Board of Railway Commissioners will take up at Ottawa on April 4 the question of limiting the height of freight cars and an opportunity will be given railway companies under its jurisdiction to discuss the subject fully.

MORISON Suspension Furnaces

The Universally satisfactory record of "THE MORISON" proclaims it the best furnace made.

With Plain Ends or Flanged to any required shape.

For Land and Marine Boilers

Uniform Thickness, Easily Cleaned, Unexcelled for Strength, Unsurpassed for Steaming Capacity.

Manufactured by

THE CONTINENTAL IRON WORKS

West and Calyer Sts., BOROUGH OF BROOKLYN, New York

Near 10th and 23rd St. Ferries

A. D. HANNAH & D. HOGG,
PROPRIETORS

ARTHUR M. GRANT,
MANAGER

MAINLY ABOUT PEOPLE.

P. Whelen, director Ottawa Electric Ry., died at Ottawa, Mar. 17, after several weeks illness.

Sir Wm. C. VanHorne, sailed from Halifax, N.S., on the s.s. Empress of Ireland, for a business trip to Great Britain.

E. H. Fitzhugh, First Vice President G.T.R., was expected to return to Canada, at the end of March, from a trip in the Mediterranean.

T. Henry, Traffic Manager, Richelieu and Ontario Navigation Co., left Montreal, Mar. 12, on a business trip through the U.S.

D. B. Hanna, Third Vice President Canadian Northern Ry., has removed to his new house, 36 Castle Frank Road, Toronto, which he has named Thornliebank, after his native place in Scotland.

Capt. G. E. Royce, Manager Toronto Suburban Ry., has been appointed Major Second Battalion Queen's Own Rifles, Toronto.

Mrs. George Hannah, wife of the Passenger Traffic Manager Allan Line, Montreal, died there, Mar. 12, after a long illness.

W. I. Gear, Vice President Robert Reford Co., Ltd., and Miss Gear, returned to Montreal Mar. 18, after a holiday of some weeks in Europe.

The wife of Arthur Hall, Superintendent Western Railway Association and Inspection Bureau, formerly of Toronto, died at Denver, Col., recently.

Hugh A. Allan, of the Allan Line, who has been seriously unwell for some time, was recruiting at Bournemouth, Eng., during March.

R. G. McNeillie, District Passenger Agent, C.P.R., Calgary, Alta., returned there, early in March, from California, after a three weeks holiday.

W. H. C. Mussen, of Mussens Limited, and Mrs. Mussen, are spending a few weeks in England, and will return to Montreal shortly after Easter.

W. T. Payne, Manager C.P.R. Trans-Pacific Steamship Service, Yokohama, Japan, arrived in Montreal, Mar. 9, on business connected with his department.

A. A. Allan, of the Allan Line, and President Shipping Federation of Canada, with Mrs. Allan, sailed on the s.s. Virginian, Mar. 8, for Great Britain.

Miss F. H. Macdonald, eldest daughter of C. A. Macdonald, Assistant Manager Northern Navigation Co., was married at Collingwood, Feb. 28, to H. Stalker.

Lady Mann and her son left Toronto March 5 for sailing from Halifax on the s.s. Royal George for Bristol. Eng. They will probably be away most of the summer.

R. Marpole, General Executive Assistant C.P.R., Vancouver, B.C., and Mrs. Marpole, returned to Canada early in March, after a holiday trip in Great Britain.

J. B. McDonald, a well known railway contractor, who died in New York, Mar. 17, aged 67, was a contractor on the construction of the Georgian Bay section of the C.P.R.

Mrs. Hugh Sutherland, wife of the Executive Agent, Canadian Northern Ry. left Winnipeg at the end of February, to spend some little time at Seabreeze, Florida.

The marriage of Miss Isobel Creelman, daughter of A.R. Creelman, K.C., director and General Counsel C.P.R., to H. S. Ambrose, of the Bank of Montreal, took place at Montreal, Mar. 22.

W. B. Lanigan, Assistant Freight Traffic Manager C.P.R. Western Lines, Winnipeg, returned there, about the middle of March, from California, where he had been spending a short holiday.

A recent issue of Mayfair, a London, Eng., magazine, contained a full page portrait with biographical sketch of H. A. Allan, Chairman of the Allan Line, and formerly President of the Shipping Federation of Canada.

Sir Thos. G. Shaughnessy left Montreal, Mar. 6, for New York, whence he sailed on the s.s. Celtic, for a holiday in the Mediterranean. He will subsequently visit England, and is expected to return to Canada about the end of April.

J. G. Sullivan, Assistant Chief Engineer C.P.R. Western Lines, left Winnipeg, Mar. 11, on an inspection trip over the lines to the Pacific coast, to look over the ground in connection with the work that is to be undertaken this year.

Mrs. G. Mc. L. Brown, wife of the European Manager of the C.P.R., who has been staying in Hamilton, Ont., for some time, left for England early in March, with her sister, Miss Crerar.

H. J. Wicksteed, B.Sc., M. Can. Soc. C.E., Chief Engineer of Survey for Mackenzie, Mann & Co., returned to Toronto March 13, after a fortnight's ocean trip from New York to Palm Beach, Fla., and intermediate points.

H. R. Mathewson, excursion clerk C.P.R. District Passengers Agent's office Toronto, was presented with a suit case by the staff there Mar. 16, on his leaving for Chicago, Ill., on his appointment as chief clerk to the General Agent C.P.R., there.

J. S. Dennis, Manager Irrigation Department, Alberta and British Columbia Land Departments C.P.R., was entertained to dinner by the staff of his department at Calgary, Alta., recently, on his return from a European trip extending over two months.

L. Sherwood, M. Can. Soc. C.E., Principal Assistant Engineer Trent Canal Construction, Peterboro, was recently announced as the successful candidate for the position of Principal Assistant Engineer Subdivision A of the Department of Railways and Canals.

Sir William Mackenzie arrived at Halifax, N.S., Mar. 4, on his return from England, and was entertained to dinner by the city. On Mar. 8 he left Toronto for Winnipeg, accompanied by a number of officials, and returned to Toronto a week later.

Howard S. Folger, of Kingston, Ont., who sold out his interests in and retired from the management of the St. Lawrence River Steamboat Co., and the Thousand Islands Steamboat Co., recently, is reported to have sold his yacht Caprice, to A. E. Knopf of New York.

Count Jacques de Lesseps, who recently married Miss Grace Mackenzie, daughter of Sir Wm. Mackenzie, President Canadian Northern Ry., has been awarded the $10,000 prize in connection with the recent aviation meet at New York, two other competitors being disqualified.

In announcing the resignation of G. W. Vaux, General Passenger Agent, G.T.R., in our last issue, it was stated that it was owing to ill health. We have been advised that he resigned for purely personal reasons, that he is in very good health and that he is immediately available should his services be required.

W. W. Butler Vice President Canadian Car and Foundry Co., entertained some 70 friends at dinner at the Windsor Hotel, Montreal, March 17. Among the speakers were Hon. G. P. Graham, Minister of Railways and Canals; T. Drummond, President Lake Superior Corporation, and D. B. Hanna, Third Vice President Canadian Northern Ry.

Unconfirmed press reports say that Count de Lesseps, who married one of Sir William Mackenzie's daughters recently, will settle in Canada and join R. J. Mackenzie in Winnipeg in connection with Canadian Northern Ry. work. The Count and Countess are spending their honeymoon in Egypt, where Lady Macenzie and her other daughter are also at present.

J. D. McDonald, formrely District Passenger Agent G.T.R. Toronto, was entertained to dinner at the Albany Club, Toronto, Mar. 17, by a number of transportation officials and others, and was presented with an engraved gold watch and address, and a travelling bag for Mrs. McDonald, on his leaving for Chicago, Ill., where he has been appointed Assistant General Passenger Agent G.T.R.

Sir Wm. Mackenzie, who arrived at Halifax, N.S., on March 4 on the s.s. Royal George, from Bristol, Eng., was entertained at dinner that evening at the Halifax Hotel by the Board of Trade and other citizens. Among the speakers were the Mayor, who presided, Sir Wm. Mackenzie, D. B. Hanna, Third Vice President C.N.R., and G. Shaw, General Traffic Manager C.N.R.

H. M. Tait, who has been appointed General Agent Passenger Department Atlantic Service, at Minneapolis, Minn., is a son of Sir Melbourne Tait, Chief Justice of the Quebec Superior Court, and a brother of Sir Thomas Tait, who recently resigned the chairmanship of the Victorian Railway Commission, Australia, and who was formerly Master of Transportation C.P.R.

J. D. McDonald, whose appointment as Assistant General Passenger Agent G.T.R., Chicago, Ill., was announced in our last issue, was born at Toronto Aug. 27, 1855, and entered G.T.R. service in 1868, since when he has been, to 1870, messenger at Toronto; 1870 to 1875, assistant ticket agent, Toronto; 1875 to 1896, ticket agent at Buffalo, N.Y.; 1896 to May, 1902, City Passenger and Ticket Agent, Buffalo, N.Y.; May 1902 to Mar. 1, 1911, District Passenger Agent, Toronto.

Osborne Scott, whose appointment as Assistant General Passenger Agent Canadian Northern Ry., Winnipeg, was announced in our last issue, was born at St. Andrews, Man., July 6, 1882, and entered C.N.R. service June, 1901, since when he has been, to Feb., 1903, in Audit Office Passenger Department; Feb., 1903, to Feb., 1910, in Traffic Department, in charge of baggage, ticket, stock and advertising; Feb. to Oct., 1910, Travelling Passenger Agent, Toronto; Oct., 1910, to Mar. 1, 1911, chief rate clerk Passenger Department, Winnipeg.

Sir Thomas and Lady Tait and Miss Tait are proceeding leisurely on their trip from Australia to Canada. Leaving Melbourne on November 30, they spent a week in Ceylon, a month in India and a fortnight in Egypt, and then went to St. Moritz, Switzerland, for a few weeks of cold weather and winter sports. From there they intended to go to the Riviera, thence to Paris, and about the middle of May to London, where they will remain until after the coronation, and then sail for Canada, which they expect to reach about the middle of July.

G. W. Vaux, whose resignation from the position of General Passenger Agent G.T.R., we announced in our last issue, was born at Montreal, Mar. 21, 1866, and entered G.T.R. service, July 13, 1881, since when he has been, to June 13, 1885 office boy General Passenger Department, Montreal; June 13 1885 to Feb. 1, 1897, clerk same department, Montreal; Feb. 1, 1897, to Aug. 1, 1889. chief clerk, same department, Montreal; Aug. 1, 1899, to May 1, 1900, Assistant General Passenger and Ticket Agent, Montreal; May 1, 1900 to May 1, 1909, Assistant General Passenger and Ticket Agent, Chicago, Ill.; May 1, 1909 to Mar. 1, 1911, General Passenger Agent, Montreal.

A. S. Dawson, who has been appointed Chief Engineer C.P.R. Irrigation Department, Calgary, Alta., was born at Pictou, N.S., Sept. 6, 1871. He graduated B.A. Sc. from McGill University, Montreal, in 1893, and from 1894 to 1898 was engaged in hydraulic engineering in the U.S.;

"CHAMPION" DUMP WAGONS

Short turns; quick handling.
Short wheel base; full capacity.
Quick and easy dumping.
Extra rugged construction.
Does away with the constant expensive
breakdowns of ordinary wagons.

1898 to 1903, engineering work on C.P.R. Western Lines; 1903 to 1911, engineering work C.P.R. Irrigation Department, Calgary; in Jan. 1908, he was appointed Assistant Chief Engineer of the Department, which position he held to Jan. 1911, when he was appointed Chief Engineer. He became a student of the Canadian Society of Civil Engineers in 1889, associate member in 1895, and member in 1909.

A. E. Duff, whose appointment as District Passenger Agent, G.T.R., Toronto, we announced in our last issue, was born at Sherbrooke, Que., May 1, 1872, and entered G.T.R. service in 1887, since when his record has been: Winter, 1887, shovelling snow on section at Danby, Que.; summer of 1888, water boy on train between Richmond and Montreal, Que.; Feb. 1889, to Aug. 1889, switchman at St. Bruno, Que.; Aug. 1889 to April 1890, switchman, St. Isidore Jct. Que.; April, 1890, to Aug. 1890, night telegraph operator, Upton, Que.; Aug. 1890, to Aug. 1892, night telegraph operator, Actonville, Que.; Aug. 1892, to May, 1895, night telegraph operator, South Durham, Que.; June, 1895, to Mar., 1898, agent, Belœil, Que.; Mar. 1898, to Oct., 1901, agent, North Stratford, N.H.; Oct., 1901, to Aug., 1904, agent, St. Lambert, Que.; Aug., 1904, to Jan. 1907, Travelling Passenger Agent, Montreal; Jan. 1907 to Sept. 1908, General Agent Passenger Department, Winnipeg, all in G.T.R. service; and Sept. 1908 to Mar. 1, 1911, General Agent Passenger Department and also District Passenger Agent G.T.P.R. lines west of Lake Superior, Winnipeg.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry., Manitoulin and North Shore Ry.—G. A. Montgomery, heretofore Superintendend Michipicoten Division, A.C. & H.B.R. Michipicoten Harbor, has been appointed Superintendent A.C. & H.B. and M. & N.S. Rys, performing all duties heretofore handled by the General Superintendent and Traffic Manager, excepting construction. Office, Sault Ste. Marie, Ont. The office of General Superintendent and Traffic Manager, heretofore held by T. J. Kennedy, who resigned to become President of the Superior Construction Co., has been abolished.

H. J. Herrold, has been appointed General Agent in charge of all matters pertaining to freight and passenger traffic. Office, Sault Ste. Marie, Ont.

Canadian Northern Ontario Ry.—C. Price Green, heretofore Passenger Agent, Toronto, has been appointed District Passenger Agent. Office, Toronto.

Canadian Northern Pacific Ry.—D. O. Lewis, of Mackenzie, Mann & Co.'s staff, who has been acting engineer on the construction of the Portland Canal Short Line Ry., with headquarters at Stewart, B.C., has been appointed Division Engineer of C.N.P.D. lines on Vancouver Island. Office, Victoria, B.C.

G. B. Hughes, District Engineer, continues in charge of surveys on Vancouver Island.

W. Tuxford, heretofore Secretary to Third Vice President C.N.R., Toronto, has been appointed chief clerk to Division Engineer of C.N.P.D. lines on Vancouver Island, Victoria, B.C.

Canadian Northern Ry.—C. Price Green, heretofore Passenger Agent, Toronto, has been appointed District Passenger Agent. Office, Toronto.

J. C. O'Donnell, heretofore Trainmaster at Dauphin, Man., has been appointed Trainmaster at Winnipeg, vice M. B. Murphy, transferred to Duluth, Rainy Lake and Winnipeg Ry. service.

G. W. Chapman, heretofore conductor District 4, west of Kamsack, has been appointed Trainmaster at Dauphin, Man., vice J.C. O'Donnell, transferred.

Canadian Northern Steamships Ltd.—W. A. Mason, heretofore Soliciting Passenger Agent G.T.R., Toronto, has been appointed City Ticket Agent C.N.S. Ltd., Toronto.

Canadian Pacific Ry.—V. A. Harshaw, heretofore Superintendent District 1, Ontario Division, Toronto, has been appointed Superintendent District 2, Atlantic Division, vice R. King, transferred. Office, Woodstock, N.B.

J. K. McNeillie, heretofore Superintendent District 2, Ontario Division, London, has been appointed Superintendent District 1, Eastern Division, vice A. L. Smith, transferred. Office, Farnham, Que.

J. H. Sheldon, acting Trainmaster District 1, Eastern Division, Farnham, Que., has resumed his former position as conductor on that district.

A. L. Smith, heretofore Superintendent District 1, Eastern Division, Farnham, Que., has been appointed Superintendent District 3, Eastern Division, vice G. Hodge, transferred. Office, Montreal.

R. King, heretofore Superintendent District 2, Atlantic Division, Woodstock, N.B., has been appointed Superintendent District 1, Ontario Division, vice V. A. Harshaw, transferred. Office, Toronto.

E. Davis, heretofore rate clerk, has been appointed chief excursion clerk, District Passenger Agent's office, Toronto., vice H. R. Mathewson, transferred to Chicago.

A. McMillan has been appointed rate clerk in District Passenger Agent's office, Toronto, vice E. Davis, promoted.

G. Hodge, heretofore Superintendent District 3, Eastern Division, Montreal, has been appointed Superintendent District 2, Ontario Division, vice J. K. McNeillie, transferred. Office, London.

J. Scott, heretofore Trainmaster District 2, Saskatchewan Division, Saskatoon, has been appointed Trainmaster at Kenora, Ont., vice A. R. Holland, acting Trainmaster, transferred to Saskatoon, Sask.

W. A. Mather has been appointed Resident Engineer District 2, Manitoba Division, Winnipeg, vice P. R. Gransaull, resigned.

V. J. Melsted, heretofore transitman at Winnipeg, has been appointed acting Resident Engineer at Brandon, Man., vice T. Lees, Resident Engineer, transferred to Vancouver.

A. R. Holland, heretofore acting Trainmaster, Kenora, Ont., has been appointed Trainmaster District 2, Saskatchewan Division, vice J. Scott, transferred. Office, Saskatoon.

W. McGimpsey, heretofore storekeeper at Sutherland, Sask., has been appointed Storekeeper at Swift Current, Sask., vice W. J. Wood, transferred to Medicine Hat, Alta.

A. Burke has been appointed Storekeeper at Sutherland, Sask., vice W. McGimpsey, transferred to Swift Current, Sask.

H. J. Cardell has been appointed Superintendent of Agencies in charge of all matters pertaining to the agents of the Canadian Pacific Irrigation Colonization Co., vice A. B. Braddick resigned. He will report to J. S. Dennis, President C.P.I.C. Co. Office, Calgary, Alta.

W. J. Wood, heretofore Storekeeper at Swift Current, Sask., has been appointed Storekeeper at Medicine Hat, Alta., vice A. W. Gleaves, resigned.

D. Condell has been appointed Car Foreman at Nelson, B.C., vice W. Fowler resigned.

T. Lees, heretofore Resident Engineer, Brandon, Man., has been appointed Resident Engineer District 2, British Columbia Division, vice F. P. Wilson, resigned to enter private business. Office, Vancouver.

E. L. McCrea has been appointed Local Freight Agent, Vancouver, B.C., vice A. L. Clements, resigned.

J. McCreery, formerly wharf agent at Vancouver, B.C., has not, as mentioned in our last issue, been transferred, but has left the company's service.

H. Vollans, heretofore Roadmaster, Cascade Section, British Columbia Division, has been appointed Roadmaster of Vancouver Terminals.

F. G. Frieser has been appointed Assistant Foreign Freight Agent, vice H. D. Annable, deceased. Office, 1 Broadway, New York.

H. M. Tait, heretofore Travelling Passenger Agent Atlantic Service, Seattle, Wash., has been appointed General Agent Passenger Department Atlantic Service, vice T. J. Burns, resigned. Office, 232 Nicollet Ave., Minneapolis, Minn.

H. R. Mathewson, heretofore chief excursion clerk, District Passenger Agent's office, Toronto, has been appointed chief clerk to General Agent Passenger Department, Chicago, Ill.

J. J. Forster, heretofore City Passenger Agent Atlantic Service, Seattle, Wash., has been appointed Travelling Passenger Agent Atlantic Service, vice H. M. Tait, promoted to Minneapolis. Office, 609 First Ave., Seattle, Wash.

Chicago and North Western Ry.—J. M. Copeland, heretofore Travelling Freight and Passenger Agent, Chicago, Milwaukee and St. Paul Ry., Toronto, has been appointed Travelling Agent C. and N.W. Ry., vice F. H. Terry, who has entered the Great Northern Ry. service. Headquarters, Toronto.

Chicago, Milwaukee and St. Paul Ry.—J. M. Copeland, heretofore Travelling Freight and Passenger Agent, Toronto, has resigned to enter the Chicago and North Western Ry. service.

Duluth, Rainy Lake and Winnipeg Ry.—M. B. Murphy, heretofore Trainmaster Canadian Northern Ry., Winnipeg, has been appointed Superintendent D.R.L. & W. R., vice D. T. Murphy, resigned. Office, Virginia, Minn.

Grand Trunk Ry.—J. W. Farrell, heretofore Trainmaster District 3, Eastern Division, Richmond, Que., has been appointed Trainmaster District 1 Eastern Division. Office, Island Pond, Vt. Reports for District 1, heretofore made to Trainmaster Connolly are made to J. W. Farrell at Island Pond. J. J. Connolly continues as Trainmaster, District 2.

R. P. Smallhorn, heretofore Freight Agent at Quebec and Point Levi, has been appointed Trainmaster District 3, Eastern Division, vice J. W. Farrell, transferred to Island Pond, Vt. Office, Richmond, Que.

W. J. Nixon, heretofore Chief Dispatcher Districts 4 and 5, Montreal, has been appointed Trainmaster District 5. Office, Montreal. Reports for District 5, heretofore made to Assistant Superintendent Coyle, Montreal, will be forwarded to Trainmaster's Office, Montreal.

E. S. Waterson, has been appointed Chief Train Dispatcher Districts 4 and 5., vice W. J. Nixon, promoted to Trainmaster. Offiffice, Bonaventure station, Montreal.

B. Chown has been appointed Soliciting Passenger Agent, Toronto, vice W. A Mason, resigned to enter other service

W. R. Davidson has been appointed Trainmaster Districts 16, 17 and 24, Districts 18 Komoka to Glencoe, District 19 Glencoe to Kingscourt Jct., Port Colborne to Welland, Jct., Port Robinson to Port Dalhousie District 20 Tillsonburg Jct., to Harrisburg, reporting to the Assistant Superintendent. Office, Hamilton, Ont.

J. Leys has been appointed foreman erecting shop, Battle Creek, Mich., vice A. G. [illegible]

W. G. Spencer has been appointed foreman machine shop, Battle Creek, Mich., vice M. H. Westbrook, resigned.

Great Northern Ry.—F. H. Terry, heretofore Travelling Agent, Chicago & Northwestern Ry., has been appointed Travelling Agent, succeeding F. A. Nar[illegible], who has been appointed General Agent, Minneapolis, St. Paul and Sault Ste. Marie Ry., at Toronto, as announced in our last issue.

Manitoulin and North Shore Ry.—See Algoma Central and Hudson Bay Ry.

Northern Pacific Ry.—W. Adamson, heretofore Contracting Freight Agent, Winnipeg, has been appointed Travelling Freight Agent, Detroit, Mich., covering Ontario territory, vice W. E. Belcher, resigned.

Ottawa and New York Ry.—F. J. [illegible], heretofore General Freight Agent, has also been appointed General Passenger Agent, vice H. K. Gays, resigned. Office, Ottawa.

Quebec and Saguenay Ry.—J. F. Guay, heretofore Chief Engineer, has been appointed Manager. Office, Richelieu Bldg., Quebec.

A. H. N. Br[illegible] has been appointed Chief Engineer, vice J. F. Guay, appointed Manager. Office, Richelieu Bldg., Quebec.

Richelieu and Ontario Navigation Co.—J. E. Cookson has been appointed Baggage and Claims Agent, vice R. McEwen, deceased. Office, Montreal.

Rutland Rd.—W. M. Skinner having resigned as General Baggage Agent, all station and train baggage reports and correspondence relating to baggage and baggage claims are addressed to C. Hartigan, General Passenger Agent, Rutland, Vt.

Temiskaming and Northern Ontario Ry.—J. Drinkwater, District Roadmaster, North Bay, has been transferred, temporarily, to construction work on the Porcupine branch, in charge of tracklaying and steam shovel work.

S. J. F[illegible], Supervisor, is acting as District Roadmaster, North Bay, vice J. Drinkwater, temporarily transferred to the Porcupine branch.

Wabash Rd.—The title of Jas. Gass, New York State Passenger Agent, has been changed to District Passenger Agent. He will report to J. Maloney, General Passenger Department, Buffalo, N.Y.

White Pass and Yukon Route.—W. Tatter has been appointed Superintendent, River Division, vice P. F. Scharschmidt, resigned. Office, White Horse, Yukon.

◆

Railway Building in Saskatchewan.—A return presented to the Saskatchewan Legislature showed that during 1910, grading was completed on 817.92 miles and track laid on [illegible] miles on lines for most of which the Government had granted aid. This mileage was divided among the following companies:

	Grading	Track laid
C.P.R.	337.42	168.30
C.N.R.	267.21	219.69
G.T. Pacific R.	217.25	67.65

Of the mileage of track laid, trains were being operated over [illegible] miles by the companies and over 287.47 miles by the contractors.

A Cornwall, Ont., dispatch says that in the county court there recently D. Monroe of that place sued the G.T.R. for damages for loss of time, inconvenience and injury to health consequent upon a train not stopping when signalled at a flag station. He was awarded $50 damages and costs.

The Minister of Railways on the Intercolonial Railway

The Minister of Railways, in the course of a speech on transportation in the House of Commons Mar. 10, referred at considerable length to the Intercolonial Ry. He said it was not a small railway, its main tracks were 1,490.67 miles long and its sidings 446 miles. The capital expenditure to Mar. 31, 1910, was $82,819,218.52, while the capital expenditure for the year ended Mar. 31, 1911, will show about $1,000,000, the smallest amount expended for many years, notwithstanding the fact that a good deal of money is being expended on special works at Chatham, Sydney Mines and North Sydney. The net revenue which the I.C.R. was able to hand back to the Receiver General during the last financial year was $623,164.66. The total train mileage for the year ended June 30, 1910, was 6,762.53, an increase of 19,624 miles over the previous year. This increase was all in freight trains, as there was a decrease in the passenger train mileage owing to the decrease in the number of trains run. Notwithstanding the decrease in passenger train mileage there was an increase in the number of passengers carried.

The operating expenses of the line will compare very favorably with those of any other line in Canada, when everything is taken into consideration. The distribution of the operating expenses is as follows, the figures in brackets being those for the year ended June 30, 1909.—Maintenance of Way and Structures, 19.91%, (18.39%), maintenance of equipment, 21.19%, (22.24%), traffic expenses 2.07%, (2.08%); transportation expenses, 51.49%, (54.84%); general expenses, 2.34%, (2.45%). The I.C.R. has to contend with the keenest competition, particularly with water transportation, and this will always keep the rates low. At Montreal the railway had to compete with water transportation during a long season of open navigation, and the rates for the entire year, on some commodities, had to be made on the basis of water borne competition. Then the I.C.R. had to carry freight as between Montreal and St. John at the same rate as the C.P.R., although the latter's haul line was 250 miles shorter, and there was water competition between Halifax and Cape Breton points all the year. Then again the I.C.R. was never built as a straight commercial proposition or it would not have been located in the peculiarly meandering way in which it has been built. Further there was no line in Canada that gave so good a service to the people all along the line as the I.C.R. Coming to the question of rates, the Minister stated that better freight and passenger rates were given on the I.C.R. than on other lines. The rate per ton per mile worked out for the I.C.R. at .553 of a cent, against .77[illegible] of a cent for the C.P.R., .672 of a cent for the G.T.R. and .734 of a cent for the Canadian Northern Ry., whereas the rate per passenger per mile was 1.[illegible]c on the I.C.R. against 1.821c on the C.P.R., 1.767c on the G.T.R., and 2.181 on the Canadian Northern Ry. If the C.P.R. had been operated on the I.C.R. basis for the year ended June 30, 1910, it would have earned $17,035,236 less for freight and $1,713,918 less for passengers than it did, while if the I.C.R. had been operated on the C.P.R. basis, its earnings would have been increased by $2,145,000 from freight and by $203,[illegible] from passengers. The cost of running a train one mile on the I.C.R. was during the year ended June 30, 1910, $1.[illegible], against $1.501 on the C.P.R., $1.317 on the G.T.R. and $1.[illegible] on the Canadian Northern Ry. These observations brought him back to the original proposition that the I.C.R. did not earn a large surplus, despite its position and location as a product of confederation, simply because its freight and passenger rates are the lowest in the Dominion.

The Minister then stated that during the nine months ended Dec. 31, 1910, the I.C.R. had out of revenue, laid 55.66 miles of 80 lb. rails; ballasted 135.5 miles of track, put in 627,711 new ties, and 314 sets of switch ties, in addition to expending $153,446.16 on heavy repairs; a large sum on locomotive repairs; an excess of $96,000 had been paid for rolling stock repairs over the same period of 1909; of $236,000 for maintenance of way and structures, and from the maintenance of equipment fund there had been provided within the same period, three Pacific type locomotives, 50 steel frame 30 ton box cars, 21 steel dump 50 ton coal cars, 100 box cars, 30 tons capacity, and 50 wood cars 30 tons capacity, at a cost of $320,670. This expenditure was met out of a fund created by setting aside $25,000 a month out of revenue, and for a rail renewal fund $12,500 a month was created out of revenue. The balance from these funds was not handed back to the Receiver General, but was retained towards future expenditures. He proposed to establish another fund, in the nature of an insurance fund. The value of the property destroyed at Campbellton by fire was estimated at $76,000. He proposed charging this amount to revenue, and to make a further appropriation from net revenue of $100,000, and put it into renewal equipment. If necessary, he proposed to obtain parliamentary sanction for this and the other special accounts, and to settle on definite principles what should be charged to revenue account, and what to capital. It was estimated that at the end of the financial year, Mar. 31, the I.C.R. would show a net revenue of $700,000.

Referring to the relations between the I.C.R. and the G.T.R., the Minister said a few years ago an arrangement was made for the Intercolonial to run into Montreal, and by agreement with the G.T.R., its terminals are used, and its line run over from Ste. Rosalie to Bonaventure, and there is an arrangement for the interchanging of traffic. The G.T.R. gathered traffic mainly in Ontario, and handed it to the I.C.R. at Montreal during 1910, on which the I.C.R. earned $908,066.35 in freight, and during the same period the I.C.R. handed to the G.T.R. at Montreal, traffic, on which it earned $753,452.28. The arrangement has been a good one; it was to hand over to the G.T.R. at Montreal, all traffic which was not otherwise routed, the G.T.R. being bound to hand over unrouted traffic to the I.C.R. It would not be very long before the G.T.R. and the G.T. Pacific would come to the Government or to the I.C.R. management and ask to be relieved from their arrangement to hand over this traffic at Montreal. The G.T.R. will want to carry this traffic on to Levis, and hand it over there to the G.T. Pacific. He was not prepared to say what would happen when this request was made; but he did not think it would be granted unless the terms were right. "I believe," he went on to say, "the future of the I.C.R. is bound up in getting an exchange of traffic with a western through line that runs from the Pacific to the Atlantic, and from the Pacific to the St. Lawrence at least. I believe that is what will make the I.C.R. of still greater benefit to the people of Canada than it has been in the past. The Canadian Northern must shortly have a through line from the Pacific down to Montreal and Quebec, it must get down to the seaboard in some way. I have an idea that in years to come, perhaps before long, the I.C.R. ought to get traffic from the Canadian Northern Ry., its through traffic as well as its local traffic; and if the time ever comes when we have to release our arrangement with the G.T.R., which may not be for many years, then I think the proper thing for the I.C.R. would be to link up with the Canadian Northern Ry., and hand its traffic from Montreal and Quebec, its through as well as its local traffics, over to the Canadian Northern as far as possible for transportation west."

U. S. Freight Rate Advances Refused.

Following are the official summaries of the Interstate Commerce Commission's two recent decisions refusing applications by railway companies to advance freight rates:

THE EASTERN CASE.

In re investigation of advances in rates by carriers in official classification territory.

Carriers in official classification territory filed tariffs with this Commission naming increases upon all class rates and upon one-half of the commodity rates within that territory. The Commission, under provisions of the Mann-Elkins law, instituted proceedings of inquiry into the reasonableness of such increased rates, and, pending such investigation, the carriers voluntarily postponed the effective dates of the tariffs filed. After full hearing and investigation of the matter and upon all the facts and circumstances disclosed by the record; Held, That there is no evidence before the Commission which establishes the necessity for higher rates. The probability is that increased rates will not be necessary in the future. In view of the liberal returns received by these carriers in the past 10 years, they should be required to show, with reasonable certainty, the necessity before the increase is allowed. If actual results should demonstrate that the Commission's forecast of the future is wrong, there might be grounds for asking a further consideration of this subject.

The act to regulate commerce, as amended in regard to increased rates, should not receive exactly the same interpretation which has been put upon the English act in regard to advanced rates. The English act creates a presumption that the rates in effect on Dec. 31, 1892, were reasonable rates, and the justice of any increase must be tried by that standard, whereas the act to regulate commerce as amended does not intend to enact that all rates in effect on Jan. 1, 1910, are just and reasonable. Upon the contrary, it is open to any shipper or to this Commission to attack such a rate as unjust and unreasonable. The only effect of our statute is to cast, in certain cases, the burden of proof upon the carrier.

Before any general advance in rates can be permitted it must appear with reasonable certainty that carriers have exercised proper economy in the purchase of their supplies, in the payment of their wages and in the general conduct of their business.

The Commission has been compelled to dispose of this case upon the evidence available, but there is no testimony tending to show the cost of reproducing these properties. It is plain that a physical valuation would introduce in the calcuation a new element which might lead to a different conclusion. Congress ought to authorize a reproductive valuation of those railroads subject to Federal jurisdiction. The interest of the public ought not to depend upon a valuation made entirely by the owners of these properties, no matter how honestly the work may be prosecuted.

These class rates have been continuously in effect for the last 30 years, and less complaint with respect to the adjustment of rates has been received from this territory than from any other with which this Commission has to do. During this long period business has adjusted itself to this scheme of rates, and the Commission is not disposed upon, the mere suggestion that some better scheme might have been originally devised, to subvert the conditions which have become established.

Commodity rates stand somewhat different. An examination of the schedules shows that most of these commodity rates were carried under the classification when tariffs were first filed with this Commission in 1887, and that the present commodity rates are from 10 to 25% lower than the class rates then applicable. Carriers have frequent occasion to vary their commodity rates with varying conditions. While earnest objection has been made to the advance in class rates, in only three or four instances has the increase in commodity rates been especially attacked.

For these reasons the Commission dislikes to tie up, by hard and fast order, these commodity rates, and has concluded, as to all the rates involved in this proceeding, to simply require the defendants to cancel on, or before Mar. 10, 1911, their advanced tariffs an file and to restore their former rates, which are the rates now in effect. If this requirement is not complied with the proposed rates will be suspended, the necessary findings of fact made, and the usual two-years' order issued as to all the tariffs involved.

THE WESTERN CASE..

In re investigation of advances in rates by carriers in Western Trunk Line, Trans-Missouri, and Illinois Freight Committee territories.

The principal carriers in Western Trunk Line, Trans-Missouri, and Illinois Freight Committee territories filed with the Commission tariffs increasing their rates upon some 200 commodities in that territory, but, pending investigation involving the reasonableness of such increased rates, the carriers voluntarily suspended the effective dates of the tariffs. After full hearing and investigation of the matters involved and upon all the facts and circumstances disclosed by the record; Held, That the proposed rates are beyond the limitations placed by law upon the carriers, and should not become effective..

The distinction between the English act as to increased rates and the act to regulate commerce upon that subject is clear. The effect of the English statute was to cast upon the railway company the burden of proving that the increase of the rate was reasonable, whereas the act to regulate commerce as amended requires the carrier to show the reasonableness of the increased rate. Under the act of Parliament the carrier is called upon to justify the difference between its previously existing rate and the rate established, while under the act of Congress the carrier is called upon to prove that the new rate as a whole is reasonable.

The phrase, "the burden of proof shall be upon the common carrier," in the Mann-Elkins Act, means that the railroad which increases its rates, if challenged, must assume to prove to this Commission that the increased rates are within the words of description and limitation used in the act; that is, that they are just and reasonable. They must satisfy the mind of this Commission of this fact.

It is doubtless true that in its control over the charges which the railroads make this Commission exercises a power so extensive as to justify the broadest consideration of the economic and financial effects of its orders, but the Government has not undertaken to become the directing mind in railroad management. This Commission is not a general manager of railroads, and no matter what the revenue the carriers may receive there can be no control placed by the Commission upon its expenditure, no improvements directed, and no economies enforced.

The strength of the carriers' case is in these two contentions: (1) That the roads are not earning a fair return upon the valuation of their property; 2) That the cost of operating has increased because of increased wages. While it is true that cost of operation has increased by the amount shown as allowed to labor and addition to wages, it is also true that operating revenues have increased so as to more than absorb increased operating expenses. Moreover, cost figures furnished would indicate that under skilful management an additional tonnage may be handled under a higher wage schedule without increasing the cost of the service given.

It appears that these commodity rates already paid their due share of the value of the service rendered by the carriers. Many of them, in fact, are now twice as high for the haul immediately west of Chicago as corresponding rates for a similar haul immediately east of Chicago.

Our laws do not seek to establish dominion over private capital for any other purpose than to make sure against injustice being done the public, and thereby to make such capital itself more secure. The Commission is dealing here with a difficult problem, involving multitudinous facts and an infinite variety of modifying conditions, which make the establishment of principles and the framing of policies a matter of slow evolution. Congress has laid down a few rules. These rules the Commission is attempting to apply. It is not for the Commission to say that it represents the Government and may have a policy of its own which in any degree runs counter to the power granted to the Commission or the duty imposed upon the Commission. The railroads may not look to this tribunal to negative or modify the expressed will of the legislature. They have laid before the Commission the facts and law which would make for a justification of their course in the increasing of rates, but to the mind of the Commission their justification has not been convincing.

The carriers herein are requested to withdraw the proposed tariffs forthwith. If such action is not taken on or before Mar. 10, 1911, the Commission will further suspend these rates, make appropriate finding, and issue an order directing the maintenance of the present rates for a period of two years from that date.

Early Maritime Province Railways.

Prior to Confederation, according to answers to questions in the House of Commons by the Minister of Railways, recently, the province of Nova Scotia built 145 miles, and the province of New Brunswick 108 miles of railway lines, which now form part of the Intercolonial Ry. The mileage in Nova Scotia was built between 1854 and 1858, and extended from Halifax via Truro to Pictou, and the Windsor branch, the cost of construction being $6,124,241.15. The mileage in New Brunswick was built between 1856 and 1860, and included the following lines: Moncton to Shediac; St. John to Rothesay, Rothesay to Hampton; Hampton to Sussex, and Sussex to Moncton; the total cost being $4,642,484.39. These amounts were assumed as provincial debt account in 1874, 1875 and 1876.

Prior to Confederation the Prince Edward Island Government built 198½ miles of railway between 1871 and 1875 as follows: From Charlottetown to Royalty Jct.; from Royalty Jct, to Summerside; from Summerside to Tignish; from Tignish to Mount Stewart; from Stewart to Souris; from Mount Stewart to Georgetown. The amount expended was $3,114,731.11, which was assumed as provincial (P.E.I.) debt account, 1874, 1875 and 1876

Hon. G. P. Graham on Railways.

Transportation, said the Minister of Railways in a speech in the House of Commons Mar. 10, has as much to do with the [illegible] of a country as tariff has. These two may [illegible] be interwoven in a measure, but if the methods are not provided by which the wealth producers can get the products of their labors to market at a reasonable rate, with fair speed and in good condition, there is little use in tariffs and less use in hunting for markets for these products. It is no exaggeration to say that in the matter of perfecting transportation facilities by aid from various sources Canada [illegible] leads the world in the [illegible] she has shown. There is a difference of opinion as to the propriety of further encouraging these great transportation companies by cash subsidies, by land grants or by guarantee. It was not the policy of the present government to any more give aid by way of land grants for the extension of transportation facilities. The land of the Dominion had become too valuable to give in this way, and the potentialities of increase in that value were so great on account of the rapid development of the country that it was more practical to give in dollars and cents any aid proposed. And besides when it is given in this way the people know exactly what they are paying for the benefit received. He had no fear of the success, present or future, of the railway companies of Canada, and [illegible] north-and-south lines we must not forget that [illegible] running south [illegible] can take traffic from Canadian roads also run north, and can bring traffic to Canadian roads. And Canada having the geographical position on this continent that she enjoys ought to be able to more than hold her own in the carrying trade of the continent, other things being at all equal. Our rail routes are shorter, and we own the largest portion of the waterways that lead from the west to the east. Under [illegible] I think with the people of the Dominion of Canada [illegible] whether they shall [illegible] their carrying trade and also [illegible] whether they shall in the future, [illegible] their own carrying trade and also a [illegible] of the carrying trade of the great [illegible] to the south of us."

He next referred to the work of the Board of Railway Commissioners, stating that [illegible] in Canada, as he [illegible] outside Canada, the [illegible] Board [illegible] was [illegible] than any other similar body [illegible] world and it was the most popular tribunal for the settlement of difficulties in which the people are concerned that existed [illegible]. It had been [illegible] that [illegible] should be [illegible] the interests of the public in [illegible] before the Board. This [illegible] but he [illegible] it was [illegible]. There had [illegible] staff of the Board, an operating department, at the head of which there was a practical [illegible] to advise the Board. The creation of this department had proved [illegible] it was much [illegible] matters than formerly.

The railway mileage [illegible] that [illegible] in 1910 was 24,731, [illegible] 24,104 in 1909, and [illegible] in 1901. In the mileage the G. T. Pacific Ry. [illegible] it being not operated as a [illegible] road. The mileage under construction on June 30, 1910, was 4,500 miles. The [illegible] was $1,110,297,687. Aid had been granted towards the building of these railways by the Dominion, the several provinces and by municipalities to the amount of $190,752,062, of which $1,7[illegible] was given last year, while in addition last year the [illegible] a loan of $10,000,000 to the G. T. Pacific Ry. The Dominion had granted 2,040,378 acres of land in aid of railway construction and the province [illegible],551,943 acres. The number of passengers carried last year was 3,211,267 greater than in the previous year, and [illegible] greater than in the year ended June 30, 1901, while there was an increase of 7,640,608 tons of freight carried over the total for the year ended June 30, 1909, and of $37,483,495 tons over the year ended June 30, 1901. The gross receipts of the railways last year totalled $173,956,217, against $143,956,-[illegible] in the preceding year, and $72,898,-749 for the year ended June 30, 1901; while the operating expenses were last year $120,405,440, against $104,600,084, and $50,368,726 for the year ended June 30, 1909. The available rolling stock at June 30, 1910, consisted of 4,079 locomotives, 119,713 freight cars, and 4,330 passenger cars, there having been added during the year 110 locomotives, 138 passenger cars, 1,934 freight cars, and 789 company cars. There were in the service of Canadian railways on June 30 last 123,768 employes, whose wage bill amounted to 67,167,703. In addition, there were 16,709 employes engaged in outside operations such as steamers and hotels, whose remuneration amounted to $5,169,923. The aggregate would therefore be 140,477 employes, with a total wage bill of $72,237,626. Assuming that each railway employe represents five persons, it is obvious that about one individual in 10 of the total population finds a livelihood from the railways of Canada.

"Now," said the Minister in conclusion, "to put it briefly, these figures show, I think, these facts. The year 1910, measured by the increased volume of traffic, measured by the earnings, economic administration, satisfactory maintenance, and swelling mileage, and measured by every proper standard, appears to have been the best year in the history of Canadian railroads."

◆

Railway Development.

The following matter was too late to be included with the other matter under that heading on pages 319 to 323:

Brandon Transfer Ry.—A letter was received by the President of the Brandon, Man., Board of Trade, Mar. 15, from H. A. K. Drury, of the engineering staff of the Board of Railway Commissioners, Winnipeg, stating that he would reach the city Mar. 23 to make the necessary inspection of the route for the proposed transfer railway, to connect all the railways now reaching the city. (Mar., pg. 205.)

Cobalt Range Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build the lines authorized by chap. 71 of the statutes of 1905. MacCraken, Henderson, McDougal and Greene, Ottawa, are solicitors for applicants. (June 1909, pg. 475.)

Quebec and New Brunswick Ry.—The [illegible] for the construction of a line of railway [illegible] by the Q. and N.B. Ry. from Quebec [illegible] to St. John, N.B., [illegible] by T. Malcolm, President of the International Ry. of New Brunswick. The route of the proposed [illegible] from the south side of the St. Lawrence River near the site of the Quebec Bridge right across the country, entering New Brunswick near Connors, [illegible] to St. Leonards, the terminal of the International Ry. of New Brunswick, on the St. John River, thence to Grand Falls or Aroostook Jct., and the south shore of the St. John River, via Woodstock and Fredericton to St. John. The distance from Quebec to St. John by this route is 102 miles against the 552 miles by the National Transcontinental Railway route, made of 462 miles Quebec to Moncton, and 90 miles from Moncton to St. John, via I.C.R. (Feb., pg. 113. See also St. John Valley Ry.)

Reid Newfoundland Ry.—The surveys for the Trepassey branch line have been completed. Engineer Powell, who was working at the main line end of the branch has returned to St. Johns, and Engineer Joyce, with his party, completed the location into Trepassey. It is expected that work will be started on the line during the summer. (Mar., pg. 207.)

St. John Valley Ry.—There was a lengthened debate in the House of Commons, Mar. 20, on a resolution proposed by the Minister of Railways, that the Dominion Government should lease the proposed line from Grand Falls to St. John, N.B., towards the building of which the New Brunswick Government has offered a subsidy of $25000 a mile. The lease, if made, will be for 99 years, and the rental will be 40% of the gross receipts from operation. The resolutions were adopted with some slight amendments, the most important one being that the necessary equipment was to be provided by the Intercolonial Ry.

The report of the engineer in charge of the surveys was presented to the New Brunswick Legislature Mar. 17. After describing the Fredericton-St. John section, which has been under survey during the year, and for which several routes were gone over, D. F. Maxwell, the Chief Engineer, submits estimates showing the cost of the whole line. This is given in sections, and where alternative surveys have been made, the cost of each has been estimated. No one definite route is suggested for the line as a whole and consequently until the route is finally determined upon, it is impossible to name any total sum as the estimated cost of the whole work. The estimated cost for the lightest section is $30,473 a mile, and for the heaviest, $123,00 a mile. This latter estimate covers the 23 miles from Evandale to St. John, and includes $528,000 for a bridge over the St. John River, and $1,317,625 for a bridge over the Kennebecasis River.

T. Malcolm, President of the International Ry. of New Brunswick, wrote the N.B. Government offering, on behalf of the Quebec and New Brunswick Ry., which has a charter to build a line from Quebec to St. John, to enter into a contract to build the proposed St. John Valley Ry., from Grand Falls to St. John, such line, when completed, to be leased to the Canadian Government and operated as part of the Intercolonial Ry. To this letter the Government replied that as soon as the act of the Legislature granting aid for the line becomes operative by proclamation, and the Dominion Legislation is passed the Government would be prepared to discuss the matter of a contract with Mr. Malcolm. See also Quebec and New Brunswick Ry. (Mar., pg. 207.)

◆

Grand Trunk Pacific Railway. — A Winnipeg press dispatch of Mar. 24 says contracts were let that day for $17,000,-000 of work on lines in the west, and that the contracts include 143 miles on the Calgary branch, 59 miles on the branch to Battleford, Sask.; 68 miles on the Melville-Regina branch, 72 miles on the Alberta coal branch, and 50 miles on the line from Biggar to Calgary. "Arrangements," says the dispatch, "are also being made for the erection of 140 station buildings and 100 hotels." The branch lines referred to are already under construction, and the contracts reported let are apparently for extensions, but there is undoubtedly something wrong about the reported erection of 100 hotels.

Large Orders For Steel Rails.

Mackenzie, Mann and Co. have ordered recently 90,000 tons of steel rails, as follows:—From the Dominion Iron and Steel Co., 10,000 tons 80 lbs., for Ontario lines; 35,000 tons for lines in Northwestern Provinces, and 10,000 tons 80 lbs. for British Columbia lines. From the Algoma Steel Co., 25,000 tons for lines in the Northwest Provinces, and 10,000 tons 80 lbs. have been ordered in the United States for the line between Duluth and Virginia, Minn.

The National Transcontinental Railway Commissioners have ordered 34,927 gross tons from the Algoma Steel Co., and 26,273 tons from the Dominion Iron and Steel Co., all 80 lbs.

The Grand Trunk Ry. has ordered 37,500 tons of 100 lbs. rails, divided between the Algoma Steel Co. and the Dominion Iron and Steel Co.

An unconfirmed Montreal press dispatch states that the C.P.R. has ordered 100,000 tons from the Algoma Steel Co., and 10,000 tons from the Dominion Iron and Steel Co., and that it is in the market for an additional 20,000 tons.

Additional Railway Contracts Awarded.

The Kootenay and Alberta Ry. has let a contract to Grant, Smith & Co., of Spokane, Wash., for the construction of 13 miles of line from about a mile west of Pincher, Alta., southwesterly to the Western Coal and Coke Co.'s mines at Beaver Creek.

Press reports state that the Alberta Central Ry. has let a contract to Janse, McDonald and Co. for grading and ballasting 100 miles, 64 west of Red Deer, Alta., and 36 east of it.

Among the Express Companies.

The Ontario Legislature has provided for the taxation of express companies operating in the province, at the rate of $500 for each 100 miles, or part thereof, of line operated over.

W. Bradshaw, who was recently arrested in London, Ont., on charges of raising the amounts of several Canadian Ex. Co.'s money orders to the limit mentioned on the stubs, was sentenced recently at Ingersoll, Ont., to five years in Kingston penitentiary.

The Dominion Ex. Co., incorporated under the Dominion Companies Act. has been licensed under the act respecting provincial corporations, to hold and dispose of real estate in Ontario, as if it had been incorporated under the Ontario Companies Act.

The bill which was recently before the House of Commons to compel all express companies to make returns of unclaimed balances to the Government was again considered by the Railway Committee Mar. 14 and it was decided that the companies must make such returns, but that, for the present, they would not have to hand over unclaimed amounts to the Government and the bill was reported as amended.

◆

Saskatchewan Legislature. — Among the acts assented to Mar. 14, were the following:—Incorporating the Shaw Lumber and Ry. Co.; Respecting the City of Regina's Street Railway system; Amending the Railway and Telephone Department Act; Incorporating the Moose Jaw Electric Ry.; Incorporating the Saskatchewan Co-Operative Elevator Co.

The International Association of Ticket Agents, which has its headquarters in Philadelphia, Pa., met at Norfolk, Va., March 14 and 15, and afterwards went for a trip through Florida and Cuba.

Grain Elevator Notes.

The C.P.R. is reported to have the construction of an elevator at Port Burwell, Ont., under consideration, with other improvements.

Negotiations are proceeding in Calgary, with a view to the erection of an elevator at Delburne, Alta., and it is hoped to have the work under way very shortly.

Three men have been sentenced to five years each in the Manitoba penitentiary, for the theft of about 1,200 bush of wheat from the Empire elevator at Fort William, Ont.

The Taylor Milling and Elevator Co., Ltd., of Lethbridge, Alta., has been licensed to carry on its business in British Columbia, with office at Nelson, and A. M. Johnson as its attorney.

The charges against the Thunder Bay Elevator Co. for making incorrect returns to the Warehouse Commissioner, were dismissed, at Winnipeg, Mar. 15. on the ground that the prosecution had not acted in conformity with the act, in view of the dates of the alleged offences, and the information given.

The Saskatchewan Legislature has amended the Grain Growers' Elevator Co.'s bill, in its passage through committee by providing that the Government may aid in the erection or acquisition of any local elevator by loaning up to 85% of the estimated cost of the same, such sum to be repayable in 20 equal annual instalments of principal and interest, the loan to be secured by a first mortgage on the elevator.

The appeals of the Grand Trunk Pacific Terminal Elevator Co., as owner of the G.T.P. elevator at Fort William, Ont., and of the Grand Trunk Pacific Elevator Co., as lessees, against the assessments made by the city, on the property, and for a business tax, were allowed by the Ontario Railway and Municipal Board, Mar. 15, and the assessments set aside. For the companies it was held that there was an agreement between the G.T.P.R. and the city, ratified by the Ontario Legislature, exempting the company from all taxes, except school taxes, on all lands, buildings, structures and property acquired and held for railway purposes for 15 years, from May 1, 1905, and that the elevator properties were part of the necessary terminal properties incidental to the traffic of the railway.

The Dominion Government's grain elevator bill was dealt with during March by a special committee of the Senate, and evidence was heard dealing with the matter, from the point of elevator owners. The clause forbidding stock holders in terminal elevators, having an interest in the handling of grain or being dealers in grain, was objected to by interests from Port Arthur and Fort William. Ont., and it was stated that, apart from eight, owned by the C.P.R., all the terminal elevators at the dual ports were controlled by the Line Elevators Co. and, if the clause were passed, they would be forced to abandon the terimnal elevators, without which they could not carry on their business profitably. Other interests from the same quarter objected to their elevators being dealt with under this section, as they were really wheat hospitals.

◆

The Manitoba Government has decided to petition the Dominion Government to amend the Railway Act so as to compel railway companies to place telephones in their stations. The Manitoba Premier in speaking on the subject, is reported to have stated that his Government had installed telephones in stations at its own expense, but he did not consider this fair.

Telegraph and Cable Matters.

The Department of Labor, has, upon the request of the Great North Western Telegraph Co.'s operators, agreed to the appointment of a board of conciliation to enquire into the matter of wages and hours. D. Campbell, Toronto, has been named as the men's representative.

The Board of Railway Commissioners will sit at Toronto, Apr. 24, to proceed with the general enquiry into the tariffs and tolls of telegraph companies, and the settlement of proper forms for them to use. The Dominion Government has retained I. Pitblado, K.C., Winnipeg, and W. S. Buell, Brockville, Ont., to conduct the further proceedings before the Board in this enquiry.

The recommendation of the various boards of trade in the West Indies concerning the future of cable communication between Canada and the West Indies, have been received by the committee having the matter in hand. The proposals cover the public ownership and operation of the cables in the British West Indies. and possibly the system northward to Halifax, N.S., with the duplication, or supplementing. of the line from Halifax to Jamaica by a wireless installation.

G. D. Perry, appointed General Manager G.N.W. Telegraph Co., vice I. McMichael, Vice President and General Manager, deceased, was born at Whitby, Ont., Apr. 19, 1858, and educated at Trinity College School, Port Hope. After some time with the Standard Bank of Canada, he entered Credit Valley Ry. service, being appointed cashier, Feb. 1880. and on the absorption of that railway by the C.P.R., he entered Dominion Telegraph Co.'s service, Feb. 1881, and remained with the G.N.W. Telegraph Co., when it leased the Dominion Telegraph Co.'s lines, grapher, accountant, secretary and auditor, Secretary-Treasurer and Superintendent of Supplies, the two last named positions having been held since 1902.

The following general circular has been issued in connection with appointments in the Great North Western Telegraph Co., consequent on the death of I. McMichael, Vice President and General Manager:—Geo. D. Perry has been appointed General Manager. All correspondence for the General Manager's Department should now be addressed to him. Cable registrations, enquiries and information as to tariffs and rates will continue to be sent to him as General Manager.

A. C. McConnell has been appointed Secretary and Auditor of the company.

D. E. Henry has been appointed Treasurer. All remittances should hereafter be addressed to him, and he will also have charge of the money transfer service, and all advices regarding this service should be addressed to him, and he will, when necessary, authorize bank drafts for payment of transfers.

Geo. Watt has been appointed Superintendent of Supplies. All requisitions and correspondence in connection with supplies should be addressed to him. Offices in New York State will continue to send requisitions for supplies to A. R. Porte, Superintendent, Ogdensburg, N.Y. Railway Agents who have been sending requisitions through their Superintendent of Telegraph will continue to do so.

◆

A London, Eng., cable, March 12. says:—Parr's Bank and the Western Canada Trust Co. offer £410,900 sterling 6% first mortgage bonds of the Canadian Steel Foundries, Ltd., at 102. The prospectus states that provision is made for acquiring the remaining shares and for the retirement of the outstanding bonds of the Montreal Steel Works, Ltd.

Careful investigation will convince you that when you buy a Booth Water Softener your money becomes worth more than if invested in some other machine.

Our claim of greater efficiency, simplicity, economy of operation is fully demonstrated by results being obtained. We do not claim that the Booth is the cheapest softener on the market.

If you investigate thoroughly and are looking for simplicity—efficiency—and a machine that can be relied upon at all times to produce the right results—at the right cost a Booth Water Softener will be your first choice.

Winnipeg Electric Ry., Co's Report.

Following are extracts from the report for the year 1910. The net earnings were $934,769.53, after providing for all operating expenses, taxes, the city's proportion of earnings, and other fixed charges. Out of these net earnings were declared four quarterly dividends amounting to $600,000, leaving a surplus of $334,769.53, which has been transferred to the credit of profit and loss, making a total credit to this acount at Dec. 31, of $1,196,199.56.

In accordance with the plan of extensions adopted at the last annual meeting, the following improvements and additions to the equipment and system have been made in the various departments:

Track and Roadbed,—10.157 miles of track was laid as follows: 4,803 miles, with concrete foundation and asphalt pavement; 4.422 miles with broken stone foundation and gravel pavement; and .931 mile surface track; Rolling Stock.—26 large double-truck closed motor cars with wide vestibules, equipped with air brakes, electric heaters both in the body of the car and the motorman's vestibule, and many other modern appliances to ensure the safety of passengers and operators were constructed in the company's shops and put into service. Three new snow sweepers of latest modern design were purchased and are also in service; Electric Lighting and Power Distribution System,—791 new poles were erected, and 209,340 lbs. of wire with 135 transformers put up, in extension of the light and power distribution system; Gas Distribution System,—38,729 ft. of new gas main were laid, and 827 new gas services installed in extension of the gas distribution system; Construction, 1910.—Six new Babcock-Wilcox boilers at power house, Assiniboine Ave., boiler settings, steel smoke stack, etc. Capacity of boilers, 3,000 h.p.; addition to pump room; gas holder, capacity 1,000,000 ft., partly erected; the whole of the tank, inner lift, and portion of the middle lift set on piles and concrete base; new retort house and chimney at gas works, with 10 benches of 6 retorts each bench; new brick and steel 5-track car barn at Main St., North.

Dominion Electric Railway Charters.

The Minister of Railways, replying to questions in the House of Commons recently, gave a list of electric railway companies which have been chartered by the Dominion Parliament since 1896, together with a statement as to the extensions of time granted to some of them. There were, he said, a number of other electric railway companies incorporated under provincial acts, and under provincial jurisdiction, of which his department had no knowledge.

The following list gives all the information contained in the answers to the questions, all the facts given in relation to each company being brought together:

Quebec.—Hull Electric Ry., La Compagnie du Chemin de Fer Electric, was granted an extension of time by chap. 167 of the statutes of 1905. Montreal and Southern Counties Ry., Montreal Park and Island Ry., Montreal Terminal Ry., Quebec Ry., Light and Power Co.

Ontario.—Berlin, Waterloo, Wellesley and Lake Huron Ry. Brantford and Hamilton Ry.; an amending act was passed in 1904, but it only came in force Jan. 1., 1905, by proclamation. Chatham, Wallaceburg, and Lake Erie Ry. Essex Terminal Ry. Grand Valley Ry. Hamilton Radial Electric Ry. Hespeler, Galt and Guelph Ry. Niagara, St. Catharines and Toronto Ry. Oshawa Ry. Nipissing Central Ry. Oshawa Electric Ry., an amending act, chap. 82, was passed in 1899 granting an extension of time for construction. Windsor, Essex and Lake Shore Rapid Ry.

BLAUGAS

Blaugas is bottled gas shipped in steel cylinders, sold by the pound.

It has 1800 B.T.U. and by this enormous heating power can do things which no other gas can. Blaugas is used, not only for house lighting, cooking, and water-heating, but for lighting of railway cars, buoys, railway stations, lighthouses. It is extensively used for all industrial purposes, as

Soldering
Brazing
Heating Appliances

of all kinds, and with oxygen, for

Welding

aluminum, bronze, copper, cast iron, etc.,

Cutting

of any kind of metal.

Blaugas is the safest gas ever invented. Explosion limits only within 96 to 92 per cent. of air and 4 to 8 per cent. of gas.

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Dominion Power and Transmission Co.

The report for 1910, presented at the annual meeting at Hamilton. Ont., Feb. 14, shows that the gross earnings were $1,922,398, and the net earnings, $533,757. The amount paid in dividends was $124,521, and $327,566 was paid for interest. The assets are placed at $19,355,247, and there is $1,019,689 to the credit of profit and loss. It was announced that dividends on the preference stock for the two years ended July, 1910, were unpaid, and though some of the shareholders did not concur in it, the directors thought it advisable to withhold payment at that time. A dividend at the rate of 7% was paid for the last half year, and it was expected that the back dividends would be paid before long. Hon. J. M. Gibson, in referring to some of the improvements and betterments that had been made, said that the proposed extensions of the street railway would be made, but that they would have to be carefully thought out. It was decided that the salary of the President, at $2,400 a year, be paid, dating from 1908, and that the directors be paid $400 a year each, and the Secretary $600 a year, from the same date. The company controls the Hamilton St. Ry. and the various electric lines radiating from Hamilton. Following is the board for the current year:—President, J. R. Moodie; Vice President, J. Dixon; other directors, J. W. Sutherland, W. O. Greening, L. Harris, W. Southam and Hon. J. M. Gibson.

◆

Halifax Electric Tramway Co.

Following are extracts from the report for the year 1910:—

An encouraging increase in the volume of business has marked the operations of the year. In view of the general condition of the company, the directors decided during the year to make a substantial reduction in the rates for electric light—the general consumers being allowed a further discount of 10% from Oct. 1. This additional concession to consumers is equivalent to something over 1% on the capital stock. The proportion of operating expenses to income was reduced to 51.94. In addition to other improvements during the year, the sprinkler system, was installed, thus reducing the risk of loss by fire and enabling the company to obtain insurance at greatly reduced rates.

St. John Ry. Co's Report,

Following are extracts from the report submitted at the annual meeting recently:—

It having been considered advisable to have the fiscal year terminate with the calendar year, the report covers a period of eight months ended Dec. 31, 1910, and shows a net profit, after providing for interest on bonds and all other charges, of $34,840.27, out of which a half yearly dividend of 3% has been declared, amounting to $24,000, leaving a balance of $10,840.27, which has been transferred to profit and loss.

During the year replacements have been made in the power house, of a 500 k. w. mixed pressure turbine and alternating generator, and a 750 k.w. motor generator set, the cost of which has been charged to contingent and depreciation account.

The directors recommend that the tracks be extended from the foot of Brussels St. to Kane's Corner, and to Fernhill Cemetery on Westmoreland Road, also out Crouchville Road, in all 1¾ miles; and that they be authorized to extend the electric lighting service into Kings county.

Following is the board for the current year:—President, Jas. Ross; Vice President, Col. H. H. McLean, K.C.; other directors, R. B. Emerson, Jas. Manchester, J. J. Tucker, W. Downie, H. B. Robinson, F. E. Sayre.

B. C. E. R. Vancouver Terminal.

Our February issue contained an illustration of the general offices and interurban station to be built by the British Columbia Electric Ry. at Vancouver. The location is at the corner of Columbia and Eighth Sts., in close proximity to the C.P.R., New Westminster branch station.

The structure will be 132 ft. square, with an elevation of 36 ft. above the sidewalk, with basement for baggage storage equipped with electric elevator. Provision has been made in the foundation and walls to carry an additional storey. The foundation is made up of piles driven in clusters to a depth of 25 ft. to 40 ft. capped with steel reinforced concrete 3 ft. thick by 9 ft. square, carrying reinforced beams which in turn support the side walls. The walls will be of pressed brick belted with concrete. An abundance of leaded glass windows will furnish light to the outside offices, while the inside rooms will be lighted by skylights.

The ground floor will contain the general waiting room, ladies' waiting room, ticket office, dispatchers' office, baggage room, lavatories, etc., and will have concrete floors throughout. The walls will be panelled in quarter sawn fir. All the lavatories will be strictly sanitary with mosaic tile floors and modern fixtures. The first floor will contain the department offices, conductors' and motormen's rooms, offices of Division Manager, Local Manager, accounting, light and power, engineering, Auditor, Trainmaster, Building Superintendent, etc., the space covered by offices totalling nearly 3,000 sq. ft. A generous portion will be reserved for bedrooms, clubroom, locker and changing room for conductors and motormen. Although the danger from fire will be reduced to a minimum in the building, each floor will be equipped with a 2½ in. hose of sufficient length to reach any point on the floors and fed by a 4 in. main tapping the city system.

The tracks will be arranged to facilitate the rapid handling of traffic over a loop system, the cars running through the station, which will mean a great saving of time over the old method of changing ends at terminal points.

◆

Toronto and York Radial Railway.

H. Waddington, of North Toronto, and H. M. Winter, of Toronto complained to the Ontario Railway and Municipal Board recently that the T. & Y. R. Ry. was operating its Metropolitan division in an inefficient and unsatisfactory manner, that the cars were overcrowded and insufficient to accommodate the passenger traffic, and that the service was inefficient owing to delays in passing cars or vehicles and moving freight. The applicants asked for an order that the company furnish a sufficient number of cars; provide a sufficient number of switches and change the tracks so as to give an adequate service.

The Board gave a unanimous judgment on Mar. 8, in which the incorporation of the original company, subsequent legislation and the agreements with municipalities were fully reviewed.

On Dec. 11, 1908 the Board's engineer reported that the only permanent remedy for the complaints then made against the traffic conditions on Yonge St. was to double track through North Toronto and to substitute large double truck cars for the ones then in use. On Feb. 19, 1909, the Board not having the power, made no order for double tracking, but ordered the company, among other things, to remove the Glengrove cars then in use and substitute four large double truck cars by May 1, 1909. This order was complied with as to the cars, but an appeal to the Court of Appeal is still

pending as to the macadamising between the rails and 18 ins. on the outside.

The Board is still of opinion that the railway should be double tracked up Yonge St., through North Toronto, and conditions having changed, on to the Golf Links. If it had the power the Board would order this to be done, but in view of the franchise agreements between the company and the County of York, under which the company has no right to lay double track unless with the county's approval, it does not consider that it has such power.

The Board therefore orders the company to extend its Glengrove service to the golf links, to construct a sufficient number of switches and turnouts and put a sufficient number of suitable cars in commission to enable it to give a 10 minute service from April 15 to Nov. 1, and a 15 minute service during the rest of the year. The Board also thinks the traffic should be regulated so that south bound cars have right of way up to noon, the north bound cars to take the switches and that after noon north bound cars have right of way, also that the system of car dispatching which has been adopted on the Newmarket line be extended to the line between Toronto and the golf links.

◆

London Street Railway History.

The London, Ont., St. Ry. Co. was incorporated by Ontario Legislature in 1873, with a capital of $40,000, and empowered to construct, maintain and operate a street railway in the city of London and townships of London and Westminster. On Mar. 8, 1875, the city granted the company the right to construct, maintain and operate a street railway, by animal power, for 50 years from that date.

An amendment to the act incorporating the company was obtained in 1889, authorizing an increase of the capital stock to $250,000, and authorizing the issue of debentures to a like amount. In 1895 the original agreement with the city was amended, and the company was granted exclusive rights to construct, maintain and operate an electric street railway for the remainder of the 50 years, at the expiration of which, or any fifth year thereafter, the city has the right to purchase the property (except the Springbank line), on an arbitration basis by giving one year's notice in advance. This agreement was ratified by the Legislature in 1895, and in 1896 the Incorporation Act was further amended authorizing the increase of the capital stock up to $750,000, and the issue of debentures to a like amount, and that the same might be secured by mortgage upon the railway, its equipment and franchise. A mortgage was accordingly executed in 1896 to the Toronto General Trusts Co., and provides that the company shall pay off and redeem on March 8 in each of the 10 years commencing 1915, five per cent. of the debentures outstanding, so there shall be left at the expiration of the franchise 50% only of the total amount of debentures issued—the debentures being in denominations of $1,000 each, payable in gold, with interest at five per cent. per annum, payable semi-annually.

Capital and Debenture Accounts
Dec. 31, 1910.

Stocks, subscribed	$600,000.00
" paid up	552,000.00
Debentures, issued	600,000.00
" sold	575,000.00

The property consists of 33.25 miles of single track, covering about 26 miles of territory; 20.8 miles in the city and 5.2 miles out of the city, and the following buildings: one power house, capable of generating about 1,150 h.p.; one storage battery plant of 320-ampere capacity; two car houses; one car shop and machinery; one office building. Following is the equipment:—Single truck motor cars, closed 34, open 5; double truck motor cars, 5 closed, 5 open; single truck trailers, 4 open; sweeper, 1; work car and snow plow, 1; wreck car, 1; line wagon, 1.

◆

Montreal Tramways Company.

The Quebec Legislature has had under discussion for some time an application for the incorporation of a company with this title, to construct and operate an underground railway throughout the Island of Montreal, and Iles Jesus and Bizard, and other railways or tramways, and to acquire, either in whole or in part, the property, franchises, etc., of the Montreal Street Ry., the Montreal Park and Island Ry., the Montreal Terminal Ry., and the Public Service Corporation. The application was made by E. A. Robert, President of the Montreal Street Ry., F. H. Wilson, and J. M. Wilson, Montreal. The important part of the bill is that covering the absorption of the several companies mentioned, which are owned or controlled by the Montreal Street Ry. Co. Of these companies, the Montreal Park and Island Ry. was declared to be subject to the legislative authority of Canada as to capital stock and general corporate powers by chap. 84 of the statutes of 1894; the Montreal Terminal Ry. is the title given by the Dominion Parliament by chap. 76 of the statutes of 1899 to the old Montreal Island Belt Line, while the other lines are operated under acts passed by the Quebec Legislature.

Prior to the introduction of this bill the M.S. Ry. had been in negotiation with the Montreal city council for a rearrangement of its franchises, and for the adoption of a new contract with the city which would cover the whole of the lines. The question was discussed at great length between the company's representatives and the board of control, as far back as Feb. 18, and there were set out ten propositions, to which the company was asked to accede to in return for the franchise asked. As there did not appear to be any possibility of an agreement being reached, the bill for the incorporation of the new company was introduced, one of its clauses providing that in the event of an agreement as to the franchise not being reached within a certain period after its passing, the Quebec Public Utilities Commission would have power to arrange one. The negotiations were continued with the city council through its board of control, and the corporation officers opposed the passage of the bill in the Legislature. The negotiations finally resulted in an agreement by which existing contracts, with certain modifications, will be extended, the details of which are being worked out. The agreement necessitated the making of a number of amendments in the bill, which, at the time of writing (March 24) had not been passed by the Railway Committee of the Legislature.

◆

Sydney and Glace Bay Railway.

The Sydney and Glace Bay Ry., which runs between those Nova Scotia towns, 19 miles, was owned jointly by the Cape Breton Electric Co., Ltd., and the Dominion Coal Co. We are officially advised that the Cape Breton Electric Co. has secured all of the Sydney and Glace Bay Ry. Co.'s common stock, the Dominion Coal Co. taking Cape Breton Electric Co.'s common stock in exchange thus becoming a large holder in the Cape Breton Electric Co. The Cape Breton Electric Co. has taken over the Sydney and Glace Bay Ry. on a long term lease, and the latter line is now being operated with the Cape Breton Electric Co.'s railway department as one department.

The operating officials of the Cape Breton Electric Company and the Sydney and Glace Bay Ry. have been practically the same for over a year, and under the new arrangements this will be continued.

The Cape Breton Electric Co. is controlled and managed by the Stone & Webster Management Association of Boston, Mass., and has 12.5 miles of equivalent single track. Its officials at Sydney are:—H. C. Foss, Manager; W. G. Ross, General Superintendent, Purchasing Agent and Electrical Engineer; Mr. J. Bulley, Assistant Superintendent and Master Mechanic; W. P. Stubbert, Engineer of Power Station. The company does the entire electric lighting and electric railway business in Sydney, the entire electric business in North Sydney the ferry business between Sydney and North Sydney, and operate an interurban line between North Sydney and Sydney Mines. It owns $220,000 of the $415,000 outstanding first mortgage bonds and the capital stock of the Sydney & Glace Bay Ry., which is operated under a lease of 99 years from June 1, 1911.

Take public taxicab or carriage to hotel at our expense, by instructing driver to charge service to Hotel Lenox.

C. A. MINER, Manager.

Seating capacity	52 passengers
Trucks	27 E-1, with 33 in. wheels
Motors	Westinghouse 101 B2

The cars are illuminated by two arches of colored lights over the centre, and there are also lights under the steps. As noted above, each car has a seating capacity for 52 passengers, but on frequent occasions knock-down chairs have to be used in the aisle. These, when not required, are stored in the front vestibule.

Last year the Vancouver car made three trips daily, leaving the corner of Robson and Granville Sts. daily at 9.30 a.m., 2 p.m., and 4 p.m., running via Granville and Hastings Sts. to the Grandview and Cedar Cottage suburban districts, to English Bay, to Stanley Park entrance, and to Kitsilano, a two hours trip for 50 cents. We are advised that when the weather was not unfavorable the car was comfortably filled. It is also often chartered by societies for evening excursions.

Electric Railway Notes.

The Montreal St. Ry., will shortly be in the market for 15 additional cars. The specification has not been settled.

The Ottawa Electric Ry. has received three p.a.y.e cars, 33½ ft. bodies, 45 ft. over all, mounted on 27-FE-1 trucks, from the Ottawa Car. Co.

P. Verner, is reported to have been appointed General Superintendent of the Grand Valley Ry., with offices at Bramtford, Ont.

The Edmonton Radial Ry., has received two p.a.y.e. cars, 28 ft. bodies, 44½ ft. over all, mounted on 27-G-1 trucks, from the Ottawa Car Co.

The Sandwich, Windsor and Amherstburg Ry. is adding six p.a.y.e. cars to its equipment; three for the Walkerville section and three for the Sandwich line.

C. F. Beams, of the Cobalt Power Co., is reported to have been appointed Manager of the Nipissing Central Ry., by the new owners. It is said that this is the only change being made.

Arrangements are being made for the operation of the Grand Valley Ry., and the Galt, Preston and Hespeler Ry., by electric power supplied from the Hydro Electric Power plant.

The new rules for the regulation of tramways, and other operation, made by the British Columbia Government, became effective Mar. 1.

A St. John's Nfld., press report states that the city council holds that the Reid Newfoundland Co. has not kept up to its contract as regards clearing Water St., and that the council started the clearing of the snow, Mar. 8, expending the deposit made by the company

Aldermann Trott, a member of the St. Thomas, Ont., city council, will act as supervisor of the municipal electric railway, for the present, consequent on the retirement of L. B. Gillett. Alderman Trott will not be a salaried officer, but an electrician wil be appointed to look after the mechanical work.

The Calgary Municipal St. Ry. is adding to its power house equipment, one 1,500 k.w. turbo-generator set with condenser, etc.; one 100 k.w. exciter and switchboards, three 1,000 k.v.a. single phase transformers, 12,000 to 2,300 volts, with switching gear.

The Mount McKay and Kakabeka Falls Ry., has ordered six Simplex self clearing cars from the Canadian Car and Foundry Co., Montreal. These cars are similar in all respects to those made by the same company for the Montreal St. Ry., which were illustrated and fully described in our Aug., 1910, issue.

The Siagara, St. Catharines and Toronto Ry. has ordered four semi-convertible, double truck, four motor equipment cars in the U.S., each 46 ft. long over all, with seating capacity for 44 persons. They will be operated on the local lines in St. Catharines and Niagara Falls, Ont.

The electric locomotive which the Guelph Radial Ry., has ordered from the Canadian Westinghouse Co., Hamilton, Ont., as mentioned in our last issue, is a 27 ton Baldwin Westinghouse locomotive of the double truck type with four motor equipment. It has a steel frame and is about 23 ft. long over sills. The electric equipment consists of four 101-B motors.

The Superior Court rendered judgment, Mar. 13, in favor of the Quebec Ry Light and Power Co., in the action relating to the running of its observation car It was contended that the company had no right to operate such a car, according to its contract with the city, but the Court held that not only had the company a right to run the car, but it could also charge a 25c. fare on it. The same case had previously been dismissed in the Recorder's Court

The Board of Railway Commissioners recently heard an application for permission to proceed against the London and Lake Erie Ry. and Transportation Co., for operating cars on Sundays, in alleged contravention of the law. In dismissing the application, the Chief Commissioner pointed out that the act referred to was a provincial one, while the company was under Dominion jurisdiction, and stated that the applicant did not require the Board's permission to prosecute the company for an infringement of the law, if such took place.

The Winnipeg Electric Ry. has increased the scale of pay to its motormen and conductors, by 2c an hour, making the schedule for the first six months, 23c.; for the second six months 25c.; for the second year, 26c.; for the third year, 28½c.; and for periods beyond three years 29c. on hour. The increase will, it is said, mean an addition of $50,000 a year to the expense. The circular announcing the increase states that in view of this increase being unsolicited on the part of the men, the directors expect the hearty co-operation of the motormen and conductors in rendering the public the most efficient and complete service possible.

The Toronto board of control, Mar. 14, considered the question of providing a motor 'bus service in the districts not served by the street railway. It was reported that, after some investigation single deck electric vehicles were best suited for the requirements, and with accommodation for 30 passengers, and suited for a speed of fifteen miles an hour, and assuming that each vehicle ran 80 miles a day, they would cost, to operate, from $15 to $20 a day, including 15% for depreciation. The matter was deferred, until some investigation into the qualities of storage battery cars had been completed.

The Pay-as-you-enter Car Corporation and the Pay-Within Car Co., have been merged and a central organization exclusively authorized to issue licenses under the numerous patents owned and controlled by the two companies has been created under the title of the Prepayment Car Sales Co., with headquarters at 50 Church St., New York City, and offices in Philadelphia and Chicago. The officers of the new company are:—President Duncan McDonald of Montreal; Vice President A. H. England, of the Electric Service Supplies Co., Philadelphia; Treasurer, H. Rowntree, of Chicago, who has invented most of the door devices controlled by the company; General Manager, T. W. Casey, formerly of the Montreal St. Ry.

NOTICE.

The General Railway Signal Company, the owners of the exclusive rights to Canadian patents No. 92323, No., 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signaling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents, to the fact that it is prepared to sell and furnish, at short notice, all such devices, and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to the office of the company, Room 506, Eastern Townships Bank, 263 St. James St., Montreal, Que.

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for Jan., $368,754; working expenses $218,428; net operating earnings $150,326; renewal funds $29,770; net earnings $120,556; approximate income from investments $20,000; net income $140,556, against $250,274 gross earnings; $144,069 working expenses; $106,205 net operating earnings; $15,443 renewal funds; $90,726 net earnings; $16,500 approximate income from investments; $107,262 net income for Jan. 1910. Aggregate gross earnings for seven months ended Jan. 31, $2,360,402; net income $970,452, against $1,731,145 aggregate gross earnings; $764,628 net income for same period 1910.

Cape Breton Electric Co.—Gross earnings for 1910, $326,010.11; operating expenses, $170,187.23; net earnings, $155,822.88; interest and taxes, $60,134.88; balance, $81,988; dividends, preferred stock 6%, $14,040, common stock 1½%, $16,875; total dividends, $30,915; surplus, $51,073. These figures include the earnings, etc., of the line between North Sydney and Sydney, N.S., and the whole of the earnings of the Sydney and Glace Bay Ry., whereas in former years only half of the earnings of the S. & G.B.R. was included. The C.B.E. Co. now owns the entire capital stock of the S & G B.R.

Dominion Power and Transmission Co.—Following is the board for the current year as elected recently:—President, J. R. Moodie; Vice President, J. Dixon; Treasurer, J. Knox; Secretary, W. C. Hawkins; other directors, J. W. Sutherland, S. O. Greening, L. Harris, W. Southam, and Hon. J. M. Gibson.

Halifax Electric Tramway.—Railway receipts for Feb., $14,675.01, and for two weeks ended Mar. 14, $6,916.11, against $14,018.69, and $7,044.29 for same periods 1910.

A dividend of 2% for the quarter ended Dec. 31, 1910, has been declared, payable Apr. 1, to shareholders of record, Mar. 20.

Hamilton, Grimsby and Beamsville Electric Ry.—Following is the board for the current year as elected recently: President, J. Dixon; Vice President, J Dickinson; Treasurer, J. Knox; other directors, W. C. Hawkins, J. W. Sutherland, S. O. Greening and J. R Moodie.

London St. Ry.—Gross earnings, for Feb. $19,309.23; expenses $14,512.71; net earnings $4,796.52; deductions $2,205.55; net income $2,590.97, against $17,349.23 gross earnings; $13,126.91 expenses; $4,222.32 net earnings; $2,205.55 deductions; $2,016.77 net income for Feb. 1910. Aggregate gross earnings for two months ended Feb. 28, $39,905.06; expenses $29,695.21; net earnings $10,210.45; deductions $4,647.30; net income $5,563.15, against $35,712.94 aggregate gross earnings; $26,705.13 expenses; $9,007.81 net earnings; $4,647.30 deductions; $4,360.51 net income for same period 1910.

Montreal St. Ry.—Passenger earnings for Jan., $363,147.35; miscellaneous earnings $6,977.25; total earnings $370,124.60; operating expenses $239,982.64; net earnings $130,141.96; city percentage

2 GRAND PRIZES AND
5 GOLD MEDALS

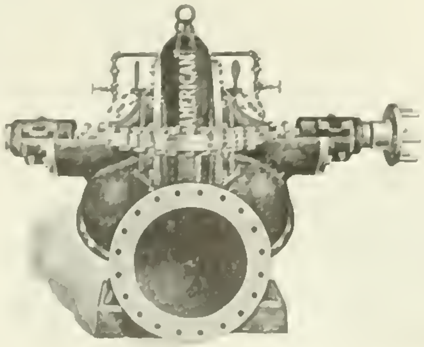
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

on earnings $18,352.08; interest on bonds and loans $15,495.86; rental leased lines $607.50; taxes $4,700; total charges $39,155.44; surplus $90,986.52; expenses per cent. of earnings 64.84, against $323,045.07 passenger earnings; $2,575.89 miscellaneous earnings; $325,620.96 total earnings; $205,059.74 operating expenses; $120,561.22 net earnings; $16,863.87 city percentage on earnings; $14,273.67 interest on bonds and loans; $552.90 rental leased lines; $4,000 taxes; $35,690.44 total charges; $84,870.78 surplus: 62.98 expenses per cent. of earnings for Jan. 1910. Aggregate total earnings for four months ended Jan. 31, $1,500,184.77; operating expenses $908,383.96; net earnings $591,800.81; total charges $140,808.67; surplus $450,992.14; expenses per cent. of earnings 60.55, against $1,352,062.36 aggregate total earnings; $791,938.71 operating expenses: $560,123.65 net earnings; $132,035.28 total charges; $428,088.37 surplus: 58.57 expenses per cent. of earnings, for same period 1909-10.

Nipissing Central Ry.—D. Fasken Toronto, is representative of a syndicate which has purchased the property rights and franchises of this company, the purchase price, it is stated, being about $250,000. The company's railway extends from Haileybury to Cobalt, Ont., and a franchise has been granted for an extension to New Liskeard. The company has not earned a profit since it began operating its lines.

Ottawa Electric Ry.—Negotiations are reported to be in progress for an amalgamation of the Ottawa Electric Ry., and the Ottawa Light and Power Co.

Port Arthur and Fort William Electric Ry.—Total earnings for 1910, $143,653.92; expenditures $83,430.38; reserve for accidents, $7,352.85; total expenses $90,783.85; net earnings $52,870.68. Car mileage 567,250; gross earnings per car mile $24,959; operating expenses per car mile $14,208; net earnings per car mile, $10,251.

Quebec Railway, Light, Heat, and Power Co.—Bonds for $2,600,000 are reported to have been sold in Paris, France. The directors have declared a dividend of 1% payable April 15 to shareholders on record March 31.

Toronto and York Radial Ry.—The Ontario Legislature has authorized the council, among other things, to expropriate the section of the Toronto and York Radial Ry., from Sunnyside along the Lake Shore within the city limits. The council desired to have power to expropriate the line as far as Long Branch.

Toronto Ry.—Gross earnings for Jan. $358,844; working expenses $189,437; net earnings $169,407, against $326,708 gross earnings; $175,074 working expenses; $151,634 net earnings for Jan. 1910.

Winnipeg Electric Ry.—Gross earnings for Jan., $346,144; working expenses $188,349; net earnings $157,795, against $297,543 gross earnings; $151,197 working expenses; $146,346 net earnings for Jan. 1910.

Winnipeg Electric Ry.—Sir Wm. Mackenzie. President, on Mar. 13, submitted the following proposals to the Winnipeg city council:—The company will sell its street railway, gas, power and electric light outfit to the city as a going concern, or the company will purchase from the city 15,000 horse-power as soon as the city is in a position to deliver it, at a price which will pay interest on the city's entire investment in the municipal plant at Point du Bois on condition that the company be given the exclusive right to engage in commercial lighting.

The price at which the company would sell, added Sir William, would be on the basis of $250 a share, and it is calculated that this would amount to over $15,000.000. At a meeting of the city council, Mar. 14, the mayor referred to the proposition, and said it should be seriously enquired into. After some discussion a resolution was passed authorizing the city solicitor to apply to the Legislature for power for the city to acquire "any or all public utilities, not owned by the city." When this has been obtained the city will be in a position to submit a bylaw to the ratepayers authorizing the purchase, upon such terms as may have been arranged, of the street railway system.

◆

Projects, Construction, Betterments, Etc.

Aroostook Valley Electric Ry.—The application for authority to extend the line westerly to the Maine-Quebec boundary, and to acquire the C.P.R. Aroostook Jct.-Presque Isle branch, has been approved by the Railway Committee of the Maine Legislature, and the measure will become law in due course. (Mar., pg. 257.)

Bird's Hill and Springfield Ry.—The Manitoba Legislature has under consideration a measure for the incorporation of a company with this title for the building of an electric railway from St. Boniface to Bird's Hill, Man., with authority to develop water powers and to distribute electricity.

The bill before the Legislature providing for the incorporation of a company with this title provides for the building of a line to be operated by electricity, gas or gasoline from or near Winnipeg, or from St. Boniface, through St. Paul, Kildonan and Springfield municipalities, with branch lines. The provisional directors are:—N. Macgregor, St. Paul: J. W. McKinley, Springfield; S. R. Henderson, Kildonan: J. E. Meredith, A. E. Hoskin, Winnipeg.

Brandon Electric Ry.—The applicants to the Manitoba Legislature for the incorporation of a company with this title are associated with the Reese-Muir Syndicate, which in turn works in connection with the recently organized Manitoba Power Co. (Mar., pg. 257.)

Brantford St. Ry.—P. Verner, who has been appointed General Superintendent, recently stated that work had so far progressed upon the Holmedale switch that he expected it would be ready for opening early in April. Work on rebuilding the line in the city would be resumed, and it was expected to finish the work this season. (Mar., pg. 257.)

British Columbia Electric Ry.—We were recently advised that it was expected to have the new line between Vancouver and New Westminster completed and ready for operation by the end of March. The line commences at the intersection of Sixth St. and Park Drive, Grandview section of Vancouver, passes through Grandview near the intersection of Nanaimo Road and First Ave., runs through Hastings tp. and Burnaby municipality, just south of Burnaby Lake, and enters New Westminster at the Sapperton end of the city. The total mileage of this line is 9.69 miles, distributed as follows:—Vancouver city, 0.73 miles; Hastings townsite, 1.53 miles; Burnaby, 7.10 miles; New Westminster, 0.33 mile. It is intended, when the line is in operation, to begin with an hourly service and to improve it as conditions warrant. This line has been built under the Vancouver, Fraser Valley and Southern Ry.'s charter. Its completion gives the company three lines between Vancouver and New Westminster, the others being the original direct line through South Vancouver, and the long route over the Vancouver and Lulu Island Ry. and its Eburne extension.

On the old direct line, a considerable sum has already been expended on reducing gradients, and in laying a second track. The line is now a double track one as far as Keefer station, mileage 6.35 from Vancouver. It is intended to extend the second track during the present season, but just what length will be completed it is impossible to say. A portion of the line, from Highland Park station into New Westminster, has been re-located in order to avoid the heavy gradient entering New Westminster. Surveys have been completed and part of the new right-of-way cleared. This work will be carried on from time to time, but just when it will be completed cannot be definitely stated. (Mar., pg. 257.)

Campbellford, Ont.—In consequence of the fact that the C.P.R. has secured the right to build the projected Campbellford, Lake Ontario and Western Ry. on a different route from that first surveyed, the residents of Campbellford and vicinity are taking steps to have an electric railway built through Northumberland county. A charter is reported to be available, but to Mar. 24 the owners of the charter and the municipal authorities of the points interested had not been brought together.

Central Canada Ry. and Power Co.—An act passed by the Manitoba Legislature provides that the company may issue bonds for $25,000 a mile in respect of the railways authorized to be built by sec. 13, chap. 56, of the statutes of 1905, viz., from the eastern boundary of Win-

NOTICE TO INVENTORS

Inventors or others interested in life-saving devices, are hereby invited to submit to the Company, plans, rough drawings, or models of any device to be used upon the cars for the prevention of accidents.

All communications on this subject should be addressed, and plans and models submitted, to the Master Mechanic of the Company, at his office, foot of Sherbourne Street, Toronto.

nipeg to Selkirk; from either Winnipeg or Selkirk to the Winnipeg River, and to Lake Winnipeg. The amending act gives power to build an additional line from St. Boniface northeasterly to the Winnipeg River, in tps. 17, 18 or 19, and thence to the northerly boundary of the province. The provisional directors named in the original act are: J. D. McArthur, J. Tees, J. S. Gray, W. A. Ducker, H. E. Carstens, W. M. McLeod, I. Pitblado, G. C. Mills, and A. N. McPherson. (Feb., pg. 167.)

Charlesburg, Que.—An application has been made to the municipal council of Charlesburg, Que., for a franchise for an electric railway from Domaine Lauret to Charlesburg, Que. E. Caron stated that the promoters were ready to proceed with the organization of a company as soon as a franchise was granted, and to proceed with construction as soon as letters patent were obtained.

Chatham, Wallace and Lake Erie Ry.—The Dominion Parliament is being asked to authorize the company to build the following additional lines:—From Charing Cross to Blenheim and Rondeau Harbor, Ont.; from Wallaceburg to Dresden, and on to Ridgetown and Erie Eau Park; from Dresden North to Petrolia, and on to Sarnia, Ont. It is also desired to have an extension of time for the building of other lines, for which previous parliamentary authority was obtained. (Mar., pg. 257.)

Development Co. of Canada.—The Quebec Legislature has incorporated a company with this title to build certain railways, to develop electric energy on the Ottawa River, and to use the same for the operation of its railways, or to dispose of the same. The water power proposed to be developed is the Des Quinze rapids, Pontiac county, Que. (Mar., pg. 205.)

Dunnville, Wellandport and Beamsville Electric Ry.—The Ontario Legislature is being asked to extend the time for the building of the lines previously authorized to be built, and to give power for the building of an extension from Fenwick to Welland, Ont. (Feb., pg. 167.)

Hamilton Street Ry.—As a result of a conference upon street railway matters an arrangement has been made between the company and the city council by which the tracks on Main and King St. east will be relaid during this year. The question of the extension of several of the lines is being considered, the council committee having, Mar. 16, submitted several proposals to the company. (Mar., pg. 257.)

Hamilton, Waterloo and Guelph Ry.—J. Patterson, the principal promoter of this projected electric railway, left Hamilton, Ont., Mar. 15, for London, Eng., in connection with plans for the financing of construction. (Feb., pg. 167.)

London and North Western Ry.—In passing through the Dominion Parliament the title of this company was amended by adding the words " of Canada" after railway. (Jan., pg. 71.)

Manitoba Radial Ry.—Application is being made to the Manitoba Legislature to incorporate a company with this title to build railways along the public highways or otherwise, to be operated by electricity, steam or gasoline as follows: From Winnipeg to Portage la Prairie; from Rosser southerly to Headingly, thence easterly to Winnipeg; from Winnipeg northerly to Stony Mountain, Stonewall and Balmoral. Authority is also being asked to obtain running powers over existing lines, and also to have power to run along any of the Winnipeg streets, subject to the approval of the city council. The provisional directors are: G. A. Glines, J. Dichmond, J. B. Henderson, J. O. Newton, J. C. Kyle, Winnipeg.

A company with the same title was incorporated by the Dominion Parliament in 1907, the provisional directors being: C. Hoffeman, A. Wagner, R. D. Fletcher, J. A. Munro, W. J. Donovan, Winnipeg, for the purpose of building a railway from Winnipeg to Clandeboye Bay on Lake Manitoba, thence northerly to Lundar, Man., and on to Grand Rapids, on the shore of Lake Winnipeg in Keewatin district, and a branch line through Stonewall to Lake Francis, Man. (Feb., pg. 168.)

Moncton Tramway, Electricity and Gas Co.—Surveys have been made recently by E. A. Mitchell and W. G. Ritchie for the building of the proposed electric railway in Moncton, N.B. Tenders have been invited for the grading of the permanent way, and the putting up of the overhead work, and the contracts were expected to be let Mar. 31. (Feb., pg. 168.)

The Montreal and Southern Counties Ry. has made application to the Montreal city council for permission to extend its lines on a number of streets in the city. (Mar., pg. 257.)

Moose Jaw Electric Ry.—The Saskatchewan Legislature has incorporated a company with this title. The company may not operate cars of the pay-as-you-enter type without first obtaining the city council's consent. (Mar., pg. 259.)

Niagara Frontier Electric Ry.—The provisional directors named in the bill introduced in the Ontario Legislature recently for the incorporation of a company with this title, to build an electric railway from Niagara-on-the-Lake to Fort Erie, and for other purposes, are: W. E. D. McKenzie, T. Flummerfelt, W. C. Perkins, Chippewa, Ont.; E. Garrett, Niagara Falls, Ont.; G. H. Pettit, Welland, Ont. (Mar., pg. 259.)

Niagara, St. Catharines and Toronto Ry.—The Board of Railway Commissioners has authorized the providing of interchange tracks between the G.T.R. and the N. St. C. and T. Ry., and also the crossing of three streets in St. Catharines. (Mar., pg. 259.)

Ontario West Shore Ry.—Press reports state that the control of this electric railway, which is under construction from Goderich to Kincardine, Ont., has been acquired by the C.P.R. One of the contractors working at the Kincardine end of the line is quoted as stating that he had received notice that he was to look to the C.P.R. for further orders. (Mar., pg. 259.)

Ottawa Electric Ry.—It is reported that the line will be extended down Preston St. to Dow's Lake, during the current year, and that possibly extensions in other parts of the city will be built. (Mar., pg. 259.)

Ottawa, Smith's Falls and Kingston Electric Ry.—The measure providing for the incorporation of a company with this title, which is under consideration by the Ontario Legislature, has been amended in committee by striking out the word "electric" from the title, leaving it as the Ottawa, Smith's Falls and Kingston Ry.

A map showing the projected route of the line from Ottawa to Montague tp. has been submitted for approval to the municipalities interested. The map shows a line running on the north side of the Rideau River from Ottawa, through Nanotic, Kars, North Rideau, Merrickville and Kilmarnock to Smiths Falls. A branch is proposed to be built from Smiths Falls to Perth, and plans for this, as well as for the extension to Kingston, are being prepared. (Mar., pg. 259.)

Port Arthur and Fort William Electric Ry.—The Port Arthur city council is asking the Ontario Legislature, in addition to the powers referred to in our last issue, for authority to extend the electric railway into the municipalities of Shuniah, Oliver and any other adjoining municipalities, and to authorize such municipalities to enter into agreements to aid by way of bonus or otherwise the building of such additional lines. (Mar., pg. 259.)

Quebec Ry., Light and Power Co.—Tenders were received to Mar. 25 for the construction of about 3.5 miles of double track line, extending from Beauport to Kent House Park. (Feb., pg. 169.)

Quebec and Saguenay Ry.—Tenders are under consideration for the building of the first section of this line from Cap Tourmente to the wharf at Murray Bay, Que., and it is expected that contracts will be let in a short time. Contractors were asked to submit prices for ten-mile sections of 10 miles of the line. A. H. N. Bruce, of Ottawa, has been appointed Chief Engineer, and J. F. Guay, heretofore Chief Engineer, has been appointed Manager. (Mar., pg. 259.)

Regina Electric Ry.—The Saskatchewan Legislature has passed the measures referred to in our last issue, and the city is now in a position to finance the construction of the lines.

Reference was made last year to certain contracts made with R. S. Bloins and Co. These contracts were for paving on the streets on which it was proposed to lay electric lines, but the work was not gone on with. We have been advised that the contracts will likely be renewed this year. (Mar., pg. 261.)

Rural Ry. Co. of Manitoba.—Following a decision of the courts dismissing a motion for an injunction restraining the St. Vital, Man., municipal council from entering into an agreement with the company respecting the building of an electric railway in the municipality, the council met Mar. 15 and signed the bylaw.

St. John Ry.—The committee of the St. John, N.E., city council has drafted an agreement setting out the conditions upon which the company may extend its lines to the old Loch Lomond Rd. The company's representatives state that the conditions are such that it would be impossible to operate the extension at a profit. (Mar., pg. 261.)

Sherbrooke Ry. and Power Co.—Power was turned on at the new power house Mar. 6, (Mar., pg. 261.)

Stratford Ry.—On the company's application for incorporation coming before the Ontario Legislature recently it was found that due notice by advertisement had not been given in the county of Huron, and it was recommended that the portions of the bill referring to power to build lines in that county be omitted. (Mar., pg. 261.)

Toronto Civic Street Railway.—The Toronto board of control, Mar. 10, directed the city engineer to ask for tenders for the necessary plant for use in the construction of the proposed civic car lines in the city. The estimated cost of the plant is $95,374, and the city engineer says at the end of the three years, during which construction will be in progress, the plant should be worth $38,575. The specifications, which are in course of preparation, show that there will be 160,000 cubic yards of material to be moved, and 140,000 cubic yards of material to be filled in. The work will be done by day labor. Tenders have been asked for the rails and fastenings required. (Feb., pg. 169.)

Toronto Eastern Ry.—The Board of Railway Commissioners has approved the location plans of the line through Pickering, Whitby, Whitby East and Darlington tps., and authorized building along and across certain streets in the towns of Whitby and Bowmanville, Ont. (Jan., pg. 73, and Oct., 1910, pg. 877.)

A Marine Authority's Opinion.

C. Arthur Jaques, of G. E. Jaques & Co., General Forwarders, Montreal, who is a prominent member of the Dominion Marine Association and a large vessel owner, writes:—

"I have been a subscriber to the Railway and Marine World since its inception, and I look upon it as one of the best mediums for information that we have in our country. The information is very accurate. The different topics are expressed very clearly and correctly, and I have yet to hear of any person who does not approve of your paper."

◆

Canadian Fishing Vessel Subsidies.

An order in council has been passed rescinding sec. 5 of the act to encourage the development of sea fisheries and the building of fishing vessels, and substituting the following:

"5. Canadian registered vessels, owned and fitted out in Canada, of 10 tons and upwards (up to 80 tons), by whatever means propelled, contained within themselves, which have been exclusively engaged not less than three months in catching sea fish, other than shell fish, salmon or shad, or fish taken in rivers, or mouths of rivers, shall be entitled to a bounty calculated on the registered tonnage, which shall be paid to the owner, or owners, provided that vessels known as steam trawlers, operating beam, otter, or other such trawls, shall not be eligible for any such bounty."

◆

Thomson Line Steamship Gerona.

The s.s. Gerona, which is being built for the Cairn Line Steamships Ltd., owners of the Thomson Line, was launched at Wallsend-on-Tyne, Eng., Mar. 4, being christened by Miss Gear, elder daughter of W. I. Gear, Vice President of the Robt. Reford Co., Montreal, Canadian agents of the line. The Gerona is built to the classification of Lloyds, 100 A.1. and will comply with all the requirements of the Board of Trade, the U. S. laws for carrying passengers and the Italian emigration laws.

She is rigged as a two-masted fore and aft schooner and has two funnels. There is a complete shelter deck from stem to stern and about it a poop, a long bridge and a topgallant forecastle. Deep web frames have been provided instead of hold beams, giving not only increased strength, but also leaving the holds clear for carrying bulky cargo such as large machinery. Amidships there will be luxurious accommodation for about 140 first class passengers, the cabins will be spacious and comfortable, a certain number of them on the bridge deck being in sets of two with a communicating door to be used by family parties. The dining saloon extends right across the vessel and is surmounted by a handsome dome. On the deck above the dining saloon is the music room. At the after end of the deckhouse on the promenade deck is the smokeroom, abaft of which is a verandah cafe. Throughout the vessel there is ample provision of fire extinguishing pipes with a complete outfit of hose pipes. Electric installation gives lighting throughout the ship and also serves the wireless telegraph apparatus.

The planning of the catering department has been carefully studied, the galleys, bakeries, pantries and storerooms all being elaborated to comprise the most improved modern appliances. There are three separate galleys, for first class passengers, for emigrants and for the crew respectively. On the shelter and in the upper 'tween decks there are berths for about 1,500 third class passengers, together with ample dining accommodation. There are hospitals for ordinary and infectious cases, an operating room and a dispensary. A special feature of the emigrants' living quarters is a complete installation of the thermotank ventilation and heating plant. The fans will be sufficient to renew the air eight times an hour. The fans can be reversed at will, so as either to draw the air out of the different parts of the ship or to inject fresh air either cool or warm. The captain, officers and engineers will have accommodation on the boat deck. The seamen and firemen, instead of having their living quarters in the forecastle, as is usual, will be more comfortably installed on the shelter deck at the after end of the vessel. The Gerona has twin screw triple expansion engines. The boilers will be worked with forced draught. She has a large cargo capacity, an ample equipment of winches and derricks being provided to handle goods expeditiously. A considerable portion of cargoes from Canada will be food suplies and refrigerated holds will be provided for these, the necessary low temperature being maintained by the carbon-dioxide process.

The addition of the Gerona to the Thomson Line will enable a fortnightly passenger service to be maintained during the season of open navigation between the north east coast of England, Southampton and Montreal, returning to London. The other vessels in the service will be the Tortona, and the Cairnrona. In the winter and early spring these vessels will be employed in carrying emigrants between Italy and Canada.

The Cunard Co. has purchased the steamships Gerona, Tortona and Cairnrona, which it will operate in Canadian service during this season, but which, we are advised, will be continued under the name of the Thomson Line.

◆

The Gael Shipping Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $27,000, and office at Montreal, to own and operate steam and other vessels, and to carry on a general navigation business on the high seas and within inland navigation. The provisional directors are: G. I. Dewar, Ottawa; W. A. Taft, Arlington, Mass.; W. H. Chandler, Newton, Mass.; J. W. Bucknam, Quincy, Mass.; W. McKissock, Brookline, Mass.

Johnson Car Replacers

Straddles the rail—needs no spikes, clamps or fasteners.
Rests on rail both front and rear.
Adjusts itself to different heights of rail.
Forms a friction grip with rail during the operation.
Brings rails to gauge during replacement.
Distributes the load on the Rail, not one or two ties.
Special types for Steel-ties and Street Car Rails.

G. T. P. Steamship Terminal at Seattle.

In our issue of June, 1910, we gave an illustration and brief description of the Grand Trunk Pacific Dock Co.'s buildings at Seattle, Wash., for the special use of the G.T. Pacific Coast Steamship Co. Following is a fuller description:—

The problem of selecting the principal terminal for the water lines in the United States was solved by the purchase of centrally located property in Seattle, Wash., and the beginning of a big dock at which to berth the steamers. The result is that the company probably has the finest wooden structure of its kind completed. As the company will handle passenger business primarily from the pier it is admirably adapted for its intended use, and the combination of stores and offices under its roof is a unique feature in structures of this kind, as space has been utilized which heretofore has produced no revenue.

In designing the pier the latest and most modern ideas of wharf construction were embodied and the structure will set the pace for pier building in the northwest. The building is fireproofed to as great a degree as possible, considering the style of material used. The adoption of a design in which wood figured as the only material was due, of course, to the fact that the dock was built on the edge of the greatest timber producing section of the country and that it was the cheapest kind of material. Figures have been brought forward to prove that trussed steel-concrete construction is the most economical in the long run, even in this section, but wood was used nevertheless.

The dock is 625 by 120 ft., although an oblique frontage gives it an inshore width of 208 ft. where most of the offices and a warehouse are located. The building is supported by creosoted piles, the specifications for which called for piles to be first growth fir, a minimum of 9 in. in diameter at the tip and 14 in. at the butt, with the penetration of oil fixed at from 1 to 1¾ in., under a 12½ lb. treatment. The length of the bearing piles varied from 55 to 90 ft., with the brace piles running up to 110 ft. in length. The bents were driven 10 ft. apart and the piles spaced along the bents at distances varying from 6 ft. centres to 3 ft. centres at the outer end, with clusters of from four to six under posts of trusses where extra loads occur. Brace piles were driven at every bent and in addition the dock is braced both laterally and longitudinally with 4 by 12 in. creosoted bracing. Caps are 12 by 12 ins., with stringers 4 by 12 ins. spaced 30 ins. apart, and 12 by 12 ins. material under posts and at the sides. The caps are drift bolted to every pile with ¾ by 22 ins. drifts and 12 by 12 ins. stringers, two lines of 10 by 12 ins. down the centre, and every third 4 by 12 ins. stringer bolted to the caps. The span of the trusses is 90 ft. and the building is extended on the north side an additional 14 ft., giving warehouse space 104 ft. wide. On the south side of the building there is an 8 ft. space to the edge of the dock, and on the north side is a 16½ ft. space where the railway tracks are located. The dock is equipped with five adjustable loading slips, worked by a worm, with the railway track carried over those on the north side by bascule bridges. At each slip is located a power plug for use of electric conveyors. The openings in the building, 8 ft. wide on each side of the slips and 14 ft. wide midway between the slips, are closed by rolling steel doors or shutters.

The passengers from the G.T.P. steamships which ply in the north coast trade are landed directly on the second floor of the dock by means of a platform supported by a pontoon which bears up the incline so that it is always at the level of the ship's deck. The incline will lead the passengers direct to the waiting and customs examination rooms and to the over-head walk to the street, which takes the passengers direct to a business avenue and does away with the usual dodging of wagons and freight cars on the water front streets.

The roof of the main warehouse is supported by a diamond truss of 90 ft. span on 12 by 12 pieces spaced 20 ft. apart, with purlins 4 by 10 in. and cross braced between trusses for wind pressure. On the ground floor inshore are six stores with an average floor space of 1,000 sq. ft. each. On the second and third floors inshore are offices, and also on the second floor suspended from the trusses down both sides of the warehouse. There is a gallery 10 ft. wide in front of these offices, leaving an open well 30 ft. wide, over the main floor. The total number of offices in the building is 69. In addition, on the sea end a tower 20 by 20 ft. and 106 ft. high above the first deck has been built, in which are four offices especially suitable for harbor officials because of the fine view of the port.

At the extreme sea end the dock is laid out to accommodate the steamboat Flyer, which carries passengers between Seattle and Tacoma. Baggage and bonded rooms are provided on the lower deck and on the second floor level are the waiting rooms, ticket office, parcel check room and restaurant, which are reached by separate inclines for incoming and outgoing passengers. A gallery for a band stand overlooks the waiting room and a stairway leads to

the open air promenade and roof garden at the sea end.

Counting out the space allotted to offices, boiler and fuel rooms and a 30 by 25 ft.. garage, the deckage available for the handling of freight is about 440 by 104 ft. There are firewalls distributed freely through the dock, in which the openings are closed by automatic steel shutters of exceptional size, some being 14 ft. wide and 14.8 ft. high, with the widest 24 ft. Ship hydrants along both sides every 80 ft. and scattered on the inside of the building, furnish further fire protection.

The engineer in charge of construction and much of the planning was F. T. Lucas, who was born at Hamilton, Ont., in 1883. After passing through the Royal Military College at Kingston, Ont., and McGill University, Montreal, he graduated in 1905, spent a year in G.T.R. maintenance of way service at Allandale, Ont., then went west on G.T.P.R. mountain surveys, and afterwards was given charge of laying out the Prince Rupert, B.C., townsite and the harbor works there.—Abridged from Marine Review.

Notices to Mariners.

The Department of Marine has issued the following:

20 Feb. 23. 47. British Columbia, Vancouver island, west coast, Nootka sound, Friendly cove, lighthouse established.

21. Feb. 24. 48. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Lake St. Peter, lightship to be replaced by gas buoy.

22. Mar. 2. 49. New Brunswick, River St. John, Glenwood, light established on wharf. 50. Prince Edward Island, south coast, Hillsborough bay, St. Peters island light station, explosive fog signal, erratum. 51. Quebec, River St. Lawrence, Crane island, character of light.

23. Mar. 9. 52. British Columbia, Johnstone strait, Helmcken island, gas lighted beacon established. 53. British Columbia, Lama passage, Camp island, gas lighted beacon established.

24. Mar. 10. 54. British Columbia northern waters between Vancouver island and mainland, slack water in passes.

25. March 11. 55. British Columbia, Johnson strait, rock point, Ripple point, and West Thurlow island, day beacons erected. 56. British Columbia, Lama passage, Denny island, day beacon erected. 57. British Columbia, Seaforth channel, Regatta rock, beacon rebuilt.

26. Mar. 13. 58. British Columbia Malaspina strait, Welcome pass, and Pender harbor, existence of rocks.

27. Mar. 16. 59. Nova Scotia, south coast, Lunenburg bay, Halifax harbor, lights of gas buoys placed for testing purposes showing irregularly. 60. Nova Scotia, south coast, submarine bell attached to Sambro gas and whistling buoy not to be relied on. 61. Nova Scotia, south coast, Island harbor, buoy established north of Harbor island. 62. Quebec, Gulf of St. Lawrence, Aylmer sound, existence of a rock. 63. Quebec, Gulf of St. Lawrence, Point Peter, buoy to be established.

28. Mar. 16. 64. Ontario, Lake Huron, Goderich, bearing of range lights. 65. Manitoba, Lake Winnipeg, Gull harbor, change in character of light. 66. United States of America, St. Lawrence river, Comfort island shoal, gas buoy to be established. 67. United States of America, Lake Erie, Cleveland harbor entrance, intended change in lights.

◆

The Reid Wrecking Co., is building an extension of 600 ft. to its dry dock at Port Huron, Mich. The work will be carried on throughout the summer, and when completed, it is said that the dock will be large enough to accommodate any vessel operating on the lakes.

G. T. P. Coast Steamship Co.

We are officially advised that the Grand Trunk Pacific Steamship Co., has purchased the s.s. Amethyst, in England, for its Prince Rupert and Queen Charlotte Islands service, and has decided to re-name her Prince John. She was built at Bowling, Eng., in 1910, and has accommodation for 50 first-class and 150 steerage passengers. The accommodation also includes a smoke room on the main deck, opening from the shade deck, decorated in Flemish oak, a dining room occupying the full width of the vessel immediately aft, with a seating capacity of 44, furnished in mahogany with leather upholstering, lavatories, chief steward's office, pantries and galley all complete with the most modern equipment for a comfortable service. The principal first class staterooms are situated on the shade deck, all decorated in white enamel and gold, and forward of these is a circular fronted observation room enclosed by plate glass, while the texas and pilot house are placed on the deck above, which also affords ample promenade space. The machinery consists of triple expansion engines with cylinders 17, 28 and 45 ins. diar., by 33 ins. stroke, supplied with steam by single ended Scotch boilers, 12 ft. long by 12 ft. diar., and equipped with well arranged bunkers containing about 100 tons of coal. The steerage accommodation is arranged on the lower deck with entrance from the quarter deck aft of the galley. Cargo space is provided on the main deck, with capacity of about 450 tons. It is anticipated that she will make 12 knots an hour on a consumption of about 12 tons of coal a day. Her dimensions are, length 185 ft. between perpendiculars; beam, 29½ ft.; depth, 13 ft.; tonnage, 622 gross, 446 register. A number of minor changes are being made at Port Glasgow, Scotland, after which she will sail on her voyage to the coast, by way of the Horn, and it is anticipated that she will be in service some time in June.

Vessels Removed from the Register.

During Jan. and Feb., the following vessels were removed from the register, for the reasons assigned:—Steam—Ethelwold, Montreal, 533 tons, transferred to London, Eng.; Gordon McDonald, Kenora, Ont., 14 tons, sold to foreigners; Hawywa, Ottawa, 3 tons, broken up; Jean, Port Burwell, Ont., 14 tons, burnt; Lillian B., Ottawa, 3 tons, dismantled; Stella, Vancouver, B.C., 13 tons, broken up; Strathcona, Vancouver, B.C., 376 tons, broken up; W. J. Strong, Southampton, Ont., 28 tons, burnt. Sailing—Arkona, Lunenburg, N.S., 144 tons, transferred to West Indies; Audacieux, Weymouth, N.S., 99 tons, broken up; Blanche, Barrington, N.S., 24 tons, sunk; Brookside, Yarmouth, N.S., 672 tons, sold to foreigners; C. W. Bangs, Ottawa, 152 tons, broken up; Elfreda May, Shelburne, N.S., 78 tons, missing; Ellen A. Read, Yarmouth, N.S., 18 tons, broken up; Genesta, Barrington, N.S., 32 tons, wrecked; Greenwood, Shelburne, N.S., 71 tons, transferred to Newfoundland; Henry Swan, Sackville, N.S., 63 tons, broken up; J. A. McLean, Lunenburgh, N.S., 80 tons, transferred to Newfoundland; L. C. Larned, Chatham, N.B., 43 tons, broken up; Lone Star, Halifax, N.S., 29 tons, wrecked; Novelty, Lunenburg, N.S., 246 tons, transferred to West Indies; Roseway, Shelburne, N.S., 244 tons, stranded; S. A. Fownes, Dorchester, N.B.M., 123 tons, wrecked; Shannon, Lunenburg, N.S., 63 tons, transferred to Newfoundland; Thomas Beckett, Ottawa, 151 tons, broken up; Tormentor, Halifax, N.S., 15 tons, wrecked; Utowana, Lunenburg, N.S., 71 tons, transferred to Newfoundland.

Atlantic and Pacific Ocean Marine.

The Allan Line is reported to have granted increases of pay to officers of its fleet, with shore subsistence allowances, and certain privileges, not hitherto allowed.

W. McK. Roden has been appointed General Passenger Manager Allan Line Steamship Co., for Great Britain and Europe, with office at 14 Cockspur St., London, Eng.

The contract with Pickford and Black for a fortnightly steamship service from St. John, N.B., and Halifax, N.S. to the West Indies, has been renewed, subject to the concurrence of the British Government. The contractors are required to use vessels on the British register.

The s.s. Henley, which has been under charter to the Canadian Mexican Pacific Steamship Co., for some time, arrived at Vancouver, from Salina Cruz, Mexico, Mar. 6, on her last trip for that company. The next sailings are being taken by the s.s. St. Ronald.

Prior to sailing from New York, Mar. 8, for a combined business and holiday trip to Europe, Sir Thos G. Shaughnessy is reported to have stated that he expects to place orders for the building of two steamships for the Pacific service, of a tonnage of about 15,000 each.

The Canada Line, which inaugurated a steamship service between Germany and Canada, last season, will it is announced, extend the service, this year, by operating a weekly service, with six vessels. The first sailing was announced to be the s.s. Barcelona, from Hamburg, Mar. 24.

The Thomson Line's s.s. Gerona was launched at Wallsend-on-Tyne, Eng., Mar. 8. She is to be an up-to-date vessel, equipped with Marconi wireless telegraph apparatus, submarine signal system, refrigerating and cooling appliances and with a capacity for 10,000 tons of cargo and 200 saloon and 1,500 third class passengers.

The Australian Government which recently decided to withdraw from the arrangement whereby it paid a portion of the subsidy for a steamship service between Canada, New Zealand and Australia, has announced its intention to reopen the question and to negotiate for a continuance of the service to Australia.

In connection with the recent reports as to the proposed establishment of a steamship service by the C.P.R., between Canada and the West Indies, it is reported that a deputation of business men from the West Indies, is coming to Canada to interview the Government and the C.P.R. on the matter, especially with regard to subsidies, and the possible amount of business.

A London, Eng., cablegram of Mar. 1, says:—"The Cunard Steamship Co. today purchased the Cairn Line steamships operating between London and Canada under the name of the Thomson Line. In addition to the vessels now being operated, the Cunard Co. takes over three new passenger liners now in course of completion on the line, and will institute a weekly service."

On his arrival in Montreal, Mar. 9, W. T. Payne, Manager C.P.R. Trans-Pacific Steamship Service, Yokohama, Japan, is reported to have said, that rumors have been freely circulated as to what the company intends doing with regard to the Pacific service, but that it is for the management to make its announcement on this point, in its own time. He is also reported to have stated that the present service, though very good, is not of a character to do justice to the traffic and that Canadian interests should be protected by a more efficient service.

Maritime Provinces and Newfoundland.

The Newfoundland sealing fleet, consisting of 19 vessels, sailed on its annual cruise in the Gulf of St. Lawrence, Mar. 13.

The returns for the past fiscal year of the Nova Scotia Legislature, show that $66,798, was paid in steamboat and ferry subsidies.

The P.E.I. Public Works Department received tenders, Mar. 28, for leasing any, or all of the public wharves and bridges, owned by the Government, from Apr. 1 to Mar. 31, 1912.

The P.E.I. Public Works Department received tenders, Mar. 27, for carrying passengers, baggage, vehicles, cattle, etc., across the Cranberry and Poplar Point ferries, for three years, from Apr. 1.

A petition has been presented to the Nova Scotia Legislature, from the residents of Little Harbor and vicinity, asking for an increased subsidy for transportation by water, between Port L'Hebert and Lockeport.

The French steam trawler Baleine is to be sold by public auction, to satisfy claims against her. She is of the latest type, fitted with patent steam capstans, hoisting gear and with an acetylene light plant for night work.

The affairs of the Star Line Steamship Co., Ltd., are being investigated in the New Brunswick courts, as the result of an auditor's examination of the books, which were stated to be in an unsatisfactory and deplorable condition.

The Dominion Coal Co., is reported to have chartered the Norwegian steamships Storstad and Sandefjord, and the British steamship Batiscan, for its coal service during the forthcoming season. These vessels were all built in England recently.

The Government ice breaking steamship Stanley was towed into Halifax, N.S., Mar. 12, by the Government s.s. Montmagny, with a broken propeller. It is not anticipated that the replacement can be made to enable her to resume operations before the early part of April.

A correspondent at Charlottetown P.E.I., writes us that the s.s. Earl Grey, which is now perfoming her second winter's service between Pictou, N.S., and Georgetown, P.E.I., is doing excellent work. Last winter there was but little ice but this winter it has been very heavy, and she has proved herself a good boat.

Application is being made to the New Brunswick Legislature to incorporate the Clair and Fort Kent Bridge Co. to build a bridge across the St. John River, between Clair and Fort Kent, to be not less than 24 ft. wide, with sufficient passage ways for boats, etc. Slipp and Hansom are solicitors for applicants.

A cable dispatch from England, Mar. 18, states that the Sydney, Cape Breton and Montreal Steamship Co., has been registered in London, Eng., with a capital of £70,000. Amongst those named as interested in the scheme, are E. F. and W. Roberts, Liverpool, Eng.; Bowring and Co., Liverpool, Eng., and St. John's, Nfld., and the Dominion Coal Co.

The Bridgetown Steamship Co., has been organized with headquarters at Bridgetown, N.B., to operate a vessel between Bridgetown and St. John, with calls at intermediate points. It is stated that an order has been placed in Yarmouth, N.S., for the construction of a steamship for the purpose, delivery to take place by July 15.

The N.B. Government has made an appropriation for the repair of the public wharf at St. Stephen, and it is announced that the work will be commenced as soon as the weather conditions are favorable. It is stated that the C.P.R. is also undertaking some improvement work there, and that some dredging work will be undertaken in the river.

The Eastern trust Co., and H. McInnes, trustees under the will of the late M. Dwyer, Halifax, have deposited with the Public Works Department at Ottawa, plans and description of a proposed wharf extension in Halifax harbor, from Lower Water St., 200 ft. into the harbor, thence southerly at right angles for 81 ft. 7 ins., and westerly for 200 ft., and thence northerly for 81 ft. 7 ins.

The Steamship Senlac So.'s s.s. Senlac, is being offered for sale by Wm. Thomson and Co., St. John, N.B., and, unless disposed of by private treaty, will be sold by public auction at Dalhousie, N.B., Apr. 5. She is a screw driven vessel, with engine of 66 n.h.p., capable of a speed of 11 knots an hour, and she was built at St. John in 1904. Her dimensions are, length 182.4 ft., breadth 33 ft., depth 16.1 ft.; tonnage, 1,011 gross, 615 register.

The Imperial Dredging and Construction Co., Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $40,000, and offices at Oromocto, to own and operate dredges, dredging steamers, etc., and to build wharves, docks, bridges, terminals and other shipping facilities. The provisional directors are: W. J. McMulkin, Upper Gagetown; R. B. Smith, Oromocto; H. B. Bridges, Gagetown; P. J. Smith, Blissville; and G. C. Currier, Upper Gagetown, N.B.

The Eastern Transportation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $20,000 and office at Bathurst, N.B., to build, own and operate steam and other vessels, docks, warehouses and other terminal facilities; to carry on a general towing, wrecking and salvage business, and to carry on the business of carriers of passengers and freight, etc. The provisional directors are A. E. Loosen, O. Page, C. M. Mersereau, A. Hains and A. McLean, Bathurst, N.B.

At a recent meeting of the Dartmouth Ferry Commission, to consider the question of the provision of a new ferry steamboat, it was decided that the mayor be authorized to go to Great Britain to place a contract for the construction of a steel steamer for the service. Tenders were recently invited for a vessel, and negotiations were entered into with a British firm which submitted a tender, but the commission has been unable to satisfactorily close the contract with the firm, as the commission's plans were not acceptable to the tenderer.

The Dominion Department of Public Works is having a dipper dredge built at Pugwash, N.S., for use in the smaller bays and harbors of Prince Edward Island. The contract has been awarded to Burns and Waters, Ottawa. The dimensions are, length 65 ft., breadth 25 ft., depth 6ft., with a maximum working depth of 16 ft. The capacity of the dipper is to be one cubic yard, with a daily output of 400 cubic yards. The hull is being built of B.C. fir or white pine, except the corner posts, transom pieces, spud casing, overhead beams, engine keelsons, foundations for boom base plate and bow planking, which are of white oak. The main engines will have cylinders 8½ ins. diar by 12 ins. stroke, flat valves, locomotive type link motion and hand reversing gear to be operated from the engineer's platform The main hoisting drum is to be 2¾ ft. long between the flanges and 15 ins. diar. Deck house 47 by 17 ft., with accommodation for 12 men. The construction is being carried on under the supervision of the Department's engineers, and it is anticipated that the dredge will be ready for operation by May 7.

Province of Quebec Marine.

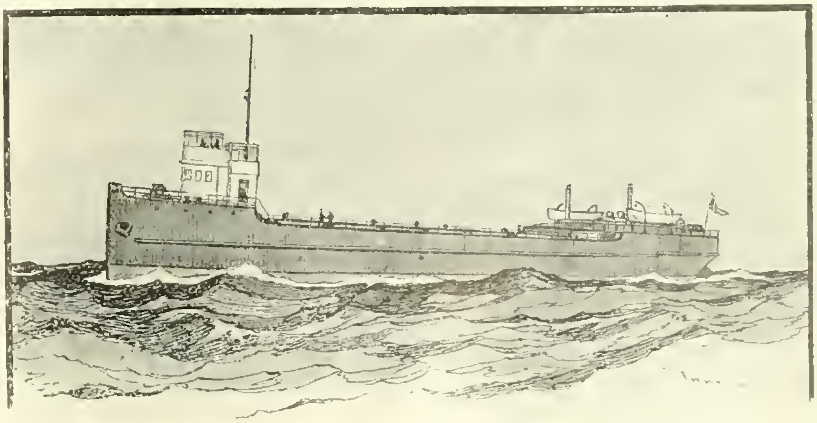
The Dominion Public Works Department will receive, to Apr. 4, tenders for the construction of a wharf at Chateauguay.

The Montreal Harbor Commissioners received tenders, Mar. 29, for the construction of a ferry wharf and approaches to be built in the harbor on the west side of St. Helen's island.

The contract for the erection of a bascule span bridge across the St. Charles River, near Quebec, has been awarded to Lemoine and Co., Montreal, at a cost of about $156,200. The bridge will be 150ft. long, and it is understood that the work will be undertaken at once.

The Marine Department has awarded the contract for the construction of a twin screw survey inspection steamboat for the St. Lawrence ship channel service below Quebec, to the Kingston Shipbuilding Co., Kingston, Ont. The vessel, which is to be named Bellechasse, will be 130ft. long, 27ft. beam and 13½ft. molded depth.

The Quebec city council ferry committee, at a meeting, Mar. 9, agreed to grant berthing facilities for the steamships Cascapedia and Gaspesian at the Champlain market wharf, at a yearly rental of $700 for the former and $400 for the latter. A letter was read from the Minister of Marine to the effect that if all parties were agreed he would



The Steamship Toiler.

The above is a somewhat crude illustration, but the best available of the s.s. Toiler, which is being built in England for the Canadian canal and lake trade, and which was fully described in our last issue.

HAMILTON, - ONTARIO

send an expert to report on the question of horse power of the engines on the ferry boats. The matter has been referred to the city council for advice.

The steamship Canada, formerly owned and operated by the Fraserville Navigation Co., recently liquidated, which was sold by order of the Admiralty Court, has been purchased by G. A. Binet, and a considerable sum has been spent on overhauling it. It is stated that it will be placed in service on the Baie des Chaleurs route on the opening of navigation, and that the Dominion Government has promised a subsidy of $15,000 a year for two years for such service.

Judgment was delivered, Mar. 8, in a case, which was tried about six months ago, to decide whether a captain of a vessel is also entitled to act as its pilot. The case was brought by Capt. J. J. Riley, master of pilots for the port of Montreal, against Capt. B. St. Denis, for having piloted the s.s. McCormick within the pilotage district of Montreal he not being a licensed pilot within that district. It was held that the master's certificate held by Capt. St. Denis does not authorize him to act as a pilot, and he was fined $1 and costs.

It is reported that the negotiations between the interests which have undertaken to build a dry dock at Montreal, and the Dominion Government, regarding the subsidy agreement, are about concluded, and that a subsidy of 3½% for 35 years, on an expenditure of $3,000,000 will be paid, dating from the completion of the work. The floating dock, which will be of the first class, to accommodate the largest St. Lawrence vessels, will be built in England, and towed across the Atlantic. The preparation of the site at Molson's Creek is well advanced.

At a meeting of the Canadian Society of Civil Engineers, at Montreal, Mar. 16, a paper was read on the Upper St. Lawrence, its navigation and future possibilities, with regard to both navigation and power purposes, by H. Holgate, C.E. As a result of the discussion which followed, the following resolution was carried: "That the council of the Canadian Society of Civil Engineers be requested to take up and study the suggestions made that the Dominion Government be urged to make a study of the River St. Lawrence and its possibilities, and that a comprehensive report be submitted before any commitment be made by the Government for the damming of the St. Lawrence at any point, or the carrying out of any other great scheme of canal transportation, and that the council be requested to take this matter up, and, if advisable, make a report to the Dominion Government."

Ontario and the Great Lakes.

In the House of Commons, Mar. 13, an attempt to raise a discussion as to the advisability of commencing the construction of the proposed Georgian Bay Canal forthwith, was ruled out of order.

The Montreal Board of Trade, Mar. 15, decided to request the Minister of Marine to order that the St. Lawrence canals, from Montreal to the west, be opened not later than Apr. 25.

A deputation, representing the city council of Toronto, waited on the Minister of Marine, recently, and obtained a promise that the Gibraltar Point lighthouse would not be discontinued, as had been proposed.

H. Holgate, M. Can. Soc. C.E., spoke before the Canadian Club, Montreal, Mar. 6, on some facts regarding the Upper St. Lawrence, and dealt, at some length, with the international aspect of the proposed Longue Sault dam.

It is reported that the work of widening the Livingstone channel in the lower Detroit River, is to be proceeded with at once and carried on to completion, the necessary authority having been received by Col. McD. Townsend, the U.S. Engineer in charge of the work.

The disused lighthouse at the south end of the International bridge at Sault Ste. Marie, was burned, Mar. 13, by order of the U.S. Lighthouse Department, it having been rendered useless, and it being found cheaper to destroy it in this way than to remove it otherwise.

A resolution was introduced into the U.S. House of Representatives, Mar. 3, authorizing the President to investigate, as in his discretion may seem best, the advisability of entering into a treaty with Canada, providing for a deep waterway between the Great Lakes and the Atlantic, by way of the St. Lawrence River.

A press report from New Liskeard states that a company is being organized to acquire the steamboat Aileen, formerly operating on the Montreal River, and to run her in the passenger and freight traffic, between White River, North Timiskaming, Gigue and New Liskeard. The Aileen is stated to be 80ft. long, with 12½ft. beam.

In addition to the companies mentioned in our March issue, pg. 267, the following have joined the Canadian Lake Protective Association; Algoma Central and Hudson Bay Ry. Co., Forwarders, Ltd., International Steamship Co., Jaques Transportation Co., Montreal, and Great Lakes S. S. Co., Montreal, and Lake Erie S. S. Co., Western Navigation Co.

In connection with recent press reports to the effect that the Northern Navigation Co., intended to equip its vessels with wireless telegraph apparatus this year, we are officially advised that as there are no receiving stations on the Canadian side of the lakes, it would be useless to so equip the vessels at present.

The Buffalo, Lockport and Rochester Ry. will operate a steel steamboat this season, between Olcott Beach, N.Y., and Toronto, in conjunction with its electric railway having a connection with Buffalo, Lockport and Syracuse. The vessel to be utilized has a carrying capacity for 700 passengers, and formerly plied on Lake Erie between Cleveland, Ohio and Port Stanley.

The Minister of Railways and Canals, in the House of Commons, Mar. 10, speaking on the Welland canal, stated that the total cost to the present was $28,338,616. He also stated that during the session he intended to explain a definite proposal to widen and deepen the river, and said that he desired to do all he could to aid the proposed Welland and Georgian Bay canal schemes.

An order in council has been passed, changing the limits of the ferry across the Rainy River, between Ontario and Minnesota, so that they shall be co-terminous with the town of Fort Frances, and the land adjacent on the north bank of the river between the west boundary of the town and Pither's Point, where the rivers join the lake, and such points on the Minnesota side as may be arranged by competent authority there.

The Dominion Public Works Department is considering the question of inviting tenders for the construction of a dock at New Liskeard. Preliminary work in connection with the proposal has been carried out and estimates made. The matter of acquiring the Temiskaming Navigation Co.'s dock there, to incorporate with the new work, is being considered, if it can be obtained at a reasonable figure, but if not, the new dock will be built immediately to the south of it.

The Grant Cartage and Forwarding Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $40,000 and office at Hamilton, to carry on a general business of warehousing, wharfinger, transportation and forwarding company, and act as ocean and inland carriers; to acquire similar companies, and to build, own and operate steam and other vessels, wharves, docks, and other transportation facilities. The provisional directors are, R. S. Rider, W. J. Shaw, P. Grant, C. K. Armstrong and C. Morin, Hamilton.

A deputation of Owen Sound citizens waited on the Ontario Government, Mar. 21, in support of a bill before the Legislature to empower the city to take $50,000 of stock in the company which proposes to build a dry dock and ship building plant at Owen Sound. The proposals include a dry dock 600 ft. long, 20 ft. deep, and sufficiently wide to accommodate lake vessels of the broadest beam; and the shipbuilding yards will have ways for three 600 ft. vessels, one of 400 ft., and two of 200 ft. An application has already been made to the Dominion Government for a 3% subsidy, under the act granting aid to dry docks.

At the annual meeting of the Temiskaming Navigation Co., at Haileybury, Mar. 9, a dividend of 5 per cent. was declared, making the third dividend paid. In 1908 and 1909 dividends of 10% were paid, but owing to an accident to one of the company's vessels last year the profits were considerably reduced. The steamboat Temiskaming is being partially remodelled, and some additional cabins are being placed on the upper deck. The steamboat City of Haileybury is having another deck added and the other vessels are being thoroughly overhauled. Following are the officers and directors for the current year: President, G. H. Rochester; Vice President, M. J. Malone; other directors, S. McChestney, A. Ferland, J. M. Wood, and A. E. Way.

Manitoba, Saskatchewan and Alberta.

The Hyland Navigation and Trading Co., Ltd., Winnipeg, has been granted supplementary letters patent increasing its capital stock from $200,000 to $1,000,000.

The Gainsford Coal Co., Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $750,000, and office at Winnipeg, with power, among other things, to own and operate steam and other vessels, docks, warehouses, wharves, etc., and to carry on a general transportation business in passengers and freight. The provisional directors are: W. Pace, H. McLennan, J. Osborne, T. B. Campbell and W. Thorburn, Winnipeg.

The Lake Winnipeg and Red River Navigation Co., Ltd., has been incorporated under the Manitoba Companies Act, to carry on the business of carriers of passengers and freight, the construction of wharves, the acquisition and operation of steamboats and ferries, and generally such business as is usually carried on by a navigation company. The company has deposited with the Dominion Public Works Department, plans of a dock, which it proposes to build on the bank of the Red River, extending along the water frontage from Water St., to Broadway bridge.

The survey of the Saskatchewan River, which was partly done last season, is to be completed this year, and an estimate made of the cost of making the river navigable from Edmonton to Grand Rapids. The survey is in charge of L. R. Voligny, and he is reported to have stated that the work will chiefly consist of sounding and the taking of levels. What was done last year was more to see if the scheme to make the river navigable were feasible. It having been decided that it is so, an estimate of the cost is the first consideration.

B.C. and Pacific Coast Marine.

The C.P.R. recently received tenders for the erection of a wharf, including material, at Nanaimo.

The North Vancouver ferry receipts for Feb. were $4,319.40, of which $251.75 was for freight.

The Esquimalt and Nanaimo Ry. has filed plans with the Dominion Public Works Department for a proposed wharf to be built in Stamp harbor, Port Alberni, Vancouver Island.

During 1910, over 300 ocean going vessels with a tonnage of about 325,000 and 1,200 coasting vessels with a tonnage of 450,000, were reported to have called at Prince Rupert.

The Dominion Public Works Department, received tenders, Mar. 23, for the charter of a steam tug boat, to tend the elevator dredge working at the First Narrows, Vancouver.

The Department of Marine is preparing plans for the erection of a lighthouse of the first order of the re-inforced concrete type, near Cape Cook, similar to those at Estevan and Triangle.

Evans, Coleman and Evans, Ltd., has added to its docking facilities at Victoria, by taking in the Victoria Dock Co.'s wharf, adjoining the G.T.P. wharves, which are also operated by it.

Reports from Prince Rupert state that a company is being formed with the object of operating a steamship service between Canada and Chinese ports, with Prince Rupert as the Canadian headquarters.

The G.T.P. Coast Steamship Co.'s s.s. Prince George, owing to a recent breakdown of her starboard engines is being thoroughly overhauled, in preparation for the summer work and her place has been taken by the s.s. Prince Rupert.

The Grand Trunk Pacific Coast Steamship Co. has received at its Vancouver offices a model, 7ft. long, of its steamships Prince Rupert and Prince George, which is complete in every detail.

Evans, Coleman and Evans, Vancouver, announce that they have chartered the British barque Gulf Stream for a trip from Glasgow, Scotland, to Vancouver, with general cargo. She is expected to sail about Apr. 1.

The Dominion Government survey steamboat Lillooet, which has been lying up at Esquimalt, is preparing for a summer cruise in the neighborhood of Hecate Strait, where it is anticipated, she will remain until about November.

It is reported that an application will shortly be made to the Dominion Government for a subsidy for the establishment of a shipbuilding plant at Port Mann., B.C. A. P. Gillies, Toronto, and N. Thompson, Vancouver, B.C., are reported to be interested in the matter.

The C.N.R. is reported to have decided to increase the dock accommodation at Port Mann, in an eastward direction. The s.s. Fitzpatrick recently unloaded the first consignment of steel rails at the port without difficulty, a depth of 35 ft. being reported at the dock, so that the largest ocean going vessels can be accommodated.

The C.P.R. barge Robert Kerr, conveying coal for the Empress of India, was wrecked on Danger reef near Ladysmith, Mar. 5. It is stated that she will be a total loss but that the coal can be salved. The barge was built at Quebec in 1866, her dimensions being: Length 190.6 ft.; breadth, 38.1 ft.; depth, 23.7 ft.; 1,123 tons register.

The Scandia Trading Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $25,000, to carry on a general mercantile business in the province, and in connection therewith to own and operate steam and other vessels, for the transportation of passengers and merchandise, and to act as general carriers by land and water.

The All Red Line, Ltd., which was recently incorporated under the B.C. Companies Act, as mentioned in our last issue, has acquired the s.s. Selma, formerly a steam yacht, which was purchased in England recently and taken to the Pacific coast. She has been put into service between Vancouver and Powel River points, making three trips weekly.

The Queen Charlotte Cold Storage and Black Cod Fishing Co., Ltd., has been incorporated under the B. C. Companies Act, with a capital of $300,000, to carry on a general fishing and fish dealing business, and in connection therewith to own and operate steam and other vessels, and other shipping facilities, and to act as forwarders, warehousemen, etc.

The Kitsumkallum Timber Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,500,000, and office at Toronto, to carry on a general lumbering business; and in connection therewith to own and operate steam and other vessels, wharves, docks, etc. The incorporators are W. J. Rooney, G. F. Morrison, R. F. Pack, P. Davies and R. Nevitt, Toronto.

The C.P.R. s.s. Charmer is being thoroughly overhauled and repaired at Victoria, prior to being replaced in the B.C. Coast Service, as a relief vessel. A considerable amount of heavier framing has been fitted, and 75 new plates have replaced the old ones. She is also being equipped with new boilers and the necessary installation is being made to convert her into an oil burner.

The B.C. Public Works Department, recently invited applications for a charter for a ferry to ply across the Skeena River, above Kitsequecla Creek, the limits to extend for 1½ miles below the Beaver dam and half a mile above Kitsequecla Creek, and the ferry to be operated whenever required between 7 a.m., and 7 p.m., each day, except Sundays. The charter will be for two years ending Mar. 31, 1913.

The North Vancouver ferry steamboat North Vancouver No. 3, was launched there, Feb. 27. She is 165 ft. long, with a beam of 45 ft. over guards, and has fore and aft compound inverted engines of about 600 h.p. It is claimed that she is the first steel hull to be built on the Burrard Inlet, others having only been put together there. It was anticipated that she would be completed and ready for service by the end of March.

The G.T.P. Coast Steamship Co. is reported to have purchased the old schooner North Bend, which it intends to alter somewhat, and utilize in carrying unwieldy cargo to little known ports, where it would not be wise to risk more expensive vessels. The North Bend was built at Coos Bay, Ore., in 1877, her dimensions being: Length, 152.6 ft.; breadth, 32 ft.; depth, 11 ft.; tonnage, 392 register. She was formerly owned by Mackenzie Bros.

The interests which have acquired the Fort George Lumber and Navigation Co., are reported to have decided to place a steamboat service on the Fraser River between Fort George and Tete Jaune Cache, this summer. The first time such a trip was undertaken, was in July last,

---

The Grand Trunk Railway Company of Canada.

NOTICE is hereby given that the Ordinary General Half-Yearly Meeting of the Grand Trunk Railway Company of Canada will be held at the City Terminus Hotel, Cannon Street, London, E.C., on Thursday, the 20th April, 1911, at twelve o'clock noon precisely, for the purpose of receiving a report from the Directors, for the election of Directors and Auditors, and for the transaction of other business of the Company.

Notice is also given that a resolution will be submitted to the Meeting to assent to and accept an Act of the Parliament of Canada, entitled "The Grand Trunk Act, 1911," and to authorize the Directors to exercise the powers conferred by the said Act.

Notice is also given that the Transfer Books of the Company in London and Montreal will be closed from Saturday the 18th day of March, to the day of the Meeting, both days inclusive.

By Order,

Alfred W. Smithers, Chairman.
H. H. Norman, Secretary.

CITY OF TORONTO

TENDERS WANTED

For Construction Equipment.

Separate or bulk tenders, on prescribed forms, will be received, by registered post only, addressed to the Chairman of the Board of Control, City Hall, Toronto, Canada, up to noon on Tuesday, April 11th, for the delivery of the following:—

(1) Two (2) full circle swing traction steam shovels, one and a quarter (1¼) yard dipper.
(2) Six (6) saddle tank locomotives, 36 in. gauge.
(3) Forty (40) four yard (4 yd.) dump cars, or fifty-four (54) three yard (3 yd.) dump cars, 36 in. gauge.
(4) Four (4) double track flat cars, 36 in. gauge.
(a)
(5) Two hundred (200) tons 30 lb. steel rail.
(b)
Twenty-four (24) No. 5 switch leads.
(c)
Seventy-five (75) kegs of spikes.
(d)
Eighteen hundred (1800) pair of fish plates.
(d)
Twenty (20) kegs bolts and nuts.

Envelopes containing tenders must be plainly marked on the outside as to contents.

Specification and form of tender may be obtained upon application from Department of Railways, Bridges and Docks, City Engineer's Office, Toronto.

The lowest or any tender not necessarily accepted.

G. R. GEARY (Mayor),
Chairman Board of Control.
City Hall, Toronto, March 27th, 1911.

when Capt. J. H. Bonser took the steamboat Fort George beyond the Grand Canyon, to Tete Jaune Cache, with ten tons of freight and 18 passengers, without encountering any special difficulties.

The North Vancouver Ferry Co.'s ferry boat which was recently launched there, was given a trial trip, Mar. 14, when everything passed off satisfactorily.

The Columbia River Lumber Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $5,500,000, and office at Toronto, to conduct a general lumbering and timber business, and in connection therewith to own and operate vessels of every description, wharves, docks, piers, etc. The incorporators are, F. H. Phippen, K.C., G. G. Ruel, G. F. Macdonnell, R. H. M. Temple and R. P. Ormsby, all of whom are connected with the Canadian Northern Ry. legal department, Toronto.

The Public Works Department's twin screw bucket dredge, no. 508, which was recently built at Glasgow, Scotland, and ordered through John Reid and Co., Montreal, arrived at Victoria, Mar. 9, and created considerable interest there on account of her somewhat strange appearance. She sailed from Glasgow, Nov. 16, 1910, and maintained a speed of about 6½ knots an hour, calling at seven ports for coaling and supply purposes. The machinery is of the latest type, each bucket having a capacity of 28 cub. ft., while the dredge will be able to handle about 1,200 tons an hour and dredge to a depth of 50 ft.

The Dominion Public Works Department has awarded a contract to the Wallace Shipyards Co., North Vancouver, for the construction of a steel dredge tender, to be attached to the new dredge, which recently arrived on the coast from Scotland, and which is to be used in dredging at the First Narrows. She is to be named Trojan. Another dredge tender, to be named Achilles, is, at present, under construction, and it is anticipated that she will be ready for operation by the end of June, in connection with the dredge Ajax, replacing the tender Petrel. A third tender, gasoline driven, to be named Satellite, for the dredge King Edward, is also being built at Vancouver.

We are officially advised that the G.T.P. Coast Steamship Co., which recently purchased the Albion Iron Works site at the foot of Westminster Ave., Vancouver, with a water frontage of about 470 ft., will proceed rapidly with the carrying out of the improvements contemplated, which include wharves with accommodation for vessels of any tonnage, and warehouses fully equipped for the expeditious handling of passengers and freight. The plans for this work are being prepared, and the erection of a suitable terminal building, with offices and stores, with railway and steamship offices, waiting rooms, ticket offices, etc., fronting on the end of Westminster Ave., is also under consideration, but no plans have, as yet, been undertaken.

The Northern Navigation Co., of Vancouver's steamship British Empire, which is laid up at St. Vincent, owing to damage sustained while on her way from England to Vancouver, will, it is reported, have to await the arrival of new parts to replace the defective machinery, from England. The company recently purchased two steamships in England, one of 1,200 tons, and one of 800 tons carrying capacity. The latter one is the British Empire, which left Liverpool, Jan. 21, but, owing to the delay, it is expected that the former vessel will arrive first. The British Empire, on her arrival, will be put on the run between Prince Rupert and Vancouver, in conjunction with the S.S. Cetriana, and the other vessel will be operated between Vancouver, Queen Charlotte, Portland Canal, Ketchikan and Skagway.

The C.P.R. tow car float, which is to be operated in the Proctor-Kootenay Landing service, as mentioned in our February issue, is being built at the Polson Iron Works, Toronto, and on completion, it will be taken to pieces and shipped to Nelson, re-erected there and completed for launching. It will be built entirely of steel, and be of the following dimensions: length, 224 ft.; beam 42 ft.; depth 7¾ ft. It has no sheer, but the beams are cambered, bilges rounded with 18 ins. radius, channel floors and angle side frames and beams, plating, generally ⅜ in. thick and all seams joggled, thereby avoiding liners for the outside strakes. The longitudinal strength is maintained by two longitudinal bulkheads, running all fore and aft, and three angle and plate trusses. There are also nine transverse bulkheads; all bulkheads are water tight and sub-divide the hull into 30 separate water tight compartments. Three tracks of rail are to be laid on the deck, resting on steel casting stools about 4 ft. apart. The capacity of the float will be 18 loaded freight cars. The weight of the total shipments will be about 500 tons, and it is expected to be completed about the end of July.

Northern Navigation Co. Ltd.

Very full particulars of the terms under which Jas. Playfair, of Midland, Ont., and his associates proposed to acquire control of this company, which has its headquarters at Collingwood, Ont., were given in our last issue. The offer of 125 for the stock met with the approval of a considerable majority of the shareholders. On March 12 some 7,600 shares out of 10,000 had been deposited in the bank in accordance with the offer, and the buyers had in addition secured considerable stock by buying in the market, so that they now have control of over 90% of the total capital.

Cheques for the stock deposited in the bank were mailed to the shareholders March 20, with interest at 6% on par value from Dec. 31 to Mar. 18. Some of the shareholders have objected to interest being paid only on the par value of the stock, as the N.N. Co.'s directors' circular apprising them of Mr. Playfair's offer and advising its acceptance said that it was at "the uniform price of $125 per share, together with interest thereon at the rate of 6% from Dec. 31, 1910, to date of payment." We understand that the balance of interest on $125, instead of $100, is to be paid.

The last list of shareholders prepared on Jan. 16 showed a total of 358 shareholders. The directors' holdings were as follows:—W. J. Sheppard, President, 270 shares; H. Y. Telfer, Vice President, 85; C. E. Stephens, Secretary Treasurer, 40; H. B. Smith, 100; F. A. Lott, 77; C. D. Warren, 20; Hon. J. S. Hendrie, 50; W. D. Matthews, 40; W. E. Davis, 10. The Manager, H. H. Gildersleeve, held 190. The following were the other principal individual holdings of 100 shares and over, the addresses being Toronto, unless otherwise mentioned:—Estate H. C. Hammond, 350; S. F. McKinnon, 200; W. H. Knowlton, 198; Jas. Henderson, 100; E. W. Langley, 100; E. B. Osler, 100; F. F. Telfer, Collingwood, 100; R. W. Leonard, St. Catharines, 100; T. McNamara, Peterboro, 100.

The brokers and banks having 100 shares in their names were:—Osler and Hammond, 742; Colonial Investment and Trust Co., 724; Bank of Nova Scotia, 185; Imperial Bank, 158; National Trust Co., 137; Union Bank, 136; Manufacturers Life Assurance Co., 115; Bank of Hamilton, 100; Merchants Bank, 100.

At a meeting of the N.N. Co.'s board in Toronto, Mar. 24, all the directors retired except W. E. Davis, P.T.M. Grand Trunk Ry., and H. B. Smith, Owen Sound, and it having been decided to increase the directorate from 10 to 11, the following were also elected:—President, Jas. Playfair, Midland, Ont.; Vice President, J. R. Binning, Manager Furness, Withy and Co., Ltd., Montreal; Secretary, F. A. Magee, Hamilton, Ont. Other directors: J. E. Dalrymple, Assistant Freight Traffic Manager, G.T.P.R., Winnipeg; E. Bristol, M.P., Toronto; W. G. Morden, director Canada Securities Corporation, Montreal; T. P. Birchall, General Manager Canada Securities Corporation, Montreal; H. W. Richardson, vessel owner, Kingston, Ont.; F. F. Pardee, M.P., Sarnia, Ont. H. H. Gildersleeve was reappointed Manager, and C. A. Macdonald, heretofore Assistant Manager, was appointed Treasurer and Assistant Manager.

It was decided to invite tenders for an additional vessel to comply with the G.T.R. Co.'s request that another one of the Hamonic type be place on the Lake Huron-Lake Superior run.

As stated in our last issue, Lord Furness, of Furness, Withy and Co., is largely interested in the purchase of the N.N. Co.'s stock, and the others associated in it with Mr. Playfair are principally in Montreal. The financial arrangements were carried through by the Canada Securities Corporation.

While a merger between the Northern Navigation Co. and the Inland Lines Ltd., of which Mr. Playfair is President, has been discussed, nothing appears to have been definitely settled, but it is probable that a holding company to control them may be decided on. In this connection a larger merger, to include the Richelieu and Ontario Navigation Co., is also much talked of.

Welland and Georgian Bay Canals.

In referring to inland marine transportation in the House of Commons, Mar. 10, the Minister of Railways said, while Canada must of necessity increase her railway facilities, she must not lag behind in keeping her waterways transportation as fully developed as possible. It was a curious coincidence that the greater the increase in railway traffic the greater the increase in canal and waterbourne traffic. That arose from the fact that the volume of traffic is greater and that the regulating force of the waterways on the rates of railways attracts traffic to those particular routes that are so governed. Following is a statement of tons of freight passed through the various canals during the years 1909 and 1910:—

	1909.	1910.	Increase.
Sault Ste. Marie	27.861.245	36.395 687	8.534.442
Welland	2.025.951	2.326.290	300.399
St. Lawrence	2,410 629	2.760,752	350.123
Chambly	752.117	669,299	82 818
Ottawa	336 938	385.261	48.322
Rideau	91.774	134.881	43.107
St. Peter's	78.850	85.951	6,101
Murray	102 291	177.941	75 650
Trent Valley	59,952	46 263	13.699
St. Andrews	.....	8.283	8,283
Total	33 720,748	42,990.608	9 269,860

1901 5,665,259
1910 .... 42,990.608

Increase for 10 years....... 37,325,349 tons.
Equal to 660 per cent.

If we are to continue to have this traffic, he went on, we must develop this branch of our transportation system. The figures show that traffic on these waterways has increased more rapidly than the railways, of which they are the regulators, and consequently, if Canada is to maintain her hold on the carrying trade she must be alert to the greater improvement of her waterways.

In connection with the Welland Canal, he gave a detailed description of the present canal and a statement of its total cost, and went on to say that while surveys for improvements had been in progress for some years, it was

only within the last two or three years that there had been any great activity shown. Surveys had been made in order to find, if possible, a route for a better and bigger canal, if it is deemed better to build a new one rather than to deepen the old one. He could not define the policy of the Government on this matter, more especially as to the time at which any work would be done, but he could say that three routes had been surveyed, and since Oct. 8, 1910, survey work had been practically confined to the third route, and the location had been determined and plotted on the plan. This route commences at Lake Erie, east of Morgan's point, thence across the marsh to Chippewa Creek, east of Marshville, thence curving to the west in the vicinity of Boyle, through the divide by a deep cut to the rocky gorge on Twenty Mile creek, near Jordan. Borings had been made to rock between Lake Erie and Boyle, and another boring machine was being used in determining the surface of the rock in the gorge between Jordan and Lake Ontario. The starting point on Lake Erie for this route would be several miles from Port Colborne, and he would say, personally, that the advantages of this route would have to be very great to justify the Government in giving up the work done at Port Colborne. Before finality was reached upon the matter the Government would gather the best opinions upon the subject.

It had been stated that the Georgian Bay Canal was the route which should be developed. That project did not come before his department, but he believed that it would be in the interests of Canada from one end to the other to enter upon the construction, not only of the Georgian Bay Canal, but also of a new Welland Canal, at a not very distant date. He believed that no greater interest would accrue from any investment that the people could make than would result from the development of these two waterways.

◆

The Progressive Steamboat Co. recently ordered new machinery in England for its tug Progressive, the displaced engines being transferred to the recently built tug Prospective. The latter, which was launched at False Creek, is 72 ft. long, with 17 ft. beam.

The Vancouver Insurance and Vessel Agency, Ltd., has been incorporated under the B.C. Companies Act, with a capital of $50,000, to carry on a general insurance business and vessel agency; to own and operate steam and other vessels, wharves, docks, etc., and act as wharfingers, warehousemen and general carriers.

The Hastings Mill Co.'s steam tug Haro, which has been built at Vancouver and recently put into service towing log booms for the company, is of the following dimensions. length over all, 116 ft.; beam, 24¾ ft.; depth, molded, 13½ ft. She has a keel 16 by 18, all in one length, and clamp streak 9 by 17 by 95 ft. long, all in one piece. She is equipped with triple expansion engines, built in Glasgow, Scotland, of 300 n.h.p., supplied with steam by a Scotch marine boiler at 180 lbs. pressure.

Team Work in Transportation.

By C. Murphy, General Superintendent of Transportation, C.P.R. Eastern Lines.

While I realize the scope that this subject affords, it is not my intention to go into statistical details, of which we have abundance in our libraries and offices, but rather to give a short talk on the necessity of team work in transportation, and induce a discussion which may be both interesting and beneficial to all concerned with railroading.

The department generally referred to as the transportation department might lead one to believe that it was somewhat separate from the other departments of a railway, but the deeper we go into it, the more we realize how closely it is identified with all the other departments; in other words, the transportation department, so far as team work is concerned, takes in every other department.

First, we have our maintenance of way, which is really the foundation of the transportation department, and takes a very important part on the team. It is absolutely necessary to have a good foundation in the way of up-to-date track upon which to carry on the work of transportation. Therefore, the roadmaster and his sectionmen are important factors in economic transportation. If the track is not in condition to allow of smooth running, trains have to be slowed down in order to negotiate bad spots. Again, flags carelessly displayed by sectionmen may cause stopping of trains, which in turn may lead to stalling and doubling, thus causing serious detention and helping to increase the fuel bill. In addition to this, is the possible serious delay to the delivery of freight at its destination. It is a well known fact that it costs more to handle tonnage over a poorly put up track than over a smooth running track, not only in the matter of fuel consumption, but in the wear and tear of the equipment, and you all know that a poorly put up track sometimes results in damage to rolling stock and may cause serious accident and great loss of life and property, all of which help to swell the expense of transportation.

I think, next to the maintenance of way department, we should bring in the motive power department, as part of the transportation team, and this might be styled "The Man in the Box." It is therefore of the utmost importance that the members of the motive power department realize their importance to the success of the team, and keep the locomotive power always in fit condition, since it is this part of the great transportation team that has most to do with running up or cutting down the cost of transportation. I often wonder if the mechanic doing a job on an engine realizes the jump he may cause in the cost of transportation by being careless in his work and turning out an engine that will fail before reaching its destination, or cause the engine to burn double the coal and take twice the time necessary to get over the road than would be the case if the repairs had been properly attended to. It is far more economical to allow a train to stand in a terminal for a number of hours waiting an engine that may be under repair, to have such repairs properly made, rather than skimp the work to avoid such delay at the terminal, and the general policy of the motive power department should be never to turn out an engine if it is not in fit shape to take the train through to its destination. Nay, I would go still further and say that the engine should not be turned out if it is not in shape to make the round trip from its home station. I am of the opinion that a close supervision and attention to the power on the part of the superintendents and others would result in better and cheaper transportation.

H. E. Whittenberger,
Superintendent Eastern Division, G.T.R

Another important place on this team is that occupied by the car department. too much value cannot be placed on the importance of careful inspection of their rolling stock by those responsible for this duty. Transportation has to stand the cost of carelessness on the part of any member of the team, and the inspectors and others connected with the car department should be broadened out to realize that they are a big factor in the earning power of the road. I say earning power, meaning that every cent that we can save in the cost of transportation is so much earned. A careless car inspector or repairer, by allowing rolling stock to be taken out of a terminal or other station under his jurisdiction in faulty condition, could easily wipe out the receipts of a whole division in what might occur through defective running gear or other parts failing, thereby causing serious accident. The improper packing of an axle box, which would cause it to run hot, means increased cost of transportation. How many of our axle box packers realize what a saving they might make if they were particular about this small matter, and it is generally the small things carelessly done that sooner or later result in serious loss. Therefore, if the men who are entrusted with these smaller jobs and responsibilities were coached in proper methods and disciplined for wilful neglect of the smaller things, the big losses which neglect of small details lead to would be avoided.

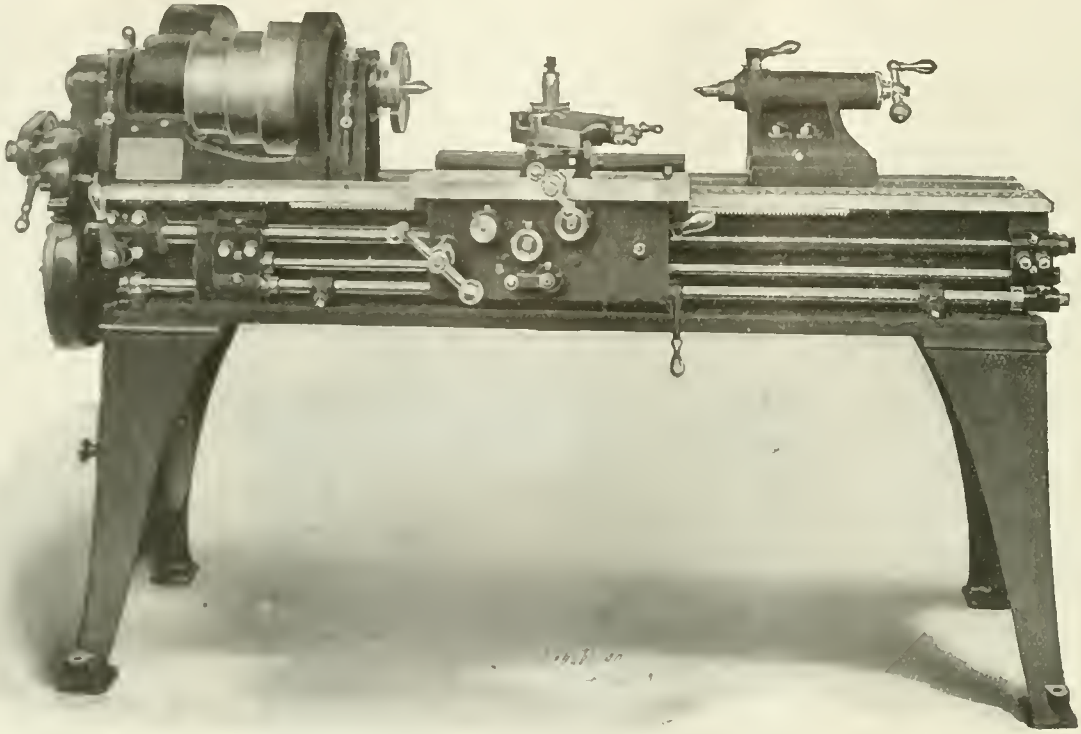
Another source of economy in connection with this team work could be developed by the train dispatchers, agents and operators, as no doubt many of them, in their anxiety to further the interests of the service in their special line, overlook the question of cost. Unfortunately a number of cases come up where it would appear the sole object in mind is to get the train in and out of their station, or over their division, or probably leave it for the next trick man to straighten out. I am inclined to believe that the average dispatcher does not consider what it means in the way of piling up the cost of transportation when he makes a bad meet, keeping a train in a side track for an hour or two through an oversight on his part, or want of thought or knowledge as to the work or running of the train he is handling. The engine crew, when they enter a side track, do not, as a rule, expect to be there more than from 10 to 20 minutes, and of course they are burning fuel keeping their fire up, until presently, after they have been there about an hour, throwing steam into the air, they let their fire cool down. Just about this time the other train usually comes along. Then they make a start, and the result is possibly leaky tubes and a struggle from there to the next terminal. Of course, there are times when such delays cannot be avoided, but I think a large proportion are due to that branch of the team not realizing how important a bearing their work is to that of the whole. An operator may have a signal up, causing a heavy freight train to stop

SPRINGFIELD IDEAL

ENGINE LATHE

Ranks in the Highest Class of Tool Room Lathes

16 in. x 6 ft. 0 in. in Stock for Immediate Delivery



We shall be pleased to furnish full particulars on this lathe to anyone who is interested.

We also have a full line of Woodworking Machinery in stock, viz

- Band Saws
- Shapers
- Saw Benches
- Planers
- Post Borers
- Two-Saw Edges
- Three-Saw Bolters
- Six-Saw Lath Mills
- 38 in. Shingle Machine

MUSSENS LIMITED

MONTREAL	TORONTO	COBALT	WINNIPEG	CALGARY	VANCOUVER
318 St. James St.	73 Victoria St.	Opp. Right of Way Mine	259-261 Stanley St.	Crown Bldg.	Mercantile Bldg.

before he realizes that he should have had the signal at "clear," and so have avoided the unnecessary loss of time and expense in fuel, to say nothing of the energy that the crew are liable to expend in "hot air." I am not forgetting that if the engineer is having trouble with his engine, or the conductor has work to perform along the line, that they should do all in their power to keep the dispatcher and agents thoroughly posted as to their movements, so that other trains may not be unnecessarily delayed. Not only this, but many other small delays could be avoided, which, in the aggregate, mean a great deal, both as regards cost to the company and delaying delivery of freight to consignee contrary to contract. Enginemen, trainmen, yard crews, call-boys, checkers, agents, pumpers, and, in fact, every man in any way connected with the transportation department, can all assist in keeping down the cost of transportation by doing their part, no matter how small or insignificant it may appear. You may ask in what way the call-boy could assist in reducing the cost of transportation. I might answer by asking a question in return. Did you ever suddenly find yourself in the midst of busy hours minus a call-boy? His position may seem of little importance, being merely to notify men of the hour at which they are required for duty, but if the caller neglects his duty and fails to call a number of men who are required for important fast trains, and his neglect is not discovered until the time arrives for the departure of the trains, then you learn that all these important trains have been seriously delayed—possibly the train crew waiting for the engine or the enginemen waiting for the trainmen—all owing to the failure of the call boy. Then you begin to realize that the team is being weakened because the boy "fell down" in his duty. The call boy may be likened to the lad who blows the organ in church. You all know the old saying, "If the boy sleeps, the music stops." There is not a false move made, but what adds to the cost of transportation. It is therefore necessary for every member in this great game of transportation to be ever on the alert, ready to do his part at the critical moment. The failure of one player to do his part is liable to cause loss, to recover from which it may cost a great deal in time and money.

There is another important feature in connection with the prompt movement of traffic that is probably not kept before us with sufficient force to enable us to get all the good out of it that is possible. I refer to the handling of our local way freight trains. These trains are becoming more numerous and the work increasing as our country progresses. The one important feature in this connection is to have the freight for local delivery properly loaded at the shipping points. It therefore becomes necessary for the freight handlers to join our team, and their aid is necessary if we are to look for success. I have seen cases where the train crew have been called upon to unload a good half car of freight to get out a small shipment for a way station, all because the freight is not properly loaded at the shipping point. This results in loss of time, disappointment to consignees, dissatisfaction to shippers, and in some cases damage to freight, besides being a general "black-eye" to the system handling the freight. Compare this with a good system of loading freight for local delivery, where it is loaded in station order, carefully packed and properly trimmed, which ensures prompt delivery when unloaded by the train crew; the train gets over the road on time without damage to freight, the consignees are satisfied, shippers inclined to give you extra freight because it has been handled so well before; overtime of train and engine crews is cut out, with less fuel consumption and low cost of handling. I might say just here that the shippers themselves could encourage this team work a great deal by shipping their goods in strong packages, fully and properly addressed. This all helps to reduce delays at terminals and expedite shipments en route, thereby resulting in economy both to the consignee and the company by preventing freight going astray or becoming damaged on account of frail packages. Another good feature in this connection is the early closing of freight houses to permit of the forwarding of all freight the same day it is received, thus enabling the fast freights to be dispatched on time.

Another important member of this team is the stores department. This may be termed the "handy department," since, when everything else fails, we are apt to say, "requisitions have been placed" and we are probably too much inclined to let the matter rest there. The part which this department plays is one that has great significance, and the difference in handling transportation is very apparent on a section that is fortunate enough to have a good live storekeeper, with a thorough knowledge of the requirements in the way of stock for the different seasons on his section. A great deal more depends upon economical operation in transportation on the stores department than is generally supposed. If the stores department fails to keep up the supply of material principally required for repairs to engines and cars or for train supplies, a very great increase in the cost will be noticeable, from the fact that in many cases, owing to this shortage, material has to be robbed—that is, taken from one engine or car to repair another. This not only causes double work, but involves keeping power and other equipment out of service, oftentimes when badly needed. A better departmental showing may possibly be made in this particular department by keeping stock short, but the transportation department suffers more loss through this lack of material than would probably pay for the shortage ten times over. It is therefore of the utmost importance that the officers of the stores department and those of the other departments keep in close touch as to the stock requirements, and this can only be obtained by their working very closely together.

FROM A RAILWAY CONTRACTOR, AND RAILWAY ENGINEERING, MAINTENANCE OF WAY AND OPERATING OFFICIAL.

T. J. Kennedy, President Superior Construction Co., which is building 43 miles of the Manitoulin and North Shore Railway, and who was for many years, until recently, General Superintendent of the Algoma Central and Hudson Bay Ry., and was formerly in the C.P.R. engineering and maintenance of way departments, writes from Espanola, Ont:—

"Dear Mr. Burrows,—In my opinion The Railway and Marine World is a publication that all Canadian railway men should feel very proud of, from the fact that each issue contains a mass of accurate, useful and interesting information well classified, nicely printed and got up in convenient form.

"I congratulate you upon the great advance that you have made since I first became one of your subscribers some years ago.

"Frankly, I do not consider that we pay enough for what you give us.

"Faithfully yours,
"T. J. KENNEDY."

The fuel department brings up a burning question. It is frequently made the scapegoat for all difficulties that interfere with successful transportation; at times its officials have even to defend themselves against complaints which are really due to weather conditions, and they are good natured enough to try and have the weather altered to suit. The fuel department should be credited with trying to do its best to obviate cause for complaints, but we should benefit by the experience of expert fuel men, who should investigate, and if fuel has been supplied to the company that does not meet requirements, the cause of complaint should be ascertained, so that the next order placed will ensure a betterment of quality. In other words, while the motive power department must realize that the fuel on the dump is what it has to use and make a success of, on the other hand, when difficulty is being experienced with it, and investigation shows there is just cause for complaint, the fuel department should in turn, as above stated, take steps necessary for an improved quality in the next order placed.

There are other departments having a certain influence in connection with transportation, but the ones I have mentioned are the most closely connected and are really a part of the transportation system. I think I am safe in saying that my experience in the transportation department has shown that it is absolutely necessary for the heads of the different departments, so closely associated, to work together for the general good, even to a greater extent than we could look for from the other employes. As a general rule, if the heads of the different departments are not working in harmony, it will be found that the employes of their departments are working at cross-purposes, and that means disorganization and serious increase in cost. On the other hand, we find that where the heads of the different departments are working together with the one end in view—that of obtaining the best possible results—the employes of their department work in the same way, and one department working with the other, helping with every member willing and ready to do his part, and being coached along by his captain, a combination so strong is formed that nothing can stand up against it, and, under these conditions, the lowest possible cost of operation is the result.

Another feature in connection with the effect on transportation in this climate of ours is the necessity of team work to turn out power in the earlier part of the day, thus giving the crews the benefit of the higher temperature during the day to get their trains over the road. Where this combination of team work does not exist, the motive power department will often hold power in that may need repairs during the day, and then flood the operating department with a lot of power between noon and midnight, thus causing extra trains to be on the road during the night at a time when the cost of transportation runs away up owing to severe weather.

There is another point I desire to bring out in connection with this team work that appears to me to be rather detrimental to the successful carrying out of the work of transportation between the different departments, and that is, the excessive amount of correspondence that occasionally drifts in, until one realizes that in many cases it is a useless waste of time and energy. I maintain that more can be accomplished by one visit to the heads of the different departments, or to the different places on the division requiring attention, than by a voluminous correspondence. In many cases, by the time correspondence gets through the different channels, the opportunity for good, with which object it was started, has passed. Many matters connected with transportation need prompt action, and the system of correspondence is too slow in such cases to accomplish any

Galena-Signal Oil Company

Tests and correspondence solicited.

S. A. MEGEATH,

PRESIDENT

good, and in many instances a great saving and improvement can be accomplished by that intercourse between the heads of departments that is essential to the successful operation of the transportation end of a railway system.

I do not think there can be much opposition to the placing of the superintendent of a division or district as captain of the team, and it should be his earnest effort to become thoroughly acquainted with the work that every player has to perform, and he should be as much interested in one department as another as members of such team. He should be quick to observe any weakness or lack of energy on the part of any player, and work the whole team so that there will be the greatest harmony and co-operation. He should not be allowed to feel that any trouble in the locomotive department does not mean trouble for him, or that if any member of the team falls down in the proper performance of his duty, he is not responsible. I am afraid that we have some superintendents who feel that the failure of some department to carry out their part of the transportation game is up to that particular department and he is not to blame. There can only be one captain if the team is to be successful, and it is the captain's duty to watch for the weak spots and see that ample support and assistance are given whenever this weakness appears. If any difficulty develops on the track, he should not rest until that difficulty has been overcome; if time is lost owing to poor coal, probably on account of snow and ice being mixed with it, he should make it his business to see that that kind of mixture for making steam is avoided, and he should not miss an opportunity of bringing all the departments associated in the transportation game into the closest harmony and co-operation, and make all realize that any weakness on the part of a single player might easily turn what would otherwise mean victory into dismal failure.

In concluding, I would draw atention to the importance of heads of departments insisting on premises being maintained at all times in a neat and tidy condition, and in endeavoring to have clean, knifty men in charge who will see to it that employes under them are kept up to tidy habits and a proper attention to their personal appearance, since the natural result of slovenliness is carelessness, and this is largely a question of how the officer in charge may look at it. Some will see accumulations of rubbish and dirt at a glance, while to others this state of affairs does not appeal. As an illustration, I may be permitted to recall a case where a colored man, on visiting a museum where all kinds of curiosities were exhibited, when asked what he thought of it, replied, "They were the best whitewashed walls he had ever seen." Another case, a guest at a banquet, from a lumber camp, when called upon to speak, in his endeavor to express his feelings of the good things provided, wound up by stating it was the "finest salt he had ever tasted." It is therefore important, when selecting men for positions, to see that they possess the qualifications necessary for the post they are to take charge of, and if the spirit of self-respect can be infused into the rank and file, the result cannot but be a beterment to the service.

The foregoing paper was read before the Canadian Railway Club recently.

◆

Farrelly Brothers, Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $20,000, and office at Winnipeg, to carry on a general contracting business, and to build and control public works of all kinds, including railways, tramways, docks, harbors, piers, wharves, canals, etc. Among the incorporators are, T. P., G. J. and F. E. Farrelly, contractors, Winnipeg.

Government Railways Wages for Telegraphers, Etc.

The Intercolonial and Prince Edward Island Railways telegraphers, train dispatchers and station agents applied some time ago for a board of conciliation and investigation, the application alleging that the differences related to the failure of the management to live up to the terms of the existing schedule of rules and rates of pay with respect to certain employes; also to the refusal of the management to agree to certain proposed amendments to the same schedule. The board consisted of J. H. Gilmour, Brockville, Ont., nominated by the Government Railways Managing Board; J. G. O'Donoghue, nominated by the employes, and Judge Barron, of Stratford, Ont., recommended by the other members of the board.

The parties having agreed upon all other points there remained but two matters to be disposed of by the board, which were unanimously agreed to as follows:

1. The claim for an increase in wage rate. The board is of the opinion that $35,000 a year should be allotted for this purpose to be distributed by increasing the minimum salaries as set forth in article 24 of the schedule, and the balance to be apportioned to the regular salaries of the men now employed, as may mutually be agreed upon between the committee of the employes and the Board of Management. This increase to date from October 1, 1910.

2. As to the number of hours operators should be required to work per day. At present the men work 12 hours per day with the exception of train dispatchers, who work eight hours. The board does not, for the present, recommend any change in this regard except in the case of operators employed at terminal points indicated in article 20 of the schedule, in which case the board recommends that an eight hour day be instituted for these men.

Article 20 of the schedule is as follows:

"Twelve consecutive hours, including meal hours, will constitute a day's work for a telegrapher except as otherwise provided for in this schedule. Eight consecutive hours train dispatching and time for transfer will constitute a day's work for telegraphers who are train dispatchers. Eight consecutive hours will constitute a day's work for telegraphers at the following points: Levis, Riviere du Loup, Campbellton, Moncton, Truro, Newcastle and New Glasgow. The hours of duty will be defined from time to time by the superintendent of the district, and when telegraphers are required to exceed the above named hours they will receive an official order and will be excused in the same manner, and will be allowed overtime. On the Prince Edward Island Ry. the hours of duty of the train dispatchers are to remain as at present subject to the discretion of the superintendent."

Article 24 is as follows: "The minimum monthly salaries for train dispatchers will be as follows: 1st year, $110.00; 2nd year, $115.00; 3rd year, $120.00; 4th year, $12.00; relieving dispatchers, $105.00; and 50 cents per day for expenses when away from headquarters, and allowed for travelling expenses if moved.

"On the Prince Edward Island Ry. the monthly salaries will be as follows: senior dispatcher, $125; assistant dispatcher, $110.00.

The minimum monthly salaries for telegraphers will be as follows: Agent and telegrapher with dwelling, fuel and light, $53.00; agent and telegrapher without dwelling, fuel and light, $58.00; telegraphers, $53.00; telegraphers at Levis, Riviere du Loup, Campbellton, Moncton, Truro, Newcastle and New Glasgow, $70.00; relief agents, $80.00."

May Birthdays.

Many happy returns of the day to—

W. R. Baker, Secretary and Assistant to President, C.P.R., Montreal, born at York, Eng., May 25th, 1852.

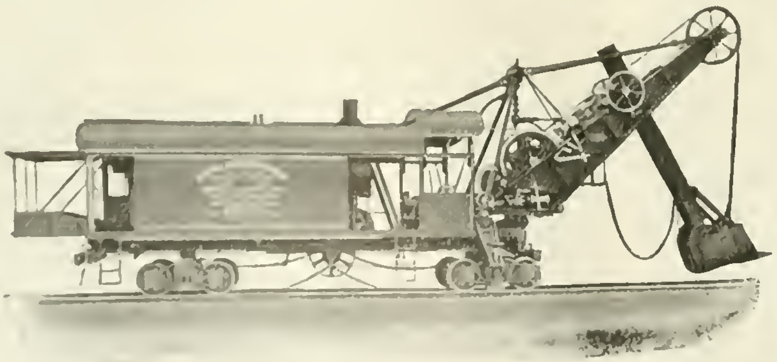
SIMPLE - - STURDY



For heavy or light digging.
No chain troubles.
Few repairs.
Not top heavy.
Saves fuel.

MONTREAL LOCOMOTIVE WORKS, LTD.

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

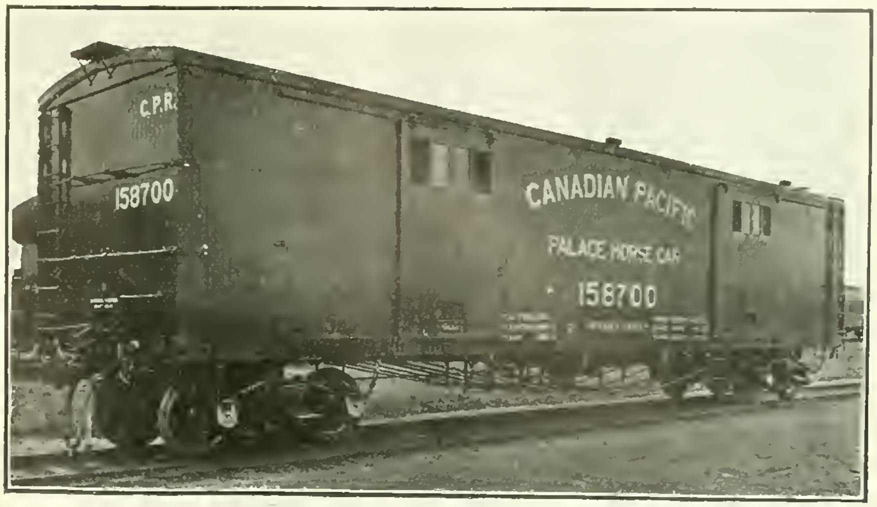
C. P. R. Palace Horse Cars.

The C.P.R. has built recently, at its Angus shops, Montreal, fifty 47 ft. horse cars, of which the following are the principal particulars:

Weight of body	34,240 lbs.
Weight of trucks	18,000 lbs.
Total weight	52,240 lbs
Capacity	16 horses
Cubic capacity	3,330 cb. ft.
Outside general dimensions:	
Length over couplers	50 ft. 1 in.
Length over frame	47 ft.
Width over fame	9 ft. 4⅝ in.
Height over brake mast	13 ft. 10 in.
Height over running board	13 ft. 3 15-16 in.
Height at centre of roof	13 ft. 2 3-16 in.
Height at eaves	12 ft. 7½ in.
Width at eaves	9 ft. 8½ in.
Inside:	
Length inside	46 ft. 1⅞ in.
Width inside	8 ft. 9 in.
Centre height inside	8 ft. 4 15-16 in.
Width at eaves	9 ft. 8½ in.
Side height inside	8 ft. 0 15-16 in.

The following are the principal features: Body—Arched roof, canvas covered; running board; side and end ladders; sheathed inside and outside; ceiling lined; special hardwood sheathing to height of 4 ft. at ends inside; iron carlines.

The doors are in two sizes, of the freight type, fitted with windows; one pair 6 ft. 9½ in. wide by 8 ft. ½ in. high; one pair 5 ft. 3½ in. wide by 8 ft. ½ in. high. The door openings are, one pair 6 ft. 6 in. wide by 7 ft. 8¾ in. high; one pair 5 ft. wide by 7 ft. 8¾ in. high. Iron angle door posts.

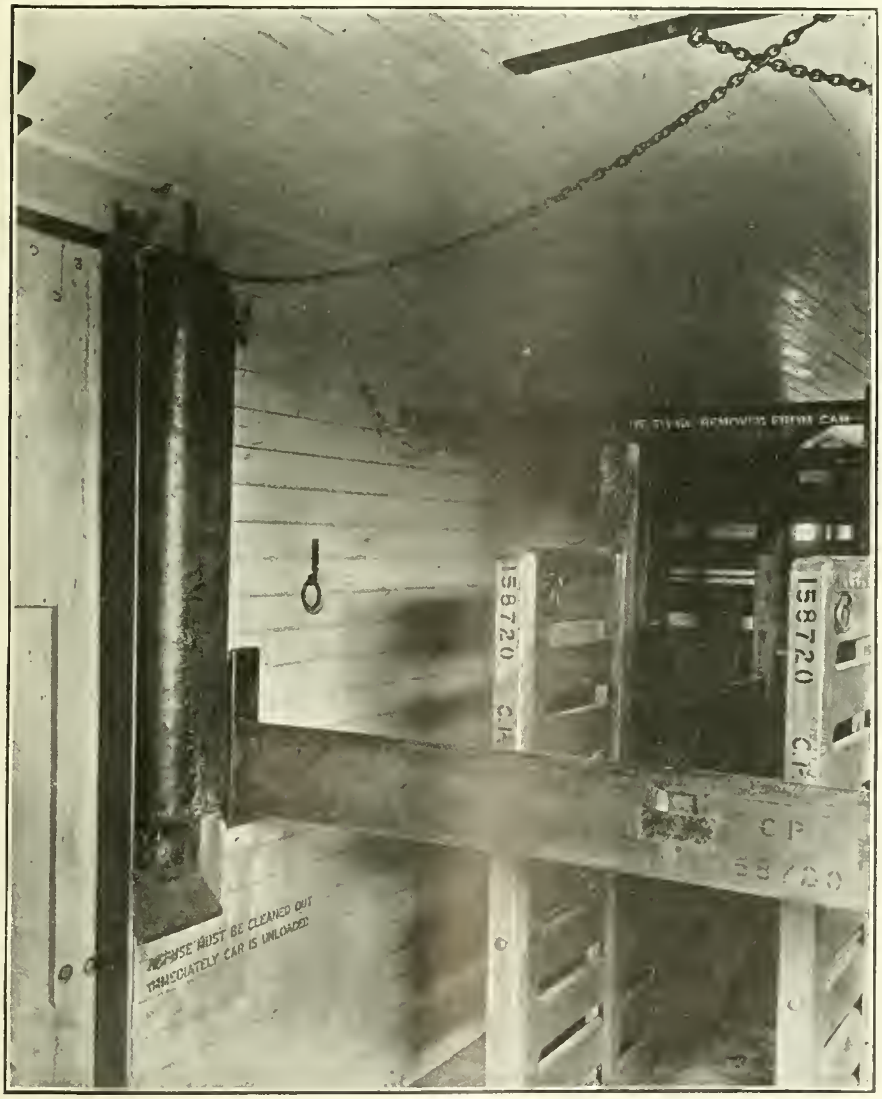


The windows in doors have 10 in. by 20 in. glass, and there are also two ventilators 11¾ by 20 in in line at upper part of each door, the ventilators being covered with wire netting and situated one at either side of window, which are central as regards the width of the door. The ventilators are closed by a sliding iron shutter, which, when ventilator is open, covers the adjoining window. One ventilator is also situated in central position at lower part of door, shutter being operated in the same manner as those above. There are four globe ventilators in the roof.

The underframe has Z bar centre sills, wooden intermediate and side sills; steel flitch plates on inside of side sills; friction draft gear, safety chains, steam train pipe, air signal pipe; 40 ton trucks of the freight type, with elliptic springs; 34 in. steel tired wheels.

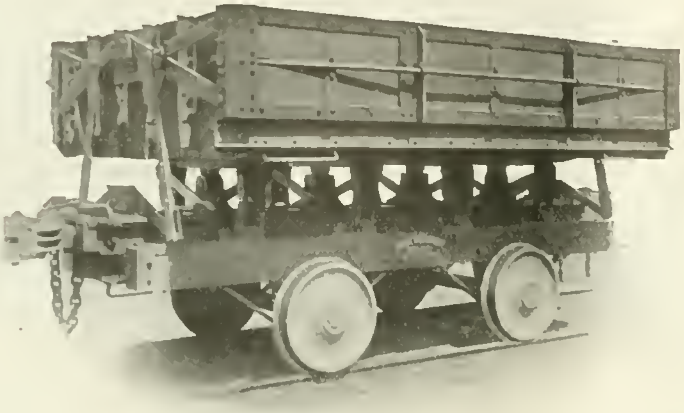
The interior is fitted with 12 removable stall partitions which rest in cast iron sockets, sunk flush into floor. Partitions are supported overhead by removable lengths of 2 in. iron pipe, pipes being supported by brackets on side sheathing. The stalls when not in use or stored at the side of the car, can be stacked six at each end of car, leaving a distance of 42½ ft. between them and the full width of the car, except for the transverse partitions. A transverse partition in two sections is located centrally in the car, one section extending from car side to first stall partition and the other meeting it, swinging from the other side of the car. The transverse partition rests in sockets similar to the ones used for the stall partitions, but each section is supported by hinges at side of car, the larger section having a lever device by which it can be raised with one hand out of the floor sockets and swung around to its stored-away position at the side of the car, where it again sinks into floor sockets on the lever being released. The small section is swung round similarly, but it is so light that no lever device is required to operate it. The stall and transverse partitions are protected to a height of 4 ft. from the floor, by hardwood sheathing. Breast bars are fitted into socket castings on either side of car and extend across immediately in front of stall partitions, the top of breast bar being 4 ft. from floor. When not in use, the breast bars are removed and stored above doors, brackets being provided for this purpose.

A special feature of these cars is the pressed steel feed troughs which are hinged to the car sides and hooked to breast bars at the other end when in use, each trough extending nearly half way across the car and supplying two stalls. An additional support for the feed troughs consists of a chain of such a length that the end of the trough is supported from the roof of the car. When not required, the feed troughs are stored away in recesses formed between the angle iron door posts and the wooden intermediate posts, the upper line of belting being stopped short at the wooden post, the only connection between the iron and the wooden posts above the lower belt rail being the outside sheath-

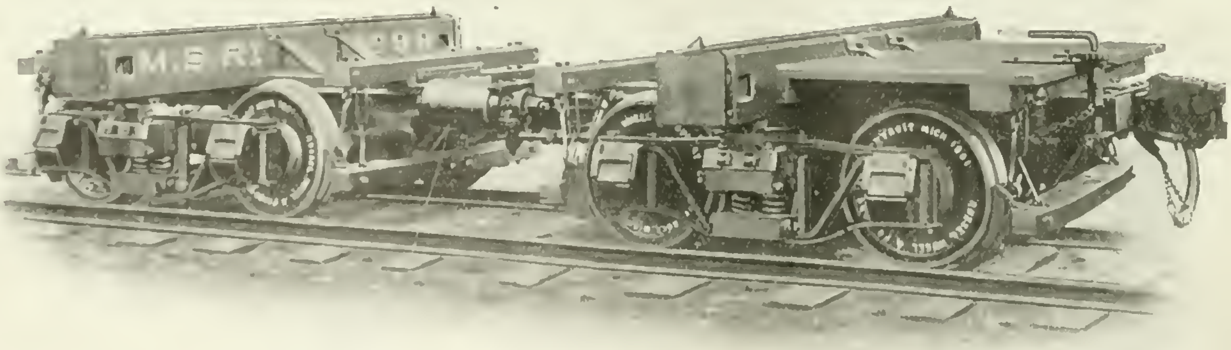


C.P.R. Palace Horse Car. Interior showing trough up.

Russel Heavy Duty Dump Cars



The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.



RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

Recent Ontario Legislation.

The Ontario Legislature at its recent session passed the following acts affecting transportation interests:—

Belleville Radial Ry. — Amending charter.

Canada Foundry Co.—Respecting company's property at Bridgeburg, Ont. This land was originally acquired for a shipbuilding yard.

Dunnville, Wellandport and Beamsville Electric Ry.—Extending time for construction.

Fort William.—Respecting city's relations to Port Arthur and Fort William Electric Ry.

Guelph Radial Ry.—Extending time for construction and confirming agreements with People's Ry.

International Ry.—Respecting International Ry. and the International Traction Co.

Mount McKay and Kakabeka Falls Ry.—Confirming bylaw of Paipoonge municipality exempting line from taxation.

Navigable Rivers.—For protection of public interest in beds of navigable rivers.

Niagara Frontier Electric Ry.—Incorporation.

Ottawa and St. Lawrence Electric Ry.—Extension of time for construction.

Ottawa, Smiths Falls and Kingston Ry.—Incorporation.

Owen Sound. — Confirming bylaw granting bonus to dry dock.

Peoples Ry.—Extending time for construction and authorizing building of additional lines.

Port Arthur.—Confirming bylaws authorizing expenditures on Port Arthur and Fort William Electric Ry.

Railway Act.—Two acts amending Ontario Railway Act, 1906.

Railway and Municipal Board.—Amending powers.

St. Thomas.—Confirming bylaw with respect to taxation of Michigan Central Ry. property.

Sandwich, Windsor and Amherstburg Ry.—Amending powers.

Stratford Ry.—Incorporation.

Temiskaming and Northern Ontario Ry.—Respecting powers of Commissioners.

Toronto.—Granting city various powers in respect of Toronto and Mimico Electric Ry., etc.

Toronto and York Radial Ry.—Extending powers.

Toronto Interurban Ry.—Incorporation.

Toronto Suburban Ry. — Extending time for construction and giving power to build additional lines.

Crow's Nest Pass Coal Co's. Railway.

The board of conciliation and investigation which was appointed to adjust a dispute between the Crow's Nest Pass Coal Co. of Fernie, B.C., and its employes, has made a unanimous report. In the employes application for the establishment of this board the differences in question were embodied in two complaints, namely: the increased charge by the company for the use of special trains to convey those of its employes who were members of the United Mine Workers of America from Coal Creek, B.C., to Fernie, and return; and an alleged reduction in the wages of certain employes in contravention of the existing agreement between the company and its employes.

The company claimed that the trains and tracks belong to the Morrisey, Fernie and Michel Railway Co., and that the schedule of rates objected to was passed by the directors of the latter company on March 11, 1910.

On the first point involved in this dispute the award of the board is substantially in favor of the men, the board considering that the relations between the Crow's Nest Pass Coal Co. and the Morrisey, Fernie and Michel Ry. Co. are so close that it is impossible to find the distinction between the two; and that therefore, the Crow's Nest Pass Coal Co. should, during the life of the agreement, continue to supply trains at the old rate. Regarding the question of the alleged unfair reduction of wages of certain employes, the finding of the board is also in favor of the men with the exception of one instance where the company's action is upheld.

During Feb., 24 employes were killed, and 26 were injured in the course of their employment on Canadian railways. Of the fatalities, nine were due to being run over, six to collisions, five to an explosion of powder, three to derailments and one to exposure, while of the other accidents, nine were due to derailments, six to falls, five to being run over, two to collisions and one each to being caught between cars, to being struck by a passing object, to falling material and to an explosion of gasoline.

American Railway Engineering Association.

This Association, formerly the American Engineering and Maintenance of Way Association, met in Chicago, March 21 to 23. The attendance was large, and there was the usual evidence of very active interest in the consideration of the various subjects submitted and discussed. The proceedings opened with the address of the President, L. C. Fritch, Chief Engineer, Chicago Great Western Ry.; this reviewed the purpose, policy, organization and growth of the association, and touched upon some developments in railway affairs and railway engineering.

The officers for 1911 are as follows: President, W. C. Cushing, Chief Engineer of Maintenance of Way, Pennsylvania Lines Southwest System, Pittsburg, Pa.; Vice Presidents, C. S. Churchill, Chief Engineer, Norfolk & Western Ry., and E. F. Wendt, Assistant Engineer, Pittsburg & Lake Erie Ry.; Treasurer, G. F. Bremner, District Engineer, Chicago, Burlington & Quincy Ry.; Secretary, E. H. Fritch, Chicago.

In the proceedings there was evident the usual difficulty in keeping the discussions to the really important matters. In several cases time was spent in discussing minor matters of wording or phrasing while matters of general principle or larger importance were passed by. A good part of the discussion also related to proposed changes in the "Manual of Recommended Practice," published by the association, and while it is desirable to have this accurate and complete it should be recognized that the manual is not a statement of the best and only practice, to be accepted and used as the highest authority. It is simply a compilation requesting and suggesting approved methods in certain lines of work. The value of the committee reports is largely in their collection of information and opinion, and the value of the meeting is largely in its opportunity for discussing the material thus presented.

Every one of the 19 standing and three special committees had a report, and all the reports were called up for consideration. Naturally some received much more attention than others, and for some of them there was lttie or no opportunity for discussion. This was inevitable, when 22 reports had to be disposed of at six sessions. One trouble with the work of this association is that its enthusiasm has led it to undertake rather too much work. Some of the committees had from four to eight subjects assigned to them, and while not all of these were taken up in detail, their consideration serves to disperse rather than to concentrate the energy of the committee members. It is true that in some cases the work is divided among sub-committees, but it would be better to have the full committee give its attention to a smaller field of investigation. Furthermore, the various reports and appendices swell the annual volumes of Proceedings to an undesirable extent.

A change in some of the methods of management and procedure is necessary, and that these conditions are recognized by the officers of the association is shown by the fact that a part of one session was devoted to a frank discussion of them. At the same time, the subject of continuing the publication of the Manual was discussed. It was the universal opinion that this should be continued, but that it should be under control of a board of review to see that the matter is properly condensed, that unnecessary matter is not included, and that there is proper harmony and agreement between the various recommendations. It was originally intended to become a book of standard specifications, but its present most useful purpose is as a hand-book of good and approved practice in different lines of work.

REFUSE MUST
IMMEDIATELY CAR IS

C.P.R. Palace Horse Car. Interior showing trough down.

All the reports were printed in advance, with their appendices and illustrations; they aggregated some 670 pages, exclusive of the 550 pages of the rail committee report (which forms one complete volume of the 1911 Proceedings. We give below a brief review of the reports and of the proceedings in connection with them.

ROADWAY.

The work of this committee is divided among five sub-committees, only one of which had a report. This was an excellent one, however, and dealt with the one subject of formulas for waterway openings. Special efforts have been made to bring together all known formulas for determining the size of such openings, and appended to the report was a digest of information compiled by A. F. Gilman and G. W. Chamberlain, Univ. of Wisconsin, in the course of their investigation on this subject. About 27 formulas were given and discussed (beginning with that of Major E. T. D. Myers. 1879). There was also an extended bibliography accompanying the report. The committee stated that it was not prepared to modify its former conclusions that "no single waterway formula can be recommended as fitting all conditions of practice. Nevertheless, as a result of its investigations it felt warranted in calling particular attention to certain relationships which point to the development of such a general formula. The report was accepted as information, without discussion.

RAILS.

This committee is conducting a comprehensive and systematic investigation with a view to improving the quality of rails. Its report proper was only one of progress, but the reports of its work for the year (including the investigations by M. Wickhorst, its Testing Engineer) fill 550 pages. Among this material is a large collection of information and engravings relating to rail failures, and to the use of rails of open-hearth and alloy steels. One important indication of the committee's work is that differences in the production of ingots and of the finished rails from them may annihilate all advantages that might be derived from any particular section of rail. The design of rail sections, therefore, is not the main cure for defective material. As a matter of fact, the principal defects connected with rail manufacture seem to have their origin in the making of the ingot. Some tests have been made as to the strength of rail head in different sections, in order to throw light on the controversy as to the respective merits of thin and thick heads. These tests will give some information also as to the claim that the rail head is broken down by excessive wheel loads even though there is no physical defect in the metal.

The discussion related mainly to rail breakages and records of breakages. It appears that on some roads from 90 to 100% of these failures occur in the left-hand rail, and it was suggested that on

double track this might be due to defective drainage in the middle of the track, causing the roadbed to be soft and the ballast loose under the ties. Mr. Elliott, N.Y. Central Ry., remarked that in tests of locomotive counter-balancing made by the Railway Master Mechanics' Association in 1892 the greatest load was found to be on the front left-hand driver of a 4-4-0 engine. The difference was not great, however. He suggested that this matter be taken up again in regard to engines having three driving axles. The committee's investigations and tests of rail joints (not yet completed) indicate that it is very necessary to see to the character of the steel used in any form of joint.

The principal work of the committee is the preparation of standard specifications and while those adopted tentatively in 1910 have not been followed in any purchases, the differences between these and the specifications of some large railways are not great and are growing less. Speaking for the committee, Mr. Churchill, N. & W. Ry., remarked that differences between the railway engineers and the rail manufacturers as to specifications are becoming less and less. He gave the manufacturers credit for really trying to improve their work.

TIES.

This committee made a report of progress, but presented several appendices. These included statistics of tie renewals, and information as to the use of steel and concrete ties (supplementing the information given in a previous report). The increasing use of cypress for ties led the committee to make some enquiries as to its service. From the returns of over 20 railways it appears that the life averages from 10 to 12 years, with a range of 4 to 15 years. Another matter dealt with was the abrasion and cutting of ties by the rails. The results of observations indicate that the use of steel flanged tie-plates on tangents and curves will increase the life of ties by one to three years, while at the same time the track will be maintained in better condition and at less cost.

There was very little discussion, but Mr. Wendt, P. & L. E. Ry., gave the results of maintenance cost of track laid with steel ties and oak ties for 3½ years. From Sept., 1907, till Nov., 1908, no surfacing was done; the cost of track labor for this period was $417 per mile per year where wooden ties were used and $28 where steel ties were used. Both pieces of track were again surfaced in Nov., 1909, and the cost was $95 and $153 respectively. During the next 12 months, however, the wood tie track was surfaced only once, while the steel-tie track had to be surfaced three times. The respective costs for this last period therefore were $128 and $428.

WOOD PRESERVATION.

This report presented two conclusions, both of which were adopted: (1) that accurate records of life of ties should be kept on certain specific lengths of track, instead of attempting to keep such records for the entire mileage (from which only very incomplete and unreliable returns can be received; (2) that timbers should be framed before treatment. The first was referred to the Board of Direction for consideration. As to framing timber before treatment this is not always practicable; where treated timber is framed, the parts are usually mopped with creosote oil or asphalt. Mr. McDonald, N C. & St. L. Ry., advocated immersion for 20 minutes in hot creosote oil and 20 minutes in cold creosote oil, where the size of the timber permits of this. It seemed to be the general opinion that present methods of field treatment in such cases were not satisfactory, and the committee was requested to look into the matter. W. F. Goltra advocated kiln drying or artificial seasoning of ties as superior to seasoning in open air, being quicker and more effective.

Appendices to the report covered the following subjects: Specifications for creosote oil, specifications for piles which are to be treated, descriptions of patented preservative processes, grouping ties for treatment, electrical resistance of treated timber, strength of ties treated with crude oil, the use of track scales in weighing timber at treating plants, statistics of consumption and treatment of ties.

GRADING AND INSPECTION OF LUMBER.

This committee submitted classification, grading and inspection rules and specifications for lumber used in maintenance-of-way work. These follow the lines of similar specifications adopted by the Master Car Builders' Association and various lumber associations for material to be used in railway car work. The desirability of such uniform specifications is evident, and has been proved by the results of experience with timber for bridge, trestle and car work. J. H. Waterman, C., B. & Q. Ry., submitted a letter from the Railway Storekeepers' Association, requesting that the specifications be adopted.

TRACK.

This report dealt with several subjects. It included specifications for switches and frogs, but stated that it is too early to prepare specifications for manganese-steel in such track work, as there is insufficient information regarding the character and life of this metal. As to special fastenings for attaching rails to treated ties, it reported that experience with these (and even with treated ties) in this country is too limited to permit of conclusions being drawn.

FROM THE MANAGER OF THE QUEBEC AND SAGUENAY RAILWAY.

J. F. Guay, M. Can. Soc. C.E., Quebec, who is Manager of the Quebec and Saguenay Railway, a contract for the construction of 56 miles of which was recently awarded, writes:—

"The Railway and Marine World is indeed very interesting and contains a lot of valuable information.

"Your recent enquiry of me is another proof of what I told you in a former letter about the reliability of the information published in your paper."

A sub-committee had a long report on spiral transition curves, supplemented by a paper on the length of such curves. This latter aimed to establish a relation between the length of the curve and the elements of radius, super-elevation, speed and the rate of rise of train on the outer rail. The committee recommended an increase of 50% in length of transition for minor curves when this will not seriously affect the cost or adversely affect the degree of curve. The 10-chord spiral was recommended also. The report stated that spiral curves need not be used when the super-elevation for highest permissible speed does not exceed 2 ins. Prof. Talbot, University of Illinois, moved that this should apply also where the distance between the tangent and the parallel tangent of the offset is less than 0.2 ft., or ¼ in. It is a question whether it will pay to put in a spiral where the track will not be shifted more than ¼ in. from a tangent and circular curve. However, this change was not adopted.

BALLAST.

The principal feature of this report was a discussion as to the proper depth of ballast. No conclusions were presented, but a table was given to show the practice on various railways. The discussion, however, bore almost exclusively upon the subject of the proper size of stone ballast, and there was the usual wide variation in opinion. The committee recommended ¾ in. to 2½ in. Mr. Morse, A., T. & S. F. Ry., preferred to raise the maximum to 2¾ ins., while Mr. Meade, of the same road, preferred to reduce it to 1½ ins., on the ground that track cannot be surfaced properly when laid with 2½ in. stone. Some members proposed also to reduce the minimum size to ⅝ in., but it was pointed out that this would not be a commercial product. Further, while this size might be satisfactory with hard trap rock, it would be otherwise with limestone and similar material that is liable to pulverize under load.

The committee had specified also that the stone should pass "in any position" through a 2½ in. ring. This was considered to be an impracticable requirement, while it enforced it would mean the use of 1½ in. stone. M. L. Byers, Mo. Pac. Ry., has had experience in re-ballasting track laid originally with stone of such size that it seemed the only requirement was that it should go between the ties. Such track was very hard to maintain in surface, but by filling in finer material and raising track so as to get the large stones well below the ties the result was to get a very good track and a solid foundation. Where large stone is laid in re-ballasting, it should be distributed and track first brought to within 1 in. of final grade. Then a top layer of finer material should be distributed to complete the surfacing. It was suggested also that the committee should determine the proportions of stone of different size in the ballast.

FENCES, CROSSINGS AND SIGNS.

As a result of careful and continued investigations as to means of obtaining fence wire that will resist corrosion, this committee finds that no new process offers any advantage over the old, and that the applied galvanized coating (by special treatment) is the best and only known economical process for protecting fence wire against corrosion. The committee recommends the use of wire which has received a special galvanized coating to stand four one-minute immersions in the standard copper-sulphate solution. The galvanizing to be done preferably after weaving. Concrete posts were recommended for railway fences. By request of the committee the report was referred back to it in order that it might be made more complete for next year.

WATER SERVICE.

The committee recommend specifications for wooden and steel water tanks, and submitted tentative specifications for reinforced-concrete tanks. The subject of track tanks was dealt with very fully in an appendix; this included a discussion of the action of the tender scoop in taking water. The specifications for wooden tanks were discussed at considerable length, the discussion including criticisms of several features. The hoops are specified to be round, half-round or half-oval; some members considered that flat hoops should be included, but a motion to make this change was lost. Last year the committee submitted specifications in skeleton form, and was requested to make them more specific; this year it was criticised as being too specific. Eventually the specifications (modified in several respects) were accepted as information.

SIGNALS AND INTERLOCKING.

This committee submitted specifications for insulated signal wire, aerial and underground cables, copper and iron line wire, copper-clad steel line wire, and iron bond wire. These were accepted without discussion. In answer to an inquiry as to what has been done in regard to

the subject of uniform signal practice, it was stated that nothing can be done by this association until the subject is reported upon by the American Railway Association committee which now has it under consideration.

YARDS AND TERMINALS.

This report dealt mainly with the important features to be considered in the design of passenger stations of medium size, including particularly the track layout and the facilities for handling passengers and baggage. General plans were submitted for through and terminal stations, with tabulated information as to a number of existing stations. Other matters discussed were (1) the mechanical handling of freight, baggage and mails, and (2) the provision of special yards for interchange freight. It was recommended that at stations where large quantities of baggage are handled, this should be done at a level below or above the train floor. This was objected to by Mr. Courtenay, L. & N. Ry., who thought this would apply only to stations of the largest size. In reply, it was pointed out that at many places where grades are not already separated there is increasing demand for separating the grade of tracks and streets. In such revision, it is desirable to include the removal of baggage handling from the train platforms. Of 26 stations listed by the committee 13 are either above or below the steel level.

The committee recommended also that in planning passenger terminals, provision should be made for economical and efficient operation during the periods of activity which may be experienced within a period of 10 years. It was voted to change this to 20 years, although the committee pointed out that it would be very difficult to foresee the traffic developments of 20 years, and that such provision might involve apparently extravagant first cost. Mr. Kittredge, N. Y. Central Ry., thought that a 10-year plan would be outgrown before its completion, and referred to the way in which traffic increase has continually overtaken the several enlargements of the Grand Central Station in New York. Mr. Temple, Pennsylvania Ry., said that at the Broad St. station, in Philadelphia, the business increases 50% every 10 years; for 30 years the company has been enlarging the station every 10 years, and is now again facing the problem.

In regard to mechanical handling of freight, T. L. Condron, Chicago, referred to a terminal freight station now being built in which the freight will be handled by an electric telpherage system. The building is 240 by 400 ft., with 12 tracks on the lower floor and the team driveways and platforms (at right angles to the tracks) on the upper floor. A series of overhead runways on the upper floor (which is 34 ft. high) will carry travelling trolley hoists which will handle packages or trucks between the team platforms and the car platforms. Numerous hatchways are provided in the former platforms. W. A. Thompson, B. & O. Ry., stated that a pier of the Baltimore & Ohio Ry. at Baltimore is equipped with the telpherage system.

ECONOMICS OF RAILWAY LOCATION.

The report of this committee was to the effect that it has not been able to obtain the detailed operating statistics which are necessary for proceeding with its work in regard to the economics of line and grade revision. It has prepared a statement of the information desired, and it is for the railways to undertake the time and expense of preparing this if they desire to benefit by the work proposed by the committee. Mr. Kittredge, N.Y. Central Ry., stated that in regard to operating results many railways know that grade reductions, etc., do produce very substantial economy, but they have not (and cannot get) the detailed analysis of such results, as desired by the committee. Mr. Begier, B. & O. Ry., referred to experiments showing that the train resistance at very low speeds (below 5 m. p. h.) is exceptionally high. This has been the experience in starting heavy trains out of yards, and as a result some $60,000 have been spent in reducing grade at two yards to enable trains to start readily. No action was taken upon this report.

ELECTRICITY.

This is a new committee appointed to investigate matters relating to the track equipment, etc., of steam railways having electrically operated sections. The principal part of its report related to the clearance limits between car equipment and track equipment on third rail lines. These limits were shown for several steam and interurban railways (the latter handling steam railway cars). The maintenance of track (including organization and methods), the protection of metal structures, the protection of the third rail, and the connections employed at switches and drawbridges, were among the other subjects touched upon. There was also an extended bibliography of reports and papers on electric traction. The plan of organization for maintenance recommended that this work should be in the hands of the regular maintenance-of-way department. There were a few remarks as to the proper determination of the gauge of the third rail, and also as to the proposed organization for maintenance, but further than this there was no discussion.

IRON AND STEEL STRUCTURES.

This committee submitted specifications for the erection of railway bridges. It made the suggestions that someone be employed to collate reports of special interest on subjects connected with the design and maintenance of steel bridges, and that a study of the design of large steel columns be taken up. A sub-committee report the results of impact tests on long truss spans of the Baltimore & Ohio Ry. bridge at Havre de Grace, Md.; these do not appear to modify the conclusions presented in a former report. No work has been done in tests for impact on short spans, but special apparatus is being designed for these tests as well as for tests of secondary stresses.

There was an extended discussion of the specifications for bridge erection. Several clauses were discussed and modified, and eventually the specifications were referred back for further consideration. A clause requiring the contractor to check the engineer's measurements was objected to by some, while others approved it as tending to provide against possible trouble in fitting the superstructure to the masonry. As a rule the engineer who has established the line and levels is not on the work during erection, and it has happened in several cases that the steel work proved too long to fit the masonry. Mr. Loweth, C., M. & St. P. Ry., thought that the specifications should permit the use of sheet lead under bed plates, but the committee explained that after due consideration it had decided against this practice. Its specifications require the use of cement grout or mortar or rust cement. Much of the discussion dealt with clauses concerning the relations between the railway company and the contractor.

WOODEN BRIDGES AND TRESTLES.

The report dealt with various aspects of piling, including wood and concrete piles, sheet piling, pile driving, pile drivers, and pile protection. As to this last question it was concluded that an effective protection against wood borers is afforded by filling sand between the pile and vitrified clay pipe extend from 12 or 24 ins. below the same distance above mud line; owing to the expense this method is warranted only for treated piles.

The subject of pile driving is one of very general interest and experience, and the committee's statement of principles of practice for this work received considerable discussion. A good part of this related to the proper methods of using the water jet. Mr. Courtenay, L. & N. Ry., did not think it would be economical to use this for boring holes in clay soil, previous to setting the piles; he had used it in this way in exceptional cases to enable 70 ft. piles to be set in the leads of a 50 ft. pile driver. Mr. Steffen, Bos. & Albany Ry., spoke of using a clay auger to loosen the ground and facilitate the driving of piles in hard soil. Mr. Courtenay was of opinion that the jet pipe should be attached to the pile, especially for work in deep water, but Prof. Jacoby, Cornell University, thought that in several there is more difficulty of the pipe clogging when it forms a part of the pile. The tendency of present practice is to use the jet pipe separately. The questions of sharpening the points and using pile shoes were discussed also. Mr. McNab, Grand Trunk Ry., objected to the committee's suggested use of a cap in driving, but Prof. Jacoby remarked that the advantages of this detail are not sufficiently well appreciated. He referred to a case where long yellow-pine piles could not be driven without injury unless a cap was used. Mr. Stevens, Ph. & Read. Ry., had had similar experience, using caps of soft wood; if these were not used, the piles would split, in spite of the usual rings.

MASONRY.

A prominent feature of this report was its discussion and analysis of different methods of waterproofing concrete. A large amount of information was presented, including the description of methods used on a number of individual structures, but the information was not of such a character as to warrant any definite conclusions. Other matters briefly considered were the use of reinforced-concrete trestles and the ability of monolithic concrete masonry to resist failure under various conditions.

The discussions related almost entirely to the merits of wood and concrete trestles, and it was stated that if the cost of creosoted timber trestles is capitalized it does not compare favorably with that of reinforced-concrete trestles. On the Illinois Central Ry. several thousand feet of creosoted trestles were burned last year, in spite of the fact that they had ballasted floors. This timber does not take fire readily, but when the fire is well started it becomes uncontrollable. On the Chicago, Milwaukee & Puget Sound Ry. all decks of timber structures are protected by metal or ballast, and the cost of such fire protection must be taken into account in a comparison of costs. The Nashville, Chattanooga & St. Paul Ry. uses galvanized metal covering over the stringers and caps at a cost of 50 cts. per ft. of structure. The metal will last from three years on main track to six years on branches, but it is expected that the new so-called pure iron will last for an average of seven years. Stringers protected in this way show practically no deay after many years service.

A comparison of cost was made by one member as follows: For a timber trestle costing $8 per ft. maintenance, 75 cts.; fire losses, 5 cts.; interest ($8 at 5 per cent.), 40 cts.; total, $1.20. For a reinforced-concrete trestle costing $30 per ft.; interest charges, $1.50; track maintenance, 20 cts.; total, $1.70.

BUILDINGS.

The special feature of this report was an extended discussion of roof coverings for railway structures, with their respective merits, and their relation to the fire protection question. There were submitted also papers dealing with the work of

UNIFORM GENERAL CONTRACT FORMS.

This special committee submitted a form of agreement and contract. The first is a two-page sheet or folder having the introductory statement on one page and the space for signatures on the other page. This alone will suffice for small or unimportant contracts, but for more important work the contract can be enclosed and thus made a part of the agreement. Specifications also may be enclosed, or they may be attached to the outside.

RULES AND ORGANIZATION.

This committee recommended some changes in the general rules for track employes. It presented also an interesting compilation of the rules of different railways covering certain specific matters (ballast, ballasting, track drainage, loading cars, care of signal batteries, etc.); for each subject the committee gave its own suggested rule. Beyond a few suggestions as to verbal changes there was no discussion.

RECORDS AND ACCOUNTS.

This committee submitted proposed standard forms for sidetrack records, bridge estimates, building service estimates and water service estimates. One object of the first of these is to give to the officers having charge of maintaining and changing sidetracks information as to the conditions of maintenance; this is especially valuable where the tracks are owned in part by private parties or corporations who are charged with a proportion of the cost of the maintenance work done by the railway.

BRINE DROPPINGS FROM REFRIGERATOR CARS.

This special committee reported that hte Master Car Builders' Association has approved the recommendations of its own committee acting jointly with this committee and has made its report to the American Railway Association. The American Railway Engineering Association therefore should request the American Railway Association to adopt the recommendations, and should request the maintenance-of-way departments of the railways to provide the facilities recommended. The plan provides for retaining all salt water in the ice tanks, and for draining these tanks only at icing stations. These stations must be provided with facilities for the disposal of the brine thus drained from the cars. The report was adopted and the committee discharged with thanks for the completion of its work.

CONSERVATION OF NATURAL RESOURCES.

This report reviewed the conservation movement undertaken by the federal government in connection with various technical and commercial organizations. It gave also the resolutions in regard to fire protection of forests and protection of timber resources in general, which were adopted by the Lake States Forest Conference as a result of the very serious forest fires of last year.—Engineering News.

Railway Lands Patented.—Letters patent were issued during February in respect of Dominion lands in Manitoba, Saskatchewan, Alberta and British Columbia, to railway companies, as follows:—

	Acres.
Calgary and Edmonton Ry.	156.00
Canadian Northern Ry.	1.760.13
Canadian Pacific Ry.	545.93
Grand Trunk Pacific Ry.	256.91
Manitoba and North Western Ry......	6.37
Manitoba and South Eastern Ry......	160.00
Total	2,885.34

Recent Dominion Legislation.

The Governor General assented April 4 to the first lot of acts passed by the Dominion Parliament at its current session. Of these 37 were in connection with steam and electric railways, and one in connection with a canal company. Following is a list:—

Alberta Central Ry.—Authorizing the building of additional lines.

Athabasca Northern Ry.—Extending time fixed for construction.

Bay of Quinte Ry.—Respecting company's powers.

British Columbia Central Ry.—Incorporation.

British Columbia Southern Ry.—Extending time for building lines authorized.

Brockville, Westport and North Western Ry. — Respecting company's powers.

Burrard, Westminster Boundary Ry. and Navigation Co.—Extending time for construction.

Campbellford, Lake Ontario and Western Ry.—Extending time fixed for construction, and authorizing building of line from Bathurst to near Locust Hill, as an alternative to route previously authorized.

Canadian Inter-Mountain Ry.—Incorporation.

Canadian Northern Branch Lines Co.—Incorporation.

Canadian Northern Ontario Ry.—Extending time for construction, and authorizing building of additional lines.

Canadian Northern Quebec Ry.—Extending time for construction.

Canadian Western Ry.—Respecting company's powers.

Collingwood Southern Ry.—Extending time fixed for construction.

Dominion Atlantic Ry.—Authorizing amalgamation with C.P.R.

Georgian Bay and Seaboard Ry.—Extending time fixed for construction.

Grand Trunk Ry.—Respecting company's financial powers and authorizing acquiring of certain properties.

Guelph and Goderich Ry.—Extending time for construction.

Hamilton, Waterloo and Guelph Ry.—Extending time fixed for construction.

Indian River Ry.—Extending time for construction.

Kettle River Valley Ry.—Extending time for construction and changing name to the Kettle Valley Ry. Co.

Kootenay and Arrowhead Ry.—Extending time for construction.

Lachine, Jacques Cartier and Maisonneuve Ry.—Authorizing company to connect its lines with those of certain other companies.

Lake Champlain and St. Lawrence Ship Canal Co.—Extending time for construction.

London and North Western Ry.—Extending time for construction.

Manitoba and North Western Ry.—Extending time for building of uncompleted lines.

Manitoba Radial Ry.—Extending time for construction.

Niagara, Welland and Lake Erie Ry.—Incorporation.

Ontario, Hudson's Bay and Western Ry.—Extending time for construction.

Ontario Northern and Timagami Ry.—Extending time for construction.

Ottawa, Northern and Western Ry.—Extending time for construction.

Orford Mountain Ry.—Extending time for construction.

Pacific, Northern and Omineca Ry.—Extending time for construction.

Pontiac Central Ry.—Extending time for construction.

Quebec, Montreal and Southern Ry.—Extending time for construction.

Southern Central Pacific Ry.—Extending time for construction.

South Ontario Pacific Ry.—Authorizing building line from Hamilton to Guelph, Jct., Ont., and extending the time for construction of other lines.

Walkerton and Lucknow Ry.—Extending time for construction.

Quebec and Lake St. John Railway.

At a meeting in London, Eng., Mar. 17, to which a short reference was made in our last issue, to confirm an agreement provisionally entered into with the Canadian Northern Ry., to exchange the Q. & L. St. J. R. Co.'s bonds for new 4% debenture stock guaranteed as to principal and interest by the Canadian Northern Ry. Co. it was stated that the agreement provides that the Q. & L. St. J. R. Co. is to create a new debenture stock, secured by trust deed in favor of the National Trust Co., and the British Empire Trust Co., to be secured as a first charge on the whole property of the company, and sufficient to provide for the taking over at the conversion price the whole of the company's bonds and the Lake St. Joseph Hotel bonds; further to pay for additional rolling stock, $430,000; to provide an amount equal to $30,000 a mile of railway that may hereafter be built by the Q. & L. St. J. R. Co.; for an amount equal to the amount by which any mortgages guaranteed by the Dominion or Provinces that may hereafter be secured on the company's lines in priority to the new debenture stock exceed $30,000 a mile on the lines on which they are secured as a first mortgage; to pay the cost of any right of way or land purchased by the company for terminals, etc.; for an amount equal to the cost price of any securities of any other company deposited with the trustees and specifically mortgaged by way of first mortgage as additional security for the new stock, and for the cost of providing further betterments in connection with the undertaking. This, it was stated would amount to about $6,600,000. The agreement also provides for the creation of charges on any extensions or new lines built, ranking before the new stock, provided such charges are guaranteed as to principal and interest by the Dominion or Provincial Governments. The new stock is guaranteed unconditionally by the C.N.R. Co. and bears interest at the rate of 4% per annum, the first payment of a full half year's interest being due on July 1. The terms on which the company's bonds are to be exchanged for the new stock are as follows: prior lien bonds, at par; first mortgage bonds at 70%; income bonds at 13%, of their face value respectively. The resolutions were carried by each class of bondholders separately.

The building which the G.T.R. has erected in the Crystal Palace grounds, London,, Eng., in connection with its exhibit at the Festival of Empire, to be held there this year, is a reproduction, on a small scale, of its passenger station, now approaching completion, at Ottawa. The building will accommodate the exhibits of the G. T. R., G.T.P.R. and G.T.P. Coast Steamship Co., and will be in charge of S. W. Cummings.

The Minister of Railways in reply to a question asked upon the voting of $2,500 as the contribution of the Government Railways to the Faculty of McGill University, Montreal, towards the foundation of a school of railway engineering and transportation in general in connection with the Faculty of Applied Sciences, said recently that if any other university in Canada were doing the same work, he would be glad to consider its application.

Discussion on Report on Ties by Can. Soc. C. E. Committee.

In our last issue we published letters written to us by a number of railway engineers and roadmasters in reference to the report of the Canadian Society of Civil Engineers' committee urging the adoption of longer ties and recommending that tests be made with 10½ ft. ties. The fact that letters were received from nearly all portions of the Dominion show that a very deep interest is taken in the question and there is no doubt the information which some of our subscribers have contributed is a most valuable addition to the literature on the subject. Following are some letters which have been received since our last issue went to press.

ANGUS SINCLAIR, C.E., Contractor Canadian Northern Ry., writes from Toronto:—"I have your letter re the most suitable length of railway ties, and asking my opinion of the report read recently at Winnipeg by a committee of the Canadian Society of Civil Engineers. Looking at it largely from the point of view of a construction engineer, I do not think it is a practical question today. In the old days, when ties were looked upon as so much local wood, costing little more than the labor of making them, the change from 8 to 10½ feet might have been introduced, if deemed necessary, without much protest from those financing the railways, but now that tie timber is scaled, and the contents sold as so much merchantable timber, the change would almost, if not quite, double the cost of ties, and make the use of the longer ones prohibitive on any but the richest railways.

"Even looking at it from an operating engineer's point of view, I think the increased length suggested an extreme one, and not warranted by experience. It is quite true that the loads on ties have increased of late years from 200 to 300%, while the carrying capacity has only increased about 50%, but the committee overlooked the important fact that there was a very large surplus factor of safety and strength in the proportions of the 8 ft. tie to meet the increased weight and momentum of the present-day engine, and the more destructive short coupled coal and ore cars.

"I differ from the report also as to the reasons why the centres of ties are not more firmly packed. In my experience nearly all ties that break do so in cold weather, the reason being that the centre of the track, being farthest from drainage, is more susceptible to heaving by frost, causing a ridge down the centre over which the ties are broken. If I am right, lengthening the tie would only be shifting the breaking point from the inside to the outer end of the tie.

"I have used ties of various lengths from 8 to 12 ft. over muskeg embankments, and agree with T. C. Burpee that more broken ties were found among the longer ones. This was caused by the undue spring given the tie by too hard packing. When the ballast froze, the hard ridge was transferred to the outside of the rail, and the impact of the heavy engine and cars caused the tie to break.

"While I do not think the longer tie would bring about the result that the maintenance of way people expect from it, I am quite certain its adoption would add considerably to the cost of construction, outside of the increased cost of the tie. There is no doubt about the fact that a shoulder of ballast is necessary, no matter what length of tie is used. This would mean an increased quantity of ballast and a wider roadbed to hold it, both costing money.

"To my mind the increased weight of engines and cars is not the serious point, but their increased height, which gives them, when running, a pile-hammer thrust which is fatal to the road-bed, and the remedy is not to be looked for so much in the length of the tie as in the quality of ballast placed under them. You have only to ride on one of these modern engines to realize how necessary to their safety is an even surface, and with what force they hit a low side or joint. The remedy lies largely in uniform drainage, uniform quality of ballast, and, as near as possible, uniform width of ties. Extremely wide or narrow ties are to be avoided.

"With ties as with all other matters in life, the happy medium is much to be desired. I think as soon as a railway can afford to, it should begin using crushed stone ballast, and the question of the length of tie would be largely eliminated."

JOHN D. EVANS, M.Can.Soc.C.E., Chief Engineer Central Ontario Ry., writes from Trenton, Ont.: "I have not had any experience with the longer ties, but in my opinion they would be objectionable, more particularly if the depth of ballast should be reduced (as suggested) out towards the ends of the ties. In that case the ties would become frost-bound at the ends earlier as the winter set in, and would be released earlier in the spring. With the 8 ft. ties we endeavor to have the full depth of ballast out beyond the ends of the ties in order that the frost will act as uniformly as possible throughout the whole length of the tie. In the absence of full and complete experiments in this latitude on the use of long ties during a period of at least one full year, I would not desire to express a favorable opinion or otherwise on the use of the longer ties."

J. GRANT MACGREGOR, A. M. Can. Soc., Chief Engineer, Alberta Central Ry, writes from Red Deer, Alta:—"I regret that I have not been able to give this subject the careful study that it deserves in order to be in a position to express an independent opinion. I am, however, of the opinion that owng to the increased weight of rolling-stock, the most serviceable length for track ties would lie somewhere between the two extremes, 8 and 10½ ft. I consideer that the ordinary length, 8 ft., has never been sufficient to get the best results from the distribution of the weight over a roadbed of standard width. I am also of the opinion that any increase in the length of the track tie should be accompanied by a proportionate increase in its thickness."

D. McCOOE, Superintendent of Grade Separation, Grand Trunk Ry., writes from Toronto:—"I am not in favor of the 10½ ft. ties for the following reasons:—

"Assuming that these ties had all the merits claimed for them (the extra supporting area), the percentage of breakage would be very large and the full benefit would not be obtained until all the ties in the track were the same length, 10½ ft. long, and while this could be done in building a new line, it would be impracticable in making ordinary renewals, and would require from six to 12 years to make this change, according to the location and volume of traffic. In the meantime it would be very difficult to maintain a good riding track on account of the uneven length of the ties.

"With regard to size, I believe a 9 ft. tie 7 ins. thick and from 8 to 10 ins. face, would give better results than either the 8 ft. or 10½ ft. lengths, as it would give a desirable increased supporting area for both the base of rail and ballast, as well as prolonging the life of the ties by reducing the mechanical wear caused from the rails cutting into them. This change from 8 to 9 ft. ties could be made by renewals gradually, with slight, if any, effect on the riding condition of the track.

"In reference to not requiring any additional increased width of the ballast section with the longer ties, this can only be done by reducing the amount of ballast under, or taking it away from the ends of the ties, as shown in sketch on page 213 of your March issue. This method would mean changing the present standards on many roads, or in other words, robbing Peter to pay Paul.

"From observation and practical experience, I believe it necessary to still retain a good shoulder of ballast at the ends of the ties to hold the track in line under high speed and from the lateral motion and side thrust of heavy power."

S. J. COVEY, Roadmaster, Grand Trunk Pacific Ry., Wainwright, Alta., writes:—"I have read with considerable interest the report on ties submitted by the committee of the Canadian Society of Engineers at its annual meeting of that body, as reported in your journal for March, and in response to your invitation, beg to offer the following observations:—

"Much may be said for and against the adoption of a longer track tie, but after a practical experience of track work, covering a period exceeding 20 years, I find myself totally unable to support the committee's recommendation.

"I am not at all in favor of using cross ties of greater length than 8½ ft., and would much rather see a standard tie of 8 ft. adopted, than any length in excess of 8½ ft., for the following reasons:—The increased cost of longer ties, owing to the scarcity of good tie timber, and the additional cost of handling and transporting from the time that the ties are received from contractor until they are placed in track, would, I am satisfied, be at least 30% as between 10½ ft. and 8 ft. ties, and with less satisfactory results. Another factor to be reckoned with is the present scarcity of labor on sections and in gangs employed at maintenance work. I believe that most Roadmasters will agree that in making renewals it would mean slow and tedious work making a change of 8,000 or 9,000 ties during a season with a force of one foreman and one or two laborers on each section. Again, 10½ ft. ties would doubtless increase the tendency of track to heave during winter, and the proposed extra length outside of rail would be responsible for ties breaking under rail.

"I notice in the committee's report the plea that a 10½ ft. tie would obviate the necessity for shoulder on ballasted track. I cannot share this view, because the shoulder at ends of ties answers more than one purpose, the most important of which, in my opinion, is that in the spring of the year, when frost is going out, the shoulder prevents frost from leaving track at ends of ties and under rail first, thereby minimizing the breakage of ties between rails or in centre of track.

"On mud or unballasted track I would estimate the life of a 10½ ft. tie at not more than three years, and I have no hesitancy in predicting that 50% would break under rail in two years. I have witnessed a thorough test of 10 ft. fir ties, with about this result. It is true that while the weight of engines and rolling stock has greatly increased in the last few years, inadequate attention has been bestowed on the strengthening of track, but closer study of the track problem will reveal a remedy. I would be pleased to make a test of longer ties, but am quite convinced that a 10½ ft. tie is too long to meet the requirements."

WM. YOUNG, General Roadmaster Temiskaming and Northern Ontario Ry., writes from North Bay, Ont.: "Referring to the report by the Canadian Society of Civil Engineers committee recently held in Winnipeg, which appeared in your

RAILWAY BOOKS

Some splendid books for Railway Men

ECONOMICS OF RAILWAY OPERATION.

By M. L. Byers. 672 pages; many illustrations. Diagrams and forms showing standard and most recent practice $5.00

RAILWAY TRACK AND TRACK WORK.

By E. E. R Tratman. 520 pages; 232 illustrations; 44 tables and an appendix of statistics of standard track construction on American railways. Third edition, revised and enlarged, $3.50

AMERICAN RAILWAY MANAGEMENT.

By H. S. Haines. Addresses delivered before the American Railway Association, and miscellaneous addresses and papers 368 pages..........$2.50

RAILROAD TRAFFIC AND RATES.

By E. R. Johnson and G. G. Huebner. A timely and important new railroad book, showing just how tariffs and rates are fixed, traffic handled and the organization of freight and passenger services, etc., etc. $5.00

POCKET RAILROAD DICTIONARY AND VADE MECUM.

By F. H. Colvin. An invaluable book to every man on the road. Containing important railroad data, master car builders' standards, tests, proportions of locomotives and boilers, and various other rules and tables $1.25

THE WORKING OF THE RAILROADS.

By L G McPherson. Tells simply and lucidly what a railroad company is, what it does, and how it does it Of great value to the ambitious railway officer $1.75

RAILROAD MEN'S CATECHISM.

By Angus Sinclair. The questions used have been developed and extended from the best codes used on American railway systems. To this are added mechanical calculations, signaling operations, and descriptive section on compound locomotives $1.25

BUILDINGS AND STRUCTURES OF AMERICAN RAILROADS.

By W. G. Berg. 500 pages; 700 illustrations. A reference book for railroad managers, superintendents, master mechanics, engineers, architects and students $5.00

TRAIN RULES AND DESPATCHING.

By H. A. Dalby. Containing the standard rules for both single and double track, showing all the signals with colors wherever necessary. The only practical book on train rules in print........$1.75

LOCOMOTIVE ENGINE RUNNING AND MANAGEMENT.

By Angus Sinclair. Telling how to manage locomotive in running different kinds of trains with economy and despatch; giving descriptions of locomotive attachments and presenting valuable directions about the care, management and repairs of locomotives $2.00

LOCOMOTIVE BOILER CONSTRUCTION.

By F. A. Kleinhans. The construction of boilers in general is treated, and following this, the locomotive boiler is taken up in the order in which its various parts go through the shop. Over 500 pages, five folding plates $3.00

The price of books must in all cases accompany the order.

Cheques must be payable at par in Toronto.

The Railway and Marine World

70 Bond Street, - TORONTO

March number. The subject is a very important one and well worth all the time spent in discussion It is a well known fact that the natural tendency of all railways, more especially trunk lines, for the past 20 years has been to increase the capacity of all their rolling stock without increasing the stability of the road-bed in proportion, except bridges and rails, it is also true that the number of 8 ft. ties has been increased from 16 to 20 and 23 ties to a rail length of 33 ft. While this has increased the bearing area per rail length, the bearing is not in the right place.

"What is actually required is a bearing in width instead of in length. It is too much like the high-heeled boots which were greatly worn some years ago, the feet of the users were continually rocking from one side to the other. The question of longer ties has been frequently discussed at roadmasters' conventions in the United States, with recommendations strongly in favor of longer ties. It is a well known fact amongst all maintenance of way men, track men in general, that with the present 8 ft. ties it is one of our hardest troubles to keep the track from getting centre-bound. No matter how carefully ties are tamped, the track will in a short time become centre-bound, and the poorer the ballast the quicker it will become centre-bound, as the material being less porous, demands filling the centre portions of the ties, midway between the two rails, full, so as to drain the water from the surface, otherwise if left open it will quickly commence to churn in wet weather, and in turn will rapidly distort the whole track's surface, whereas with better ballast the centre portion of it can be left without tamping and will remain longer open, the better quality of ballast not shaking under the tie as readily as the poorer quality. The evil of centre-bound track is better overcome by the use of crushed rock ballast, with 8 ft. ties. The opening left under the tie midway between the rails remains so for a much longer period, giving better results, both as a labor saver and a better riding track.

"It is evident that the members of the engineers' committee based their calculations in having as much of the tie outside of the outer base of the rail as between those two points, when they recommended a 10½ ft. tie as proper length. When basing calculations from the centre of the rail, instead of the outside of rail base, the proper length of the tie would be 9 ft. 10 in. Any increased length over 8 ft. would be a decided benefit. Taking 9 ft. as a standard length of tie for ordinary sub-grade composed of solid material, and from 10 to 12 ft. on muskeg formation (according to depth and other conditions) would be a decided betterment.

"It is the general practice to hard-tamp an 8 ft. tie, 18½ ins. from the centre of a rail (with 5 in. base) outside, and 15½ ins. on the inside from the same point, so as to give the greater support from the outside of the rail. Twenty ties 8 ft. long with 9 in. face in a rail length of 33 ft. tamped in the manner outlined, would give a bearing area of 12,240 sq. ins. allowable bearing surface. On the other hand, 18 ties 9 ft. long with 9 in. face per 33 ft. rail, with allowable inside bearing surface in proportion to the length outside from centre of rail, would give a bearing surface of 14,904 sq. ins. or 2,664 sq. ins. more bearing surface than with the 20 ties 8 ft. long in the same length of rail and with only two lineal feet more timber with 18 ties 9 ft. than 20 ties 8 ft. long.

"On some main lines I have counted as many as twenty-three 8 ft. ties per 33 ft. rail, the spacing of which was so close that it was almost impossible for the trackmen to shovel out the ballast between the ties for the purpose of tie renewals. With regard to the increase of width in ballast section, for a longer tie I quite agree with the engineers' committee that it would not be necessary, as with the present arrangement of 8 ft. ties it is necessary to have at least one foot of ballast at the end of the tie to hold the rocking or centre-bound track in reasonable alignment. With the increased length of tie we would have more bearing surface outside of the rail, giving support where required.

"There is no doubt in my mind that main line tracks equipped with 9 ft. ties would overcome the extra cost of ties. Even supposing 20 were used per 33 ft. rail, the extra cost of material would be more than offset by the reduction in cost of labor maintaining track in surface with 8 ft. ties. In the northern portion of the country where I am located, I find that our main line track is so much centre-bound in the spring of the year that the only remedy is to start at one end, giving a light surface lift throughout tamping the whole tracks so as to get the bearing from the centre to the end of the ties in order to get the track into good running condition.

"From a practical standpoint, I am of the opinion that on the whole the engineers' committee have struck the keynote to improved road-bed condition."

A trackmaster on the Intercolonial Ry. writes from Moncton, N.B.:—"In compliance with your request asking for an expression of opinion in regard to railway ties, I would say I very much favor the continuance of the 8 ft. tie in preference to the 10½ ft. length, as the latter would be impracticable in yards; and on the main line would have a tendency to hold frost, making it much more difficult for the road to come to surface in spring, when frost is going out of the ground, and in many cases in taking unever bearing, they would be much more liable to breakage Of course, this only applies to climates, such as we have to contend with on the Intercolonial Ry. Our past experience with the 9 ft. tie would seem to bear this out. I, however, would recommend an increase in length to 8½ ft, which would give a more uniform bearing in conformity to gauge or road, which is 4 ft. 8½ in. and allow us to use a longer brace while skimming in winter, as well as giving all the bearings a 6 by 8 tie would be able to stand."

L. S. RUDDER, Resident Engineer, Canadian Pacific Ry., writes from Toronto:—"I do not see that any benefit might be derived from the use of 10½ ft. ties would compensate for the following advantages derived from the uese of 8 ft. ties.

"Renewal of ties in rock cuts, or earth cuts. It would be difficult to renew 10½ ft. ties without considerable expense widening cuts.

"Embankments, large expense to widen same.

"In winter, when track heaves, the 10½ foot tie would tend to make very rough track, especially at side heaves, and through covering so much more surface.

"As ties generally start to decay under rail the percentage of broken tie ends would begreatly increased, and lifee of tie shortened considerably.

"Inconvenient for section men to handle.

"There is a much better chance of getting a good 8 ft. tie from the contractors than the one 10½ ft. long.

"Altogether, considering cost of material and large amount of expenditure that would be necessary before we could use 10½ ft. ties, and also the extra expense that would be incurred through the use of such ties as against the advantages to be derived I do not favor 10½ ft. ties. I think the 8 ft. tie a good length and if improvement on same is to be made, increase the thickness firstly and secondly, the width.

"A standard 7in. by 8 in. 8 ft. tie with a large amount of good ballast and heavy rail, should make a good riding road if givene proper care and attention.

"I regret not having read the Canadian Society of Civil Engineers committee's report, as published in your March issue, as that number was mislaid in my office and I have not been able to locate it."

We sent Mr. Rudder another copy of our March issue, and received a second letter from him, as follows:— "Having received another copy of your March issue and read the matter therein referring to the proposed lengthening of ties, I beg to add the following remarks to my previous letter:—

"There are some instances where 10½ ft. ties could be used with a little additional ballast; but the greater portion of tracks would require a large amount of ballast, and a very large amount of widening of roadbed generally. Especially would this be the case with all roads except some first class main roads. The diagram certainly looks all right, but in actual practice we do not often see it in other than cases already stated.

"If then the quantity of ballast must be increased to accommodate the 10½ ft. tie, and as all track when equipped with 10½ ft. ties would require a great deal more ballast for maintenance reballasting, than track with 8 ft. ties, I am of the opinion that it would be better economy to increase the present stan-

dard of ballast. Firstly, to use a better quality of ballast, and secondly, to increase the depth of ballast under tie. For in connection with better quality and increased depth of ballast, we practically overcome the objections to the 8 ft. tie. that the bearing surface does not afford sufficient resistance to the live road to allow of trackmen maintaining good line and surface. A track laid with good 8 ft. ties equipped with a good type of tie plate and crushed stone ballast will maintain better line and surface than similar track with gravel ballast, and I doubt very much that 10½ ft. ties on gravel ballast would keep in as good surface and line conditions as 8 ft. ties on crushed stone. The accompanying diagrams illustrate what I refer to. Consider A., B. and C. to be conical shaped heaps of stone, gravel and sand, and that a dead load of say 100 lbs. were placed on top of each, the crushing and spreading would be very noticeable with sand, and would decrease to a very small quantity with broken stone, and if subjected to a good rainfall we can imagine what would happen to the sand pile under the load.

"The crushed stone ballast provides the necessary grip on bottom surface of tie, and affords sufficient resistance both vertical and lateral to give a uniform distribution of live load on sub-grade, and thus allow of better surface and line to be maintained on track, and reduce the shifting and burying of ties to a minimum.

This is shown in cut A. Cut B shows gravel balast, the particles are invariably rounded and smooth and this ballast is always shifting under live load. C shows sand ballast which spreads easily and shifts under load, wind and rain.

"Therefore, I do not advocate increasing the length of tie for the primary purpose of distributing a load and consequently preserving the line and surface of track. It would be better to consider the importance of ballast if even the initial cost is greater than the cost of equipping track with 10½ ft. ties, as the class of non-shifting ballast that will fulfill the requirements of drainage, etc., will transmit and distribute the live load on the sub-grade in a manner that will reduce the defects of load distribution complained of as much as 10½ ft. ties will. With the long tie cure we go around the obstacle and get rid of it temporarily as long as the tie lasts. In the good ballast cure, we get rid of the obstacle, and the money saved is equal to the difference between the life of a tie and life of a good ballast plus the large benefits accruing from the use of good ballast.

"Where the sub-grade is very soft formation, as across muskegs, long ties are used to advantage, and this is because sub-grade won't bear the load, but should not serve to prove that long ties should be used because inferior ballast will not distribute the load on a sub-grade that is capable of giving required resistance when live load is transmitted uniformly."

◆

Recent Quebec Legislation.

Among the acts passed at the recent session of the Quebec Legislature were the following affecting transportation interests:—

Development Co. of Canada.—Incorporation.

Kamouraska and L'Islet Ry.—Incorporation.

Montreal and Northern Colonization Ry. Co.—Incorporation.

Montreal and Southwestern Ry. and Power Co.—Incorporation.

Montreal Street Ry.—Amending acts relating thereto.

Montreal Tramways.—Incorporation.

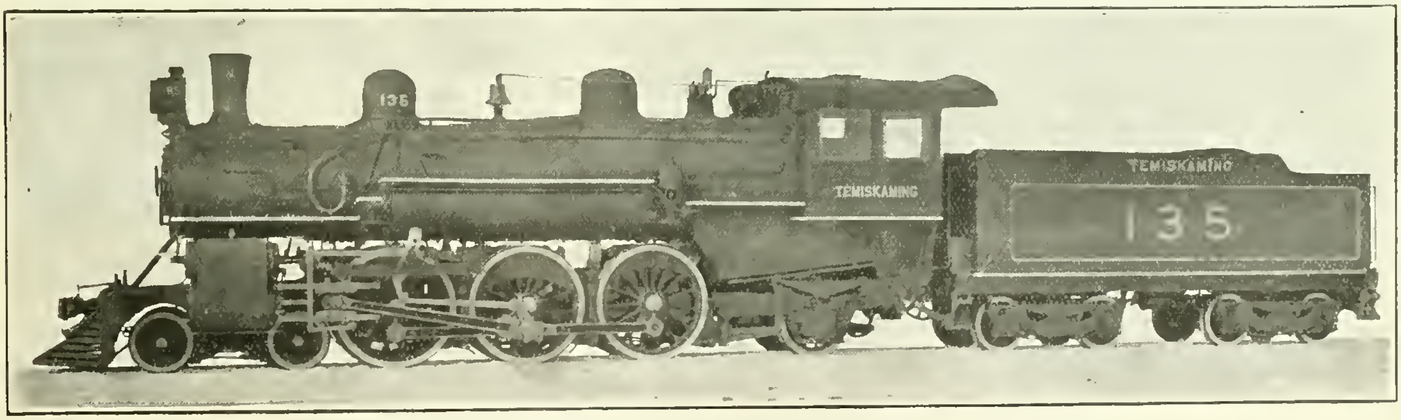
Public Utilities Commission.—Amending Revised Statutes of 1909 with respect thereto.

Quebec and Island of Orleans Ry.—Amending Act of Incorporation.

Quebec Eastern Ry.—Incorporation.

Richmond, Magog and Stanstead Co.—Incorporation.

Roberval and Saguenay Ry.—Incorporation.



Temiskaming and Northern Ontario Railway Pacific Type Locomotive.

T. & N. O. Ry. Locomotives.

The Temiskaming and Northern Ontario Ry. ordered four Pacific type locomotives last year from the Canadian Locomotive Co., Kingston, Ont. all of which have now been delivered and one of which is illustrated on this page. They are designed to handle through passenger trains and have already been tested in the freight service with satisfactory results. They are simple expansion locomotives, and will exert a tractive force of 30,400 lbs.

The cylinders are 21 ins. in diameter by 28 ins. stroke, and are fitted with automatic relief valves, the steam chests are arranged for piston valves, having inside admission. These valves are of the latest improved semi plug type and are operated by a valve motion of the Walschaert type. The driving wheels (3 pairs), are of cast steel, 69 ins. in diameter and are most perfectly balanced, ensuring absolute steady riding. The frames are of cast steel, made in one piece from end to end. These frames are braced by cast steel cross ties, which system is made possible by the introduction of the Walschaert valve gear. The boiler is of the radial stayed type with a wide firebox. Great care has been given to all the details in the design of the boiler. All the water spaces are large, most convenient wash out plugs and ports are arranged for the purpose of reliable washing out. The ash pan is of the hopper pattern and has ample air openings, as well as sliding bottom doors for easy and quick means of cleaning out. The spring gear is excellent, that on the forward truck being self contained. The driving spring gear, being equalized with the rear truck, which is of the Vaughan type, enables the engine to take curves in the most satisfactory and easy manner. The engines are fitted with electric headlights and are wired for incandescent lamps for gauges, etc. in the cab. The cab arrangement is exceedingly well worked out, everything in it being placed in the most convenient and appropriate place for operating and inspection. The brakes are Westinghouse E. T. 6. All the fixtures, such as the sanding device, the lubricator and the automatic bell ringer, etc., are of the most modern type known. The tank is of the hopper type and delivers the fuel to the fireman's shovel. The frame is all steel and the drawbar attachment is of the tandem type. Nothing has been spared in the construction of the trucks to make them what they should be. The wheels are in one piece of solid pressed steel. Following are the principal dimensions, etc.:—

Fuel used	Bituminous coal
Weight in working order, drivers	135,500 lbs.
Weight in working order, total	202,500 lbs.
Wheel base of engine, rigid	12 ft. 7 in.
Wheel base of engine, total	31 ft. 6 in.
Wheel base of engine and tender	57 ft. 10 in.
Height over all, engine and tender	14 ft. 9¼ in.
Heating surface, firebox	162 sq. ft.
Heating surface, tubes	2,705 sq. ft.
Heating surface, total	2,867 sq. ft.
Diameter of driving wheels	69 ins.
Material for driving wheel centres	Cast steel
Diameter and length of driving journals	9½ by 12 ins.
Diameter of cylinders	21 ins.
Stroke of cylinders	28 ins.
Valve gear	Walschaert
Type of boiler	Extended wagon top
Working pressure of boiler	200 lbs. per sq. inch
Number of tubes	272
Diameter of tubes	2 ins.
Length of tubes	19 ft.
Injectors	No. 9 locomotive type
Brakes	Westinghouse 6 E.T.
Weight of tender, loaded	123,000 lbs.
Capacity of tank in imp. gallons	5,500
Style of tank	Hopper type
Coal, capacity	10 tons
Style of truck	Four wheeled equalized
Diameter of wheel	36 ins.
Kind of wheel	Solid steel type
Diameter and length of journal	5½ by 10 ins.
Brake beam	Simplex high speed

The Columbia Collieries Ltd., has been incorporated under the B.C. Companies Act, with a capital of $500,000, to carry on a general colliery business, and in connection therewith to build, own, and operate and control tramways, switches, logging railways, steam and other vessels, docks, wharves, piers, etc., and to act as general shipping and forwarding agents.

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.
CHICAGO

THE EFFICIENCY OF VANADIUM STEELS

is a subject that deserves the close investigation of every railroad officer who has anything to do with keeping operating costs down.

A locomotive with Vanadium Cast Steel Frames and Cylinders, Vanadium Forged Steel Side Rods, Connecting Rods, Tires and Axles, is more nearly shop-proof than any other locomotive, and will yield 15 per cent. increased efficiency in life and service. **This 15 per cent. increase costs you nothing. It is free when you specify Vanadium parts.**

A Vanadium steel locomotive has the minimum of dead load with the maximum of resistance to fatigue or failure of parts by crystallization. The re-boring of cylinders and the replacement of bushings occur less frequently because Vanadium Castings wear to an extremely resistant, mirror surface.

Investigate through our Engineering Department.

RAILWAY DEVELOPMENT

Projected Lines, Surveys, Construction Betterments, Etc.

Alberta Central Ry.—The Dominion Parliament has authorized the company to build certain branch lines, and has extended the time fixed for the building of other lines previously authorized.

On March 31 we were officially advised that the reported letting of a contract to the Janse, McDonnell Co., Calgary, Alta., for the grading of 100 miles, 36 miles at Red Deer, and 64 miles west of that town, was premature, as the contract had not then been ratified by the railway company.

A Winnipeg press dispatch stated positively that the contract had been signed by J. T. Moore, President A.C.R., and the contractors. (April, pg. 319 and 353.)

Algoma Central and Hudson Bay Ry.—The Ontario Legislature has enacted that the cash subsidy of $2,000 a mile, and the land grant of 5,000 acres a mile, granted to the Ontario, Hudson Bay and Western Ry., be transferred to the A.C. and H.B. Ry., so far as they cover the proposed line from the C.P.R. transcontinental line to the National Transcontinental Ry., 115 miles. This mileage is under survey by the A.C. and H.B. Ry. (April, pg. 319.)

Arisaig and Country Harbor Iron, Coal and Ry. Co.—An extension of time has been granted by the Nova Scotia Legislature for the building of the lines authorized to be constructed by the statutes of 1909, chap. 154.

Atlantic, Quebec and Western Ry.—Representatives of the trustees of the Charing Cross Bank (in liquidation), and of the bondholders and shareholders of the A., Q. and W. Ry., in London, Eng., waited on the Dominion Government, April 8, with a view to securing its co-operation and assistance in the completion of the line. (April, pg., 319.)

Bear River and Caledonia Ry.—The Nova Scotia Legislature incorporated a company with this title to build a railway from Bear River to Caledonia, N.S. (See Shelburne and Bear River Ry. and Liverpool and Caledonia Ry.)

Blomidon Ry.—The Nova Scotia Legislature has incorporated a company with this title to build a railway from Blomidon to Canning, on the Dominion Atlantic Ry., and to other points.

Brandon Transfer Ry.—H. A. K. Drury, of the Board of Railway Commissioner's engineering staff, Winnipeg, met the mayor of Brandon, Man., and others interested in the building of a transfer railway in the city, Mar. 31. A survey was made of different districts in the city where it seemed possible to locate a line, and the matter was discussed from every point of view. A route will be recommended for the Board's approval. (April, pg. 352d.)

British Columbia and Canada Central Ry.—The Dominion Parliament has incorporated a company with this title. The application was that the title be the Dominion Development Ry. Co., but it was changed in committee. (See Dominion Development Ry., April, pg. 319.)

Buctouche Ry. and Transportation Co.—Application will be made to the Board of Railway Commissioners, May 2, for the approval of an agreement of amalgamation between the Moncton and Buctouche Ry. and the Buctouche Ry. and Transportation Co. (June, 1910, pg. 447.)

Burrard, Westminster Boundary Ry. and Navigation Co.—The Dominion Parliament has extended the time for the building of the lines authorized by chap. 68 of the statutes of 1907, and by chap. 56 of the statutes of 1909. (Jan., pg. 21.)

Canada and Gulf Terminal Ry.—In an interview April 9, M. J. O'Brien, President, stated that the company was maturing its plans for the extension of the line from the present terminus at Matane, through the interior of the Gaspe Peninsula to Gaspe Basin, Que., 180 miles. During the winter, surveys had been made between these points and the engineers reported that a very good route had been secured, with easy gradients, and through a country possessing excellent timber resources, and with large areas of good agricultural land. Surveys had also been made for a line from Matane to a junction with the National Transcontinental Ry., about 100 miles, and a good route had been secured. Several hundred acres of land had been purchased at Matane for the purpose of developing the place as a summer resort. (Feb., pg. 109.)

Canadian Inter-Mountain Ry. — The Dominion Parliament has incorporated this company, to build a number of lines in Alberta, Saskatchewan and British Columbia. (Mar., pg. 205.)

Canadian Western Ry.—An extension of time for the building of the line authorized to be constructed by the statutes of 1909, chap. 69, has been granted by the Dominion Parliament. The amending act authorizes the company to enter into agreements with the Kootenay and Alberta Ry., the Alberta Pacific Ry., and the Western Alberta Ry., or any of them. (Jan., pg. 21.)

Cap de la Magdaleine Ry.—Application is being made to the Department of Public Works for approval, under the provisions of the Navigable Waters Protection Act, of plans for a bridge across a branch of the St. Maurice River, connecting Belle River Island with the mainland at Cap de la Magdaleine, Que. The notice of application is signed by E. W. Beatty, Montreal, President. This is an old Quebec charter, and a subsidy was voted in aid of construction by the Dominion Parliament in 1894.

Dominion Atlantic Ry.—We are officially advised that the company is doing a good deal in the way of betterments. It is gradually substituting 80 lb. steel for the present 60 lb., but what mileage will be relaid this year has not been decided.

A new and heavier steel bridge is to be constructed at Gaspereaux by Aug. The Board of Railway Commissioners has approved plans for alterations to the bridge over the Shubenacadie River in South Maitland. The work to be done includes the replacing of the present draw span by a wider one. This will be done during the summer and arrangements are being made for placing a contract. The rebuilding of the wooden structure at Sawmill Creek, started in 1910, will be completed this summer. Further bridge work may be undertaken this year, but it has not yet been decided.

The company is building a mile of track at Canning, N.S., to connect with the Dominion Government wharf there. The work includes a Y to facilitate handling the cars to and from the wharf. The line branches off from the Cornwallis branch about a quarter of a mile west of Canning and runs at the back of Canning town to the wharf. (Mar., pg. 205.)

Fredericton and Grand Lake Coal and Ry. Co.—At the annual meeting in Fredericton, N.B., April 12, the question of the building of a line from Gibson, on the opposite bank of the St. John River to Fredericton, to Minto, where a junction could be effected with the New Brunswick Coal and Ry. Co.'s Ry., was under consideration. It is said that the company proposes to undertake its construction at an early date. Following are the officers and directors:— President, H. P. Timmerman, Montreal; Vice President H. W. Woods, M.P.P., Welsford, N.B.; other directors: A. R. Slipp, M.P.P.; C. F. Chestnut, H. W. Woods, M.P.P.; A. B. Wilmot, P. Glaser, M.P.P.; Secretary Treasurer, D. K. Hazen. (July, 1910, pg. 547.) (See also St. John Valley Ry.)

Halifax and Guysboro.—The Nova Scotia Legislature has extended the time within which the aid voted for the construction of a railway between Halifax and Guysboro, granted by the statutes of 1906, chap. 1, is available. (See Halifax and Eastern Ry., Feb., pg. 111.)

Halifax and South Western Ry.—The Nova Scotia Legislature has amended the company's charter powers in some minor points. (Sept., 1910, pg. 727.)

High River, Saskatchewan and Hudson Bay Ry.—The provisional directors named in the bill for the incorporation of a company with this title, now before the Dominion Parliament, are:— H. N. Sheppard, F. Crandell, T. E. LeClaire, C. A. Gigot, G. D. Stanley, High River, Alta. (Mar., pg. 205.)

Hudson Bay and Pacific Ry.—The Board of Railway Commissioners has approved the location plans from mileage 0, Prince Albert, Sask., to mileage 70, in the direction of Fort Churchill, on Hudson Bay. (Feb., pg. 155.)

Hudson Bay, Peace River and Pacific Ry.—Route plans of this projected railway show a line running due north from Winnipeg, on the east side of Lake Winnipeg, and on to Fort Churchill, and a line starting at Fort Churchill westerly to the Pacific Coast. It is reported in Winnipeg that the British interests behind the provisional directorate have the funds ready to finance the undertaking, as soon as the necessary parliamentary powers are obtained. (April, pg. 319.)

Indian River Ry.—The Dominion Parliament has granted an extension of time within which the company may build the line authorized to be constructed by the statutes of 1902, chap. 64 (Jan., pg. 23.)

Intercolonial Ry.—The Dominion Parliament has voted the following sums on account of betterments, etc., along the line:—Original construction, $500; surveys and inspections, $15,000; to increase accommodation and facilities along the line, $40,500; to strengthen bridges, $29,000; general protection of highways, $20,000; to increase accommodation at Halifax, $82,500; second trackwork at New Glasgow, $35,500; to increase accommodation at Stellarton, $30,000; new machinery for steamer Scotia, $1,100; diversion at Sydney Mines, $250,000; to increase accommodation at Truro, $57,200; additional facilities at Princess pier, $4,000; to increase accommodation at St. John, $25,600; to increase accommodation at Campbellton, $150,000 and $75,000 to meet expenditure incurred on Governor General's warrant at same place; diversion of line and branch to wharf at Chatham, $300,000; to increase accommodation at Fredericton, $25,000; additional office building at Moncton, $62,500; locomotive and car shops with equipment and new freight yard and cut off line at Moncton, $200,000; engine house equipment, etc., at Riviere du Loup, $15,650.

The Minister of Railways explained in the House of Commons that the diversion of the line at Chatham, N.B., will be about 8.25 miles, and will get rid of the gradient down to the water front. The work was begun about two years ago, the contract having been awarded to Morrison and Clark, for the estimated sum of $245,853.58. The total cost of the work, including ties, rails, ballasting, right of way, grading, and $30,000 for a station building is 512,603.58.

The new station which it is proposed to build at Fredericton, N.B., will cost, according to the estimate, $125,000, and

THE HART-OTIS CAR CO., LIMITED

MONTREAL

the vote of $25,000 now made is for a start.

In connection with the proposal for increased dock accommodation at Halifax the Minister stated that some years ago the Government purchased the old Cunard property. In view of the demand for increased accommodation at Halifax, the Government Railways Managing Board and the Chief Engineer made a visit of inspection, and a special report was made by J. Kennedy, of Montreal. He expected to ask Parliament at a later date to make an appropriation in order tö start carrying out the proposals. The intention is to build one large dock and to commence on another This will afford early accommodation for the large ships that are being built, and, year by year, it will develop into a larger scheme including several docks. These changes are absolutely necessary not only because the C.P.R. gets its traffic from these steamship lines, but the Intercolonial as well. Up to the present time there has been spent in Halifax, in connection with the I.C.R. $4,431,947.

With respect to the suggestion that the line be double tracked from Moncton to Halifax, the Minister could not say what would be done in the future. The existing local traffic could be handled with the present line. So far as the G.T. Pacific Ry. was concerned, the I.C.R. had its traffic for 99 years under contract. If the Government was going to undertake to put the G.T. Pacific Ry. and the C.P.R. into Halifax and St. John, the line would have to have a second track. Such a proposition would have to be discussed with the companies, as to whether the work would be done by the Government or not. The matter was being given consideration.

The diversion at Sydney Mines, upon which work was started last year, is estimated to cost when completed $539,000. It will give the I.C.R. a straight line to the mines. The department intends putting in a second track in connection with the yards at St. John, N.B., and some second track also at New Glasgow and Stellarton, N.S., this year.

In connection with the suggested diversion of the line in the vicinity of the Cobequid Mountains, the Minister of Railways stated Mar. 29, that a survey had been made, and his information was that a better gradient than the existing one might not be obtainable, and that it would be cheaper to build a second track on the existing line, than to build a diversion. The building of a diversion would mean doubling the number of stations, and overhead work.

The Department has under consideration a proposal to build a railway wharf for the I.C.R. terminus at Dartmouth, N.S., (April, pg. 321.)

Kamouraska and L'Islet Ry. Co.—The Quebec Legislature has incorporated a company with this title to build the lines named in its application. (Mar., pg. 249.)

Kaslo and Slocan Ry.—It is reported from Kaslo, B.C., that an option has been secured by a local syndicate on this railway, which extends from Slocan to Kaslo, 27 miles, and which was operated by the Great Northern Ry., U.S., under a lease which is about to expire. Owing to some land slides the line has not been operated for some time. It is stated that it is intended to reconstruct the line and to hand it over to the C.P.R. for operation. Sandon is the present terminus of the Nakusp and Slocan Ry., operated by the C.P.R., and Kaslo is situated on Kootenay Lake, on which the C.P.R. operates a steamer service.

Kettle Valley Lines.—We are advised that the press reports that a contract for the second 30 miles section of the extension out of Merritt, B.C., had been let to Macdonnell, Gzowski & Co., are premature, as the contract for this section will not be let until July.

The Dominion Parliament has authorized the building of certain extensions of previously authorized lines, extended the time for building certain lines, and changed the company's name from the Kettle River Valley Ry. Co., to the Kettle Valley Ry. Co. The company has charters in the State of Washington and operates its railway in the two countries as the Kettle Valley Lines. (April, pg. 321.)

Kootenay and Alberta Ry.—A contract has been let to Grant, Smith & Co., Spokane, Wash., for the building of the first 13 miles of this projected railway. This section begins on the C.P.R. Crows Nest Pass Line, about a mile west of Pincher, Alta., and extends south westerly to the Western Coal and Coke Co.'s mines on Beaver Creek. The maximum gradient with the traffic is 1% compensated. There are three minor summits, all of which are less than 14 ft. high, and are so arranged as to be velocity gradients. The sharpest curvature is six degrees. The work is heavy, averaging about 40,000 cubic yards to the mile, and having one very large cut, and two high timber trestles. The line will be laid with 60 lb. steel, American Society of Civil Engineers Section. L. B. Merriman is Chief Engineer.

Representatives of Grant, Smith & Co. were in Pincher Creek, Alta., Mar. 26, making arrangements to start work. Two steam shovels are being brought in to be used in the Mountain Hill cut. (April, pg. 321 and pg. 353.)

Liverpool and Caledonia Ry.—The Nova Scotia Legislature has incorporated a company with this title to build a railway from Liverpool to Caledonia.

Manitoulin and North Shore Ry.—The Ontario Legislature has extended the subsidy grant to this company, provided that the line from Sudbury to Little Current, be completed by Dec. 31, 1912. (April, pg. 321.)

We are advised that sub-contracts have been let as follows, on the section of the line from Crean Hill to Whitefish, Ont:—Espanola southerly, McCaffrey and McCaffrey, Espanola, Ont.; mileage 48.50 to mileage 51, Debona and Orlando Bros., Little Current, Ont.; mileage 51 to mileage 61, Murdoch Bros., Missanabie, Ont.; mileage 23 to mileage 30, Fletcher and Jones, Sudbury, Ont.

Margaree Coal and Ry. Co.—The Nova Scotia Legislature has extended the time fixed for construction. (Dec., 1909, pg. 883.)

Maritime Coal and Ry. Co.—The Nova Scotia Legislature has amended the company's powers in certain details, including an extension of time for the building of the uncompleted lines. (Sept., 1910, pg. 727.)

Michigan Central Rd.—The new double track swing bridge over the Welland Canal at Welland, Ont., was opened for traffic, April 7. (April, pg. 321.)

Montreal and Northern Colonization Ry. Co.— The Quebec Legislature has incorporated a company with this title to build the railway mentioned in the application, as amended. (April, pg. 321.)

Midland Continental Ry.—A Chicago, Ill., press dispatch, April 17, states that the Midland Construction Co., will start building the first section of a line intended to form a trunk line from Winnipeg to the Gulf of Mexico, at an early date. The section to be built, will, it is said, connect with the Canadian lines near Pembina, and will extend to Edgely, 2.5 miles. The officers of the Construction Co., are:—F. Bell, Racine, Wis.; Vice President, H. D. Duncombe, Chicago; Chief Engineer, G. M. Wisner, Chicago; Consulting Engineer, C. V. Weston, President, South Side Elevated Rd., Chicago. (Dec., 1910, pg. 1015.)

New Brunswick and Prince Edward Ry.—Press reports from Sackville, N.B., state that C. W. Fawcett, C. Pickard, Sackville, and M. G. Siddall, Port Elgin, N.B., are the leading members of a syndicate which is about to take hold of this railway. The reports state that these new interests propose to electrify the line for the operation of passenger cars, to run steamships from Cape Tormentine to Summerside and Charlottetown, with a winter service to the Traverse; and a steamship service from Cape Tormentine to Fort William, Ont. The company owns the public wharf at Sackville, and it is proposed to lay a track from the railway on to the wharf. and make a number of improvements there. (Jan., pg. 23.)

New Brunswick Coal and Ry. Co.—The N. B. Legislature is being asked by the Government to pass a measure providing a guarantee of bonds for $15,000 a mile for the building of an extension of this line from Minto to Fredericton, N.B. The company entering into a contract for building the extension must lease the present line running from Norton to Minto from the Government. purchase at least 100,000 tons of coal a year from the mines along the route of the line, and enter in a contract with the C.P.R. or other company for the operation of the entire line on a 99 year lease, the Government to receive 40% of the gross earnings on the 31 miles between Minto and Fredericton, and 50% of the gross earnings on the other mileage. The Premier in introducing the measure stated that the C.P.R. had made careful tests of the Grand Lake coal which came from mines on the line, and was prepared to enter into an agreement to take 100,000 tons a year. (Feb., pg. 113.)

New Ontario and Quebec Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the National Transcontinental Ry. near mileage 940. Que., to Matheson, Ont., on the Temiskaming and Northern Ontario Ry., and on to Congdon station on the James Bay Ry., 160 miles; a 25 mile line from mileage 1000 on the N.T. Ry., to a junction with the first named line, and a 25 mile line from Iroquois Falls on the T. and N.O. Ry., along the Abitibi River to a junction with the first named line. The provisional directors are: E. A. Walberg, E. C. Wilson, Montreal, L. M. Wood, T. H. Watson, Toronto, F. J. Bell, Cobalt, Ont (Mar., pg. 207.)

Newport and Northern Alberta Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title, to build a railway from Newport, at the head of Howe Sound, B.C., north easterly to Lillooet, then northerly along the valley of the Fraser River to Fort George, thence to the Parsnip River, and along its valley to the confluence with the Peace River, thence easterly along the valley of the Peace River to Peace River Landing, Alta. Pringle and Guthrie, Ottawa, are solicitors for applicants.

New York and Canadian Pacific Ry.—The charter granted by the New York State Legislature for the building of a line to connect the C.P.R. lines in Canada with those in the U.S. is reported to have become forfeited. The line proposed to be built was from New York to Ogdensburg, via Schenectady, N.Y., with a car ferry connection on the St. Lawrence River. (Jan., 1907, pg. 3.)

Ontario Hudson Bay and Western Ry.—The Dominion Parliament has extended the time for the construction of this projected railway, which was authorized to be built by statutes of 1901, chap. 78. (Dec., 1910, pg. 1015. See also Algoma Central and Hudson Bay Ry.)

Ontario Northern and Timagami Ry.—The Dominion Parliament has extended the time within which the line, originally authorized to be built by the statutes of 1898, chap. 87, may be built. The last extension of time was granted in 1906, chap. 136. (See Timagami and Northern Ontario Ry., Jan., pg. 25.)

Pontiac Central Ry.—The Dominion Parliament has extended the time within which the lines authorized to be constructed by the statutes of 1908, chap. 146, may be built, and has given the company power to enter into agreements with the G. T. Pacific Ry., the Canada Atlantic Ry., the Central Ry. Co. of Canada, and the Canadian Northern Ontario Ry. (Dec., 1910, pg. 1015.)

Ontario-Michigan Ry. — In passing through the House of Commons committee, the name of the company proposed to be incorporated as the Ontario Railways Co., was changed to the Ontario-Michigan Ry., and power was given to make an agreement with the Michigan United Electric Ry. for the purpose of operating a car ferry between Sarnia and Port Huron, and of transferring thereon the cars of both companies. Agreements may also be made with the C.P.R., the G.T.R. and the Pere Marquette Rd. (See Ontario Railways Co., April, pg. 321.)

Simcoe, Bruce and Grey Ry.—Replying to a deputation which waited on him recently to ask for a subsidy for the Owen Sound-Meaford, section of this projected railway, the Dominion Minister of Railways said his department had not recommended the granting of any railway subsidies this session, but if it did, this line would be one of the first recommended. (April, pg. 321.)

Prince Edward Island Ry.—The following amounts, chargeable to capital, have been voted by the Dominion Parliament:— Branch line, Harmony to Elmira, $150,000; extension to freight shed on wharf at Souris, $1,813; to increase accommodation at Summerside, $9,300; addition to station at Tignish, $1,000.

With respect to the Harmony-Elmira branch line the Minister of Railways stated recently that the estimated cost was $315,000. The contract was let to Whitehead Bros., at schedule prices. Owing to the death of their father and some other occurrences the contractors got into difficulties, and the department held up their estimates until some settlement had been effected. This has been made, but progress has been slow. A good deal of the branch has been graded, and the station buildings which were let to another contractor are nearly completed. The Intercolonial Ry. is selling 56 lb. rails taken up from the old Canada Eastern Ry., for the branch at $27.50 a ton. It is expected that the branch will be completed this year. Up to the present time $128,000 has been paid on account of the building of the line, and $14,000 on account of the building of the stations. (April, pg. 321.)

Prince Edward Island Tunnel.—Resolutions have been passed by the residents of Emerald, P.E.I., urging the making of complete surveys with a view to determine the feasibility and cost of construction and the cost of operation of a tunnel under Northumberland Strait, to connect P.E.I. with the mainland, and that pending the construction of such a tunnel the P.E.I. Ry. gauge be widened to standard, and that a car ferry service be established. (Mar., pg. 207.)

Quebec and Great North Western Ry.—The provisional directors named in the bill, now before the Dominion Parliament for the incorporation of a company with this title are:— R. Chevrier, P. O'Reilly, P. Clarke, E. J. Daly, Ottawa; J. Bourque, Hull, Que. (Feb., pg. 113.)

Quebec Eastern Ry.—The Quebec Legislature has extended the time for the construction of this projected railway, and authorized an increase of the capital stock from $1,000,000 to $5,000,000. (Mar., pg. 249.)

Quebec, Montreal and Southern Ry.—The Dominion Parliament has extended the time within which the company may build the uncompleted portions of its lines. These include the extension of the line from near St. Francis to the southern end of the Quebec Bridge. (Feb., pg. 113.)

Richmond, Magog and Stanstead Ry. Co.—The Quebec Legislature has incorporated a company with this title to build the railway mentioned in the application. (Mar., pg. 249.)

Shaw Ry. and Lumber Co.—The Saskatchewan Legislature has incorporated a company with this title. The railway proposed to be built will extend from Shaw's siding near Prairie River, on the Canadian Northern Ry., about seven miles west of the Hudson Bay Jct., Sask. (Mar., pg. 207.)

St. John and Quebec Ry.—The new Brunswick Legislature has under consideration a bill providing for an extension of this projected line.

Shelburne and Bear River Ry.—The Nova Scotia Legislature has incorporated a company with this title to build a railway from Shelburne to Bear River. (See also Bear River and Caledonia Ry.)

Southern Central Pacific Ry.—The Dominion Parliament has extended the time for the building of the lines authorized to be constructed by sec. 3, chap. 162, of the statutes of 1906, and giving power to build a line from the headwaters of the Blindman River, or at the crossing of the North Saskatchewan, to Dunvegan, the Parsnip River, the Nechaco River, and thence southerly to Deans Channel or to Gardiner's Canal on the Pacific coast.

Surveys were made during the winter, under the charge of G. A. Knowlton, and B. Russell, for the location of a route from Coutts to the north and south forks of the Old Man River, and to Pincher Creek, Alta. It is reported that the location surveys for 10 miles on each side of the forks of the Old Man River have been completed. Press reports state that arrangements are being made for starting construction at an early date. (April, pg. 321.)

Southampton Ry.—The New Brunswick Legislature has under consideration a proposal authorizing the Government to guarantee the company's 4% bonds for $10,000 a mile, for the construction of a railway from the C.P.R. Gibson branch between Melville station and a railway bridge crossing the Northeast Mackawick stream, to Pokiok Bridge, York county, 13 miles. The guarantee is contingent upon the company entering into a contract with the C.P.R. for the operation of the line upon release, the Government to receive 40% of the gross receipts from the operation of the same. After meeting interest charges on the bonds any balance remaining shall be paid over to the Southampton Ry. The bill further provides that the gradients, and general construction of the line shall conform to the standard of the C.P.R Gibson branch.

Southern Central Pacific Ry.—The Board of Railway Commissioners has approved the location of the line from Burmis, Alta., mileage 0, to sec. 2, tp. 4, range 6, west of the fifth meridian, mileage 7.84.

Sydney, New Waterford and East Bay Mono Rail Ry.—The Nova Scotia Legislature has incorporated a company with this title, to build a railway, on the mono-rail system, from Sydney to East Bay.

Temiskaming and Northern Ontario Ry.—Addressing the Toronto Board of Trade, April 7, J. L. Englehart, Chairman, T. and N.O.R. Commission, after describing the clay belt plateau reached by the line, and the coastal plain beyond, said the Commission proposed to send a small survey party to Moose River this year, with a view to locating an extension to Salt Water. Liskeard was the portal to the clay belt which extended to Cochrane, 140 miles, and north of that point, for 150 miles, and beyond this was the great coastal plain, for which, so far as present knowledge went, the mouth of the Moose River formed the best harbor. Two other matters were mentioned, the first being the securing of a new location for an alternative route for the first 35 miles out of North Bay, with lower gradients and easier curvature than the present line; and the second was that a working arrangement had been effected by which traffic brought by the National Transcontinental Ry. would be carried over the T. and N.O. Ry. between Cochrane and North Bay.

Rapid progress continues to be made with construction on the branch to Porcupine Lake; ten miles of steel has been laid, and the bridge structures are well forward. It is fully expected by the commissioners that the branch will be ready for traffic by July 1.

A deputation waited on the Ontario Minister of Public Works, April 7, in connection with the proposal to build a branch into the Gowganda district. It is said that while a definite decision has not been reached, the Government does not view the project with much favor, and that in the event of reaching a decision not to build the line, it will be prepared to grant a charter to a private company. (April, pg. 321.)

Winnipeg North Eastern Ry.—The Manitoba Legislature has incorporated a company with this title to build a railway along the east side of Lake Winnipeg. Press reports state that Mackenzie, Mann & Co., are behind this project, and that the line will start at the present terminus of the company's Bird's Hill branch, reach Fort Alexander, and then proceed along the eastern boundary of Lake Winnipeg. (April, pg. 323.)

Winnipeg River Ry.—The Manitoba Legislature has incorporated a company with this title to build a railway from Winnipeg to Lac du Bonnet. (Mar., pg. 209.)

Recent Manitoba Legislation.

The following acts affecting transportation interests were passed at the recent session of the Manitoba Legislature:—

Bird's Hill and Springfield Ry.—Incorporation.

Brandon Electric Ry.—Incorporation.

Canadian Northern Ry.—Authorizing guaranteeing of certain of the company's securities.

Lake Winnipeg and Red River Navigation Co.—Incorporation.

Manitoba Power Co.—Respecting company's powers.

Manitoba Radial Ry.—Incorporation.

Rural Ry. Co. of Manitoba.—Amending act of incorporation.

St. Vital.—To enable the municipality to enter into an agreement respecting construction of electric railways.

Telegraph and Telephone Systems.—Amending act respecting government telegraph and telephone systems.

Western Electric Light and Power Co.—Incorporation.

Winnipeg North Eastern Ry.—Respecting company's powers.

Winnipeg River Ry.—Respecting company's powers.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale	- - -	9.15 p.m.
Leave West Toronto	- - -	9.30 p.m.
Arrive North Toronto	- - -	9.40 p.m.
Leave North Toronto	- - -	10.00 p.m.

Arrive Ottawa, 6.50 a.m.
Arrive Montreal 7.00 a.m.
Daily except Sunday.
Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service. .

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them

13243. Mar. 16.—Authorizing city of St. Boniface, Man. to lay water main under C.P.R. at Montcalm St.

13244. Mar. 16.—Authorizing Water Commissioners of London, Ont., to erect wires across G.T.R. siding on Rectory St.

13245, 13246. Mar. 15—Authorizing G.T.P.R. to cross 47 highways in Alberta.

13247. Mar. 16.—Authorizing C.P.R. to cross Trespass Road Thorah tp., Ont.

13248. Mar. 17.—Approving Rutland Rd.'s bylaw authorizing C. Hartigan, G.P.A., and G. Cassidy, G.F.A., to prepare and issue tariffs of tolls in respect to passenger and freight traffic.

13249. Mar. 15.—Authorizing C.N.R. and C.P.R. to appeal to Snpreme Court of Canada from order 12520, Dec. 10, 1910, which directed them to grant certain rates to Regina, Sask., as are now enjoyed by Winnipeg. This order is given in full on another page.

13250. Dec. 14.—Dismissing application of Gundy-Clapperton Co., Goldsmiths' Stock Co., and Gowans, Kent and Co., Toronto, for reduction in rating in Canadian Classification on cut glass, from double first class to first class.

13251, 13252. Mar. 17.—Authorizing G.T.P. Branch Lines Co. to cross 34 highways on its Calgary Branch, Alta.

13253. Mar. 17.—Approving C.N.R. revised location through sec. 19, tp. 2, r. 6, w. 2 m., mileage 15.84 to 16.60 Sask.

13254 Mar. 17.—Authorizing city of Toronto to erect wires across C.P.R. on Front St. near Overend St.

13255. Mar. 18.—Approving G.T.R. plans for abutments, wing walls and steel work of subway at Queen St. West, Etobicoke tp., Ont.

13256. Mar. 18.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect wires across T.,H. & B.R. spur at Sherman Inlet, Hamilton Ont.

13257. Mar. 20.—Approving character of work of Gillett drain across G.T.R. in Malahide tp., Ont.

13258. Mar. 20.—Approving C.N.O.R. location through McTavish and Sibley tps., Thunder Bay district, mileage 524.96 to 548.45.

13259. Mar. 20.—Authorizing C.P.R. to divert and cross highway at mileage 75.3 on west boundary of n. w. ¼ sec. 1, tp. 25, r. 5, w. 5 m., Sask.

13260. Mar. 20.—Authorizing G.T.P. Branch Lines Co. to cross C.N.R. Maryfield branch, Sask., crossing to be protected by interlocking plant, etc.

13261. Mar. 20.—Approving C.N.O.R. revised location near Billing's Bridge, Ottawa Junction Gore, Gloucester tp., Carleton county, mileage 2.3 to 3.02.

13262. Mar. 20.—Authorizing Seymour Power and Electric Co. to erect wires across G.T.R. at Newcastle, Ont.

13263, 13264. Mar. 20.—Authorizing Water Commissioners of London, Ont., to erect wires across G.T.R. at two points on Egerton St.

13265. Mar. 20.—Authorizing C.P.R. to maintain spur to Canadian Linderman Co.'s premises, Woodstock, Ont.

13266. Mar. 20.—Authorizing C.P.R. to operate spur to Coast Lumber Yards' premises, Winnipeg, Man.

13267. Mar. 20.—Authorizing C.P.R. to operate spur to S. E. Stewart's premises, Saskatoon, Sask.

13268. Mar. 20.—Authorizing C.P.R. to operate spur for Manitoba Government Telephones, across Higgins Ave. and lots 11, 10, 9, in block 30, St. John, Winnipeg.

13269. Mar. 20.—Authorizing C.P.R. to build spur to Vanconver-Prince Rupert Meat Co.'s premises, New Westminster District, and to connect with Vancouver, Victoria & Eastern Ry. spur.

13270. Mar. 20.—Ordering that G.T.R. instal improved type of electric bell at Daniel St., Arnprior, Ont., 20% of the cost to be paid by the railway grade crossing fund.

13271. Mar. 21.—Authorizing G.T.P.R. to divert road through east half of sec. 36, tp. 44, r. 7, w. 4 m., Alta.

13272. Mar. 20.—Approving plans of C.P.R. bridge 0.5 over Thames River on Windsor subdivision, Ontario Division.

13273 to 13276. Mar. 21.—Authorizing G.T.P. Branch Lines Co. to divert four roads on its Calgary Branch, Alta.

13277. Mar. 21.—Authorizing G.T.P. Branch Lines Co., to cross highway in sec. 16, tp. 25, r. 4, w. 2 m., Yorkton District, Sask.

13278. Mar. 21.—Authorizing C.P.R. to build culvert on its Lethbridge subdivision at mileage 105.1 from Dunmore Jct., for Alberta Ry. and Irrigation Co.

13279. Mar. 21.—Authorizing G.T.R. to build spur to premises of J. C. Low, Wright & Co., E. F. & G. E. Barrett and Ottawa Construction Co., south of Catharine St., west of Bank St., Ottawa, Ont.

13280. Mar. 20.—Authorizing G.T.R. to build spur to Hamilton Bridge Co.'s premises, Hamilton, Ont.

13281. Mar. 21.—Ordering Quebec Oriental Ry., formerly Atlantic and Lake Superior Ry., to repair and alter bridge at Rock Cut, in r. 5, Que., by May 15, under penalty of $25 a day.

13282. Mar. 22.—Authorizing C.N.R. to cross with its Delisle Extension, C.P.R. Moose Jaw-Lacombe Branch in sec. 31, tp. 29, r. 9, w. 3 m., Sask., interlocking plant to be installed.

13283. Mar. 22.—Approving C.N.R. revised location through subdivision on n, w. ¼ sec. 34, tp. 23, r. 29, w. 4 m., Alta., mileage 255.22 to 255.73.

13284. Jan. 23.—Approving Dominion Atlantic Ry. standard tariff of maximum parlor car tolls C.R.C. S-3.

13285. Mar. 22.—Authorizing C.P.R. to operate spur from its main line, to premises of Heintzman Piano Co., and Nordheimer Piano Co., Toronto.

13286. Dec. 12.—Approving character of Pike and Dauphin drainage schemes to cross G.T.R. between Raleigh and Tilbury tps., Ont.

13287. Mar. 23.—Authorizing Caledonia Gypsum Co. to lay pipe under G.T.R. at Caledonia, Ont.

13288. Mar. 23.—Authorizing C.P.R. to build bridge 18.3 over Shogomog River, Woodstock section, Atlantic Division.

13289. Mar. 22.—Dismissing application of Blaugas Co. of Canada, Ltd., for order directing railways to classify Blaugas in cylinders, in Canadian Classification as third class in l.c.l. and fifth class in c.l., in lieu of second class and fourth class, as proposed by railways

13290. Mar. 22.—Ordering G.T.P.R. to provide farm crossings for W. Smith, Huxley, Alta., by June 1, under penalty of $25 a day.

13291. Mar. 25.—Authorizing C.N.O.R. to cross roadways on lot 1, con. 2, from the Bay, York tp.

13292. Mar. 23.—Extending to June 1, time for British Yukon Ry., B.C. Yukon Ry., Pacific and Arctic Ry. and Navigation Co. and White Pass and Yukon Ry. to file joint freight and passenger tariffs as reqnired by order 12783. Jan. 18. This order is given in full on another page.

13293. Mar. 25.—Authorizing Reeb Bros., Port Colborne, Ont., to maintain gas pipe under G.T.R. at west side of Catharine St.

13294. Mar. 27.—Authorizing Vancouver Island Power Co., to erect wires across Esquimalt and Nanaimo Ry., near mileage 4, from Victoria, B.C.

13395. Mar. 23.—Approving Georgian Bay and Seaboard Ry. location from mileage 74.25 to 87.65, Ont.

13296. Mar. 25.—Ordering C.N.R. to complete concrete work for sidewalks of Pembina St. subway, Winnipeg, by May 31, under penalty of $25 a day.

13297. Mar. 27.—Approving plans of G.T.R. station at Dublin, Ont.

13298. Mar. 27.—Approving plans of three C.P.R. bridges on its Windsor, North Bay and St. John sub-divisions.

13299. Mar. 27.—Approving Dominion Atlantic Ry. plans for bridges across Shubenacadic River at South Maitland, N.S.

13300. Mar. 27.—Removing speed restriction on B.C. Yukon Ry. trains between stations 382, 487 and 520 and limiting speed to 15 miles an hour from Best Chance Mine to Pueblo Mine.

13301. Mar. 27.—Ordering C.N.R. to build standard station and freight shelter at Garland, Man., before June 15, under penalty of $25 a day.

13302. Mar. 23.—Authorizing C.P.R. to build spur near Port Moody, B.C., mileage 0 to 3.5.

13303. Mar. 27.—Authorizing C.P.R. to build spur for Britnell & Co., Toronto tp., Ont.

13304. Mar. 27.—Authorizing Ontario Hydro-Electric Power Commission to erect wires across G.T.R. at lot 46, con. 2, North Easthope tp.

13305. Mar. 28.—Authorizing Pintsch Compressing Co. to lay gas main under G.T.R. at St. James St., Montreal.

13306. Mar. 28.—Extending to April 25, time for filing of plan for Hefferman St. bridge, Gnelph, Ont., by the city.

13307. Mar. 28.—Approving Georgian Bay and Seaboard Ry. plan for highway under tracks at lot 6, con. 11, Thorah tp., Ont.

13308. Mar. 28.—Authorizing C.P.R. to build three spurs in Camrose, Alta.

13309 to 13311. Mar. 29.—Rescinding orders 13089, 13092 and 13094, Feb. 27, which authorized city of Toronto to erect wires across G.T.R. and G.N.W. Telegraph Co.'s wires on Royce Ave., Queen St. East, and Bloor St.

13312. Mar. 29.—Authorizing Ontario Hydro-Electric Commission to erect wires across Bell Telephone Co.'s wires at seven points in Toronto and Etobicoke tps.

13313. Mar. 29.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect wires across Bell Telephone Co.'s wires at Barton St., west of Birch Ave., Hamilton, Ont.

13314, 13315. Mar. 29.—Authorizing Saskatchewan Government to build highway across C.P.R. in secs. 23 and 24, tp. 13, r. 19, w. 3 m.

13316. Mar. 29.—Ordering C.P.R. to provide for installation of telephone at Dorking station, Ont.

13317. Mar. 29.—Amending order 13228, re classification of toasted corn flakes, Jan. 17. This order is given in full on another page.

13318. Mar. 29.—Authorizing Saraguay Electric and Water Co. to erect wires across C.N.Q.R., at Joliette St., Montreal.

13319. Mar. 29.—Approving amended location of Vancouver, Victoria and Eastern Ry. from Otter Summit, mileage 17, to Tulameen, mileage 39, B.C.

13320. Mar. 29.—Authorizing C.P.R. to build spur for Wattsburg Lumber Co., West Kootenay District, B.C.

13321. Mar. 29.—Dismissing application of G.T.P. Branch Lines Co. to cross highway on its Calgary branch in sec. 36, tp. 39, r. 23, w. 4 m., Alta.

13322. Mar. 29.—Authorizing C.N.R. to operate spur north of lot 88, from Rue de Meuron to College St., St. Boniface, Man.

13323. Mar. 28.—Rescinding order 13186, Mar. 7, which approved plans of train shed, etc., at Central Union Passenger Station, Ottawa, Ont.

13324. Mar. 29.—Authorizing G.T.P. Branch Lines Co. to divert road on its Calgary branch in s.w. ¼ sec. 25, tp. 35, r. 23, w. 4 m., Alta.

13325. Mar. 28.—Ordering V.V. and E. Ry. to build spur to premises of Prudential Builders', Ltd., Vancouver, B.C.

13326. Mar. 27.—Ordering railway companies to file special tariffs to take effect not later than May 1, providing for allowance of 500 lbs. from weight of each carload in or upon open cars for weight of racks, stakes, standards, boards, strips, supports, etc. This order is given in full on another page.

13327. Mar. 30.—Extending to two years, instead of six months, time for completion of branch from V.V. and E. Ry. main line, near McLean's Drive, to Park Lane, Vancouver, B.C., as authorized by order 12939, Feb. 8.

13328 to 13348. Mar. 30, 31, Apr. 1.—Authorizing Hamilton Cataract Power, Light and Traction Co. of Canada to erect wires across Niagara, St. Catharines and Toronto Ry., G.N.W. Telegraph Co.'s, and Bell Telephone Co.'s wires in Welland county, Wentworth, Port Colborne and Humberstone, Ont.

13349. Mar. 31.—Anthorizing city of Toronto to erect wires across Bell Telephone Co.'s wires at Jefferson Ave.

13350.Apr. 1.—Relieving G.T.R. from further protecting crossing of highway west of Graham Bay station, Nepean tp., Ont.

13351. Mar. 31.—Authorizing G.T.R. to extend spur to city water works, Toronto.

13352. Apr. 1.—Authorizing C.P.R. to cross C.N.R. Beulah to Rapid City branch, in s.w. ¼ sec. 17, tp. 15, r. 24, w. p. m., Man., and ordering interlocking plant to be installed.

13353. Mar. 31.—Approving plans of Fleming drain under G.T.R. in Plympton tp., Ont.

13354. Apr. 1.—Approving C.P.R. standard fence plan, F-14-15-3.

13355. Mar. 21.—Dismissing application of Canadian Freight Association, in so far as proposed Supplement 1 affects ratings of tobacco, Canadian Classification 15. This order is given in full on another page.

13356. Apr. 8, 1909.—Anthorizing C.P.R. to refund to Constructing and Paving Co. of Ontario, Ltd., difference between rate of 22c. per 100 lbs. and rate collected on shipments of asphalt oil in tank cars from Philadelphia, Pa. This order is given in full on another page.

13357. Mar. 30.—Ordering express companies within the Board's jurisdiction, on and after June 1, to collect and deliver traffic to all points within the municipal boundaries or limits of cities, towns and villages and that after that date all existing delivery limits be abolished. Leave is granted to said companies to apply to the Board for establishment of reasonable collection and de-

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

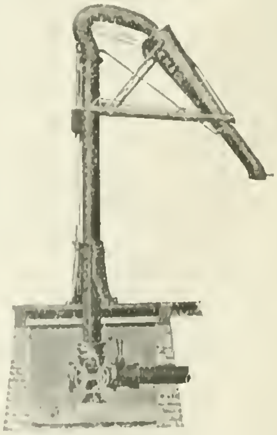
Sheffield-Johnson Flexible Spout Standpipe Installed on C.P.R. at St. Clet, P.Q.

The Original

SHEFFIELD-JOHNSON STANDPIPE

It meets with the approval of practical railway men and its popularity is assured. It has a range of flexibility of 5 ft. or over as desired and the spout can be introduced directly into the highest as well as the lowest tender. Nothing could be simpler, more easily operated or more convenient than the type of telescopic spout shown. This, in connection with our horizontal main valve and other special features, makes a combination that is far ahead of all other standpipes on the market. Locks automatically and positively parallel with tracks when not in use. Revolves in complete circle. Operated entirely by one man. Self-draining—cannot freeze. Equipped with relief valve.

Beware of Imitations



Showing Telescopic Spout Lowered.

livery zones, maps to be furnished.

13358. Apr. 3.—Authorizing Seymour Power and Electric Co. to erect wires across C.P.R. wires at broken front concession, Carke tp., Ont.

13359. Mar. 21.—Ordering that, pending completion of overhead bridge at Coutts St., Lethbridge, Alta., a watchman be placed at Galt St. for protection of C.P.R. and A. Ry. and I. Co.'s tracks.

13360. Apr. 3.—Authorizing C.P.R. to build spur across William St., Walkerton, Ont.

13361. Apr. 3.—Extending for two months from date, time for installation of gates at Main St. crossing, Medicine Hat, Alta., as authorized by order 11824, Sept. 16, 1910.

13362. Apr. 3.—Authorizing C.P.R. to build station at Suffield, Alta.

13363. Mar. 31.—Amending order 12225, that water stand pipes shall not be nearer than 2½ ft. from widest engine cab, changes necessary to be made before Jan. 1, 1912.

13364. Apr. 4.—Approving plans of C.N.O.R. Cobourg station grounds.

13365. Apr. 4.—Authorizing C.P.R. to build bridge over Stobie River, Soo branch, Lake Superior Division, Ont.

13366. Apr. 4.—Authorizing C.N.O.R. to cross public roads between lot 1, Tyendinaga tp., and lot 31, Thurlow tp.

13367. Apr. 3.—Ordering that G.T.P.R. and Quebec, Montreal and Southern Ry. file new tariffs of interswitching tolls in accordance with order 4988, not later than Apr. 26, under penalty of $25 a day.

13368. Apr. 5.—Authorizing C.N.R. to open for traffic portion of its line from Luxton to Bienfait, Sask.

13369, 13370. Apr. 4.—Authorizing C.N.O.R. to cross public road between lots 15 and 16, con. A, and between lots 3 and 4, con. 2, Tyendinaga tp.

13371. Apr. 4.—Authorizing C.P.R. to revise grade between mileage 0 and 16.7, and slightly revise location between mileage 6.2 and 6.9, being proposed second track from Smiths Falls to Glen Tay, Havelock section, Ont.

13372. Mar. 24.—Ordering C.N.O.R. to file new plan of subway at Division St., Cobourg, within 30 days.

13373. Apr. 5.—Ordering C.P.R. to readjust its tracks under Julius St. bridge and erect tell-tales at Matheson St. bridge, Kenora, Ont.

13374, 13375. Apr. 4.—Authorizing city of Toronto to maintain sewer under G.T.R. and C.P.R. at Weston Road.

13376. Apr. 6.—Approving location of Hudson Bay and Pacific Ry. from Prince Albert northeasterly towards Fort Churchill, mileage 0 to 70, Saskatchewan.

13377. Apr. 6.—Authorizing city of St. Catharines, Ont., to lay pipe under G.T.R. at Vine St.

13378. Apr. 5.—Authorizing Thamesville village, Ont., to lay pipe under G.T.R. at Victoria St.

13379, 13380. Apr. 6.—Authorizing J. Marshall, barton tp., Ont., to lay gas mains under G.T.R. at two points in Seneca tp.

13381. Mar. 21.—Ordering express companies to file tariffs for cream for butter making not to exceed certain figures, also special tariffs on sweet cream effective May 1, for district east of Port Arthur, Ont.

13382. Apr. 7.—Approving agreement between Narcross Bros. Co. and G.T.R. for erection of overhead travelling crane at Toronto.

13383. Apr. 7.—Approving C.N.R. bylaw authorizing G. H. Shaw, General Traffic Manager, Toronto and G. Stephen, G.F.A., Winnipeg, to prepare and issue tariffs.

13384. Apr. 7.—Extending to July 1, time for completion of G.T.R. steel bridge at Chesley, Ont.

13385. Apr. 7.—Authorizing C. N.O.R. to cross Brockville, Westport and North Western Ry. at Brockville Jct., mileage 189.34 from Toronto.

13386. Apr. 8.—Authorizing G.T.R. to operate trains over interlocker at Lynden Jct., Ont., without stopping.

13387. Apr 8.—Authorizing Montreal Light, Heat and Power Co. to maintain cable ducts under C.P.R. Lachine Canal South bank branch.

13388, 13389. Apr. 10.—Authorizing C.N.O.R. to divert public roads on lots 1, 2, 3, con. 5, Loughborough tp.

13390. Apr. 7.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur from near Hamilton station to A. S. Nicholson's property.

13391. Apr. 5.—Approving Southern Central Pacific Ry. location from Burmis to sec. 2, tp. 4, r. 6, w. 5 m., mileage 0 to 7.84, Alta.

13392. Apr. 8.—Authorizing C.P.R. to build spur to Enderby Brick and Tile Co.'s premises, Enderby, B.C.

13393. Apr. 10.—Approving C.P.R. plans for 10 bridges on its Ontario, Lake Superior and Alberta Divisions.

13394. Apr. 10.—Ordering Bell Telephone Co. to file answer by Apr. 15, under penalty of $25 a day, to application of city of Montreal to provide uniform service with uniform rates within the whole city.

13395. Apr. 10.—Dismissing G.T.P. Branch Lines Co.'s application to divert a road on its Calgary branch in s.w. ¼ sec. 18, tp. 31, r. 23, w. 4 m., Alta.

13396. Mar. 24.—Authorizing C.N.O.R. to build subway at Kingston Road, Hamilton tp.

13397. -Apr. 7.—Amending order 13109, Feb. 25, which directed G.N.R. to widen ditch near Port Kells, B.C., by ordering it to close three small culverts on completion.

13398. Apr. 4.—Approving C.N.O.R. revised location at Smiths Falls, mileage 37.8 to 40.8, from Ottawa.

13399. Apr. 4.—Authorizing C.N.O.R. to cross C.P.R. near Jacques Cartier Jct., mileage 49.3 south from Hawkesbury.

13400. Apr. 4.—Authorizing Georgian Bay & Seaboard Ry. (C.P.R.) to build spur for Victoria Harbor Lumber Co., Victoria Harbor, Ont.

13401. Apr. 10.—Authorizing Guelph, Ont., Water Works Commissioners, to maintain pipe under G.T.R. at Alma St.

13402. Apr. 10.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect wires across T.H. & B. Ry. at Ottawa St.

13402 to 13408. Apr. 11.- Authorizing Sherbrooke Ry. and Power Co., to erect wires across Bell Telephone Co.'s wires and C.P.R. in Sherbrooke, Que.

13409. Apr. 11.—Approving revised location of V.V. & E. Ry. and Nav. Co., between mileage 12 and 16 from Coquihalla Summit, B.C.

13410. Apr. 11.—Authorizing G.T.R. to build spur on its Haliburton branch, near Lindsay, Ont., for Toronto Construction Co.

13411. Apr. 11.—Authorizing C.N.O.R. to build spur from its Deer Lake station to Graves Bigwood Lumber Co.'s premises at Gooseneck Lake, lot 6, Burton tp.

13412. Apr. 11.—Authorizing Canadian Tube & Iron Co. to build coal handling plant across C.P.R. siding on south side of Lachine Canal, Que.

13413. Apr. 11.—Authorizing C.P.R. to build three spurs for Vancouver Milling and Grain Co., Vancouver, B.C.

13414. Apr. 11.—Approving revision in location of portions of C.P.R. Moose Jaw northwesterly branch.

13415. Apr. 11.—Authorizing C.P.R. to change location of its eastbound main line at Royce Ave., Toronto.

13416, 13417. Apr. 11.—Authorizing C.P.R. to build bridges 27.71 and 48.71 over Silver Creek, Cartier sub-division, Lake Superior Division, Ont.

13418. Apr. 10.—Authorizing G.T.R. to expropriate certain lands in Toronto in connection with its grade separation.

13419. Apr. 11.—Authorizing C.P.R. to build spur to Hero Manufacturing Co.'s premises, Winnipeg.

13420. Apr. 11.—Authorizing Sherbrooke Ry. and Power Co., to erect wires across Bell Telephone Co.'s wires at King and Belvidere Sts., Sherbrooke, Que.

13421, 13422. Apr. 12.—. g Vancouver, Fraser Valley & Southern Ry. to connect with British Columbia Electric Ry. at Park Drive, Vancouver, and at Eighth Ave., Sapperton, New Westminster.

13423. Apr. 11. Ordering Bell Telephone Co. to connect with Colborne, Ont., Municipal telephone system.

13424. Apr. 11.—Ordering C.P.R. to provide suitable crossing at west end of its yard at Eagle, Ont.

13425. Apr. 12.—Rescinding order 13364, Apr. 4, and approving C.N.O.R. station ground plans, Cobourg.

13426. Apr. 12.—Approving C.N.R. crossing of 39 highways in Saskatchewan.

13427. Apr. 11.—Ordering G.T.R. to provide watchman at Montreal Rolling Mills' siding in Montreal.

13428. Apr. 12.—Approving C.P.R. plans for standard grain loading platforms.

13429. Apr. 12.—Authorizing C.N.O.R. to build bridge over Salmon River, Tyendinaga tp.

13430. Apr. 11.—Ordering C.P.R. to instal improved electric bell ¼ mile west of Piles Jct., Que., 20% to be paid out of the grade crossing fund.

13431. Mar. 15.—Authorizing city of Toronto to erect wires across C.P.R. and G.T.R. at Hanna Ave. and Liberty St.

13432. Apr. 13.—Authorizing C.P.R. to build four bridges on Eastern and Alberta Divisions.

13433. Apr. 15.—Authorizing C.P.R. to build spur for Blairmore Brick Co., Blairmore, Alta.

13434. Apr. 15.—Approving agreement between Bell Telephone Co. and Drummondville Telephone Co. for interchange of business.

13435. Apr. 15.—Authorizing V.V. & E. Ry. to take certain lands in Vancouver, B.C., for deviation and change of grade.

13436. Apr. 15.—Ordering C.P.R., G.T.R. and C.N.Q.R. to reduce export rates on lumber, in carloads, to Montreal for export, so that same differences shall exist between them and present domestic rates as existed between old domestic rates and old rates for export, and rescinding order 12301.

13437. Apr. 13.—Authorizing Seymour Power and Electric Co. to erect wires across Bell Telephone Co.'s wires in Newcastle, Ont.

13438. Apr. 18.—Extending for three months time for construction of Qu'Appelle, Long Lake and Saskatchewan Ry. spur on Lauriston St., Saskatoon, Sask., as authorized by order 10314, Apr. 19, 1910.

13439. Apr. 18.—Authorizing Fenlin Leather Co., Montreal, to lay water pipe under G.T.R. on North Bank Lachine Canal, Cote St. Paul, Que.

13440. Apr. 18.—Authorizing city of Toronto to erect wires across G.T.R. and G.N.W. Telegraph Co.'s wires near Queen St. and Sunnyside Ave.

13441 to 13443. Apr. 13, 19, 18.—Authorizing Seymour Power and Electric Co. to erect wires across G.T.R. and Bell Telephone Co.'s wires in Durham and Northumberland counties, Ont.

13444, 13445. Apr. 19.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect wires across C.P.R. and Hamilton, Grimsby and Beamsville Electric Ry. at Ottawa St., Hamilton. Ont.

13446. Apr. 19.—Authorizing Sherbrooke Ry. and Power Co. to erect wires across C.P.R. at King and Belvidere Sts., Sherbrooke, Que.

13447. Apr. 19.—Approving Algoma Central & Hudson Bay Ry. location from Hawk Lake Jct. to Hobon, Ont., mileage 0 to 30.23.

13448. Apr. 19.—Approving plans of G.T.R. freight house and re-arrangement of tracks at Cobourg, Ont.

13449. Apr. 18.—Approving G.T.R. bylaw appointing W. E. Davis, P.T.M., G. T. Bell, A.P.T.M., and H. G. Elliott, G.P.A., to prepare and issue tariffs for passenger traffic.

13450. Apr. 18.—Approving plans of G.T.R. subway at Brock Ave., Toronto.

13451. Apr. 18.—Authorizing C.P.R. to build bridge 107.5 on its Havelock subdivision, Ontario Division.

13452. Apr. 19.—Approving Essex Terminal Ry. location from lot 75, con. 2, Sandwich West tp., to Saginaw Salt and Lumber Co.'s property, Sandwich, Ont.

13453. Apr. 18.—Authorizing G.T.P. Branch Lines Co. to cross seven highways on its Tofield-Calgary branch, Alta.

13454. Apr. 18.—Authorizing C.P.R. to alter certain lines crossing Drew and Givens Sts., Woodstock, Ont.

13455. Apr. 18.—Authorizing Seymour Power and Electric Co. to erect wires across G.N.W. Telegraph Co.'s wires near Bowmanville, Ont.

13456. Apr. 18.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect wires across G.T.R. and G.N.W. Telegraph Co.'s wires at Sherman Inlet, Hamilton, Ont.

13457. Apr. 19.—Authorizing G.T.P.R. to divert road in n.w. ¼ sec. 10, tp. 43, r. 2, w. 4 m., Alta.

13458. Apr. 19.—Amending order 12013, re installation of gates at John St., Aylmer, Ont., by changing operating hours.

13459. Apr. 19.—Approving Eastern British Columbia Ry. bylaw authorizing G. H. Martin, G.F. and P.A., to prepare and issue tariffs.

13460. Apr. 19.—Ordering C.P.R. to build suitable farm crossing for J. Gevart, Young, Sask.

13461. Apr. 19.—Authorizing G.T.P.R. to divert road in s.w. ¼ sec. 18, 12, 12, 20, w. p.m., Brandon District, Man.

13462. Apr. 18.—Authorizing town of Pembroke, Ont., to lay pipe under C.P.R. at Pembroke-Mattawa Road.

◆

Interests connected with the Canadian Northern Ry., are reported to have purchased the Western Dominion Collieries, and the Roche Pircee Collieries, situated on the C.N.R. Bienfait, Sask., branch.

The Brown Construction Co., Ltd., has been incorporated under the Manitoba Companies Act, with a capital of $150,000, and office at Winnipeg, to carry on a general construction business, including piers, wharves, canals, bridges, railways, etc. The incorporators are. S. Brown, J. McDole, R. J. Kennedy, E. Coop and E. J. Tarr, Winnipeg.

THE RAIL JOINT COMPANY OF CANADA, LIMITED

OFFICES: BOARD OF TRADE BLDG., MONTREAL, CAN.

Makers of Base Supported Rail Joints for Standard and Special Rail Sections, also Girder, Step or Compromise, Frog and Switch, and Insulating Rail Joints, protected by Patents.

C.P.R. Betterments, Construction, Etc.

Orford Mountain Ry.—The Dominion Parliament has authorized the company to build an extension from Mansonville to the International boundary at Highwater, Que.

Ottawa, Northern and Western Ry.—The Dominion Parliament has extended the time for the building of the proposed line from Maniwaki to James Bay, Que., and of the extension to Lake Timiskaming.

Grahams Wooden Trestle.—We are officially advised with respect to the reported call for tenders for replacing the wooden trestle at Grahams station, near Ottawa, that it is contemplated to replace the existing trestle by a permanent structure during the current year, but that it has not yet been definitely decided whether it will be of concrete or of concrete and steel.

Montreal-Toronto Second Track.—We are officially advised that a contract for the bulding of a second track from Smiths Falls westerly to Bathurst, Ont., 19 miles, on the Montreal-Toronto line, has been let to Jones and Girouard, of Ottawa. Work is being started at once, the contractors having opened an office in Smiths Falls. Bathurst is the point from which it is proposed to start the projected line to and along the lake shore to near Locust Hill, on the present line into Toronto, under the charter of the Campbellford, Lake Ontario and Western Ry.

The Board of Railway Commissioners has approved of plans for grade revision between mileage 0 and 16.7, and to revise location of line between mileage 6.2 and 6.9, on the proposed second track from Smiths Falls to Glen Tay, Ont.

Place Viger Improvements, Montreal.—The viaduct on Notre Dame St., between Wolfe and Montcalm streets, will be over 1,000 ft. long and will have on top two tracks for electric railways, two traffic roadways, and two sidewalks for pedestrians. Underneath the viaduct is space for a two story freight shed, upon which work will be commenced immediately. It is expected that the work will be completed by the fall.

It is expected that work will be started in June upon the alterations of the hotel, by the conversion of the part formerly used for station purposes, into additional hotel space. The alterations will provide an additional 12,000 square feet of floor space. The detail plans are being worked out.

Ottawa.—The report of the Ottawa city engineer and W. F. Tye, consulting engineer, Toronto, upon the railway situation has been presented to the city council. The engineers recommend the closing of part of the Rideau Canal, to permit of the construction of a tunnel to be used by all railways, from the central station to the union station, with the cutting of a new canal on the western side of the city. It is also recommended that the G.T.R. cross town lines be taken up, and connection made with the tunnel. The cost of building the tunnel is estimated at about $1,500,000. The plan recommended follows closely that prepared by the C.P.R. some time ago. In explaining the plan to the city council, April 5, Mr. Tye said it would be the best thing that ever happened to Ottawa if it were carried out. The plan and report were referred to a special committee for full consideration.

The Minister of Railways and Canals is reported as saying that the proposal would require serious consideration. The marine interests would have to be consulted, and the whole project would have to be examined by the Department engineers Personally, he did not think that the Government should be asked to pay for the building of the new cut for the canal, but he could not say what would be done when the matter came up for consideration.

Campbellford, Lake Ontario and Westery Ry.—The Dominion Parliament has authorized the company to build a line from the C.P.R. between Smiths Falls and Sharbot Lake, southwesterly to Cobourg, and thence westerly to the C.P.R. line between Locust Hill and Leaside Jct., Ont., and has extended the time for the building of previously authorized lines.

Georgian Bay and Seaboard Ry.—The Dominion Parliament has authorized a change in the point of junction of this line, now under construction, with the Montreal-Toronto line, from between "Cavanville and Maberly" to between "Burketon Jct. and Havelock," Ont.

Toronto City Improvements.—The tenants of the houses on the property purchased by the C.P.R. in the block bounded by Cherry, Water, Overend, Tate and Front streets, were notified April 7, to vacate the premises by the end of the month. The land acquired is about three acres and will be laid out as a freight yard with freight shed for the accommodation of the business in the east end of the city.

The question of the building of a new passenger station at North Toronto is still in abeyance, until everything is finally settled as to the route of the Canadian Northern Ontario Ry. in the vicinity.

Men started work April 6, on the site at the corner of Dundas St., and Royce Ave,, where a station is to be built. It is expected that this building will be completed in Sept. It will be of brick, one story high with covered platform for passengers.

In connection with the laying out of yards on the Government House site, the company has acquired the old Duke of Cumberland hotel property, in order to provide a suitable space for approach tracks. The question of the closing up of certain streets in order to permit this plan to be carried out is under consideration by the city council, and application has been made to the Board of Railway Commissioners for approval of the plans for laying out the yards.

The buildings at the south east corner of Yonge and King St. are being pulled down, in preparation for the erection of a large office building, in which all the company's city offices will be located.

At West Toronto substantial progress is being made with the bridge and freight shed building at the present station, and with the additional building at the car shops. The property at Elizabeth, Jane and Scarlett streets, which is to be added to the yard, is being cleared and preparations are being made for the building of the subways.

The Board of Railway Commissioners has approved of the location plans for the line from mileage 74.25 to 87.65. An agreement has been reached with the Lindsay town council as to the closing of Carline St. north of Colborne St. Additional plant has been delivered at Lindsay for the Toronto Construction Co., and additional gangs of men are being set to work.

South Ontario Pacific Ry.—We are officially advised that a contract has been let to the Toronto Construction Co., for the building of the line between Hamilton and Guelph Jct., Ont.

The Dominion Parliament has extended the time for the construction of previously authorized lines, and has given power for the building of a line from Guelph Jct., to Hamilton, Ont.

Hamilton, Waterloo and Guelph Ry.—The Dominion Parliament has authorized the company, upon a two-thirds vote of its shareholders, to issue $1,500,000 of its share capital as preference stock, and to provide a cumulative dividend therefor not to exceed 6%.

Guelph and Goderich Ry.—The Dominion Parliament has extended the time for the building of the proposed branch line from Woolwich, Peel or Wellesley tps., to St. Marys and Clinton, via Stratford, Ont.

J. W. Leonard, General Manager, Eastern Lines, was in Stratford, Ont., recently, discussing the proposed route for the entrance of the company's lines into that city. The plans provlde for a line from Linwood and for another from Embro, which would affect a portion of the city. It is expected that the line from Linwood will be built first. The company favors the adoption of a route through the city along the south bank of the river, with the flats adjoining skating rink for yard purposes. The citizens do not favor this route, on the same grounds that they objected to the route previously proposed on the north bank of the river, but if no other route is available they will consent on conditions which are under consideration.

London Station.—The question of the construction of a union station in London, Ont., is being revived in consequence of surveys which are being made by C.P.R. engineers for the building of a branch line from Pottersburg, or as it is also called, London Jct., to a junction with the London and Port Stanley Ry., (leased to the Pere Marquette Rd.) The P.M.R. has running rights into the G.T.R. station, and the reports say, "if the C.P.R. gets into the city from the south, it will not be long before the question of elevated tracks and a union station are decided for all time to come."

London Roundhouse—The new roundhouse at London, Ont., for which tenders are under consideration, will be built on standard plans. There will be accommodation for 22 locomotives, the building to have a depth of 95 ft.; and there will be attached a machine shop 51 by 50 ft., and a boiler house 35 by 50 ft. The foundations will be 5 ft. below base of rail; the walls and piers of concrete; all steelwork on the inside to be enclosed with concrete; the floors to be of concrete; the roof to be of mill construction, with 3 in. planking covered with tar and gravel; the smoke stacks and ventilators to be of asbestos construction; the building to be wired for electricity and piped for steam heat. The present turntable is to be utilized for the new house.

Walkerton and Lucknow Ry.—The Dominion Parilament has extended the time for the completion of the section of the line from Walkerton to Lucknow, via Teeswater, Ont.

Collingwood Southern Ry.—The Dominion Parliament has extended the time within which the railway authorized to be built by the statutes of 1907, chap. 77, may be constructed.

Stobie River Bridge.—The Board of Railway Commissioners has authorized the company to build a bridge over the Stobie River, on the Sault Ste. Marie branch.

Fort William Freight Office.—Tenders are under consideration for the erection of a freight office at Fort William, Ont.

Kenora Subway.—A contract is reported let to C. G. Anderson, Winnipeg, for the construction of a subway under the tracks at Main St., Kenora. The subway will be a little west of the present level crossing and will give a headway of 14 ft. The contract calls for the completion of the work in July.

Winnipeg Shops, Etc.—Tenders are under consideration for the following works at Winnipeg: Extension of freight shed; an unholstering shop, a boiler shop and transfer table.

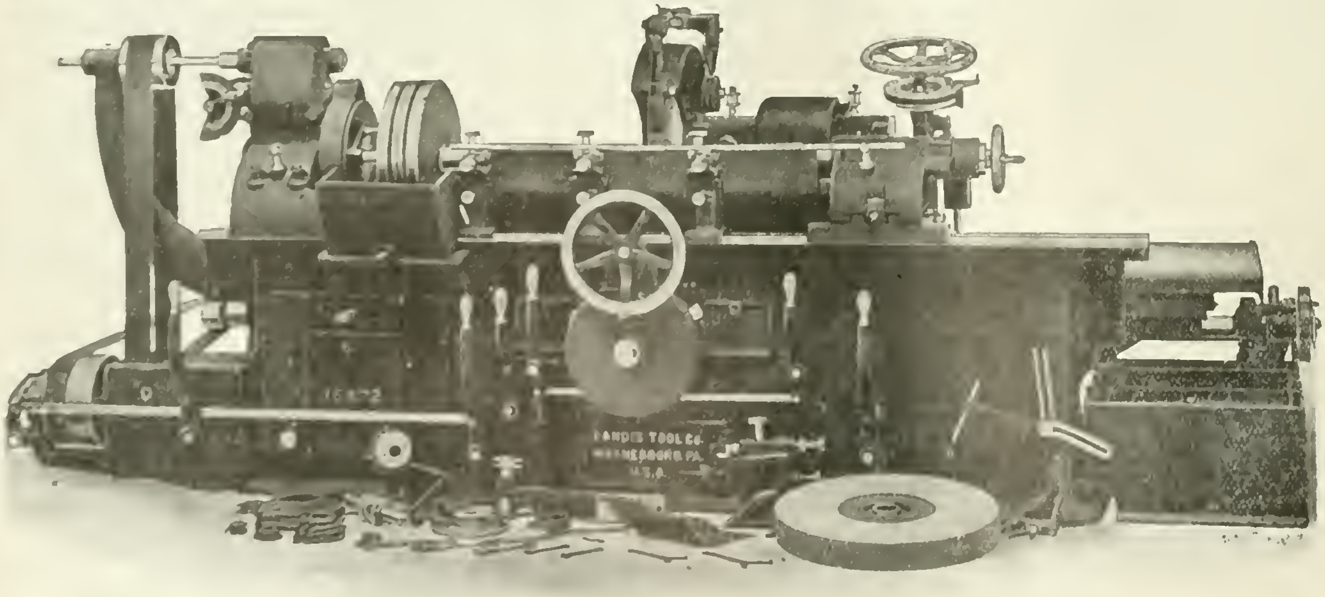
DO YOU GRIND YOUR AXLES, PISTON RODS, VALVE STEMS, CRANK PINS, ETC ?



16 x 72 PLAIN SELF CONTAINED GRINDING MACHINE WITH GAP

This machine is provided with a gap—built along the bed to suit the projection of work for which it is intended.

No railroad shop is complete without one, as it will grind accurately and economically, worn or turned piston rods, valve [illegible] stems, axles and other parts.

Piston rods and valve [illegible] stems are ground round, straight and uniform, insuring steam-tight joints, reducing the wear on the packing and increasing its life from three to four times that of any other method. See our line of work at the exhibit.

For the railroad tool-room our Universal grinder is valuable, as it will grind tools straight or taper, external or internal, and on straight and taper reamers, gauges, dies, boring bars, arbors, cutters, etc.

WILLIAMS & WILSON, Limited, - - - - MONTREAL

Western Lines Legislation.—The Dominion Parliament has extended the time within which certain branch lnes authorized to be constructed by acts passed in 1901 and 1907 may be built, has authorized the building of additional lines as specified on pg. 23 of our Jan. issue; and has fixed the terminus of the Estevan branch at Forward, instead of as located by par. g, sec. 3, chap. 74 of the statutes of 1907.

Western Line Fencing.—It is reported that 700 miles of fencing will be built on the company's western lines during the summer.

Winnipeg-Brandon Bridges and Culverts.—A contract is reported to have been let to G. H. Archibald, Winnipeg, for the erection of a number of culverts and small bridges on the line between Winnipeg and Brandon, Man.

Manitoba and North Western Ry.—The Dominion Parliament has authorized an extension of time for the construction of the lines authorized to be built by the statutes of 1893, sec. 9, chap. 52, and by the statutes of 1909, sec. 2, chap. 104, and has authorized a change in the location of the terminus of the proposed Theodore-Insinger line from range 18 or 19 to range 16 or 17.

Brandon Station.—Tenders are being invited for the erection of a new station building at Brandon, Man. The work proposed to be done includes the tearing down of the section of the present building opposite the foot of Tenth St. The new building will cover the site of this part of the old building, and the adjacent unoccupied land, extending from the track platform to Pacific Ave. The building will be three stories high on the track front. The main entrance to the station from the city will be on the first floor, where there will be provided a general waiting room, ladies' waiting room, retiring rooms, ticket office, etc. A wide staircase will lead from this to the platforms and on the ground level there will be provided men's waiting room, smoking room, trainmen's rooms, baggage room. The dining room and lunch counter will be located in the east end of the old building, at present used as waiting rooms and ticket office, while the express office will be retained in its present situation. The third floor will be occupied by the officers of the various departments. The building will be of brick with stone trimmings and will be surmounted by a clock tower.

Estevan to Forward, Sask.—We are officially advised that a contract has been let to the J. D. McArthur Co., for the building of 35 miles of line from Estevan northwesterly to a junction near Forward, Sask., with the line running westerly from Weyburn.

The route of this line will be westerly from Estevan, then swinging northerly to a junction with the line running from Weyburn through Forward, near the latter point. The engineer in charge of construction work is M. McKenzie. The contractors have most of their plant on the spot. It is expected that the line will be completed this year.

Sutherland, Sask.—Press reports state that considerable work is to be done during the current year on the terminal yards at Sutherland, near Saskatoon, Sask. The work, it is stated, includes an extension of the present shops and roundhouse, and a warehouse, together with a travelling crane in the freight yards.

Qu'Appelle Valley. — In connection with the press reports as to the building of a line for 150 miles along the Qu'Appelle River valley, we are advised that the company will eventually build such a line, but no location surveys have been made. We are further advised that there is nothing in the newspaper report that a summer hotel is to be built by the company at Fort Qu'Appelle, Sask.

Moose Jaw, Southerly.—The route map of this projected branch line from Moose Jaw to Gravelburg, Sask., has been approved by the Minister of Railways. C. Tomkins, Omaha, Neb., arrived with an outfit at Moose Jaw, April 30, and pitched his camp at Lillico, seven miles out of Moose Jaw, on the route of this line. He is reported to have been given a grading sub-contract.

Alberta Division Contracts.—Contracts are reported to have been let as follows: six stall engine house addition at Red Deer, Carter, Hall and Aldinger, Winnipeg; station buildings at Tomkins, Suffield, Burdett, Bow Island and Redcliffe, J. E. Lussier, Medicine Hat; bunk house at Red Deer, J. M. Eaton, Strathcona; extension to station at Medicine Hat, J. E. Lussier; locomotive foreman's house, Red Deer, J. M. Eaton.

Hotel at Calgary.—The hotel proposed to be erected at Calgary, Alta., will, it is reported, cost about $1,000,000. An agreement in connection with the proposal came before the council April 4, and after some discussion was passed.

Boundary Lines.—C. S. Moss, Resident Engineer, Nelson, B.C., is quoted as stating that the betterment plans for that district for the year include the erection of two steel bridges to replace wooden structures, at Cascade and Greenwood; the filling of a trestle at Fisherman and five others not yet decided on; the relaying of about 70 miles of track with 85 lb. steel; and a considerable mileage of ballasting.

British Columbia Southern Ry.—The Dominion Parliament has extended the time for the building of various lines. These are extensions to the 49th parallel, and the Tobacco Plains, a branch from the main line about 60 miles west of the eastern boundary of British Columbia; the western section of the line and the branches to Nelson and Martin Creek, as described in the statutes of 1900, sec. 1, chap. 52, and the branch line from Michel to Kananaskis, described in the statutes of 1909, sec. 1, chap. 54.

Kootenay Central Ry.—The company's engineer who will have charge of construction on the extension of this line is H. N. Merriman, who arrived at Golden, B.C., Mar. 29.

A contract has been entered into under the Dominion Act granting aid to certain railways in respect of the construction of a line from Golden, B.C., towards the International boundary, via Windermere and Fort Steele, thence crossing the Crows Nest Pass branch of the C.P.R. near Elko, a distance of 186 miles.

Kootenay and Arrowhead Ry.—The Dominion Parliament has granted an extension of time for the completion of the line between Gerrard and Arrowhead, B.C., authorized to be built by the statutes of 1901 sec. 7, chap. 70.

Pacific Division Betterments. — The company has several gangs at work extending the sidings at various points between Vancouver and Kamloops. Between Vancouver nad North Bend, it is reported that 30 new bridges will be erected during the year, and that 13 of the present wooden bridges will be replaced by steel structures.

Pacific Division Contracts.—Contracts are reported to have been let as follows: Ten stall addition to roundhouse and a pattern house at False Creek, Vancouver, The Canadian Dart Co., Vancouver; fire protection system at False Creek yards, J. H. Vickers, Vancouver; oil tanks at C.P.R. wharves, Vancouver, Campbell and Wilkie, Vancouver; station at Abbottsford, A. D. McQuarrie, Vancouver; addition to station at New Westminster, C. Tossell, Vancouver; new station at Merritt, J. Boch, Merritt; new freight sheds at Harrison Mills, Wolharbin and Savonas, Campbell and Wilkie.

New Westminster Yards.—The reconstruction and the extension of the company's yards at the west end of New Westminster have been completed. Some seven miles of new track have been laid, and provision has been made for future extensions.

False Creek Freight Sheds.—New plans for the proposed 250 ft. extension of the freight shed at False Creek, Vancouver, are being drawn, in order to comply with the city bylaws as to fire protection. The building will be either of brick or concrete.

Carrall St. Subway, Vancouver.—The question of the construction of a subway under the C.P.R. tracks in the vicinity of Carrall St., so as to give access to the water front, is under consideration by the city council. The proposed subway will be 42 ft. wide with two seven foot sidewalks, and the estimated cost is $225,000. The matter was discussed at a conference with the North Vancouver council April 11, further consideration being postponed to May 11.

Esquimalt and Nanaimo Ry.—In an interview at Vancouver, Mar. 27, on his return from England, R. Marpole, Vice President, is reported to have said he would be in Montreal early in May to consult with Sir Thos. G. Shaughnessy, as to future construction on this line. The extension into Alberni was expected to be completed by the end of June. There might be some delay, however, as the bridge work had been held up owing to inclement weather.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—United States papers say that the recent increase in the capital of the company was made for the purpose of completing the company's terminal facilities at St. Paul, Minneapolis, Duluth and Superior, and the building of additional lines. These lines, it is further stated, include a branch from near Foxboro, Wis., on the Brooton-Duluth line, southerly to Frederick, 65 miles, and a line from Fordville, N.D., westerly to Drake. (April, pg. 339.)

Judgment re Restricted Rates.

In the matter of restricted rates the Interstate Commerce Commission, U.S.A., has given a judgment which is summarized as follows: The Commission adheres to its ruling that "a tariff providing for reduced rates on coal used for steam purposes, or that the carrier will refund part of the regular tariff charges on presentation of evidence that the coal was so used, is improper and unlawful—that is to say, that the carrier has no right to attempt to dictate the uses to which commodities transported by it shall be put in order to enjoy a transportation rate." It also adheres to its ruling that "a carrier, or a person or a corporation operating a railroad or other transportation line may not, as a shipper over the lines of another carrier, be given any preference in the application of tariff rates on interstate shipments, but it may lawfully and properly take advantage of legal tariff joint rates applying to a convenient junction or other point on its own line, provided such shipments are consigned through to such point from point of origin and are, in good faith, sent to such billed destination." Carriers are ordered to cease and desist from maintaining tariffs which contain rates applicable only upon shipments for a particular consignee or when the commodity transported is for a particular use or rates that are restricted to the use of certain shippers and not open to all shippers alike.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

Cartage on Safes.

13185. Feb. 27, 1911.—Re application of J. and J. Taylor, Toronto, complaining that the note appended to item 35, page 47, of Canadian Classification 15, namely, "Safes of 1,000 lbs. each, or over, to be loaded and unloaded by owners," is unjustly discriminatory against them as manufacturers of safes: It is ordered that the said note to item 35 be struck out, and that the words, "Safes of 1,000 lbs. each, or over," be struck from the list of exceptions to the tariffs of cartage charges of the railway companies.

Rates on Gas-House Coke from Black Rock.

13215. Feb. 27.—Re application of Thomas Miles and Sons, Ltd., Hamilton, Ont., complaining of advance by G.T.R. in its freight rates upon gas-house coke from Black Rock, N.Y., to Hamilton and other Ontario points, made effective Dec. 12, 1910, by Special Tariff C.R.C. no. E. 2195: It is ordered that the railway company restore the rates on gas-house coke from Buffalo (River St.), Black Rock and Suspension Bridge, N.Y., to the Ontario points shown in its Special Tariff, C.R.C. no. E. 2195, which were in effect on Dec. 11, 1910; the said rates to be made effective not later than April 24, 1911.

Minimum Weight on Toasted Corn Flakes.

13228. Jan. 17.—Re application of Battle Creek Toasted Corn Flake Co., Ltd., of London, Ont., for a reduction in the minimum carload weight of toasted corn flakes from London to points west of Port Arthur and Fort William, Ont.: It is ordered that Canadian Classification 15 be amended so as to provide a minimum carload weight of not more than 24,000 lbs. for flaked or cooked cereals (which may be enumerated if the railway companies so desire) when loaded in cars not exceeding 36½ ft. in inside length, subject to the greater minima for cars of greater length provided in rule 1 (b) of the said classification; and that the said flaked or cooked cereals be not removed to a higher class of the said classification by reason of this order; the said amendment to be included in the first supplement to the classification.

This order was amended March 29 by order 13317 by striking out the words, "flaked or cooked cereals" in the operating part of the order and substituting the words "cereals flaked (roasted)."

Rates from Eastern Canada to Regina.

13249. March 15.—Re application of the city of Regina, under secs. 314 and 332 of the Railway Act, for an order directing a reduction in the rates on classes 1 to 10 on goods shipped from Eastern Canada to Regina, Sask., and re application of Canadian Northern Ry. under sec 56 of the Railway Act, for leave to appeal to the Supreme Court of Canada, from order 12520, Dec. 10, 1910: Upon hearing the application in the presence of counsel for the C.P.R. and the C.N.R. respectively, and for the respondents; and upon reading the notice of motion and the affidavit of E. W. Beatty, General Solicitor, C.P.R., and what was alleged at the hearing, the applicants undertaking to get this case set down for hearing at the present sittings of the Supreme Court unless in the view of the Supreme Court itself or a judge thereof, the case should not be set down; and it appearing that in the opinion of the Board questions of law arise: It is ordered that the said railway companies be granted leave to appeal to the Supreme Court of Canada from the said order subject to and upon the terms and conditions following: That the applicants undertake to set the appeal down for and expedite the hearing thereof at the present sittings of the Supreme Court. That if the appeal be not argued at the present sittings of the Supreme Court, for any reason for which the applicants may be to blame, then the appeal shall not operate as a stay of the said order, unless the Supreme Court, or a judge thereof, shall otherwise order. That the order issued herein, dated Feb. 21, 1911, be repealed.

White Pass and Yukon Railway Rates.

13292. March 23. Re order 12783, Jan. 18, directing, inter alia, that the respondent companies substitute for Joint Freight Tariff C.R.C. 9 and Joint Passenger Tariff C.R.C 3, joint tariffs of freight and passenger tolls based on a reduction of at least one-third in each case from the freight and passenger tolls shown in the tariffs disallowed by the said order, the said substituted tariffs to become effective not later than April 1, 1911, and re application on behalf of the respondent companies for an extension of time within which the requirements of the said order may be complied with. Upon its appearing that the respondent companies have petitioned to the Governor-in-Council by way of appeal from the above order; and that the appeal cannot be heard before the date that said tariffs were required to be put into effect; it is ordered that the time at which the tariffs required to be substituted under order 12783, were to become effective, be extended until June 1, 1911.

Stakes and Fastenings for Flat Cars

13326. March 27.—The application of Canadian Manufacturers' Association, British Columbia Lumber and Shingle Manufacturers, Ltd., Montreal Lumber Association, Canadian Lumbermen's Association, Mountain Lumber Manufacturers' Association, and St. John, N.B., Board of Trade, under sec. 284 of the Railway Act, for an order directing all railway companies subject to the Board's jurisdiction to reimburse shippers for any and all expenses to which they are subjected by reason of having to equip flat or other cars with stakes and fastenings, so as to comply with the provisions of order 7599, July 24, 1909; it appearing that the existing allowances from track scale weights to cover variations in the tare of cars, absorption of moisture ,accumulations of ice, snow, etc., do not include the weight of the auxiliary material necessary to retain the loads in or upon open cars, except where such provision is specified, inter alia, in the case of racks, and (or) blocking in connection with shipments of bark, machinery, and vehicles. It is ordered that the railway companies file special tariffs, to take effect not later than May 1, 1911, providing for an allowance of 500 lbs. from the weight of each carload in or upon open cars for the weight of such racks, stakes, standards, boards, strips, supports, or other material furnished by shippers, as may be necessary to retain the lading in or upon the said open cars from the point of shipment to the destination thereof, and for which no allowances are specifically prescribed in the existing tariffs or classifications: Provided that the minimum weight prescribed for the said freight or lading by the classification or tariff applicable thereto, shall not be reduced by reason of the said allowance.

Classification Ratings on Tobacco.

13355. March 21. Re application of Canadian Freight Association, under sec. 321 of the Railway Act, for an order approving of proposed Supplement no. 1 to Canadian Classification 15, submitted Dec. 16, 1910. Upon hearing the application at the sittings of the Board held in Ottawa and Toronto on February 21 and 28, 1911, respectively, the applicant association, the Canadian Manufacturers' Association, The Montreal Board of Trade, the Dominion Tobacco Co., the Imperial Tobacco Co. of Canada, and the Ontario Wholesale Grocers' Guild being represented at the hearing, the evidence offered, and what was alleged, it is ordered that, in so far as the said proposed Supplement no. 1 affects the ratings of tobacco, the application be dismissed.

Rate on Asphalt Oil, Philadelphia to Toronto.

13356. April 8.—Re application of the Constructing and Paving Co., of Ontario, Ltd., for an order directing that a through rate be established on shipments of asphalt oil in tank cars from Philadelphia, Pa., to Toronto, and that overcharges already made on such shipments be refunded, it is declared that the legal rate chargeable upon the shipments complained of, when routed via the Pennsylvania Rd. from Philadelphia to Buffalo, thence via the Michigan Central Rd., and Toronto, Hamilton & Buffalo Ry., and the C.P.R., was 22c per 100 lbs, the joint tariff fifth-class rate under the Official Classification published and filed with the Board, which rate is still in force. And it is ordered that the C.P.R. be authorized to refund to the applicants the difference between the rate of 22c. per 100 lbs. and the rate collected by it on the said shipments.

MODERN DESIGNS FOR MOTOR CONNECTION

National Transcontinental Railway.

The Dominion Parliament has voted $4,500,000 on capital account for surveys and construction work on this railway.

Speaking in Quebec recently, S. N. Parent, Chairman of the Commission having in charge the building of the line from Moncton, N.B., to Winnipeg, Man., said work at the eastern end was so far advanced that tenders would shortly be invited for the building of the stations from Moncton westerly. The site for the station in Quebec, at the Champlain market, had been cleared, and as soon as the plans for the building had been approved by the G.T.. Pacific Ry., tenders would be asked for its construction. The work of completing the lines to the site of the Quebec Bridge would be gone on with during the season. Pending the building of the bridge a car ferry service is proposed and plans for the landing places for such a ferry are now under consideration.

Quebec press reports, April 18, state that as a result of the conference between the Commissioners and the directors of the G.T. Pacific Ry., it was decided to add to the dimensions of the station building to be put up. The frontage of the building, it is said, will be increased to 350 ft. and the cost increased from $750,000 to $1,500,000.

Replying to questions in the House of Commons, April 5, the Minister of Railways said the reason why only about 28% of the work had been done on contract 12, about 13% on contract 16D, and nothing on contract 13C, was because the work on adjoining sections had not been completed so as to permit of getting in supplies, materials, etc., under favorable conditions. Contract 18E had been started, and about 69% of the work had been done. It was impossible to state exactly when any one of these contracts would be completed, but it was estimated that they would all be finished in 1912.

GRAND TRUNK PACIFIC RAILWAY.

Contracts are reported to have been placed for the erection of about 500 miles of wire fencing in the prairie provinces during the current year.

The company has ordered from the Algoma Steel Co., Sault Ste. Marie, Ont., 18,000 tons of 60 lb. steel rails for early delivery at Fort William, Ont., for use on branch lines in Saskatchewan and Alberta.

The construction programme for the season has been arranged, and the contracts let for the work were finally approved at a conference held at Montreal, April 6, between E. J. Chamberlin, Vice President and General Manager, and C. M. Hays, President G.T.R. and G.T. Pacific Ry. The work, said Mr. Chamberlin, in an interview in Winnipeg a few days previously, for which contracts had been let includes the construction of 645 miles of new branch lines, 265 miles of main line track, 200 miles of grading on branch lines, the erection of 140 station buildings, and a number of steel bridges. The details of the work are referred to below.

The modified plans for the hotel at Winnipeg have been completed by Ross and MacFarlane, architects, Montreal, and provide for the erection of an eight storey building, with about 350 rooms

In connection with the reported line from Harte to Brandon, Man., we are advised that while people in the vicinity of Brandon have been agitating for the building of such a line, no arrangement has yet been entered into for its construction.

Further work will be done on the line northerly and southerly from Melville, Sask. The southerly branch will be completed into Regina, giving the line a length of 95 miles. Track has been laid on this branch from Melville to Balcarres, leaving about 68 miles of track to be laid to complete the line.

The line from Regina, southeasterly to the International boundary, 155 miles, will also be gone on with.

Another line will be started at Regina, with Moose Jaw as its present terminus, but with the intention of ultimately reaching Calgary. In connection with the work in Regina arrangements are being made for the laying out of large terminal yards.

On the branch from Young to Prince Albert, on which 25 miles of track were laid during 1910, further work will be done in the expectation of completing the remaining distance about 72 miles. Grading will be completed on a branch from near Biggar to Battleford, and it is expected to also have track laid this year.

With the exception of the Regina-Moose Jaw line, the contract for which has been let to Rigby and Hyland, the contracts for these lines have been let J. D. McArthur, Winnipeg. A contract for the building of 50 miles of line from Biggar towards Calgary has been let to Foley, Welch and Stewart.

In connection with these lines the following information from the latest report of the Saskatchewan Department of Railways will be of interest.

The Saskatchewan Legislature by chap. 4 of the statutes of 1908-9 voted aid by way of guarantee of bonds for $13,000 a mile in respect of three branch lines having a total length of 195 miles; and by chap. 5, of the statutes of 1909-10, aid at the same rate in respect of five other branches with a total length of 475 miles; altogether 670 miles. Of these eight lines, construction was carried on during the year ended Feb. 28, 1910, on two lines and 58.22 miles of grading, completed with 50.43 miles of track laid thereon. Following is a list of branch lines subsidized with the work done, up to the date of the report:—

	Total mileage.	Miles graded.	Miles track laid.
Melville-Yorkton branch ...	40	26.48	26.48
Melville-Regina branch	110	31.74	23.95
Biggar-Battleford branch ..	45	.....	.....
Regina Southeast	155	.....	.....
Young-Prince Albert branch	110	.....	.....
Regina - Moose Jaw - Calgary branch	110	.....	.....
Biggar-Calgary branch	50	.....	.....
Cutknife branch	50	.....	.....
Total	670	58.22	50.43

Our returns of track laid in 1910, show that track was laid on an additional 70 miles, including 25 miles on the Young-Prince Albert branch on these lines during that year, and reports as to contracts let show that work is in progress on four of the lines, and that a contract is expected to be let at an early date on the Regina-Moose Jaw line. The matter of the building of the lines from Biggar and the Cutknife branch has not yet been definitely discussed by the management.

In Alberta the only branch line under construction is the one starting at Tofield, on which steel has been laid to Red Deer River, about 80 miles. A bridge, with a rail level 200 ft. above high water mark is under construction, and as soon as this is completed track laying will be resumed southerly to Calgary. The grading is well advanced, and the contractor, J. D. McArthur, expects to have it completed this year. The railway committee of the Calgary city council has had the plans for the entrance of the line into the city under consideration, and finally approved of them April 1, subject to the company's undertaking to provide for the installation of certain protective devices at the crossings. At Edmonton, it is proposed to erect a large hotel for which plans will be prepared, as soon as certain matters under discussion with the city General Passenger Agent, stated April 3, that these matters were practically decided and that the hotel would be built on McDougall Ave., opposite the Edmonton Club. A line of about 70 miles will be started at Bickerdike, and will run through the properties of the Pacific Coal Co., and the Yellow Head Pass Coal Co., with a branch to the Mountain Park Coalfields. The name of the contractor for the building of this branch has not yet been announced. The main line has been completed to Prairie Creek, about 200 miles west of Edmonton, where a large bridge has just been completed. Another large bridge is under construction over the Athabasca River, some distance westward, and good progress is being made westerly to Tete Jaune Cache, by the contractors, Foley, Welch and Stewart. On the line easterly from Prince Rupert, good progress has been made during the winter on the tunnel work in the Kitselas Canyon, and the contractors, Foley, Welch and Stewart, will push on with the work during the summer. The 400 mile section to connect up with the line coming westerly is expected to be placed under contract during the summer. We are advised that while surveys have been made, within the last year, for a line from Fort George on this section to Vancouver, B.C., it is not contemplated to make any move towards its construction until after the main line to Prince Rupert is completed.

Since the foregoing was put in type we have been officially advised that the G.T.P.R. management expects to do the following work during the current year:

Grading Main Line.

	Miles	
Prairie Creek to Tete Jaune Cache	114	
Copper River to Aldermere	140	
		254

Grading Branches.

	Miles	
Calgary branch (to complete)	117	
Battleford branch (to complete)	28	
Regina branch (to complete)	30	
Regina-Boundary branch (to complete present contract)	40	
Regina-Moose Jaw branch (to complete)	35	
Prince Albert branch (to complete)....	59	
Alberta Coal branch (to complete)	48	
New branch off same (new contract)..	25	
Biggar-Calgary branch (new contract)..	50	
		432
Total		686

Tracklaying, Main Line.

	Miles
Prairie Creek to Tete Jaune Cache........	114
Copper River to Aldermere	140

Battleford branch	48
Regina branch	58
Regina-Boundary branch	90
Regina-Moose Jaw branch	40
Prince Albert branch	87
Alberta Coal branch	54
Total	748

It is also the intention to erect 140 station buildings this season.

Thee G.T. Pacific Branch Lines Co., has been authorized by the Dominion Parliament to build the additional lines mentioned on pg. 1035 of our issue of Dec. 1910, and has been granted an extension of time for building the lines authorized by sec. 11, chap. 99, of the statutes of 1906.

An extension of time for the construction of the Pacific Northern and Omineca Ry., has been granted by the Dominion Parliament. The company was originally incorporated in 1902, and its powers amended by chap. 141 of the statutes of 1906. (April, pg., 331.)

◆

The C.P.R. is arranging for an extensive decoration of its London, Eng., offices, for the coronation. The general scheme, arried out in red and gold, will illustrate the many energies of the Dominion, special emphasis being given to grain-growing, shipping and railway construction. At night the building will be illuminated wth several thousands of electrc lights.

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for Feb., $32,640, against $45,211 for Feb., 1910. Cumulative net profits for eight months ended Feb. 28, $247,250. Railway traffic receipts for Mar., $32,171, against $34,513 for Mar., 1910. Cumulative traffic receipts for nine months ended Mar. 31, $252,272.

Canadian Northern Ry.—Reference was made in our April number to an issue of stock offered in London. The prospectus issued by Lazard Bros. & Co., March 14, offered £958,888 3½% guaranteed first mortgage debenture stock Canadian Northern Ry. and £647,260 similar stock Canadian Northern Alberta Ry., both unconditionally guaranteed as to principal and interest by the Dominion Government. The issue price was £94 10s.

Dominion Atlantic Ry.—Gross earnings for Feb., $75,600 against $81,421 for Feb. 1910. Aggregate gross earnings for eight months ended Feb. 28, $896,606, against $964,004 for same period 1909-10.

The Dominion Parliament has authorized the company, subject to the provisions of sections 361, 362 and 363 of the Railway Act, to enter into an agreement with the C.P.R., to lease its railway and undertaking to the C.P.R., and providing that the approval of the C.P.R. shareholders of such agreement or lease shall be sufficient, if the provisions of sec. 6, chap. 47, of the statutes of 1890 are complied with.

Grand Trunk Ry.—The Dominion Parliament has enacted that any of the various classes of stock issued or to be issued by the company shall be transferable under conditions set forth in the by-laws, notwithstanding the general provisions of the Railway Act, the company is also authorized to acquire and dispose of the capital stock, or other securities of the Montreal and Southern Counties Ry.; to guarantee G. T. Western Ry. bonds to the extent of $30,000,000; to issue additional 4% perpetual consolidated debenture stock, as required to an amount upon which the aggregate annual charge for interest shall not exceed £100,000, such stock to rank equally with existing consolidated debenture stock, and the proceeds of such stock to be utilized for the purchase of such stocks, bonds, etc., as the company may acquire under the authority of the G.T.R. act of 1910, and the present act. The several provisions of this act are only to come into effect when assented to by the shareholders at a general meeting held for that purpose.

A release of the mortgage, dated May 8, 1894, to C. Percy and Hon. D. Tisdale, as trustees, to secure an issue of bonds of $100,000, on the Parkhead and Owen Sound Branch, and a conveyance of the property to the G.T.R., have been deposited with the Secretary of State at Ottawa.

Intercolonial Ry. — The following amounts have been voted on account of collection of revenue by the Dominion Parliament, $9,500,000; $250,000, and $35,000, the latter being on account of the Windsor branch.

Manitoulin and North Shore Ry.—A mortgage and trust deed dated Mar. 1, 1911, between the M. & N.S. Ry. Co. the U. S. Mortgage and Trust Co., as trustee, and the Lake Superior Corporation, as guarantor, securing an issue of 5% first mortgage 50 year gold bonds of $3,000,000, has been deposited with the Secretary of State, at Ottawa.

Minneapolis, St Paul and Sault Ste. Marie Ry.—A circular issued by E. Pennington President, April 17, states that on April 13, 1909, the company offered for subscription to its shareholders, for the purpose of purchasing a majority of the common stock of the Wisconsin Central Ry. Co., completing its terminals at St. Paul, Minneapolis, Superior and Duluth, purchase of equipment, payment for betterments, etc., $6,048,000 of its capital stock. The expenditures necessary for the above purchase and for the construction of additional mileage having exceeded the amount provided for by the issue above referred to, at a special meeting of directors held March 13, 1911, a resolution providing for an issue of $6,562,200 of capital stock was adopted, viz: 21,874 shares of preferred and 43,748 shares of common, which is to be offered at par to shareholders at the rate of 21 shares of new stock for each 100 shares held. The subscriptions for both kinds of stock are to be at the ratio of one share of preferred to two shares of common.

Nelson and Fort Sheppard Ry.—The discharge of a mortgage given by the N. & F. S. Ry. Co., July 1, 1893, to the Minneapolis Trust Co., as security for debentures, has been deposited with the Secretary of State, at Ottawa.

Missisquoi Marble Co.—Supplementary letters patent were issue Mar. 30, increasing the capital stock from $500,000 to $1,000,000. The company owns the Phillipsburg Ry and Quarry Co., Phillipsburg, Que.

Nova Scotia Steel Co.—Following are the directors for the current year:—R. E. Harris, Hon. J. D. McGregor, Hon. R Jaffray, Hon. J. S. Pitts, T. Cantley, J. W. Allison, K. W. Blackwell, R. E. Chambers, F Ross, G. S. Campbell, J. C. McGregor, G. F. McKay, F. Stanfield, L. C. Webster, W. D. Ross. The directors were by resolution of the annual meeting held in New Glasgow, Mar. 30, authorized to increase the capital to $8,530,000 by the issue of an additional $1,500,000 of common stock.

Prince Edward Island Ry.—The Dominion Parliament has voted $450,000 on account of collection of revenue in respect of the current year's operations on this railway.

Quebec and Lake St. John Ry.—Total earnings for March, $41,832.82, against $49,598.53 for March 1910. Aggregate total earnings for three months ended Mar. 31, $118,147.60, against $119,592.54 for the same period, 1910.

Sydney and Louisburg Ry.—The Nova Scotia Legislature has made some minor amendments in the company's charter of incorporation, statutes of 1910, chap. 171. (Feb., pg 113.)

Temiscouata Ry.—There was a deficit on operation for Jan., of $841.

Temiskaming and Northern Ontario Ry.—Receipts for Feb., $115,804.41; expenditure $86,375.24; balance $29,429.17; ore royalties $7,863.98; total $37,293.15; hire of equipment $2,407.46; net result $34,885.69.

Earnings for March, $131,791, against $146,369 for March 1910.

White Pass and Yukon Ry.—Gross earnings for seven months ended Jan. 31, $803,259.

◆

The Supreme Court, at Ottawa, gave judgment, Apr. 3, in the case of the appeal of E. A. Walberg, in connection with the building of the I.C.R. shops at Moncton, N.B., for which he had the contract. Certain extra work was ordered, for which a claim of $105,000 was made and which was contested in the Exchequer Court and $53,000 found by the Registrar to be the fair value of work done. The judge of the Exchequer Court increased the award to $93,000, being the amount claimed, less damages to workmen, etc. This was appealed against and the Supreme Court has given judgment for $53,000, the appellant to pay the costs of the appeal.

Great Northern Ry. Lines in Canada.

Midland Great Northern Ry.—Arising out of a motion at the meeting of the Winnipeg city council, Mar. 21, to rescind the agreement of April, 1910, certain questions in connection with the proposed new agreement have been discussed by the Ratepayers Association. It is alleged that the proposed new agreement paves the way for the abandonment of the plan for the erection of a station facing Paulin St., and the carrying of the traffic to the union station at Fort Garry. The Ratepayers' Association, April 7, passed a resolution to the effect that no plans providing for the entrance of the company's line into the city would be satisfactory unless the Paulin St. station was erected. L. C. Gilman, Assistant to the President, G.N.R., was in the city at the time of the meeting and discussed the matter with representatives of the Association. It is said that an appeal will be made to the Board of Railway Commissioners on the subject.

A letter was received April 12, by the President of the Ratepayers Association from L. W. Hill, President, G.N. Ry., in which it was said, "After giving this queston of the erection of passenger terminals on Paulin St. the most careful study we reached the conclusion that it was not best to erect at once a passenger station in connection with our present development." It was added that "permanent freight terminals would be at once established," the question of passenger terminals being "left for future determination."

A United States press report states that work is to be started early in June upon the terminals in Winnipeg, and upon the construction of a line from Winnipeg southerly to the International boundary.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The Board of Railway Commissioners has approved the location of the extension of this line from Otter Summit, mileage 17, to Tulameen, mileage 39, B.C.

The Board of Railway Commissioners has extended the time for the building of the branch line from near McLean's Drive to Park Lane, Vancouver.

The Board of Railway Commissioners has approved revised location plans mileage 12 to 16 from Coquihalla Summit.

A contract has been let to H. Chase & Co.; Seattle, Wash., for the filling in of the trestle to be built at the head of False Creek, Vancouver, from Park Lane to the western end of Grand View cut. Work on the trestle was started Mar. 27, and the contractor's equipment for filling in arrived a week later. Five carloads of steel for the new Park Drive bridge at Grandview cut have been delivered. The filling in will be done by earth taken from the Grandview and Park Drive cut, which will be lowered about 15 ft. at the deepest part of the cut, reducing the grade through there to about 1%. It is estimated that about 1,000,000 cubic yards will be secured from the Grandview cut when the permanent slope has been made on the cut there.

A contract is reported let to Chase and Co., Seattle, Wash., for the building of an oil car trestle for the supply of oil to the oil burning locomotives on the division, pending the building of a permanent oil tank. (April, pg. 347.)

Victoria and Sidney Ry.—It is expected that the new buildings, which include a passenger station and freight shed, will be completed and ready for occupation early in May. April, pg. 347.)

◆

The G.T.R. shops at Stratford, commenced working a 55 hour week, Apr. 1, instead of a 50 hour week, which has been the rule since last fall.

Canadian Northern Ry. Construction, Etc

Canadian Northern Quebec Ry.—The Dominion Parliament has authorized the construction of a line from Rawdon to a junction with the National Transcontinental Ry., with a branch from near Rawdon to Joliette; and a line from St. Jerome to St. Eustache, Que.

The Quebec city council is being asked to pass a resolution asking the Provincial Government not to grant any further subsidies to the C.N.Q. Ry. lines without insisting upon the company carrying out its alleged obligations with the city to construct workshops within its limits in return for a subsidy of $200,000. It is claimed that the contract was entered into with the old Great Northern Ry., and the subsidy paid over, but that the shops were not built. The C.N.Q. Ry., is the successor of the G.N. Ry.

The Board of Railway Commissioners has ordered the company to fence its line from Hochelaga to the limits of Montreal, to erect gates at certain crossings; and to provide gatekeepers at others. The Montreal city engineer has reported in favor of the company's proposal to close Robillard St., from Marlborough to Moreau streets, for the purpose of laying additional tracks, but against the closing of Stadacona St., from Moreau St., for 600 ft. westwards.

The company is remodelling the buildin Montreal, at 226, 228 and 230 St. James St., corner of Dolland Lane, which it purchased recently. When the alterations are completed the rail and steamship ticket, express and other offices will be located on the ground floor, while the upper floors will be utilized for offices.

Canadian Northern Ontario Ry.—The Dominion Parliament has granted an extention of time for the construction of the various lines authorized to be built by par. c, sub-pars. i to x, of sec. 5, and by pars b, and e of sec. 2, chap. 63, of the statutes of 1909; and a line from Berlin through Guelph, Acton and Brampton to Toronto.

The Board of Railway Commissioners has approved of the revised location plans for the line near Billings Bridge, mileage 2.3 to 3.02, from Ottawa on the Toronto-Ottawa line; and has heard an application for the approval of the locations plans for the route at Smiths Falls, mileage 37.8 to 40.8 from Ottawa. Some opposition was made to these plans on the part of residents of Smiths Falls, and the Commissioners reserved judgment. The company's right of way agent stated at Smiths Falls, April 5, that all the right of way between Ottawa and Smiths Falls had been secured and also most of the land required for the line between Smiths Falls and Sydenham. It is expected that a contract will shortly be let for the construction of the line from Ottawa to Sydenham, and that work will be commenced on it during the summer.

Between Toronto and Sydenham, work is well advanced and it is expected to have a train service in operation early in the fall. Track has been laid on 95 miles, and some short stretches have to be completed to connect up with the Central Ontario Ry. at Trenton, and the Bay of Quinte Ry., the tracks of which will be used to Sydenham. Further on towards Ottawa, the Brockville, Westport and Northwestern Ry. will be joined up, and a portion of its mileage used. The Dominion Parliament has authorized these two companies to enter into agreements with the Canadian Northern Ontario Ry., and the Ontario and Ottawa Ry., or either of them.

The Board of Railway Commissioners has approved revised location at Smiths Falls, mileage 37.8 to 40.8 from Ottawa; the building of a subway at Kingston Road, Hamilton tp., Ont.; the diversion of certain public roads in Loughborough tp., Ont., and the crossing of the Brockville, Westport and North Western Ry. at Brockville Jct., mileage 189.34 from Toronto.

A map of a proposed entrance into Hamilton, Ont., filed with the city council there, Mar. 30, shows a route from Bronte, to the eastern boundary of Wentworth county, south of and parallel with the G.T.R., to the centre of the city, then crossing to the north of the G.T.R. and paralleling it out of the city. The city council authorized its engineer to protest to the Board of Railway Commissioners if the plans filed interfered with Dundurn Park, or necessitated any level crossings. The city council will take the plans into consideration May 15.

In connection with the proposed line from Ottawa to Port Arthur, a press dispatch from the latter city Mar. 30, stated that the city council had been informed that construction would be started there as soon as weather permitted, while a later dispatch stated that Foley, Welch and Stewart have been given a contract for a section of the line easterly. The Board of Railway Commissioners has approved of location plans for the line in McTavish and Sibley tps., Thunder Bay districts, mileage 524.96 to 548.45.

Canadian Northern Ry.—The Manitoba Legislature has provided for the guaranteeing of the company's 4% bonds up to $13,000 a mile, in respect of the construction of the following additional lines of railway:— From the termination of the line mentioned in par. 3, chap. 53, of the statutes of 1910, northerly and north westerly for 50 miles; from Deloraine, to the western boundary of the province, about 60 miles; and from Ste. Rose du Lac northerly to near Winnipegosis, about 50 miles.

Press reports state that the new station at Fort Garry, Winnipeg, which is to be used jointly with the C.N.R., by the National Transcontinental Ry., and the G.T. Pacific Ry., will be ready for opening in July. The subway under the tracks at Pembina St., Winnipeg, is expected to be completed by May 31. Work is progressing and is expected to be completed early in May, on a bridge across the Assiniboine River, east of the Main St. bridge. The bridge is provided with a bascule lift span, so as to permit of the ordinary navigation of the river.

Plans have been received at Dauphin, Man., for the erection of a new station building. They show a two story structure, 170 ft. by 30 ft., to be built of brick on a stone basement. On the ground floor will be waiting rooms, ticket office, baggage and express rooms, while upstairs will be offices for the train dispatchers and the general office staff.

The Board of Railway Commissioners has issued an order authorizing the opening for traffic of the portion of its branch line between Luxton and Bienfait, Sask.

Plans were submitted to the Moose Jaw city council, Apr. 12, showing the route of the proposed entrance into the city.

The Saskatchewan Legislature by chap. 3, of the statutes of 1908-9 voted aid by guarantee of bonds for $13,000 a mile in respect of 410 miles of branch lines; and by chap. 4, of the statutes of 1911, similar aid was voted in respect of 575 miles of branch lines, a total of 987 miles. The report of the Provincial Department of Railways for the year ended Feb. 1910, shows that work has been done on eight of the 15 lines, 355.13 miles of grading having been completed and 138.13 miles of track laid. Following is a list of the branch lines subsidized, their total mileage, miles graded, and miles of track laid:—

	Total mileage.	Miles graded.	Miles track laid.
Craven to Adams Ferry....	40	.....	.....
Goose Lake line	120	70.00	50.00
Bienfait branch	25	16.40	16.40
Maryfield branch	135	123.60	43.60
Dalmeny branch	40	28.13	28.13
Battleford-Jackfish branch .	50	40.00	.....
Thunderhill branch	25	10.00	10.00
Kaiser-Swift Current branch.	135	.....	.....
Humboldt-Melfort branch ..	60	.....	.....
Delisle branch	35	.....	.....
Maryfield-Hartney branch ..	65	.....	.....
Moose Jaw South East branch	100	.....	.....
Maryfield line extension ...	75	.....	.....
Crooked Lake branch	60	40.00	.....
Rossburn extension	20	.....	.....
Prince Albert-Battleford branch	..	27.00	.....
Total	985	355.13	138.13

Our track laid returns for 1910 show that 250.84 miles of track were laid in Saskatchewan during the year, on six of these lines, so that it would appear that track has been laid on about one-half of the mileage aided by the Government.

The C.N.R. is building a line from the east with the intention of reaching Lethbridge. This is an extension of its Maryfield branch, and local reports state that it will ultimately be extended into the Flathead Valley, B.C., where those interested in the company own large areas of coal lands. The route, so far as surveyed, is stated to have been run in a nearly straight line to a point southeast of Lethbridge, crossing the Alberta Ry. and Irrigation Co.'s line, entering the town, and then proceeding westerly to the Flathead Valley. This is a local report, and, as the plans are not definitely settled, may be considerably altered before it is finally arranged to start construction.

In connection with the branch from Vegreville to Calgary, construction is being proceeded with between the Bow and the Belly rivers, and it is expected that the branch line will be completed this season. Local reports state that it has been decided not to build the line across the Elbow River at present, but to erect a station on the south side of the river, probably near the crossing of Second St. A branch from this line is under construction from Stettler into the Brazeau River country. About 70 miles of grading has been completed, and the steel laying gang started work in Stettler April 11.

A number of contractors have been going over the different lines on which work is to be done during the year, and arranging for starting operations. The construction work in Saskatchewan and Alberta, it is said is being divided between the Cowan Construction Co., and the Northern Construction Co., and the smaller contractors have been looking over the work in company with representatives of these companies.

We were officially advised Apr. 20, that the Cowan Construction Co. has been given a contract for 100 miles on the main transcontinental line, from the Pembina River westerly towards the Yellowhead Pass. The Northern Construction Co. has been given a contract for about 100 miles on the Brazeau extension, which runs westerly from the Vegreville-Calgary line, near Stettler, Alta. The Northern Construction Co. also has the contract for the completion of the Vegreville-Calgary line from the Red Deer River to Calgary.

Canadian Northern Branch Lines Co. The Dominion Parliament has incorporated a company with this title to build branch lines for the C.N.R. The location of the lines authorized is given on pg. 1031 of our issue of Dec. 1910.

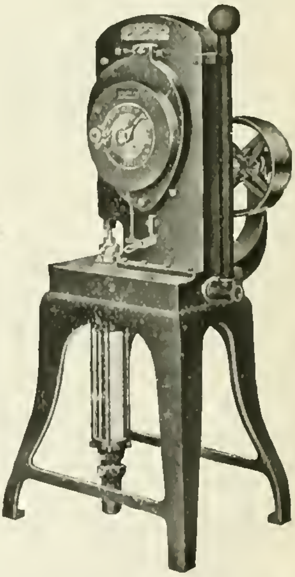
A Problem Solved
for
Railroads

For rapid pumping of oils, in filling barrels, mixing vats, supply cars, etc., the Bowser Automatic Power Pump meets all the requirements of the storekeeper bent on accuracy of measurement, saving of time and elimination of waste. The pump can be belted to, or directly connected with, an electric motor, a line shafting, etc. It is typical of the high degree of perfection of the

Bowser Oil Storage Systems
(adopted by 150 railroads)



Cut No. 150

which include every device for facilitating the storage and handling of oils. It will pump and measure—in one operation—any desired quantity. It can be set for any desired quantity up to 1,100 gallons, and when that amount has been pumped it automatically stops. Ask for the new Railroad Book just issued. It explains all about them. No. 91.

S. F. Bowser & Co., Ltd., Toronto, Ont.
66-68 FRAZER AVE.

Canadian Northern Pacific Ry.—It is expected to have the grading on the section of the line from Port Mann to Matsqui, B.C., completed by May 1, and the grading from Matsqui to Hope, by Sept. 1. Track laying is expected to be started at Port Mann early in May. Tenders will be received to May 12 for the construction of the line from Hope to Kamloops, 163 miles, in four sections as follows:—Hope to Boston Bar, 40 miles; Boston Bar to Lytton, 28 miles; Lytton to Ashcroft, 44 miles; Ashcroft to Kamloops, 51 miles. The work is to be completed within two years.

Duluth, Winnipeg and Pacific Ry.—The contractors for the tunnel at Duluth, Minn., on this line are the Wick, O'Connor Co., and they expect to get it finished in May. The tunnel is 155 ft. long, and is on a 7 degree curve. (April, pg. 345.)

◆

C. P. R. Dividend Announcement.

Sir Thomas G. Shaughnessy, President, issued the following circular to shareholders recently:—

Pursuant to the intimation given at the last annual meeting, your directors have considered and formulated a plan by which the shareholders may in the future receive greater advantage from the extraneous assets of the company than they have in the past.

Amongst the securities held by the company there are bonds and stock to the face value of about $46,000,000 on which the company receives, or is entitled to receive, direct payments of interest or dividends, and there is the amount represented by the land mortgages and cash proceeds of land sales $50,000,000; then there are other lands to the value, on a conservative basis, of $6,500,000, of which the company became the owners in whole or in part in connection with the acquisition of branch railway lines. Besides these there are, of course, your unsold lands in the agricultural belt approximating 7,300,000 acres.

It has always been the practice to separate in the annual accounts the revenue from land and townsite sales from the other income of the company, and it is now proposed to adopt the same policy with reference to interest on investments, dividends, rentals and like sources of income other than the receipts from the railway and steamship lines, incorporating the income from these items in one fund which, of course, will vary in amount from year to year, and from which the directors will make such a periodical distribution, as in their opinion may be warranted by circumstances, in addition to the regular dividend that may from time to time be declared on the ordinary shares.

It is estimated that the interest and dividend return from these sources will be about $4,500,000 during the current year; so that even now it will only be necessary to supplement this amount by a comparatively small contribution from the land funds to represent 3% on the outstanding common shares, and, therefore, it was decided to make a distribution on that basis, commencing with the quarter ended Dec. 31, 1910.

Your directors have every reason to hope and believe that the regular dividend of 7% per annum from the net revenue of the railway and steamship lines can be maintained, so that with a payment of 3% from other income, you will be receiving a return of 10% per annum on your common stock without encroaching to any appreciable extent on the vast assets, now at your disposal, that will increase in amount as population increases and as your lands are sold, and that will remain available for the fortification of your property in any exigency that may arise.

G.T.R. Betterments, Construction, Etc.

Vermont-Rhode Island Plans.—Tenders have been asked for the construction of the first section of the proposed Southern New England Ry., and the developments on the other portions of the Central Vermont Ry., connected with it. This section will be 25 miles long, and will extend from the C.V.R. tracks at Windsor, to the Rutland Rd. yards at Bellows Falls, Vt. A second section for which tenders will be asked later on, will start from the Rutland Rd. yards at Bellows Falls, extend to Dummerston, Vt., and will enter Brattleboro, Vt., over the lines of the West River Rd., a subsidiary of the C.V. Ry.

The Southern New England Rd., is asking the Rhode Island Legislature for authority to cross New York, New Haven and Hartford Rd. tracks at grade in Providence, with a view of reaching a site for a terminal dock on the west shore of Narragansett Bay. The Providence city council approves of the crossing, and suggests that the Legislature permit the use of the N.Y., N.H. and H. Rd. tracks in the city as well. It is reported that the company has secured 2,300 ft. of water frontage at Field's Point, adjoining a large area which the State Government proposes to acquire. The U.S. Government is spending a large sum in dredging the river so as to permit of the entrance of the largest ocean going steamers.

Lachine, Jacques Cartier and Maisonneuve Ry.—The Dominion Parliament has declared the company's line to be a work for the general advantage of Canada; extended the time fixed for construction; continued an agreement made in 1910 with the city of Montreal, and authorized the company to enter into agreements with other railway companies.

Montreal Track Elevation. — The G.T.R. plans for the elevation of its tracks in Montreal have been completed, and have been sent to the Board of Railway Commissioners for consideration. The proposal is to elevate the tracks from Bonaventure station to St. Henri, thus doing away with all level crossings.

That the company has purchased St. Joseph's church on Richmond St., in connection with the track elevation plans and the proposals to rebuild the Bonaventure St. station, is denied by G.T.R. officials. The company, in view of the difficulties in the way of obtaining the land necessary, has, officials state, decided to modify its plans by removing everything possible to the Turcot yards, and retaining at Bonaventure only such buildings, etc., as are absolutely necessary.

Ottawa Improvements.—The Board of Railway Commissioners has rescinded the order passed Mar. 7, approving plans for train shed, etc., at the central union station.

Referring to the report as to the tunnel at the Rideau Canal, W. Wainwright, Second Vice President, is quoted as having stated April 5, that he was not in a position to discuss the matter officially on behalf of the company, but personally, it did not appeal to him. In addition to having to remove its Parry Sound line, and placing it in the tunnel, the carrying out of the proposal would do away with the company's freight yards. General Superintendent Donaldson, is quoted as saying April 5, that the projeet did not meet with the approval of the G.T.R. That company had an alternative proposal, which would be laid before the authorities.

Barry's Bay to Bancroft.—Local press reports state that G.T.R. engineers have been working in the vicinity of Barry's Bay and Bancroft, Ont., for some time, endeavoring to secure a location for a route for a branch from its Canada Atlantic Ry., into the district. Such a line would run through the Bessemer Iron range.

Hamilton Station.—The Hamilton, Ont., Board of Trade has been informed by the General Passenger Agent, that the company has under consideration a proposal to build a new station in that city.

London, Huron and Bruce Ry.—A new siding half a mile long is being built at Clinton, Ont., to facilitate the working of trains off this line, in making connections with the Buffalo-Goderich line. It is proposed to reballast the entire line during the year. (April, pg. 335.)

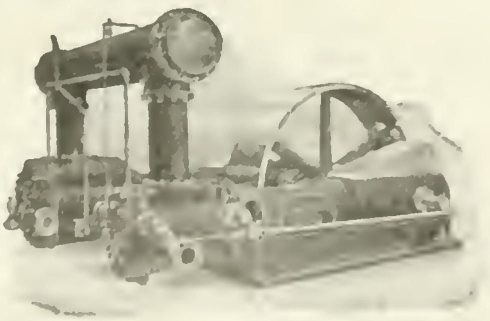
THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

RAND DUPLEX POWER-DRIVEN COMPRESSORS



In buying Rand Compressors, you buy future machines, not low price, but high grade, high efficiency, large capacity machines, that mean sustained economy.

Saving in power consumption, breakages and delays are more important considerations than a slight saving in first cost.

See Rand designs, then compare with other constructions. No unnecessary weight, but judicious distribution of metal.

SOLUTION OF ISOLATED COMPRESSED AIR POWER UNITS

The FRANKLIN Tandem Gasoline Engine-Driven Air Compressor, running at high speed, will yield a much greater output of compressed air than is given by a slower running, less efficient compressor of equal weight and size. This Compressor is a complete independent power unit; no dependence need be placed on steam boilers, belts, electric power, nor any appliances not forming a part of the Compressor Unit.

Write us for prices and literature.

Of course, it is needless to say that we can supply "anything pneumatic."

The Quebec Bridge Contract.

The Minister of Railways announced in the House of Commons, April 5, that the contract for the erection of the superstructure of the bridge over the St. Lawrence River near Quebec had been signed. He said that the straightening out of the difficulties surrounding this undertaking had been a work fraught with much anxiety and not a little industry. The undertaking was such a vast one that the engineers on the board realized that every step should be made only after the fullest investigation. Differences of opinion arose between these able men which were altogether of a technical nature, and could only be understood by men with a theoretical knowledge and practical experience in bridge building. The original intention, and in fact the scheme contemplated until very recently, provided for roadways, and street railway traffic, as well as steam railway tracks. The majority of the Board, after full consideration, recommended the acceptance of the St. Lawrence Bridge Co.'s tender, upon a design of its own, which included provision for street railways and driveways. In doing so, it called attention to the fact that another design had been submitted by the company for a purely railway bridge. By the adoption of the latter proposition, it was pointed out that a very material saving could be made. The Government fully considered this suggestion and, as a result, the contract has been signed with the St. Lawrence Bridge Co., for a railway bridge which will also have two 4 ft. sidewalks. The cost of this will be at the estimated quantities, $8,650,000. There has been deposited with the Government as security for the carrying out of this project, $1,297,500 or 15% of the contract price. The stockholders in the Dominion Bridge Co., and of the Canadian Bridge Co., organized the St. Lawrence Bridge Co., but in addition to the last named company signing the contract, the two parent companies have guaranteed the carrying out of the work. Considering the very many difficulties that had surrounded this entire project, he was of opinion that the very best possible contract had been made, and fully believed that these purely Canadian companies were competent to accomplish the task they had undertaken, and that the result would be a credit, not only to Canada, but to the ability of the men at the head of these great industries. The province of Quebec contributed $250,000 and the city of Quebec $300,000 to the original bridge scheme, and it was but fair that these amounts should be returned.

The contract was signed by the Minister of Railways and Canals, representing the Government; Phelps Johnson, President of the St. Lawrence Bridge Co. and J. F. Weber, secretary, while Mr. Johnson again signed as Vice President

of the Dominion Bridge Co., with M. Davy as secretary. The Canadian Bridge Co., of Walkerville, was represented on the signed document by F. C. McMath, President, and Mr. Miller, secretary. Press reports state that the contractors will at once expend $1,000,000 upon a new plant for the purpose of carrying out the contract, and that orders have been placed in the United States for the manufacture of the steel for the bridge.

The St. Lawrence Bridge Co.'s board is as follows:—President, P. Johnson; Vice President, F. C. McMath; Secretary, J. F. Weber; other directors, C. Cassils, F. L. Wanklyn, G. H. Duggan, W. Pope, and B. S. Colburn.

Certain additions were made to the contract at the instance of the Department of Labor, the Minister of Labor stated April 6, providing for the payment of current rates of wages on the work, and for the inspection by the Min- as steam railway tracks could have been successfully constructed and erected, ister of Labor at his discretion of the rates paid.

In the House of Commons, April 11, the Minister of Railways said the engineers, while expressing the view that a bridge on the design including roadways and electric railway tracks as well were of the opinion that serious difficulties could be obviated if the design on which the contract has been let were adopted. Add to this the great difference in cost, and he thought it would appear evident that the wiser course was pursued. The engineers brought to the attention of the government the fact that over several large bridges electric lines use the same tracks as the steam railways, and they expressed the belief that this could be done on the Quebec bridge. The following are comparative figures:—

With roadways, etc.—	
Weight of metal, not including weight of material used in making of roadways	132,200,000 lbs.
For railway bridge only	95,900,000 lbs.
Difference in weight	36,300,000 lbs.

Cost as per estimated quantities—	
With roadways, etc.	$11,171,100 00
With road material	75,000 00
Rails for tramways	5,000 00
Approaches for roadway	200,000 00
Total	$11,451,100 00
Cost of design adopted for railway only, on estimated weight	8,650,000 00
Difference in cost	2,801,100 00
The Government has suggested that $550,000 contributed by the Province of Quebec and the city of Quebec for roadway purposes on this bridge, can be handed back to them and still there will be a saving of	550,000 00
	$ 2,251,100 00

The Dominion Parliament has voted $333,333.34 on account of construction of the bridge.

The Minister of Railways stated in reply to a question in the House of Commons, Mar. 29, that the Department had no record of any investigation being held as to the advisability of construct-

ing a tunnel under the St. Lawrence River at Quebec, in lieu of a bridge.

On pages 435 and 437 are a number of plans. Fig. 1 shows the bridge in course of construction, which collapsed Aug. 29, 1907. Fig. 2 shows the Board of Engineers' official design, on which tenders for the new bridge were invited This was for a cantilever bridge with anchor arms and cantilever arms of the same length, the suspended span to be erected by cantilevering out. Five modifications of this design were also prepared by the Board, a tender on any of the six propositions being considered a tender on the Board's design. Two of these schemes were based on erecting the suspended span by cantilevering out, while the remaining four were based on erecting the suspended span at an adjacent site and floating it into position.

Fig. 3 shows the St. Lawrence Bridge Co.'s accepted design. The bridge will have the K web-system in the cantilever and anchor arms. the suspended span being a modified Pratt. All members in the anchor arm and those immediately over the main pier, as well as the floor system, are carbon steel, the cantilever arms and suspended span being of nickel-steel. The top chords are composed of built-up riveted members extending over one full truss panel or two floor panels. This design differs from those shown in figs. 2, 4, 5, 6, 7 and 8, by having an 1,800-ft. channel span, as in the old bridge. It is also different in making no provision for highway traffic. The suspended span is 640 ft. long, 110 ft. deep at the centre. and 70 ft. deep at each end. The cantilever arms are 580 ft. long. 70 ft. deep at the end, and 310 ft. high over the main post. The anchor arms are 515 ft. long, as at present designed. The trusses are 88 ft. apart. and there is a clear headroom of 150 ft. above extreme high water. The train load allowed for on each track will be equivalent to two E-60 engines. followed by a train load of 5,000 lbs. per lineal foot of track. The increase in length of span was brought about by a rearrangement in the manner of sinking the caissons. thus allowing the centre line of the new bridge to remain coincident with that of the old bridge. The old main piers will not be used. but will be taken down to low water level. the stone being re-used in the new piers.

In addition to the design which has been accepted. the St. Lawrence Bridge Co. tendered on each of the Board's designs, and on six other designs of its own. In general elevation and outline the designs submitted by the company conform to that of the Board's design. Two of these designs are of the single-intersection Warren type (fig. 4), the remaining five being variations of the single-intersection K web-system type (figs. 5 and 6). The variations in the different tenders were due mainly to variations in the details of the members, as well as the proportion of nickel-steel and carbon steel used in the construction. The accepted design was that approved by the majority of the Board, as well as by the additional experts appointed by the Government. In the opinion of the engineers this design contained several features, particularly in respect to erection. that rendered it preferable to the designs prepared by the Board.

The British Empire Bridge Co. submitted six tenders on the Board's design only. It proposed two schemes of erection in connection with the floating in of the suspended span; one floating the span in on high falsework, the other by floating in a light temporary span to be used as staging upon which the suspended span is erected.

The Pennsylvania Steel Co. submitted 10 tenders on the Board's design and one tender on an eyebar suspension span designed by Gustav Lindenthal (fig. 8). This company submitted prices on two schemes of erection of the suspended span. In one scheme the suspended span is floated in on high falsework, while in the other the entire span is lifted directly from the pontoons by a special lifting device.

Maschinenfabrik Augsburg-Nuerenburg A. G., tendered on three of the Board's designs. It also submitted a tender on a design of its own (fig. 7). The principal features of this design are the large panels, the small number of members in the web system and the length of the suspended span. The material proposed was a chrome-nickel-steel. Built-up riveted members were to be used for tension members throughout.

Canadian Northern Ry. Earnings. Etc.

Gross earnings, working expenses and net profits from July 1,. 1910. with increases over, or decreases from, those of 1909.10 :

	Earnings.	Expenses.	Net. Earnings	Net Increase.
July	$1,225,100	$876,900	$348,200	118,600
Aug.	1,093,000	830,000	263,000	58,600
Sept.	1,279,000	898,700	381,200	69,700
Oct	1,627,800	1,047,300	580,500	99,800

Inc.	$5,881,445.09	$4,337,403.12	$1,541,041.97	... .

Approximate gross earnings for Mar. $8,648,000. and for two weeks ended April 14, $4,035,000 against $7,667,000 and $3,776,000 for same period 1910.

Duluth, South Shore and Atlantic Ry.—Operating revenue for Feb., $190,805.29; expenses, $174,341.03; net revenue. $16,464.26. against $213.702.93 operating revenue; $158,921.33 expenses; $54,781.60 net revenue for Feb., 1910. Aggregate operating revenue for eight months ended Feb. 28. $2 126,261.74; expenses, $1.484 411.95; net revenue, $641 849.79. against $2.144.772.38 aggregate operating revenue; $1.473,882.20 expenses; $670,890.18 net revenue for same period 1909-10. Approximate earnings for Mar., $230.162. and for two weeks ended Apr. 14. $106.947. against $279.102 and $124.540 for same periods 1910.

Mineral Range Rd.—Operating revenue for Feb., $57.730.72; expenses, $58,019.62; deficit, $288.90. against $63.208.13 operating revenue; $60.874.36 expenses; $2.333.77 net revenue for Feb., 1910. Aggregate operating revenue for eight months ended Feb. 28, $500,386.88; expenses, $491.766.12; net revenue, $8 620.76. against $571.670.35 aggregate operating revenue; $489.294.32 expenses; $82,376.03 net revenue for same periods 1909-10. Approximate earnings for Mar., $65.960, and for two weeks ended Apr 14 $27.293. against $69,870 and $27.155 for same periods 1910.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Operating revenue for Feb $895,326 46; expenses and taxes, $756 417 47; operating income $138,908.99, against $843 090.22 operating revenue; $654,679 38 expenses and taxes; $188,410.84 operating income for Feb., 1910 Aggregate operating revenue for eight months ended Feb. 28. $8,956,243.50; expenses and taxes. $6,053.412.46; operating income $2,902,831.04. against $10.648.617.24 aggregate operating revenue; $5.909.674.87 expenses and taxes; $4 738 942.37 operating income for same period 1909-10. Approximate earnings for March, $1.645.005. and for two weeks ended Apr. 14. $788,951. against $1,880,360 and $874.651 for same periods 1910.

Chicago Division. Operating revenue for Feb., $648,023.72; expenses and taxes, $544.555.84; operating income, $103,467.88, against $652,753.80 operating revenue; $472,371.36 expenses and taxes; $180,382.44 operating income for Feb., 1910. Aggregate operating revenue for eight months ended Feb. 28, $6,852,091 85; expenses and taxes, $4.677,171.05; operating income, $1,371,920.80, against $5,653,263.08 aggregate operating revenue; $3,999,685.86 expenses and taxes; $1,653,577.22 operating income for same period 1909 10.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry. and D G.H. and M Ry. separately, for Feb., as compared with Feb., 1910:—

Grand Trunk Railway.

	1911.	1910.
Earnings	$2.326.800	$2.248.000
Expenses	1.995.700	1,866.000
Net earnings	$ 331 100	$ 382,000

Canada Atlantic Railway.

	1911.	1910.
Earnings	$ 121.000	$ 116.000
Expenses	133 9 10	111.000
Net earnings	*$ 12.300	$ 5,000

Grand Trunk Western Railway.

	1911.	1910.
Earnings	$ 497.600	$ 461.000
Expenses	415.400	372.000
Net earnings	$ 82 200	$ 89,000

Detroit. Grand Haven and Milwaukee Ry.

	1911.	1910.
Earnings	$ 157.100	$ 140,000
Expenses	160,000	118.000
Net earnings	*$ 2,900	$ 22,000

*Deficit.

Approximate gross earnings for March. $3,909 773. and for two weeks ended Apr. 14. $1,748 951. against $3,793,257 and $1,640,783 for same periods 1910.

Traffic Receipts of the System.

Aggregate from Jan. 1 to Mar. 31:—

	1911.	1910.	Inc.
Grand Trunk Ry.	£1,614 249	£1 545 426	£68.823
Canada Atlantic Ry.	91.839	87 164	4.675
G T Western Ry.	329.154	310 159	18,995
D G.H & M Ry..	100.548	93.958	6,590
Totals	£2 135.790	£2,036,707	£99,083

New England Connections With Canada.

In connection with the extension of G.T.R. influences in Rhode Island and Vermont, through its controlled line—the Central Vermont Ry., the New York, New Haven and Hartford Rd., is working out extension plans to secure Canadian connections independent of its existing affiliations. The N.Y., N.H. and H. Rd., controls the Boston and Maine Rd. which operates the Massiwippi Valley Ry. in Quebec. The B. & M. Rd. controls the Maine Central Rd., owns the Hereford Ry. in Quebec, and the Princeton Branch of the Washington County Ry. in New Brunswick. Through the two lines in Quebec, the N.Y., N.H. and H. Rd. secures connections which enables it to operate through passenger cars into Montreal and Quebec.

In the U.S. a ten-mile line is being built from Hinsdale to Brattleboro, Vt., which will have the effect of making the N.Y., N.H. and H. Rd., independent of the Central Vermont Ry., over which it had running powers into Brattleboro. The Montpelier and Wells River Ry.; the Barre Ry., and the Barre Rd., have been acquired by interests associated with the B. and M. Rd., and according to President Mellen will be amalgamated with it These lines will give the B. and M. Rd. a direct connection with the granite quarry areas in Central Vermont. The N.Y., N.H. and H. Rd., has also secured trackage rights over the Boston and Albany Rd. from the New York Central and Hudson River Rd., and from the same company interests allied with the B. and M. Rd. have purchased 25.520½ preferred shares of the Rutland Rd. This company owns the Rutland and Noyan Ry., 3.39 miles in length. in Canada, and has trackage rights from Noyan Jct. into Montreal, 53 miles.

"CHAMPION" DUMP WAGONS

Short turns; quick handling.
Short wheel base; full capacity.
Quick and easy dumping.
Extra rugged construction.
Does away with the constant expensive
breakdowns of ordinary wagons.

Railway Rolling Stock Notes.

The Dominion Parliament has voted $21,750, for additional rolling stock for the Prince Edward Island Ry.

The Hart-Otis Car Co. has ordered 45 special steam shovel clay cars from the Canadian Car and Foundry Co.

Allis-Chalmers-Bullock, Limited, has ordered two special skidding and logging engine cars from the Canadian Car and Foundry Co.

The G. T. P. R. has received three colonist cars, nos. 3017, 3019 and 3020, from the Canadian Car and Foundry Co., Montreal.

The Intercolonial Ry. has received one stores car from the Nova Scotia Car Co., Halifax, and has ordered one van to be built at its Moncton shops.

The Canadian Northern Ry. has deposited with the Secretary of State at Ottawa a bailment of rolling stock, made with the Imperial Rolling Stock Co., Mar. 29, 1911.

The Montreal and Southern Counties Ry. (G.T.R.), has ordered one electric motor combination passenger and baggage car, and one electric motor flat car, to be built at the G.T.R. Montreal shops.

The Dominion Iron and Steel Co. has ordered from the Canadian Car and Foundry Co. 50 all steel coal cars, 100,000 pounds capacity, with Westinghouse air brakes, Simplex brake beams and bolsters, and Janney couplers.

The Laprairie Brick Co., Laprairie, Que., and the Victoria Harbor Lumber Co., Victoria Harbor, Ont., have each received one four wheeled locomotive, of which we gave details in our last issue, from the Montreal Locomotive Works.

The Canadian Northern Ry., between Mar. 16 and Apr. 13, ordered the following additions to rolling stock: 50 Hart convertible cars from the Hart-Otis Car Co., Ltd., Montreal, and 50 steel underframe flat cars from the Canadian Car and Foundry Co., Montreal.

The 21 Hart-Otis steel dump coal cars which the Intercolonial Ry. has ordered from the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue, will be of 100,000 lbs. capacity, and will be equipped with Westinghouse air brakes, Simplex brake beams and bolsters, and Janney couplers.

Allis-Chalmers-Bullock, Limited, has ordered from the Canadian Car and Foundry Co. one standard Lidgerwood unloader car for a 60 ton pull rapid unloader, the car to be equipped with Westinghouse air brakes, Simplex brake beams and bolsters, and the engine of the unloader to be protected by a hood.

The Dominion Steel Corporation Ltd., has ordered one mogul freight locomotive, cylinders 19 by 26 ins., driving wheels 50 ins., total weight in working order, 129,000 lbs.; and one consolidation freight locomotive, cylinders 21 by 26 ins., driving wheels 50 ins., total weight in working order 178,000 lbs., from the Montreal Locomotive Works.

The Dominion Iron and Steel Co. has ordered from the Canadian Car and Foundry Co. 25 flat cars with wood underframe, 25 gondola cars for limestone, and 60 wooden ore cars lined with steel. The capacity of all these cars is 80,000. lbs. They are to be equipped with Westinghouse air brakes, Simplex brake beams and bolsters, and Janney couplers.

The Dominion Parliament has voted the following sums on account of rolling stock for the Intercolonial Ry.:—to improve triple valves of air brakes, $7,150; to provide air brakes for freight cars, $12,160; to exchange drawbars of freight cars, $2,000; to equip passenger cars with fire extinguishers and tool boxes, $6,400; rolling stock, $133,200.

The G.T.R., since Jan. 30, has ordered six first class coaches to be built in its Montreal shops, and has received 602 steel under frame box cars, and 442 all steel coal cars, from the Canadian Car and Foundry Co., Montreal, three first class coaches from its Montreal shops, and 12 consolidation locomotives from the American Locomotive Co.

The Canadian Northern Ry., between Mar. 16 and Apr. 13, received the following additions to rolling stock: 285 box cars and two first class cars from the Canadian Car and Foundry Co., Montreal; eight cabooses from the Crossen Car Manufacturing Co., Cobourg, Ont., and two baggage and mail coaches from the Preston Car and Coach Co., Preston, Ont.

The British Columbia Electric Ry. has ordered from the Canadian Car and Foundry Co., for its Victoria lines, one steel one-way dump car with cab, for which the Canadian Westinghouse Co. will furnish the electric equipment; also two steel one-way dump cars without cab, to be used as trailers. The capacity of each car will be 40,000 lbs. They will be used in construction work.

The C.P.R., between Mar. 14 and Apr. 14, placed orders for rolling stock as follows: two superintendents' business cars, 61 box cars, five stock cars, two freight refrigerator cars, one second class car, three vans, two snow ploughs, and two G2 locomotives at its Angus shops, Montreal; four steel flat cars, one steel coal car, and one Hart ballast car, with the Canadian Car and Foundry Co., Montreal.

The Sydney and Louisburg Ry. has ordered one consolidation locomotive and one mogul locomotive from the Montreal Locomotive Works. Following are the chief dimensions:—

	Consolidation.	Mogul.
Weight in working order	178,500 lbs.	129,000 lbs.
Weight on engine truck	20,000 lbs.	16,500 lbs.
Weight on drivers	158,500 lbs.	112,500 lbs
Weight of tender	92,000 lbs.	103 000 lbs.
Wheel base, driving	15 ft.	12 ft. 6 in.
Wheel base, engine	23 ft.	20 ft. 6½ in.
Wheel base, engine and tender	51 ft. 6½ in.	49 ft. 4 in.
Driving wheel, diar.	50 in.	50 in.
Valve gear	Stephenson	
Boiler, type	Straight top	Extended wagon top
Boiler, pressure	200 lbs.	180 lbs.
Cylinders, diar. & stroke	21 by 26 in.	19 by 26 in.
Tubes, no. and diar.	368 2 in.	275 2 in.
Tubes, length	13 ft. 11 in.	10 ft. 5¼ in.
Tank capacity	4,000 U.S. gals.	5,000 U.S. gals.

Following are the chief details of the 300 steel underframe, forty ton flat cars, with fish-belly centre sills, which the Canadian Northern Ry. is having built by the Canadian Car and Foundry Co., Montreal:—

Length over end sills	41 ft. ¼ in.
Length over buffer blocks	42 ft. 2 in.
Length over face of knuckles	44 ft.
Width over side sills	8 ft. 10 in.
Width over floor	9 ft.
Width over all	9 ft. 7⅝ in.
Height, top of rail to top of floor	4 ft. 2¾ in.
Height over all	5 ft. 11¼ in.
Centre to centre of trucks	31 ft. 2 in.
Depth of centre sills at centre	2 ft. 6 in.
Depth of centre sills at bolster	1 ft. ¾ in.
Wheel base	5 ft. 4 in.
Trucks	Arch bar type
Couplers	Janney cast steel 5 by 7 in. shank
Air brakes	Westinghouse K C. 812
Axles	M.C.B. open hearth steel
Journal bearings	5 by 9 in.
Journal boxes	McCord m.i.
Springs	M.C.B. class C
Brake beams and bolsters	Simplex
Brake shoes	Steel back

Following are the chief details of the two class G-1d locomotives, which the C.P.R. is having built at its Angus shops, Montreal.

Weight on drivers	136,000 lbs.
Total weight	217,000 lbs.
Cylinders, diar. and stroke	21 by 28 in
Valves	11 in. piston
Drivers, diar.	75 in.
Boiler, type	Extended wagon top
Boiler, pressure	200 lbs.
Heating surface, tubes	2,777 sq. ft.
Heating surface, total	183 sq. ft.
Heating surface, total	2,960 sq. ft.
Heating surface, superheater	539 sq. ft.
Equivalent heating surface	3,767 sq. ft.
Tubes, no. and diar.	193 2¼ in., 22 5 1-5 in.
Tubes, length	19 ft. 4⅞ in.
Firebox, type	radial stayed, with cross stays
Firebox, dimensions	7 ft. 10⅛ in. 65 ft. 9⅞ in.
Grate area	45.6 sq. ft.
Capacity, water	5,000 gals.
Capacity, coal	10 tons
Axles, main	9½ by 12 in.
Axles, others	9 by 12 in.
Brakes	Westinghouse ET6
Brake beams	Simplex outside hung
Valve gear	Walschaert
Superheater	Vaughan and Horsey
Wheel centres	Cast steel

The C.P.R., between Mar. 14 and Apr. 14, received the following additions to rolling stock: 16 suburban cars, three sleeping cars, one pile driver, 46 wooden box cars, and five switching locomotives, from its Angus shops, Montreal; 99 automobile cars and one steel flat car, from the Canadian Car and Foundry Co., Montreal; ten N3 locomotives from the Montreal Locomotive Works; five D10 locomotives from the Canadian Locomotive Co., Kingston, Ont., and 39 steel pitch cars from the U.S.

The Steel Co. of Canada, Ltd., Hamilton, Ont., has ordered one four wheeled locomotive from the Montreal Locomotive Works. Following are the chief details:—

Weight in working order	88,000 lbs.
Wheel base	7 ft.
Driving wheel, diar.	50 in.
Valve gear	Stephenson
Cylinders, diar. and stroke	17 by 24 in.
Boiler, type	Straight top
Boiler, pressure	180 lbs.
Tubes, no. and diar.	139 2 in.
Tubes, length	11 ft. 10 in.
Tank capacity	1,000 U.S. gals.

Following are chief details of the four six-coupled switching locomotives which the Intercolonial Ry. has ordered from the Canadian Locomotive Co., Kingston, Ont., as mentioned in our last issue:—

Weight in working order	138,000 lbs.
Wheel base, engine	12 ft.
Wheel base, engine and tender	40 ft.. 5¼ in.
Length over all	55 ft. 4 in.
Width over all	10 ft.
Height over all	15 ft. 3 in.
Heating surface, firebox	132 sq. ft.
Heating surface, tubes	1,935 sq. ft.
Heating surface, total	2,067 sq. ft.
Grate area	27.5 sq. ft.
Driving wheels, diar.	51 ft
Driving wheel centres	Cast iron
Driving journals, diar. and length	8½ by 11 in.
Cylinders, diar. and stroke	20 by 26 in.
Boiler, type	Straight top, radial stayed
Boiler pressure	200 lbs.
Tubes, no. and diar.	300 2 in.
Tubes, length	12 ft. 6 in.
Brakes	Westinghouse American
Weight of tender, loaded	90,000 lbs.
Tank, style	Hopper, with sloping back
Tank capacity	3,800 gals.
Coal, capacity	6 tons
Truck, type	Four wheel
Wheel, diar.	33 in.
Wheel, type	Wrought iron, steel tired
Journal, diar. and length	M.C.B. 4¼ by 8in.

Following are chief details of the three Pacific type locomotives which the Intercolonial Ry., has ordered from the Canadian Locomotive Co., Kingston, Ont., as mentioned in our last issue:—

Weight in working order on drivers	126,000 lbs.
Weight in working order, total	187,000 lbs.
Wheel base of engine, rigid	12 ft. 7 in.
Wheel base of engine, total	31 ft. 6 in.
Wheel base, engine and tender	57 ft. 10 in.
Length over all, engine and tender	67 ft. ½ in.
Width over all	10 ft. 3 in.
Height over all	15 ft.
Heating surface, firebox	162 sq. ft.
Heating surface, tubes	2,584 sq. ft.
Heating surface, total	2,764 sq. ft.
Grate area	45.75 sq. ft.
Driving wheels, diar.	72 ins.
Driving wheel centres	Cast steel
Driving journals, diar. and length	9 by 12 in.
Cylinders, diar. and stroke	21 by 28 in.
Boiler, type	Wide firebox, radial stayed
Boiler pressure	200 lbs.
Tubes, no. and diar.	232 2¼ ins.
Tubes, length	19 ft.
Brakes	Westinghouse American
Weight of tender loaded	120,000 lbs.
Tank, style	Water bottom
Tank, capacity	5,000 gals.
Coal, capacity	10 tons
Truck, style	4 wheel, steel bolster
Wheel, diar.	36 ins
Wheel, type	W. I. centre, steel tire
Journal, diar. and length	5½ by 10 in.

MANUFACTURERS OF

BASIC OPEN HEARTH STEEL RAILS

Order Books are now open for delivery during 1911. Intending Purchasers should place orders early to insure prompt delivery.

HEAD OFFICES AND WORKS SYDNEY, CAPE BRETON, CANADA

TOOLS FOR ALL PURPOSES

We carry the Largest and Best Assorted Stock of Tools in Canada, and Mechanics will find every new idea in the tool trade shown in our stock. We name below a few of our lines:

- Wiley & Russel, Stocks, Dies, Taps, Etc.
- Butterfield, Stocks, Dies, Taps, Etc.
- Oster, Stocks and Dies
- Starret's Fine Tools
- Brown and Sharp's Fine Tools
- Western Tool Co.'s Lathe, Planer, and Shaper Tools

We cordially invite all interested in Tools to come in and view our stock. We will gladly demonstrate any of our lines.

MAINLY ABOUT PEOPLE.

C. M. Hays, President G.T.R. and G.T.P.R., sailed from New York, Apr. 19, for Europe.

Sir William Mackenzie, President Canadian Northern Ry., sailed from Halifax, N.S., Apr. 19, for England.

W. W. Butler, Vice President Canadian Car and Foundry Co., Montreal, has been elected Vice President Rea Mines, Ltd.

Major-General F. Wilson, who died at Montreal, Apr. 12, married a daughter of the late Sir Hugh Allan, of the Allan Line.

G. B. Greene, for many years Secretary-Treasurer Upper Ottawa Improvement Co., Ltd., Ottawa, died there, Mar. 30.

P. W. Graham, younger son of Hon. G. P. Graham, Minister of Railways and Canals, died at Brockville, Ont., Apr. 17, aged 25.

Mrs. McIntyre, who died at Lakewood, N.J., April 14, was the widow of Duncan McIntyre, one of the original C.P.R. directors.

J. P. McNaughton, General Sales Agent Dominion Iron and Steel Co., was married April 26, to Miss Etta Peppett, of North Sydney, N.S.

Sir William Mackenzie, President Canadian Northern Ry., has been elected a director of the Metropolitan Life Insurance Co., New York.

Walter Anderson, father of James Anderson, manager Sandwich Windsor and Amherstburg Ry., died at Ayr, Ont., April 14, aged 91.

G. W. Stephens, Chairman Montreal Harbor Commission, returned to Montreal, early in April, after having spent the winter in Europe.

The Governor General and Lady Grey will occupy Benvenuto, Sir William Mackenzie's house at Toronto, during the Ontario Jockey Club's race week, in May.

R. Creelman, Assistant General Passenger Agent, Canadian Northern Ry., Winnipeg, returned to duty, Apr. 12, having recovered from an attack of appendicitis.

Mrs. Bosworth, wife of G. M. Bosworth, Vice President, C.P.R., sailed Mar. 31, for Europe, where she will spend some weeks to recuperate after an illness.

J. S. Pyeatt, formerly Superintendent Canadian Division, Pere Marquette Rd., St. Thomas, Ont., has been appointed Superintendent District 3, 'Frisco Lines, at Chaffee, Mo.

Miss Ethel Holtby, daughter of A. R. Holtby, Bridge and Building Master, Grand Trunk Pacific Ry., Prince Rupert, B.C., was married, Apr. 13, to T. B. B. O'Neill, of Quebec.

F. Mabee, brother of J. P. Mabee, Chairman of the Board of Railway Commissioners, was found drowned, near Toronto, Apr. 15. He was incapacitated, some time ago, by paralysis.

Sir Thos. and Lady Tait, will be in London, Eng., for the cononation, when Miss Tait will be amongst the debutantes at Court, after which they will return to Canada, arriving about July 10.

J. R. Leckie, Locomotive Foreman, G.T.R., London, Ont., who was recently transferred from Palmerston, Ont., has been presented with a gold ring and gold mounted umbrella, by the staff at Palmerston.

E. J. Caron, assistant soliciting agent, G.T.R., Montreal, while boarding a train at Waterville, Que., April 4, missed his footing and fell under a car, one of his legs being so badly hurt that it had to be amputated below the knee.

The appointment of Lieut.-Col. H. H. McLean, K.C., M.P., Vice President St. John Ry., to command the Canadian troops at the coronation of King George, in June, with the temporary rank of Colonel, has been confirmed.

S. Sharples, private secretary to W. Wainwright, Second Vice President G.T.R. and G.T.P.R., Montreal, died there of typhoid fever, Apr 17, aged 22. He was born at Houghton, Eng., and had occupied the position for two years.

A. L. Clements, who was formerly City Freight Agent, C.P.R., Vancouver, B.C., and whose resignation we announced in our last issue, has entered the service of Evans, Coleman and Evans, Ltd., wharfingers and general shippers, Vancouver.

J. F. Stevens, M. Am. Soc. C.E., is reported to have resigned as President of the Oregon Trunk Ry., and other railways of the Hill system in Oregon, and to have been succeeded by C. R. Gray, Senior Vice President of the St. Louis & San Francisco Rd., of St. Louis, Mo.

Lord Strathcona has accepted the honorary chairmanship of the western committee of the Canadian Y.M.C.A., and has given $150,000 to the funds for suitable buildings for the association's purposes, in Manitoba, Saskatchewan and Alberta.

A. E. Duff, who was recently appointed District Passenger Agent, G.T.R., Toronto, was presented with an engraved gold watch, locket and chain, by the passenger and train agents, at Winnipeg, on his leaving there to take up his new duties.

W. C. Cushing, Chief Engineer Maintenance of Way, Pennsylvania Rd. Southwest System, Pittsburgh, Pa., who was recently elected President American Railway Engineering Association, for the current year, was born at St. John, N.B., Mar. 18, 1863, and has spent his railway career entirely in the U.S.

A. E. Duff, who was recently appointed District Passenger Agent, G.T.R., Toronto, was, prior to his leaving Winnipeg, where he had been for some time General Agent Passenger Department, G.T.R., and District Passenger Agent, G.T.P.R., presented with a travelling bag and Mrs. Duff with a silver tea service, by a number of the local railway officials.

Henry K. Wicksteed, B.A.Sc., M.Can. Soc. C.E., whose portrait we published in our last issue, was born at Quebec, Que., May 25, 1855, and prior to his appointment as Chief of Surveys, Mackenzie, Mann & Co., in 1905, he was with the Inverness and Richmond, and Halifax and South Western Rys., and Chief Engineer in charge of location on James Bay. His father was a lawyer of considerable eminence, and was for fifty years, Law Clerk of the House of Commons.

Hon. L. J. Forget, Director Richelieu and Ontario Navigation Co., and of the C.P.R., and a former President of the Montreal St. Ry., died at Nice, France, Apr. 7. He had been in poor health for some years, and left Canada for the south of France in November. He was uncle of R. Forget, who is interested in a number of transportation companies, and was father-in-law of Guy Boyer, ex-Superintendent of Construction, Montreal St. Ry., who is one of his executors. The estate is stated to amount to about $4,000,000.

Lieut.-Col. Hon. D Tisdale, K.C., who died at Simcoe, Ont., recently, aged 76, after a long illness, took a prominent part in the construction of the Grand Trunk, Georgian Bay and Lake Erie Ry., now the Georgian Bay Division of the G.T.R., and was President of the former railway for several years. He was also President of the St. Clair and Erie Ship Canal Co., and during his membership of the House of Commons, representing South Norfolk, he acted, for a considerable time, as chairman of the railway committee.

G. Cogger, who has been appointed joint agent, G.T.R. and Intercolonial Ry., at Quebec and Point Levi, Que., was born at Point Levi, Dec. 17, 1874, and entered G.T.R. service in Nov., 1889, since when he has been to Mar., 1890, messenger at Chaudiere, Que.; Mar., 1890 to Apr., 1893, messenger and clerk at Point Levi; Apr., 1893, to 1898, in Export Department at Portland, Me.; 1898 to Jan. 1, 1908, chief clerk at Point Levi; Jan. 1, 1908, to Mar. 15, 1911, accountant, Freight Department, Quebec, Que.

G. Hodge, whose appointment as Superintendent, District 2, Ontario Division, London, was announced in our last issue, was born at Montreal, Oct. 2, 1874, and entered C.P.R. service Mar. 24, 1890, since when he has been, to Aug. 8, 1890, in General Passenger Agent's office, Montreal; Aug. 8, 1890 to Jan., 1896, in various positions in Vice President's office, Montreal; Jan. 1896 to Feb. 1907, chief clerk to Vice President; Feb. 1907, to June 1908, Superintendent Montreal Terminals; June 1908 to Mar. 1911, Superintendent, District 3, Eastern Division, Montreal.

W. Stapelton, who has been appointed District Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., was born at Bristol, Eng., May, 20, 1884. He entered Canadian Northern Ry. service in May, 1903, as stenographer in the Passenger Department and worked through the various positions to that of chief clerk of that department. From 1906 to Jan. 8, 1910, he was Travelling Passenger Agent, and from Jan. 8 to Apr. 8, 1910, was City Ticket Agent, Winnipeg, and from Apr. 8 to May, 1910, General Agent, Passenger Departmeent, Canadian Northern Steamships, Winnipeg.

A. J. Donegan, who has been appointed Assistant Superintendent, Algoma Central and Hudson Bay Ry., Michipicoten Harbor, Ont., was born at Perth, Ont., Feb. 17, 1881, and entered railway service June, 1899, since when he has been, to May 1, 1900, freight clerk, C.P.R., London, Ont.; May 1, 1900, to Mar. 15, 1901, bill clerk, Dominion Express Co., London, Ont.; Apr. 20, 1901, to July 31, 1910, brakeman, conductor and Trainmaster, consecutively, Algoma Central and Hudson Bay Ry.; Sept. 1, 1910, to Mar. 15, 1911, Storekeeper, Lake Superior Iron and Steel Co., Magpie Mine, Ont.

Robt. Stockton, C.E., who has been appointed Superintendent of Operation and Maintenance under the administration division of the C.P.R. Irrigation Department, Strathmore, Alta., was heretofore Irrigation Manager in the U.S. Reclamation Service on the Yellowstone Project in Montana. He designed the Huntley project, there, and operated it for some time, and had also, charge of construction work on the Yellowstone project. He will have charge of the field force of the western section of the C.P.R. irrigation block, where the construction work has been completed, and which has been handed over to the administration division for operation.

H. E. Whittenberger, Superintendent Eastern Division G.T.R., Montreal, whose portrait appears on the first page of this issue, was born at Peru, Ind. Nov. 9, 1869, and entered transportation service in 1885, his record being: 1885 to Feb., 1897, various positions, Wabash Rd.; Feb. 1897, to May, 1902, Trainmaster Middle Division, G.T.R.; May 1902 to Sept. 1904, Superintendent Denver and Rio Grande Ry.; Sept. 1904 to Jan. 1906, Superintendent Cincinnati, Hamilton and Dayton Rd., Indianapolis, Ind.; Jan. 1906 to Sept. 30, 1907, Superintendent Kansas City and Southern Rd.; Sept. 30, 1907 he was appointed Superintendent Eastern Division G.T.R., which position he still holds.

EVERLASTING BLOW-OFF VALVE

"What we have been looking for for years" is what a prominent steam goods man remarked when he saw it first.

Dearborn Feed Water Treatment

Relieves Locomotive Boiler Troubles

Dearborn Preparations are made to suit the water conditions and prevent foaming, scale and leaking.

Dearborn Treatment is standard on more than 100 RAILROADS, because we are the only house working along scientific lines in the treatment of boiler feed waters. Complete Mineral Analyses are made in our laboratories of the waters causing trouble, and treatment prepared to meet the conditions found. Our success in practice proves the value of our method.

Dearborn Drug & Chemical Works

ROBERT F. CARR, President

General Offices, Laboratories & Works - - Chicago

W. M. Kirkpatrick, who has been appointed General Freight Agent, Eastern Lines, C.P.R., Montreal, is a son of the late Sir Geo. A. Kirkpatrick, at one time a director of the C.P.R. He was born at Kingston, Ont., Oct. 8, 1874, and entered C.P.R. service Mar. 7, 1892, in the Vice President's office, and up to July, 1899, he filled various positions in Chief Engineer's office, Foreign Freight Department, Montreal, and General Freight Agent's Office, Toronto; July, 1899, to Dec., 1902, clerk in Fourth Vice President's office, Montreal; Dec., 1902, to Apr., 1905, Assistant General Freight Agent, Pacific Division, Vancouver, B.C.; Apr., 1905, to Feb., 1907, Export Freight Agent, Montreal; Feb. to Dec., 1907, General Freight Agent, Atlantic Division, St. John, N.B.; Dec., 1907, to Apr., 1911, General Freight Agent, Through Traffic, Ontario Division, Toronto.

Jules Hone, who recently resigned the position of City Passenger and Ticket Agent, C.P.R., Quebec, Que., was born at Montreal, Sept. 8, 1874, and entered C.P.R. service in the Car Accountant's office, Montreal, Mar. 14, 1889, and from July, 1890, to Aug., 1891, was secretary to the Manager of Transportation, Montreal; Aug., 1891, to the summer of 1892, in City Ticket Office, Montreal; 1892 to July 4, 1893, chief clerk, City Ticket Office, Ottawa; July 4, 1893, to June 21, 1896, assistant to Chief Clerk City Ticket Office, Montreal; June 21, 1896, to Nov. 1, 1903, Ticket Agent at the Windsor Hotel, Montreal; Nov. 1, 1903, to 1906, City Passenger, Freight and Steamship Agent, Quebec, Que.; 1906 to Apr., 1911, City Passenger and Ticket Agent, Quebec. He is a director of the Quebec Cartage and Transfer Co., a member of the Quebec Board of Trade, and of a number of other local organizations. He has opened a steamship and general ticket agency, in partnership with L. J. Rivet, at 5 and 9 St. Lawrence Boulevard, Montreal with a branch office in Quebec.

J. K. McNeillie, whose appointment as Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., was announced in our last issue, was born at Toronto, Feb. 23, 1874, and entered railway service in 1890, since when he has been, to July, 1890, call boy and clerk in Stores Department, G.T.R., Lindsay, Ont.; July, 1890, to Nov., 1891, apprentice in round house, G.T.R., Lindsay, Ont.; Nov., 1891, to Sept., 1896, apprentice, locomotive fitter and machinist, G.T.R. Point St. Charles shops, Montreal; Sept., 1896, to Nov., 1897, clerk in Superintendent and Trainmaster's office, C.P.R., Farnham, Que.; Nov., 1897, to Nov., 1899, chief clerk Superintendent's office, C.P.R., Farnham, Que.; Nov., 1899, to May, 1900, clerk in General Superintendent's office, C.P.R., Winnipeg; May, 1900 to July, 1902, chief clerk same office; July, 1902, to Mar., 1903, Car Service Agent, C.P.R., Winnipeg; Mar., 1903, to Oct., 1907, in Car Service Department, C.P.R., Montreal, in charge of the distribution of passenger equipment; Oct., 1907, to June, 1908, Assistant Superintendent of Terminals, C.P.R., Toronto; June, 1908, to Jan., 1909, Superintendent, District 1, Ontario Division, C.P.R., Toronto; Jan., 1909, to Mar., 1911, Superintendent, District 2, Ontario Division, C.P.R., London.

◆

Dominion Railway Subsidy Contracts. The Dominion Dovernment has entered into a contract with the Kootenay Central Ry., under the act granting aid to certain railways, for the construction of a railway from Golden, B.C., towards the International boundary, via Windermere and Fort Steele, thence crossing the Crows Nest Pass branch of the C.P.R., near Elko, a distance not exceeding 186 miles.

Quebec and Saguenay Railway.

We are officially advised that a contract has been let to O'Brien and Doheny, for the building of 56 miles of this projected railway. The line will run from St. Joachim, where connection can be made with the line of the Quebec Ry., Light and Power Co., to Murray Bay wharf, and then up to the Falls. The present contract covers the building of the line from Cap Tourmente to Murray Bay, and calls for the completion of the work by 1912. The line from Murray Bay wharf to the Falls is already under construction, the contractors being the Bishop Construction Co., of Montreal, and it is expected to be completed in 1911. (Mar., pg. 259.) A delegation of U.S. landowners in the vicinity of Murray Bay waited on the Provincial Government, April 11, with a view of securing some change in the route of Murray Bay, with a view of protecting the property of summer residents, and L. A. Vallee, Engineer of the Provincial Public Works, was instructed to report on the question. Construction is to be started at once. A. H. N. Bruce is Chief Engineer, and J. F. Guay, General Manager. (April, pg. 365.)

Since the above was put in type we have received later official advices in which it is stated that it is expected to start work on the first 56 miles in May and to complete it by September. The contract which has been let to the Bishop Construction Co. is for 7½ miles from Pointe a Pic to the East Canada Power & Pulp Co.'s site. The contract is on a percentage basis and work has been started on it.

There are four engineering parties in the field revising location, and one on construction on the Bishop Construction Co.'s contract. The location of the main line follows the shore and is extremely rough, the rocks in some places rising for several hundred feet perpendicularly. The tides will wash the banks for fully half the distance and great care will have to be exercised to prevent washouts. The St. Lawrence River averages about 12 miles wide for the whole distance and with the prevailing easterly winds the seas at high tide are very high.

From the fact that the Q. & S. Ry. will start from Cap Tourmente, the terminus of the Quebec Ry,, Light & Power Co.'s Montmorency Division, the impression seems to have got abroad that the Q. & S. Ry. is also to be an electric line. It is to be operated by steam.

◆

C. P. R. Montreal-Ottawa Line.

In an interview at Toronto April 24 D. McNicoll, Vice President C.P.R., is reported to have stated that the location of a line from Glentay, on the Montreal-Toronto line, 15.7 miles west of Smiths Falls, via Belleville, thence along the shore of Lake Ontario to a point east of Leaside Jct., 5.3 miles east of Toronto. It was originally intended to start this line from Bathurst, 19.4 miles west of Smiths Falls, but Glentay has been decided on instead. Mr. McNicoll added that engineers would be started from the western end of the proposed new line to meet those working from the east, and that construction would be completed in about two years. The new line would have a gradient of about four-tenths of 1%, and would be adapted for fast passenger travel, avoiding the Scarboro elevation.

Mr. McNicoll also stated that track on the Georgian Bay and Seaboard Ry. from Victoria Harbor will be laid this year to Bethany, 12.7 miles west of Peterboro' on the Montreal-Ottawa line, and that in July the C.P.R. upper lake steamships will begin running from Victoria Harbor to the head of Lake Superior, instead of from Owen Sound, as at present.

NOTICE.

PUBLIC Notice is hereby given that the Canadian Pacific Railway Company, as lessee of, and exercising the franchises of, the Atlantic and Northwest Railway, will, so soon after the expiration of four weeks from the first publication of this notice, as the application can be heard, apply to the Board of Railway Commissioners for Canada under the provisions of sections 221 to 225, 227 and 237 of The Railway Act, for authority to construct, maintain and operate a branch line or railway and spurs in the Parish of St. Brigide, County of Iberville, and the parish of West Farnham, county of Missisquoi, in the Province of Quebec, said spur commencing at a point on the centre line of the main line of the Farnham section of the railway, at chainage 437+20, and extending northeasterly across public road from St. Brigide across part of Lot No. 401 in the said Parish of St. Brigide, to and into said Parish of St. Brigide, to and into the Parish of West Farnham, thence northerly parallel to and east of the boundary between the Counties of Iberville and Missisquoi across the Central Vermont Railway, and across public road to the Town of Farnham, to and into the Military Camp ground of the Canadian Government situate on Lot 341 of the Parish of West Farnham, as said branch line of railway and spur are shown on a plan with book of reference and profile deposited in the Registry Office for the County of Missisquoi on the 20th March, 1911, and in the Registry Office for the County of Iberville, on the 6th April, 1911.

E. W. BEATTY,
Solicitor.

Montreal, the 8th day of April, 1911.

Train Numbering on C. P. R.

On June 4 a new system of train numbering will go into effect on all C.P.R. lines from coast to coast. The general principle of numbering is to carry the same number with the same train from starting point to destination, and thus do away with the system of having two or three numbers applying to the same train because it happens to run over two or three subdivisions on the same general division. In some instances it may be necessary for odd and even numbers of trains to be running in the same direction. There can be no objection to this, as the time table clearly shows which direction is superior and has no reference to numbers whether odd or even. Thus new no. 951 will appear from Smiths Falls to Vancouver, instead of the present no 126 Smiths Falls to Carleton Place, and 117 Carleton Place to Fort William.

Nos. 1 to 14 inclusive have been allotted for through passenger trains where they run over eastern and western lines and portions thereof. No. 1 train will be numbered through from Montreal to Vancouver, taking the place of old no. 97. No. 2, Vancouver to Montreal, old no. 94. No. 3, Toronto to Vancouver old no. 95. No. 4, Vancouver to Toronto, old 94. No. 5, Montreal to Winnipeg, old no. 1. No. 6, Winnipeg to Montreal, old no. 2. Nos. 7 to 14 are reserved for future use.

Nos. 15 to 50, are allotted to eastern lines inter-division passenger trains.

So far nos. 15 to 32 only have been allotted, the balance of the numbers up to 50 being reserved for future use.

Nos. 901 to 950 have been allotted to eastern lines inter-divisional fast freights, and 951 to 970 to fast through freights eastern and western lines. The balance of numbers of this service up to 950 are reserved for future use.

In the case of dead freight numbers which are only used in order to provide schedules in the superior direction for greater safety in train movement, small numbers are desirable on account of used so often in train orders. Therefore, nos. 71 to 99 have been reserved for these dead freight schedules and may be used as required on any general division.

The balance of the passenger and mixed trains will be numbered in the series allotted to each general division.

The numbers for passenger and mixed trains are to be decided by the General Superintendent. The series of numbers allotted to eastern lines are as follows:—

Atlantic Division	101 to 199 inclusive
Eastern Division	200 to 599 inclusive
Ontario Division	600 to 799 inclusive
Lake Superior Division....	800 to 899 inclusive

A sufficient margin for numbers has been figured on for each division to permit of the putting on of additional trains and keeping within the series allotted to each general division.

At the time of writing we had not received details of the new numbering of the inter-division passenger trains, local passenger and mixed trains and freight trains on the western lines.

◆

Canadian Freight Association.

At the annual meeting in Montreal, April 13, officers and committees were elected as follows:—

President, C. A. Hayes, G.T.R., Montreal; 1st Vice President, B. R. Hepburn, Ontario & Quebec Nav. Co., Picton, Ont.; 2nd Vice President, G. C. Ransom, Michigan Central Rd., Buffalo, N.Y.

Advisory Committee—J. Pullen, W. B. Bulling, G. C. Ransom.

Executive Committee—C. A. Hayes, F. F. Backus, W. M. Kirkpatrick.

Classification Committee—W. B. Bulling, M. H. Brown, C A. Hayes, W. Phillips, F. J. Watson, W. M. Kirkpatrick, L. Macdonald, H. E. Macdonell, A. E. Rosevear, R. E. Perry.

Inspection Committee—R. W. Long, G. Tombs, F. Conway, R W. Youngs, J. Paul, G. T. Pettigrew, J. P. Daly, H. A. Young, W. S. Elliot, W. B. Bamford.

C. A. Hayes, G. B. Brown, G. H. Shaw and the Secretary, T. Marshall, were appointed a committee to select a place for the quarterly meeting in July.

◆

G.T.R. Coach Wheel Lathe.

The illustration on this page shows a steel tired passenger car wheel lathe which was installed at the G.T.R. shops, Point St. Charles, Montreal, in March. The accompanying table gives a record of the passenger car wheels turned out at a test of the machine on March 23, when 40 pairs of 38 in. steel tired wheels were turned out in 9 hours 35 minutes. It is said that the result of this test excels any other which have been made on this continent. The lathe, which was built by the London Machine Tool Co., Ltd., of Hamilton, Ont., is driven by a 50 h.p. motor, variable speed, the tail stock operated by motor greatly facilitating the operation of the lathe. The tools used in the test only required one grind for the entire operation used on the 21 lb. pair of wheels.

Record of passenger car wheel turning test on wheel lathe at G.T.R. car shops, Montreal, March 23, 1911:—

Pairs of Wheels	Time Putting Wheel in Lathe	Actual Turning Time	Time Removing Wheel	Total Time
1st	3.50 2/5	6.19 4/5	2.49 4/5	13.00
2nd...... ..	3.40 2/5	6.19 3/5	3.00 2/5	13 00 2/5

E. L. Sheehan, heretofore Travelling Passenger Agent, Atlantic Steamship Service, Chicago, Ill., has been appointed City Passenger Agent, same service, Chicago, Ill., vice J. J. Forster, appoint-

FOR RAILWAY SIGNAL WORK

TATE BIFUNCTIONAL ACCUMULATORS

ARE BETTER ADAPTED THAN ANY OTHER BATTERY.

They have Longer Life. Their watt-hour efficiency is higher.
They occupy less space for given capacities.
They are not affected by heavy discharge rates, including short circuiting.
They do not discharge while standing.
They do not require any repairs during their life.
They are not affected by mechanical jarring.
They are mechanically stronger.
The plates hold the active material in place PERMANENTLY.
The cells never have to be washed out, as there is no deposition of active material.

For portable work they are vastly superior, owing to their mechanical strength. And for given capacities they are lighter.

They are superior to Primary Batteries; especially in cold or damp climates. They show relatively small drop in capacity due to low temperature. They do not require the same expensive means of protection from dampness and cold.

THEY HAVE AN ACCURATE MEASURABLE CAPACITY

All statements made by us concerning the physical characteristics and performance of the TATE BIFUNCTIONAL ACCUMULATOR are based solely upon independent Engineering Reports or the results of practice. We can quote unquestionable authority for each and every assertion embraced in our advertisements.

The chemical re-action employed is the standard lead oxide-sulphuric acid.

The improvements wrought in the TATE BIFUNCTIONAL ACCUMULATOR come through the wonderful advance made in the mechanical construction of the plates.

We manufacture Storage Batteries for every purpose for which storage batteries can be used in connection with steam and electric railway operation.

THEY ARE MADE IN CANADA

Grain Elevator Notes.

The elevator at Broadview, Sask., owned by A. R. Colquhoun and Sons, with about 6,000 bush. of grain, and one C.P.R. box car, were destroyed by fire, Mar. 30.

The Redcliffe Mill and Elevator Co., Ltd., of Redcliff, Alta., has been licensed to carry on its business in British Columbia, with office at Vancouver, and E. Munnings as its attorney.

The Saskatchewan Legislature, at its recent session, authorized the Government to raise by way of loan on the credit of the province, such sums as may be required for the purposes of the act incorporating the Saskatchewan Co-operative Elevator Co., passed during that session. The money is to be raised on securities bearing interest not to exceed 4%, the principal to be repaid in 40 years.

The G.T.R. has awarded a contract to John S. Metcalf Co., Ltd., Montreal, for the construction of a re-inforced concrete storage and shipping elevator of 500,000 bush. capacity, at Windmill Point, Montreal. This elevator is to be connected with the G.T.R. existing elevator there, which has a 1,100,000 bush. capacity, and was built by the same firm a few years ago. The cost will be about $125,000. Both elevators will be operated by the Montreal Warehousing Co., a subsidiary company of the G.T.R.

The International Milling Co. of Canada, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $6,000,000, and office at Toronto, to carry on a general milling business, and in connection therewith to own and operate grain elevators, steam and other vessels, and other transportation facilities. The incorporators are A. Bicknell, J. W. Bain, F. R. McKelcan, M. L. Gordon, T. W. Lawson, E. G. McMillan, J. F. MacGregor, J. E. Riley, W. H. Walter and H. Riley, Toronto.

Among the Express Companies.

The Canadian Northern Ex. Co. has opened offices at Calder, Sask., and North Edmonton, Alta.

The Western Ex. Co. has closed its office at Skinner, Me. Shipments intended for there must be forwarded to Lowelltown.

The Western Ex. Co. has opened a regular waybill office at Skagway, Alaska, reached at all seasons of the year, via Vancouver, B.C., and steamer lines.

The Dominion Ex. Co. has announced that navigation having re-opened for the season, shipments for Michipicoten, Michipicoten Harbor, Michipicoten Island, Michipicoten River and Helen Mine should be routed via Sault Ste. Marie, Ont.

W. H. Plant, Traffic Auditor, Dominion Ex. Co., Toronto, has also been appointed Auditor in charge of all accounting, Western Ex. Co. The positions of Traffic Auditor and Auditor of Money Order Acounts, Western Ex. Co., have been abolished.

The Board of Railway Commissioners, after a hearing of complaints regarding the delivery limits, fixed by the express companies, in cities and municipalities, decided that the companies must make collections and deliveries within the limits of the boundaries, commencing June 1, and gives companies the right to ask for relief in special cases.

Telegraph and Cable Matters.

The Order of Railway Telegraphers will hold its biennial convention at Toronto, May 8.

The Great North Western Telegraph Co. has removed its Brandon, Man., office to the rotunda of the Hotel Cecil.

The Newfoundland Legislature has confirmed contracts with the Western Union Telegraph Co. and the Direct United States Cable Co.

The Dominion Government telegraph line from Battleford, Sask., northerly to Isle Lacrosse, about 250 miles, will be proceeded with this year, an appropriation of $37,000 having been made.

The board of conciliation appointed to investigate the grievances of the Great North Western Telegraph Co.'s operators, consists of Justice Teetzel, Toronto, chairman; F. H. Markey, Montreal, representing the company, and D. Campbell, Toronto, on behalf of the men.

The Nova Scotia Telephone Co., which recently received an offer from the Maritime Telegraph and Telephone Co. to lease the former company's franchises, etc., guaranteeing 7% to the shareholders, or to purchase the stock at 125, is to recommend to the shareholders that the companies be merged, on terms which are stated to be satisfactory to both concerns.

Projects, Construction, Betterments, Etc.

Alberta Electric Ry.—The Dominion Parliament has incorporated a company with this title to build the various lines mentioned on pg. 71 of our Jan. issue. (Mar., pg. 257.)

Aroostook Valley Electric Ry.—The act authorizing the company to acquire and electrify the Presque Isle branch of the C.P.R., and to extend its line westward from Washburn, Me., to the International boundary at L'Islet county, Que., and to other points in Maine, was finally passed by the Maine Legislature, Mar. 30. (April, pg. 363.)

Belleville Radial Ry.—The Ontario Legislature has extended the time for the construction of the lines authorized to be built by the act passed in 1909. (Mar., pg. 257, and April, 1909, pg. 281.)

Birds Hill and Springfield Ry.—The Manitoba Legislature has incorporated a company with this title to build an electric railway from St. Boniface to Birds Hill, Man. (April, pg. 363.)

Brandon Electric Ry.—The Manitoba Legislature has incorporated a company with this title to build an electric railway in Brandon, Man. A resolution was adopted by the city council Mar. 25, directing the preparation of a bylaw for submission to the ratepayers authorizing the issue of $300,000 of debentures for the purpose of building an electric railway line in the city. A committee of the board of trade was appointed to act with the city council in discussing probable routes. Mr. Farquharson, of Fort William, Ont., was in Brandon, Mar. 30, in consultation with City Engineer Speakman as to the routes to be recommended. As a result of their consultation, the City Engineer recommended the construction of a belt line, with four cross lines, aggregating 10 miles in length, to be laid with 80 lb. steel on Rosser Ave., and 60 lb. steel on the other streets.

An offer has been made to the city council by J. D. McGregor, Brandon, on behalf of a British company to finance and build a street railway upon the basis of an equal division of profits between the company and the city. The matter was referred to the special committee which has the street railway matter in hand. (April, pg. 363.)

The British Columbia Electric Ry. Co. has secured control of a property at the corner of Carrall and Pender streets, Vancouver, B.C., for a future extension of its Hastings St. building. This gives the company control of the entire block.

The Board of Railway Commissioners has authorized the Vancouver, Fraser Valley and Southern Ry., controlled by the B.C.E.R., to connect its tracks with those of the B.C.E.Ry. at Park Drive, Vancouver, and at Eighth Ave., Sapperton, New Westminster.

The Point Grey municipal council was advised April 5, that an appropriation had been made for the buliding of a second track on the Vancouver-Eburne line, and that work would be started at an early date.

Application is being made to the company to arrange for the building of additional lines in various parts of the Vancouver-New Westminster district which are not served by existing lines.

The new wharf at New Westminster has been completed and track laid on it.

Press reports state that arrangements are being made for the building of a line from Victoria to Deep Cove, about 22 miles.

It is expected that power from the Jordan River plant will be delivered in Victoria, May 15. (April, pg. 363.)

Calgary Municipal St. Ry.—Construction on the extension of the municipally owned electric railway in Calgary, Alta., was started April 1. A large amount of the necessary material being on hand the work is reported to be progressing rapidly. (Mar., pg. 257.)

Cape Breton Electric Co.—It is proposed to build an extension to the company's power house in Sydney, N.S. A contract has been let for a 500 k.w., tube generator, 2,300 volt alternating current. (Feb., pg. 167.)

Dunnville, Wellandport and Beamsville Electric Ry.—The Ontario Legislature has extended the time for the building of the previously authorized lines, and authorized the building of an extension from Fenwick to Welland, Ont. (April, pg. 365.)

Edmonton Radial Ry.—The annual report of the city commissioners for Edmonton, Alta., for 1910, states that they would not recommend any extension of the street railway during the current year, but all efforts would be centred upon the improvement of the present system, it being understood that extensions commenced during the past year are to be completed as promptly as possible. It is planned to operate the cars on the single end plan, with Y's or loops at the end of the lines. Too much work was laid out last year for the time available considering the late date at which specifications for materials were issued. It is expected that the system as a whole will be in operation by Aug. 1. After careful study of the question of the distribution of power the commissioners have arrived at the conclusion that a sub-station would be most desirable for the economical system of feeders, and consequently recommend the purchase of a motor generator, to be installed at the present car barns, to take care of the feeder system at the east end, the power plant to supply direct current for the present for the central portion of the city, Strathcona and the west end. (Mar., pg. 257.)

Guelph Radial Ry.—The Ontario Legislature has extended the time within which certain branch lines may be built, and confirmed agreements with the Peoples Ry., respecting the building of that company's lines in the city of Guelph. (Mar., pg. 257.)

Halifax Electrical Tramway Co.—No action having been taken by the city council on the company's application to lay a second track on the belt line in Halifax, the company recently advised the Mayor that it was too late to do anything with the work this year. Permission was granted to build a line on Gottingen St., from Cunard to Young St., this year, and for which permission was asked. (April, pg. 365.)

Hamilton and Dundas Electric Ry.—The Manager of the Dominion Power and Transmission Co., has advised the Ontario Railway and Municipal Board, that a new substation will be completed early in June, which will enable the company to have all the power necessary to give an adequate service on the line. (Jan. 1909, pg. 53.)

Hamilton, Grimsby and Beamsville Electric Ry.—The company was granted permission by the city to begin relaying its tracks on Main St., Hamilton, on April 15, but prior to that date a deputation of Main St. residents asked the council to approach the company with a view to the abandonment of Main St., and the utilization of King St. east by the company for its line. The council agreed to do so, but W. C. Hawkins, General Manager, on behalf of the company, stated in an interview that the project was impracticable. (Jan., 1908, pg. 47.)

Hamilton St. Ry.—After a lengthened discussion the Hamilton city council decided to ask the company to transfer its tracks on Barton St., east, into the middle of the road and to double track Aberdeen Ave. and move back the poles there, or to put down an extension on Herkimer St. from MacDonald St. to Queen St, and to ask the company to allow it to use the radial subway under the Grand Trunk track. The company promised to consider the matter on May 1. The extensions proposed by the city would add about nine miles to the present 21 miles of road, and are estimated to cost $238,000. (April, pg. 365.)

The International Traction Railways, is the title of a company for which the authority of the Dominion Parliament is being obtained to take over the "estate, property, name, rights, privileges and franchises" of the International Ry. within Canada. The bill specifically provides that the rights of Ontario in respect of the Niagara Falls Park and River Ry., which forms part of the property taken over, shall in no way be affected. An act passed by the Ontario Legislature provides for the transfer of the line, and especially reserves its authority and the authority of the commissioners of the Queen Victoria Niagara Falls Park in respect of the Niagara Falls Park and River Ry. (Mar., pg. 257.)

London St. Ry.—Work is in progress in laying an additional track on the Dundas St. line, by the company, and the city is repaving the street. (Mar., pg. 257.)

Moncton Tramways, Electricity and Gas Co.—We are advised that work has been started upon the construction of a street railway in Moncton, N.B., Owing, however, to the severity of the weather, work was expected to proceed but slowly until well on in May, but we are informed the company expects to have the line opened for traffic in Nov.

The line under construction starts at the corner of King and Main Streets, proceeds along Main St., to High St., along High St. to Union St., with a branch along St. George St. to the Intercolonial Ry. tracks; a line extends from the King-Main St. corner along Union St. as far as Wilberforce St., and a third line starts from Main St., proceeds along

BLAUGAS

Blaugas is bottled gas shipped in steel cylinders, sold by the pound.

It has 1800 B.T.U. and by this enormous heating power can do things which no other gas can. Blaugas is used, not only for house lighting, cooking, and water-heating, but for lighting of railway cars, buoys, railway stations, lighthouses. It is extensively used for all industrial purposes, as

Soldering
Brazing
Heating Appliances

of all kinds, and with oxygen, for

Welding

aluminum, bronze, copper, cast iron, etc.,

Cutting

of any kind of metal.

Blaugas is the safest gas ever invented. Explosion limits only within 96 to 92 per cent. of air and 4 to 8 per cent. of gas.

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. Write for catalog now.

INTERNATIONAL TEXTBOOK COMPANY
Box 1072, Scranton, Pa.

Bon Accord St., St. George St., Robinson St., Railway Ave., Church St., Church St. extension, First Ave., and Shediac St., to the Humphrey golf links. (April, pg. 365.)

We were advised April 21 that work has been started with the erection of poles on King St. and Mountain Road. Under the terms of the agreement with the city the company is required to have not less than two miles of track equipped and in actual operation by Nov. 30. The total mileage of the system, as outlined, will be 6.5 miles. The track will be laid with 76-lb. rails, which have not yet been ordered. The company's power house will be located on Mechanic St., and at first coal will be used for fuel, but natural gas may be used in the near future instead. It is the ultimate intention of the company to instal gas engines in which natural gas will be consumed. The power plant will consist of two 150 k.w. generators. Tenders are under consideration for the supply of six single truck cars, with longitudinal seats, each capable of accommodating 22 people, and fitted with two series wound motors of 40 b.h.p. The resident engineer in charge of construction is W. G. Ritchie.

Montreal St. Ry.—The question of the renewal of the franchise came before the Montreal board of control April 18, when it was decided to write the company on the matter. It is expected that before any arrangement is made with the city, the four companies will be amalgamated under the title of the Montreal Tramways Co., as sanctioned by the Quebec Legislature. (See Montreal Tramways Co., April, pg. 359.)

Montreal Tramways Co.—The Quebec Legislature has incorporated a company with this title to construct and operate an underground railway through the Island of Montreal and Ile Jesus and Bizard, and other railways and tramways, and to acquire existing lines. The purpose of the company is to amalgamate the existing companies and to provide for the extension of the lines. After an agreement had been reached with the city of Montreal as to the existing contracts, certain amendments were made and the bill was allowed to pass. (April, pg. 359.)

Moose Jaw Electric Ry.—We are advised that tenders are being asked for the building of a power house and car barns. It was expected to start work early in April on the completion for operation of the track laid during 1910, and upon laying an additional three miles of track.

A. H. Dion, in a recent interview, stated that work on the Electric Ry. will be pushed to a completion as speedily as possible. Tenders are under consideration for the building of a power house and car barns. The engines and generators for the power house are ready, but will not be delivered until the power house is ready. A number of the cars are ready for shipment, and others are being built by the Ottawa Car Co. The portion of the lines built include a double track from the C.P.R. station to Oxford St., on Main St., and from Fourth Ave. to Main St., on High St. (April, pg. 365.)

Nelson St. Ry.—We are advised that during 1910, the company reconstructed the old line of two miles in Nelson, B.C., and built an extension of 1.25 miles. (Sept., 1910, pg. 781.)

Niagara Frontier Electric Ry.—The Ontario Legislature has incorporated a company with this title to build an electric railway from Niagara-on-the-Lake to Fort Erie, Ont. (April, pg. 365.)

Niagara, Welland and Lake Erie Ry.—The Dominion Parliament has incorporated a company with this title to build an electric railway. The route of the various lines, and the names of the provisional directors have already been published in this department.

A. P. Laughlin, one of the provisional directors, is quoted as having stated recently that arrangements are being made to start work on the building of an electric railway through Welland, Ont., at once, and to have it completed by the fall. (Mar. pg. 259.)

Ontario West Shore Ry.—Negotiations are in progress with the municipal council of Bayfield, Ont., for an extension of the line southerly from Goderich, Ont. (April, pg. 365.)

Ottawa and St. Lawrence Electric Ry.—The Ontario Legislature has extended the time within which this projected electric railway may be built. (Mar., pg. 259.)

Ottawa Electric Ry.—We are advised that it is the company's intention to lay a double track line on Preston St., from Somerset St., to Dow's Lake, 1.25 miles, this season. The work of relaying the present tracks on Sparks St. was expected to be started in April. No other construction is likely to be undertaken this year. (April, pg. 365.)

Ottawa, Smiths Falls and Kingston Ry.—A meeting of shareholders was held in Ottawa, April 12, when the following were elected directors:—F. A. Heney, Westboro, Ont.; T. A. Kidd, Burritt's Rapids, Ont.; J. F. Caldwell, City View, Ont.; G. L. Dickenson, Manotick, Ont.; and G. Boyce, Merivale. Arrangements were made with a view of raising the capital necessary for the building of the railway, and it was proposed to hold a series of meetings to secure financial aid in the municipalities through which the projected line will pass. (April, pg. 365.)

Port Arthur and Fort William Electric Ry.—R. S. Kelsch, Montreal, has been engaged in making preliminary surveys for extensions of lines in Fort William, Ont. (April, pg. 365.)

Peoples Ry.—The agreements made between the company and the Guelph Radial Ry., with respect to the construction of certain lines in the city of Guelph Ont., and their connection with the G.R.R. lines, have been confirmed by the Ontario Legislature. The Legislature has also granted the company an extension of time within which to build its previously authorized lines, and has given power for the building of additional lines. (Mar., pg. 259.)

Quebec and Island of Orleans Ry.—The Quebec Legislature has granted an extension of time for the building of the line already authorized, and has given the company power, if thought advisable, to build the line on the mono-rail system of construction. (Feb., pg. 169.)

St. John Ry.—The company's application to the New Brunswick Legislature for power to extend its lines in various directions has been amended by limiting the extensions to the parishes of Rothesay, Westfield and Hampton. (April, pg. 365).

St. Thomas Street Ry. — The St. Thomas, Ont., city council is being asked to approve of the submission to the taxpayers of a bylaw providing for the raising of $35,000 for the purpose of putting the line and the overhead construction in proper repair; to repair the present rolling stock, and to purchase three new cars. (Mar., pg. 261.)

Saskatoon, Sask. — Six propositions were submitted to the city council of Saskatoon, Sask., April 4, for the construction of an electric railway in the city. The propositions were submitted by E. J. Wenger and Co., Regina, Sask.; the interests behind the Moose Jaw Electric Ry., J. E. Hutchinson, Ottawa; Lyons and Shepard, Edmonton, Alta.; C. Meredith and Co., Montreal; C. C. Cohan, Montreal. The whole matter was referred to a special committee consisting of Aldermen Caswell, Willoughby and Harrison.

Sherbrooke Railway and Power Co.—The power plant has been completed and power was turned on about a month ago. The whole plant is of very fine construction. The completion of the railway within the city was expected to be taken up April 15. The new rails and special work have been ordered, and it is expected that the whole system will be completed by about June 15. When finished it will cover about 11 miles. Besides the branch to Lennoxville further extensions are under consideration. The Lennoxville line extends three miles from Sherbrooke, and forms a very important link, connecting Sherbrooke with Lennoxville, which is the seat of Bishops College University. (April, pg. 365..)

Toronto and York Radial Ry.—Application is being made to the Ontario Railway and Municipal Board to approve plan and profile of the proposed deviation of the Metropolitan division westerly off Yonge St.,* from the C.P.R. tracks, northerly to within a few feet of Balmoral Ave.

The building of the double track deviation near Mimico, on the Sunnyside-Port Credit line, is nearly completed, and the new bridge over the Mimico creek has been built. It is expected that the new piece of line will be connected up and put in operation by June.

The Ontario Legislature has amended the company's powers as to the construction of lines. (Mar., pg. 261.)

Toronto Civic Street Railway.—The city engineer was directed April 4 to prepare plans for a subway on Yonge St. from the Union Station to St. Clair Ave., in connection with the proposed civic street railway and tube system. It is expected that tenders will be asked for on the adoption of the plans, and that a vote of the ratepayers will then be taken as to construction.

The city solicitor has been instructed to prepare a report upon the question of the interchange of traffic between the Toronto Ry. lines and the civic lines. (April, pg. 365.)

Toronto Interurban Ry. Co.—The Ontario Legislature has incorporated a company with this title to build a railway to be operated by steam or electricity from Toronto to Newmarket, Ont. (Mar., pg. 261.)

Toronto Suburban Ry.—The Ontario Legislature has extended the time within which certain extensions of the company's present lines may be built, and has authorized the building of a line via Cooksville to Milton and Acton, Ont. The time extension allowed is one year, and the Legislature did not grant the increase of capital stock, or power to build all the extensions asked for.

The committee had engineers out over the routes of proposed lines which should be built within the year's extension granted, April 5, and the following week. (Mar., pg. 261.)

Windsor, Essex and Lake Shore Rapid Ry.—A Chatham, Ont., press report states that J. Piggott says the company is planning to extend its line from Chatham to London, and that for the purposes of construction an issue of bonds will be placed on the London, Eng., and Paris, France, markets.

Winnipeg Electric Ry.—The city council, April 12, passed a resolution asking the company to at once file plans for various extensions of lines in the city, and for certain second track work. The material has been delivered for the new belt line on Princess and Donald streets from the C.P.R. tracks to Broadway, for the purpose of relieving the traffic on Main St. The work is expected to be completed early in July. (Mar., pg. 261.)

Ferranti

TRACTION METERS

The demand for Car Meters has grown very rapidly and the economies effected by the installation of these instruments have more than justified their use.

The guaranteed accuracy of the Ferranti Traction Meter is $2\frac{1}{2}$ per cent. from full load to 1-10th load.

Will stand 100 per cent. overload for ten minutes.

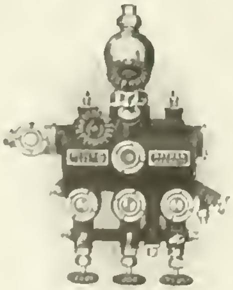
NATHAN BULL'S EYE LUBRICATOR



A new type that may be safely relied upon under all conditions of modern locomotive service.

The new form of "DISC" glass is unbreakable so far as human agency can provide. Danger to enginemen and delays to trains, resulting from breakage, have been practically eliminated.

Every lubricator conforms to our high standard of material and workmanship and is subjected to tests of extreme severity before shipment.

British Columbia Electric Ry.—Applications for the recent issue of £600,000 4¼% perpetual consolidated debenture stock, were received during April. Of the issue 5% was due on application, 10% on allotment, 20% on Apr. 27, and 30% is due on June 6, and 35% on July 10. The proceeds are required for general purposes, and for extensions necessitated by increasing business. The stock ranks parri passu with the present perpetual consolidated debenture stock, which is secured by a first mortgage on the whole of the assets and undertakings, subject to existing mortgages and charges issued to secure the £228,400 first mortgage debentures and £110,600 Vancouver Power Co.'s debentures now outstanding. The interest dates are Mar. 31 and Sept. 30 each year, the principal being irredeemable. On the present showing, the company's net earnings will be sufficient, after paying all charges, to pay its debenture interest three times over.

Gross earnings for Feb. $348,332; operating expenses, $212,239; operating earnings, $136,093; renewal funds, $29,770; net earnings, $106,323; approximate income from investments, $20,000; net income, $126,323, against $237,756 gross earnings; $139,884 operating expenses; $97,872 operating earnings; $17,852 renewal funds; $80,020 net earnings; $16,500 approximate income from investment; $96,520 net income for Feb., 1910. Aggregate gross earnings for eight months ended Feb. 28, $2,708,734; net earnings, $1,096,775, against $1,968,901 gross, and $861,148 net for same period 1909-10.

Calgary Municipal St. Ry.—Passenger earnings for Mar., $22,493.10; miscellaneous earnings, $323.15; total earnings, $22,816.25; operating expenses, maintenance of way and structures, $385.05; maintenance of equipment, $1,075.10; transportation, $9,490.92; general expenses, $687.46; total operating expenses, $11,639.53; net operating revenue, $11,176.72; contingent account, 5% gross receipts, $1,140.81; interest and sinking fund, $2,715.88; net profits, $7,320.03.

Halifax Electric Tramway.—Railway receipts for Mar., $16,129.49, and for two weeks ended Apr. 14, 7,661.62, against $15,966.97 and $7,303.94 for same periods 1910.

London Street Ry.—Experts were in the city making a valuation of the plant of the L.S.R., and of the London and Lake Erie Ry. and Transportation Co. line recently, and it is stated that an offer will be made for these two lines on behalf of a syndicate which is arranging for a merger of all the electric lines in Western Ontario, as predicted in these columns nearly two years ago.

Gross earnings for Mar., $21,175.20; expenses $15,370.73; net earnings $5,804.47; deductions, $2,441.75; net income, $3,362.72, against $20,451.80 gross earnings; $14, 762.17 expenses; $5,689.63 net earnings; $2,441.75 deductions; $3,247.88 net income for Mar. 1910. Aggregate gross earnings for three months ended Mar. 31, $61,080.86; expenses $45,065.94; net earnings, $16,041.92; deductions, $7,000.05; net income, $8,925.80, against $56,164.74 aggregate gross earnings; $41,467.30 expenses; $14,697.44 net earnings; $7,089.00 deductions; $7,608.39 net income for same period 1910.

Montreal and Southern Counties Ry.—The Dominion Parliament has authorized the G.T.R. to acquire, and deal with the capital stock, bonds and other securities issued by the M. & S.C.R. Co.

Montreal St. Ry.—Passenger earnings for Feb., $326,628.34; miscellaneous earnings $4,109.33; total earnings $330,737.67; operating expenses $227,604.44; net earnings $103,133.23; city percentage on earnings $21,024.29; interest on bonds and loans $15,642.58; rent leased lines $607.10; taxes $4,700; total charges $41,973.97; surplus $61,159.26; expenses per cent. of earnings 68.82; for March, passenger earnings $368,079.75; miscellaneous earnings $3,912.68; total earnings $371,992.43; operating expenses $234,484.22; net earnings $137,508.21; city percentage on earnings $25,616.79; interest on bonds and loans $15,498.86; rent leased lines $607.10; taxes $4,700; total charges $46,422.75; surplus $91,085.46; expenses per cent. of earnings, 63.03; against $300,029.83 passenger earnings; $3,947.43 miscellaneous earnings; $303,977.26 total earnings; $204,255.58 operating expenses; $99,721.68 net earnings; $20,487.50 city percentage on earnings; $14,834.90 interest on bonds and loans; $552.89 rent leased lines; $4,000 taxes; $39,875.29 total charges; $59,846.39 surplus; 67.19 expenses per cent. of earnings, for Feb., and 332,781.05 passenger earnings; $3,415.54 miscellaneous earnings; $336,196.59 total earnings; $220,790.08 operating expenses; $115,406.51 net earnings; $21,484.65 city percentage on earnings: $14.637.64 interest on bonds and loans; $552.90 rent leased lines; $4,000 taxes; $40,675.19 total charges; $74.731.32 surplus; 65.67 expenses per cent. of earnings, for March, 1910. Aggregate total earnings for six months ended Mar. 31, $2,202,914.87; operating expenses $1,370,472.62; net earnings $832,442.25; total charges $229,205.39; surplus $603,236.86; expenses per cent. of earnings 62.21, against $1,992,236.21 aggregate total earnings; $1,216,984.37 operating expenses; $775,251.84 net earnings; $212,585.76 total charges; $562,666.08 surplus; 61.09 expenses per cent. of earnings, for same period 1909-10.

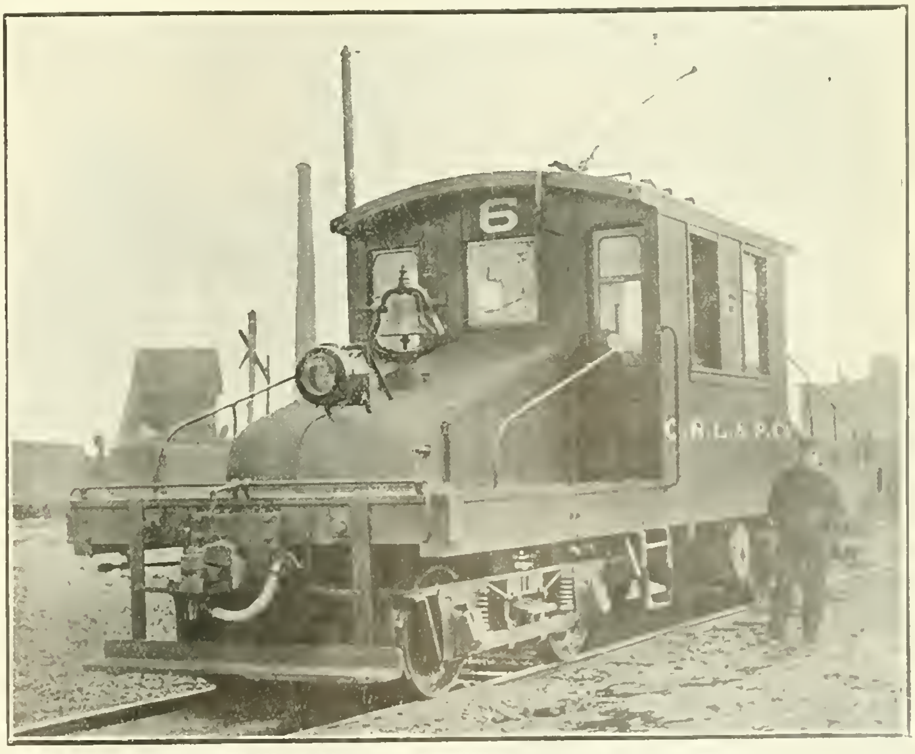
Toronto Ry.—Gross earnings for Feb., $335,010; operating expenses $181,933; net earnings $153,077, against $305,617 gross earnings; $167,085 operating expenses; $138,532 net earnings for Feb., 1910. Aggregate gross earnings for two months ended Feb. 28, $693,854; net earnings $322,484, against $632,265 gross and $290,165 net for same period, 1910.

Winnipeg Electric Ry.—Gross earnings for Feb., $309,500; working expenses, $162,074; net earnings, $147,126, against $261,864 gross earnings; $133,270 working expenses; $128,594 net earnings for Feb., 1910. Aggregate gross earnings for two months ended Feb. 28, $655,644; net earnings, $305,221, against $559,408 aggregate gross earnings and $271,941 net earnings for same period 1910.

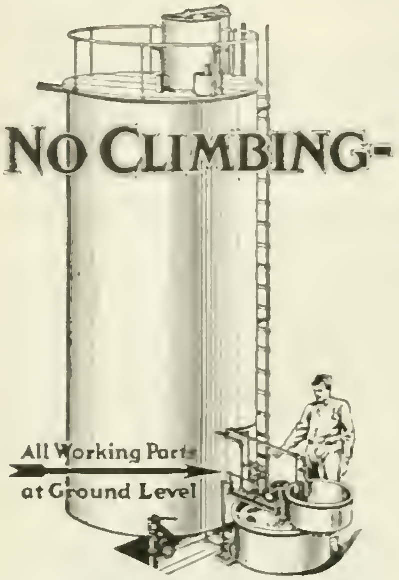
◆

Q.R.L. & P. Co's. Electric Locomotive.

The Quebec Railway, Light & Power Co. has recently built at its own shops at Ste. Anne de Beaupre a new electric locomotive for its Montmorency division. The company plans to build a number of other locomotives of the same type and to do away entirely with steam operation on the division. The dimensions of the locomotive are: Length over all, 34 ft.; width, 8 ft. 8 ins.; weight, 59.300 lbs.; diameter of driving wheels, 33 ins.; wheel base of each truck, 6½ ft.; total wheel base, 28 ft. 8 ins.; axles, 4½ ins.; journals, 7x3½ ins.; gauge of track, 4 ft. 8½ ins. The axle carries a motor wound for 600 volts. The flanges, journals and boxes are of M.C.B. standard. The longitudinal frame consists of two outside pitch pine sills 12x5 ins., and four inside sills 9x4½ ins. Steps are provided at each end on the sides. The body bolster is of wrought iron. The cab is of wood, size 11 ft. by 8½ ft., with two windows 30 by 28 ins. on each side, and one at each end of the same size. There are also two glass doors at the end. Hoods at each end of the cab cover the resistance and other electrical equipment. The locomotive is fitted with a hand brake on all the wheels, also with the Westinghouse automatic air brake. The equipment includes a bell and whistle. The gear ratio is 14:68, gives a normal speed of 18 miles an hour, and on a level carries 400 tons at a speed of 10 miles an hour. The locomotive carries a quadruple equipment of four no. 56 Westinghouse railway motors, having a nominal rating of 55 h.p. each, total of 220 h.p. at 600 volts. Standard nose suspension is used. The one K34 controller is located in the centre of the cab.



Quebec Railway, Light and Power Co.'s Electric Locomotive.



NO CLIMBING-
All Working Parts at Ground Level

Careful investigation will convince you that when you buy a Booth Water Softener your money becomes worth more than if invested in some other machine.

Our claim of greater efficiency, greater simplicity, and greater economy of operation is fully demonstrated by results being obtained.

If you investigate thoroughly and are looking for simplicity—efficiency—and a machine that can be relied upon at all times to produce—the right results—at the right cost a Booth Water Softener will be your first choice.

Kalamazoo Reinforced Pressed Steel Wheels

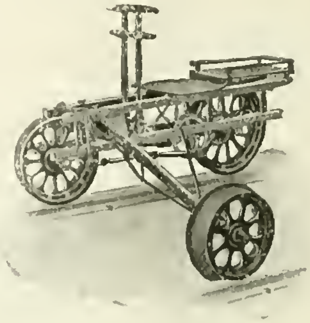
For Hand and Push Cars

They always wear much longer than others, giving fully 100 per cent. greater service than any other wheel of similar design or weight.

Kalamazoo Wheels are strongest where other wheels are weakest—in the throat of the flange (See sectional cut).

Made in three sizes, 16 in., 20 in., 24 in.

Twenty Styles of Kalamazoo Velocipedes



The Kalamazoo idea is to provide the proper velocipede for each different need. No difference what you want or for what purpose, we have it

We also build Hand Cars, Push Cars, Inspection Cars, and Gasolene Motor Cars, in many styles and sizes.

DAKE ENGINE CO., Grand Haven, Mich.

Nipissing Central Railway.

An arrangement has been made by the Temiskaming and Northern Ontario Ry. Commission for the purchase of the Nipissing Central Ry., a five mile railway running from Haileybury, on Lake Timiskaming, to North Cobalt. The price to be paid, it is stated, is $250,000, the purchase being made from D. Fasken, Toronto, representing the company. The railway has done a large amount of business.

The N.C. Ry. Co. was incorporated by the Dominion Parliament in 1907, the provisional directors being: J. W. Fitzpatrick, F. R. Latchford, Ottawa; B. F. Pearson, Halifax, N.S.; G. A. Browning, North Bay, Ont.; G. Taylor, New Liskeard, Ont.; M. J. O'Brien, Renfrew, Ont.; H. L. Dunn, Toronto; G. F. Duncan, Portland, Me.; J. J. Whipple, Brockton, Mass. In the following year an amending act was passed in which E. J. Daly, Ottawa, replaced F. R. Latchford; Hon. D. McKeen, Halifax, replaced B. F. Pearson, and C. M. Stone, Cleveland, Ohio, replaced J. J. Whipple as provisional directors. The company was authorized to build two lines starting at Latchford, Ont., and extending to the National Transcontinental Ry., the junction point of one line being fixed in the act near the Metagami River; a line from Latchford to Timagami station on the Temiskaming and Northern Ontario Ry., and various branch lines serving the whole of the intervening district. The company was given authority to develop water powers, generate and distribute electricity, to operate steam and other vessels, and to enter into agreements with the G.T.R., the G.T. Pacific Ry., or the T. and N.O. Ry. Commission for any of the purposes specified in sec. 361 of the Railway Act.

Franchises were granted April, 1909, by the Haileybury, and Cobalt municipalities and by the township of Bucke, for the building of an electric railway between Cobalt and Haileybury, a distance of about five miles; preliminary work on construction was started, and a contract was let to the Lindsay Construction Co. for building the line. Grading was completed about the end of Oct., and the line was completed by the end of March, 1910. The line was passed for operation by the Government engineers April 12, 1910, and a regular half-hour passenger service was inaugurated April 30. Four cars were delivered in Oct., 1909; four trailers and a locomotive were subsequently ordered, the latter to be used for hauling the cars, pending the completion of the electrical plant.

Surveys were made in Aug., 1910, for the extension of the line from Cobalt to Kerr Lake, and in the following month a franchise was granted for an extension of the line from Haileybury to Liskeard.

◆

Electric Railway Notes.

The Ottawa Electric Ry., has received two pay-as you-enter cars, 45 ft. long over all, mounted on 27-G-1 trucks from the Ottawa Car Co.

The Edmonton Radial Ry. has received four 28 ft. pay-as-you-enter cars, mounted on 27-G-1 trucks, 44½ ft. over all, from the Ottawa Car Co.

The Moose Jaw Electric Ry., has received two single truck semi-convertible pay-as-you-enter cars, mounted on 21-E trucks, from the Ottawa Car Co.

The Berlin and Waterloo St. Ry., and the Galt, Preston and Hespeler St. Ry., are now receiving their power from Niagara, over the Hydro-Electric Commission line.

The Montreal and Southern Counties Ry. has ordered one electric motor combination passenger and baggage car, and one electric motor flat car, to be built at the G.T.R. Montreal shops.

The Peterboro Radial Ry. has ordered three single truck pay-as-you-enter cars, mounted on 27-E trucks, and one double broom snow sweeper, from the Ottawa Car Co., for delivery by July 15.

J. E. Hutcheson, Superintendent and Purchasing Agent, Ottawa Electric Ry., on his return to Ottawa from the west, Apr. 10, is reported to have said that early in May the company hoped to put in operation 20 new p.a.y.e. cars.

One of the six pay-as-you-enter type of cars being built for the Moose Jaw, Sask., Electric Ry., by the Ottawa Car Co., was exhibited in Ottawa, April 18. It is similar to those in use on the Bank St. line in Ottawa, with the exception that instead of four cross seats at the back, there are two longitudinal seats. The same seating capacity is provided, but there is greater standing room.

The Calgary Municipal St. Ry. has awarded contracts for the supply of a 1,600 k.w. turbo-generator set with condenser, etc., to Allis-Chalmers-Bullock, Ltd., Montreal, and for a 100 k.w. exciter and switchboards, to the Canadian Westinghouse Co., Ltd., Hamilton, Ont. Allis-Chalmers-Bullock, Ltd., will also have charge of the removing and reerecting of the boilers from the power house to Victoria Park, and such other necessary work as is required.

The Nova Scotia Legislature has passed an act providing that in all matters regarding extensions of electric railways, whether proposed by the city council, or the company, in case of disagreement, the Board of Public Utilities shall be the court of appeal. The Board shall have power to regulate frequency of service, ventilation of and heating of cars, etc. Hitherto the Board had control only of telephone, lighting and power companies. The Cape Breton Electric Co., and the Pictou County Electric Co., which have electric railways at Sydney, and New Glasgow, respectively, have been exempted from the operations of the act.

An application which had previously been made to the Board of Railway Commissioners for leave to prosecute the London and Lake Erie Ry. and Transportation Co. for operating its cars on Sundays, and dismissed, was made to the Ontario Railway and Municipal Board recently. The Chairman, J. Leitch, K.C., in delivering judgment, said that there was no dispute as to the facts. The company, which operates an electric railway between London and Port Stanley, Ont., through St. Thomas, was incorporated by the Dominion Parliament, but under sec. 9 of the Railway Act it comes under provincial jurisdiction so far as operating cars on Sundays is concerned. Nothing in the act, however, applies to any railway which forms a part of a continuous system between any of the ports of the Great Lakes, nor does it apply if the Governor General proclaims it to be exempt. It has not been contended that the company has been declared exempt, and the question is whether or not it forms part of a continuous system between Ontario and the U.S. The Board is of opinion that very important questions of law and fact are involved, and does not feel like closing the doors of the court on the applicant. If it is found that the company has not violated the law, then the applicant will suffer the penalty of costs which the courts impose. The application was granted, no order being made as to costs. It is stated that should this case be successful from the applicant's point of view, other actions will be taken against companies running cars on Sundays under similar conditions.

Sandwich, Windsor and Amherstburg Ry.

The Detroit United Ry. Co.'s annual report for the year 1910 embraces all the subsidiary companies, including the Sandwich, Windsor and Amherstburg Ry., of which the following particulars are given: Mileage, 36,060; interest on funded debt, $34,000; revenue passengers, 3,261,664; transfer passengers, 429,383; employe passengers, 20,269; total passengers. 3,711,316; mileage statistics, car mileage, 856.186; earnings car mile .2165; expenses, .1115; net earnings, .1050. In extending the S.W.A.R. lighting plant and addition to power house $55,113.16 was expended. Under investments, the S. W. & A. R. is given as $253,134.91, and under accounts current, $200,503.57.

Balance Sheet, Sandwich, Windsor and Amherstburg Ry.

	$298,553.79	$298,553.79

The earnings and expenses of the Windsor & Tecumseh Electric Ry. are included in the operations of the Sandwich, Windsor & Amherstburg, Ry., which latter company owns all of the capital stock of the W. & T.E.R.

◆

Ontario Electric Railway Legislation.

The Ontario Legislature passed the following Act at its recent session:

The Ontario Railway and Municipal Board Amendment Act, 1910, is amended by adding thereto the following sections:

"11. All tracks, switches, additional lines and extensions of existing lines which are, have been or shall be hereafter constructed and operated by a street railway company in pursuance of an order of the board, shall nevertheless be deemed to have been constructed under the authority, and shall be subject to all the provisions of the agreement between the company and the corporation of the municipality, or the bylaw of the council thereof, by which authority to construct the railway was conferred upon the company.

"12. It was not intended by the said Act to confer, and it did and does not confer upon the board power or authority to require or to permit a railway company, or a street railway company, without the consent of the corporation of the municipality, to construct or lay down within the municipality more tracks or lines than under its agreement with the corporation or the bylaw of the council of the corporation of the municipality by which authority to construct the railway upon any such street or highway or part of a street or highway was conferred, it has authority to construct or lay down, but the agreement or bylaw shall govern as to the number and location of the tracks and the streets or highways upon which the railway may be constructed."

◆

The Nova Scotia Legislature has passed an act respecting street railways within the province, and another one authorizing the granting of aid to electric railways.

TITANIUM

The Wonder-Working Alloy

Rails made from open-hearth steel purified by Titanium Alloy "flow" less, wear less, and splinter less, simply because Titanium Alloy makes them sound, healthy and free from slag and blowholes. Toughness is increased—brittleness decreased. Cost is increased $1 to $5 per ton, depending on amount of alloy used.

Booklet No. 30 tells about Titanium Alloy and its effect on iron and steel.

Titanium Alloy is made for Canadian consumption by Electro Metals, Ltd., Welland, Ont.

◆

Montreal Harbor Improvements.

The Montreal Harbor Commissioners' improvement programme for the present season, comprises the completion of the no. 2 elevator, with a capacity of 1,772,000 bush.; the preparation of the site for the proposed dry dock; and the completion of ten additional miles of high level railway with sidings. Increased accommodation will be given for ocean going vessels, by the re-modelling of the Victoria pier, which when completed will have 2,700 ft. of high level permanent quay with five double decked re-inforced concrete sheds and grain conveyor equipment. The inner side will be 4,800 ft. long, and a jetty 500 ft. long will provide accommodation for the Richelieu and Ontario Navigation Co.'s vessels. With this extension of the Victoria pier, it is considered necessary to divert the flow of the St. Mary's current, which will be accomplished by an addition to the south of the down stream end of the Mackay pier, as well as by dredging a channel to the south of St. Helen's island. A number of old sheds will be removed near the elevator, to make room for the office building for the traffic and elevator staffs. A concrete ferry wharf is also to be built at St. Helen's island, about 265 ft. long. The work of preparation of the site for the dry dock, includes the dredging of a basin 50 ft. deep, the filling of about 20 acres of reclaimed land, the erection of quay walls for the reception of the floating dock, and preparing for the erection of the shipbuilding plant. The building of the high level railways, which was commenced last season, will be continued as far as Racine pier this year. There will be 11 concrete subways to allow passage to and from the docks. The foundations of the elevators were laid last year, and are for a building 314 by 100 ft., and 230 ft. high, having accommodation for 1,772,000 bush., and provision will be made for a further 800,000 bush. capacity should it be rendered necessary. The receiving capacity will be at the rate of 40,000 bush. an hour from vessels, and 24 cars an hour, while it will provide for the transfer of 45,000 bush. an hour to ocean going vessels. There will also be a cleaning plant with a capacity of from 3,000 to 6,000 bush. an hour, and a drying plant of 500 to 700 bush. capacity. The elevator was designed by the John S. Metcalf Co., Ltd., Montreal. There

will also be completed this season, a marine tower jetty, or pier, 400 ft. long, of solid crib work substructure and concrete superstructure with a quay wall, in front of the elevator, with a mile of railway track connected. The Commissioners have acquired the dredging plant, formerly operated by F. Gilbert, and a seven yard dredge has been built at the harbor shops, where another is under construction. A light draught twin screw steam tug, to be named John Young, is approaching completion, and an ice breaking steam tug for towing and inspection purposes, to be named Sir Hugh Allan, is being built at Barrow-in-Furness, Eng., and is expected to sail for Montreal in June. The erection of additional workshops and storage warehouses, with connecting sidings, and two single story concrete sheds, will also be undertaken.

The Canada Shipping Act.

The Dominion Parliament is being asked to amend the Canada Shipping Act in several details. It is desired to bring it into conformity with Imperial legislation by making it unnecessary for the vessels of the naval service, with the exception of the those engaged in the hydrographic surveys, and the fisheries protection service, to be registered. As regards sick mariners the new measure makes it clear that contributions to funeral expenses shall be paid out of the fund created under the act. and that collectors of customs who collect the dues under the act, shall report more frequently than they do at present.

An important change is made concerning pilotage in the St. Lawrence. It was proposed to make pilotage in the St. Lawrence, and in all parts of Canada where pilotage exists, compulsory. At present, pilotage is not compulsory in the St. Lawrence, although the payment of pilotage dues is. This provision is being made as the result of conferences which have taken place between the Department and the various shipping interests. The provision applies to all vessels of over 10 ft. draught; all sea going vessels must take pilots, and others need not do so, if they are provided with masters and mates who have passed the necessary examination qualifying them to run a vessel in the St. Lawrence channel. It is also proposed to include the St. John pilotage authority, and the Minas Basin pilotage authority, and the those authorities which are at present allowed, under existing legislation, to force all vessels engaged in the coasting trade to take pilots.

The measure also extends the period within which investigations into wrecks may be ordered from a month to a year; to permit the holding of the position of inspector of hulls, and inspector of machinery by the same person, if duly qualified; to permit of an appeal to the House of Lords or to the Privy Council in cases where the certificate of a sea-going master or mate is cancelled by the Wreck Commissioner, and to authorize the dispensation of inspection of boilers and hulls of vessels certified by British or foreign authorities. This latter provision is to be subject to the authority of the Governor-General, who shall define what certificates shall be accepted. Power is also taken in the measure to regulate traffic in the St. Lawrence channels, and provision is also made for obtaining the sanction necessary under the Imperial Shipping Act of 1894 for any Canadian legislation which might conflict in words, if not in fact, with the Imperial legislation. This Imperial act of 1894 provided that the self-governing colonies could enact their own shipping legislation, provided that the several acts were approved by the King-in-Council before they became operative.

The bill was read a second time, April 5, and was then referred for special consideration to the Committee on Marine and Fisheries, before which all interests affected by the bill will appear and state any objections they have to its becoming law. So far as the Dominion Marine Association is concerned, its position is that it does not offer any serious objection to the proposal to render pilotage as well as payment of dues compulsory in the two districts named, the proposal being considered preferable to the existing state of affairs. While this is the most important point of the bill there are, we understand, certain of the clauses in the bill as it stands, which require to be amended so as to bring them more in accord with the views of the marine men.

A deputation of those interested in the proposals contained in the bill, including Francis King, representing the Dominion Marine Association, and F. E. Meredith, K.C., on behalf of the Shipping Federation of Canada, waited on the Minister of Marine, Apr. 25. The Minister explained that the shipping interests of Ontario had complained there was discrimination in favor of the Maritime Provinces and Quebec, and the Dominion Marine Association had asked that the compulsory pilotage proposals be eliminated from the bill, and the law stand as it was. This was agreed to by the Shipping Federation of Canada, and all the pilotage clauses, so far as they related to the St. Lawrence, would be struck out.

Notices to Mariners.

The Department of Marine has issued the following:—

29. Mar. 24.—68. General, buoyage, shapes of tops of spars. 69. New Brunswick, east coast, Pokemouche gully, hand fog horn at light station. 70. Quebec, River St. Lawrence, Montreal harbor, Ile Ronde, lighthouse increased in height.

30. Mar. 27.—71. Quebec, Ottawa River mouth, Lake St. Louis, improvement of channel, rearrangement of lights and buoys.

31. Mar. 30, 72. Quebec, Ottawa River, Rigaud river entrance, range lights established, lighted buoys discontinued, buoys re-arranged. 73. United States of America, Lake St. Clair, St. Clair flats canal, gas buoy to be established. 74. United States of America, River St. Clair, St. Clair middle ground, gas buoy to be established. 75. United States of America, River St. Mary, Sweets point shoal, gas buoy to be established, light and buoy to be discontinued. 76. United States of America, River St. Mary, Mud lake, Pointe aux Frenes, gas buoy to be established. 77. United States of America, River St. Mary, Sailors' Encampment, gas buoy to be established, float lights to be discontinued.

32. Mar.31. 78. British Columbia, Queen Charlotte Islands, Moresby island, Selwyn inlet, Pacofi, hydrographic information, private buoys. 68. General, buoyage, shapes of tops and spars.

33. Apr. 1.—79. Quebec, River St. Lawrence, survey steamer at work in the vicinity of Father Point and Bicquette island, caution. 80. Quebec, River St. Lawrence, Bic island and vicinity, hydrographic information, anchorages. 81. Quebec, River St. Lawrence, Escoumains, anchorage, wharf.

34. Apr. 4.—82. New Brunswick, Miramichi River, beacons between Newcastle and northwest arm. 83. England, west coast, Wales, Fishguard approach, light and submarine bell buoy established.

35. Apr. 12.—84. Ontario, Lake Huron, Goderich harbor entrance, buoyage. 85. Ontario, Muskoka Lake, east side, Muskoka River, lights established.

36. Apr. 13.—86. Nova Scotia, south coast, Shelburne, light established. 87. Prince Edward Island, Northumberland Strait, gas and whistling buoy in mid-strait between Tryon shoal and Tormentine reefs withdrawn. 88. Prince Edward Island, Northumberland Strait, west reef, whistling buoy replaced by gas and whistling buoy. 89. Prince Edward Island, North Point reef, whistling

Atlantic and Pacific Ocean Marine.

The Canadian-Australian Line's s.s. Makura, in arriving at Victoria, Apr. 2, made what is claimed to be a record, for the trip from Sydney, N.S.W., in completing the journey under 19 days.

Press reports from Victoria, B.C., state that the s.s. Montfort, of the C.P.R. Atlantic service, will shortly be transferred to the Pacific service, and will alternate with the Monteagle, between Vancouver and Hong Kong.

The Canadian Mexican Pacific Steamship Co. has rechartered the s.s. Henley for its Vancouver-Salina Cruz service, and it is reported that the s.s. St. Ronald, recently chartered for the service, will be released on the completion of its present trip.

A Glasgow, Scotland, press dispatch, of Apr. 2, stated that shipbuilders on the Clyde were tendering for two steamships of 5,000 shaft horse power, for the C.P.R. Atlantic Service, to replace the steamships Empress of Britain and Empress of Ireland.

The Donaldson Line's steamships, Tritonia, Laconia and Kastalia, have recently been overhauled at Glasgow, in readiness for the season's business. The company's new vessel, which it is expected will be launched on the Clyde in October, will be named Letitia.

Press reports from Victoria, B.C., state that negotiations are proceeding between Alfred Holt and Co., Ltd., operating the Blue Funnel Line, and the G.T.P.R., relating to a steamship service between Canada and the Orient, with Prince Rupert as the Canadian port.

It is announced that the Red Star Line's steamships Samland and Gothland, are to be transferred from the New York to the Montreal route on the re-opening of navigation, and that they will be operated by the Canada Line, between Montreal and the European continent.

The Anglo-Newfoundland Development Co.'s ice breaking steamship Tritonia, recently built in Great Britain, for the pulp wood trade from Botwood, Nfld., will sail from Liverpool, Eng., shortly, Capt. H. Dawe and three seamen of Bay Robert, having sailed for England to bring her over.

The Allan Line s.s. Montevidean, which for a number of years operated in the River Plate trade, and made occasional visits to Montreal, has been sold to ship breakers for $25,000. She was built at Glasgow, Scotland, in 1887, her dimensions being, length 330 ft., breadth 42.1 ft., depth 24.7 ft., tonnage, 2,952 gross, 1,862 register.

The Department of Trade and Commerce is receiving tenders for a man service between Canada and Jamaica, for either 14, 10 or seven day service, calling on each trip at Bermuda and Turk's Island. The chief Canadian port is to be Halifax, N.S., and a call is to be made, each trip at St. John, N.B. Vessels mut be of British register, and preference will be given those having cold storage facilities.

It is reported from London, Eng., that a number of shipbuilders have been invited to submit tenders for the construction of two vessels for the C.P.R. Atlantic service. The plans submitted show a vessel 600 ft. long, and the whole built specially for passenger traffic. A vessel of larger dimensions than either of the Empresses is shown, and the specification calls for the most modern of reciprocating machinery.

The Weir Line s.s. Luceric, arrived at Victoria, B.C., Apr. 7, on her maiden trip from the Orient. She was built last year at Port Glasgow, Scotland, for Andrew Weir and Co., London, Eng. She is of the following dimensions, length 460 ft., breadth 57 ft., depth 32 ft., with 6,526 gross tons, and is equipped with triple expansion engines of 3,000 i.h.p., supplied with steam by four boilers, capable of 12 knots an hour.

The Harrison Direct Line has announced through its agents, Balfour, Guthrie and Co., Vancouver, that it will place a line of steamers in service between the Pacific coast and Europe, this season, the first vessel, s.s. Centurion, sailing from Antwerp, Belgium, Apr. 2, calling at Glasgow, Liverpool and Swansea, in Great Britain, and at San Pedrom San Francisco, Seattle, Vancouver and Victoria on the Pacific coast. The service will be a monthly one.

The Cunard Line, which recently purchased the steamships Cairnrona, Tortona and Gerona, the last named now approaching completion in England, as mentioned in our last issue, for operation on the St. Lawrence route, will, it is reported, re-name the vessels, Ausonia, Ascania and Albania. The first sailing from Montreal, for Southampton, Eng., is scheduled to take place May 20. We are informed that it is probable that they will be operated under the name of the Thomson Line.

Vancouver press reports state that investigations are being made into the possibilities of Quatsino Sound, Vancouver, as the port for the C.P.R. trans-Pacific steamships. The report states that a considerable saving of time would be accomplished by the adoption of this port, and it would mean the extension of the Esquimalt and Nanaimo Ry. to Quatsino Sound, where passengers and mails would be disembarked, and taken to Nanaimo or Nanoose, and shipped on other C.P.R. vessels to Vancouver.

The Allan Line s.s. Scotian, which recently arrived at Halifax, N.S., on her first trip for that company, was formerly the s.s. Statendam, of the Holland-Amerika Line, and was recently purchased by the Allan Line, to replace the s.s. Pretorian. She was built in 1898 at Belfast, Ireland, and is a twin screw steamer, equipped with two triple expansion engines with cylinders 27½, 45½ and 75½ ins. diar. by 54 ins. stroke, of 1126 h.p. Her dimensions are: length 515.3 ft., breadth 59.8 ft., depth 23.8 ft.; tonnage, 10,491 gross, 6,701 register.

A press dispatch from London, Eng., states that —. Tinsley, representative of the Uranium Steamship Co., the full name of which is said to be the Uranium Canadian Northern Steamship Co., and which is also said to be controlled by the Canadian Northern Ry., has been banished from Holland, for infringement of the regulations issued by the Netherlands Government regarding the landing of steerage passengers bound for Eastern Europe. The Uranium Steamship Co., operates two steamships between Holland and New York, with a call at Halifax. One of the vessels, the s.s. Volturno, was purchased last year by the Canadian Northern Steamships, Ltd., and is operated by the Uranium Steamship Co., under a charter.

Maritime Provinces and Newfoundland.

At a meeting of residents at Emerald, P.E.I., recently, a resolution was passed that a car ferry should be established between the island and the main land.

The Euphrates Steamship Co., of St. John's Nfld., is reported to have purchased the steamship Othar, from Crosbie & Co. It is stated to be the intention to operate it, in conjunction with the s.s. Euphrates in Conception Bay.

The following acts relating to the marine interests were passed by the Newfoundland Legislature at its recent session:—Respecting the coastal mail service; to encourage the operation of a dock at Harbor Grace; respecting pilots and pilotage; to provide for the inspection of boilers.

H. Cann and Sons' steamboat Hugh D., was destroyed by fire at Yarmouth, N.S., Apr. 3. She was built at Shelburne, N.S., in 1908. Her dimensions were: length, 80 ft., breadth 18 ft., depth 7½ ft; tonnage, 71 gross, 20 register. She was equipped with engine of 24 n.h.p., driving a screw.

The Dartmouth, N.S. ferry commission has been advised that, before Nov. 30, it will be necessary to install new boilers in the ferry steamboat Dartmouth. The question of the style of boiler to be adopted, is to be discussed, it having been suggested that oil-burning boilers be installed in place of the old ones.

A meeting was held, Apr. 5, at the Marine and Fisheries Minister's office, St. John's Nfld., to discuss arrangements whereby such vessels as were required for the Newfoundland trade generally could be built in the colony, instead of going outside as heretofore. The question of revising the act respecting ship building was also discussed.

The Eastern Transportation Co., the incorporation of which we announced in our last issue, is closely allied to, and will work in connection with, the Bathurst Lumber Co., Ltd. The headquarters are at Bathurst, N.B., and Angus McLean, Manager Bathurst Lumber Co., is President, with A. E. Loosen, accountant Bathurst Lumber Co., as Manager.

The Steamship Senlac Co.'s s.s. Senlac, which was to have been sold by public auction at Dalhousie, N.B., Apr. 5, was withdrawn, no bid being made. The vessel which is managed by Wm. Thompson & Co., St. John, N.B., is laid up at Dalhousie. J. H. Crossley has been appointed captain for this season, but we were advised Apr. 17, that it had not then been decided as to what route she would be placed on.

The Halifax and Newfoundland Steamship Co.'s s.s. Harlaw, under charter to Crosbie and Co., for sealing purposes, after having been crushed by ice, was abandoned, in a sinking condition, off St. Paul's Island, Apr. 7. She was built at Port Glasgow, Scotland in 1881, and was a screw driven vessel with engine of 71 n.h.p. Her dimensions were, length 165.1 ft., breadth, 24.5 ft., depth, 11.8 ft.; tonnage, 451 gross, 267 register. She was insured for $34,000 and $29,000 by the owners and charterers, respectively.

The Reid Newfoundland Co.'s s.s. Bruce, while en route from Port aux Basques, Nfld., to Sydney, N.S., towards the end of March, ran ashore in bad weather, at Point Nova, about eight miles from Louisburg, N.S., and became a total loss. Two of the passengers were drowned. A press report from Montreal, states that W. D. Reid, President Reid Newfoundland Co., has ordered a new steamer, of a similar type, to replace her. It is stated that the vessel will be ready for next season, and in the meantime, the s.s. Glencoe has been assigned to the route between Port aux Basques and Sydney.

A steel screw steamer, named Seal, was recently launched at Glasgow, Scotland, for Capt. J. A. Farquhar, Halifax, N.S. She is rigged as a two masted schooner, with upper and shelter decks, water ballast in double bottom and aft peak, and is specially strengthened for working in ice when sealing off Newfoundland. The machinery includes triple expansion engines, main boiler and donkey boiler, steam windlass, steam steering gear, steam winches, and she is equipped with wireless telegraph installation, electric light and electric searchlight. Her dimensions are, length 175 ft., breadth 26½ ft., depth 20½ ft.; tonnage, about 520 gross.

The s.s. Sandefjord, which recently underwent her trial trip off the Tyne, Eng., was built at Newcastle, for the iron ore trade between Wabana, Nfld., and Sydney, N.S. She is constructed on the Isherwood system to the requirements of the British Corporation for the Registry of Shipping, and the Norske Veritas. The machinery consists of triple expansion engines, with cylinders 28½, 47 and 78 ins. diar., by 54 ins, stroke, supplied with steam by three boilers, each 15½ ft., by 12 ft., at 180 lbs. pressure, under forced draught. There are also a steam windlass and steam steering gear, steam heating and complete electric light equipment, and ten steam winches, ten derricks and other facilities for the efficient handling of cargo. Her dimensions are, length 452 ft., breadth 58 ft., depth, molded, 28 ft., 8 ins., and she has a dead weight capacity of 10,650 tons.

The Nova Scotia Steel and Coal Co.'s ore steamers Tellus and Themis, recently built at Sunderland, Eng., which have been specially built for the trade between Wabana, Nfld., and North Sydney, Philadelphia and Middlesbrough, Eng., are of the following dimensions, length, 465 ft., breadth 60 ft., depth, molded, 37½ ft., with a dead weight capacity of 12,925 tons. The machinery includes triple expansion engines, with cylinders 27½, 45½ and 76 ins. diar., by 51 ins. stroke, supplied with steam by three Scotch boilers 17 ft. 2 ins. diar., by 11 ft. long, at 180 lbs. working pressure, developing about 2,500 h.p. The vessels are built on the cantilever principle with cellular double bottoms, and wing tanks extending the whole length, with water ballast capacity of 3,000 tons. There are five hatches, each 30 ft. wide, three being 36 ft. long and the others 30 ft. long. Twelve steam winches are provided with double derricks for each hatch. The Tellus recently arrived on this side, and the Themis is expected to arrive early in May.

Province of Quebec Marine.

The Dominion Government quarantine steamboat Polana was launched at Kingston, Apr. 4.

The Dominion Department of Public Works received Apr. 26, tenders for the construction of an extension to the western wharf at the quarantine station at Grosse Isle, Montmagny county.

The Richelieu and Ontario Navigation Co. is applying to Parliament for amendments to its act of incorporation, authorizing an increase of its capital stock to $10,000,000, and for other purposes.

Dominion Quarry, Ltd. has been incorporated under the Quebec Companies Act, with a capital of $20,000, and office at Quebec, to carry on a general stone quarrying business, and in connection therewith, to own and operate steam and other vessels.

P. Bourque, for some years keeper of the light at Bird Rocks, addressed the Canadian Club at Quebec, Apr. 6, on the possibility of winter navigation of the St. Lawrence river and gulf, and claimed that it was, with the assistance of wireless telegraphy, quite possible, though there might be delays owing to heavy ice.

The Montreal and Cornwall Navigation Co.'s steamboat Emerald, which has been sold to the Barclay Smith Forwarding Co., Montreal, was built at Montreal, in 1903, and was formerly named Garnet. She is a paddle wheel steamer, equipped with engine of 30 n.h.p., and is of the following dimensions: length 140 ft., breadth, 23 ft., depth 14 ft.; tonnage, 385 gross, 195 register.

The Canadian Whaling Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000, and office at Seven Islands, Que., to carry on a general whaling business, and to own and operate steam and other vessels and other necessary facilities therefor. The incorporators are, B. Sawyer, Westmount, Que.; F. Rosenburg, G. Magnus, L. B. Jennings, J. L. Danziger, Montreal.

The Fairhaven Transportation and Coal Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and office at Montreal, to build or otherwise acquire and operate steam and other vessels, and to carry on the business of forwarding and transporting passengers and goods on rivers, lakes and other waters, and to carry on the business of general merchants. The incorporators are, G. W. MacDougall, L. Macfarlane, G. Barclay, J. G. Cartwright and J. Graham, Montreal.

D. McNicoll, Vice President, C.P.R., had a conference with J. B. Laliberte, Chairman, Quebec Harbor Commission, Apr. 3, in connection with some improvements in the port. It is proposed to continue Prince Edward St., to the Empress docks, this meaning the continuation of the road from Prince Edward St., with the northern part of the embankment so as to run a direct line with that wharf for passengers and freight for the Empresses, and the construction of a line between the wharf and the Quebec and Montmorency Ry bridge. It was arranged that plans would be submitted to the Commission and to the city council, shortly.

The Government steamboat Cartier is engaged in re-surveying the River St. Lawrence in the vicinity of Father Point and Bicquette Island, and mariners are warned that as the lines of soundings take the vessel across the river at slow speed, on lines at right angles to the track usually followed by vessels, and as much loss of time ensues when she has to leave these lines, they should pass astern of her, if circumstances permit. In any case the helm should be altered to clear her in ample time, in order that the Cartier's officers may be in no doubt as to the course of passing ships. The Cartier being a two masted vessel, painted white, is easily recognizable.

The Quebec board of trade, recently memorialized the Minister of Marine, regarding the location of the proposed navy yard and ship building and repairing plant for vessels of the Canadian Navy, urging the claims of Quebec, which, it is claimed, has advantages over all other points. The Minister in his reply pointed out that tenders for the construction of vessels for the Canadian Navy had been invited, the firms tendering being asked to state the locality at which they proposed to establish their yards for such construction, and should the successful tenderer choose Quebec as the site for its operations, he would do his best to have that choice ratified.

Ontario and the Great Lakes.

It is reported that the Ontario Car Ferry Co., is considering the building of another car ferry, to run with its car ferry Ontario No. 1, between Cobourg and Rochester.

The water was withdrawn from the Cornwall canal during April, to enable the contractors, Fallon Bros., to complete their contract of building a new weir and a wall, running west from lock 17.

The Lake Carriers Association, Apr. 14, announced its recommended draught for vessels passing the Limekiln Crossing at Amherstburg, as 19 ft., and for the Canadian lock at Sault Ste. Marie, as 17¾ ft.

The Hamilton Steamboat Co.'s steamboat Macassa arrived at Toronto, Mar. 30, being the first vessel to arrive at that port this season. The customary hat was awarded by the harbor master to Captain J. Henderson.

At a special meeting of shareholders of the Northern Navigation Co., held at Toronto, Apr. 8, it was decided to increase the number of directors, and C. A. Barnard, K.C., was added to the board, the other members of which were given in our April issue.

The steam tug which has been built by Clark Bros., Toronto, during the winter, was launched Apr. 7, and named J. T. Clark. She is to be used in the Toronto island freight and baggage business, in connection with the Toronto Ferry Co.

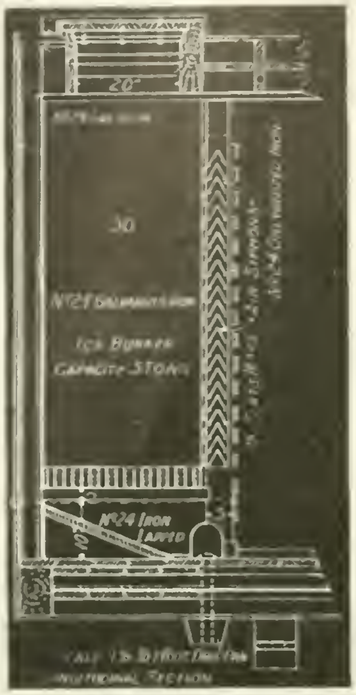
The Turbine Steamship Co.'s s.s. Turbinia, has been thoroughly overhauled, and some of her machinery renewed, during the winter, and it is announced that she will be put on her regular service between Toronto and Hamilton, May 20.

In consequence of the death of G. B. Greene, Secretary-Treasurer Upper Ottawa Improvement Co., Ottawa, the following appointments have been made:—Superintendent, P. W. Tomkins; Secretary-Treasurer, E. C. Woolsey; Paymaster, K. A. Greene.

It is announced that the Lake Erie and Northern Ry., which recently obtained a charter to operate an electric railway from Port Dover to Galt, by way of Brantford, intends to run vessels between Port Dover and Fort William, for both passengers and freight.

Eddy Bros., of Blind River, have ordered a steel steam tug at Collingwood, for delivery in July. It is to be of steel throughout, equipped with fore and aft compound engines, supplied with steam by a Scotch boiler. The dimensions will be, length 75 ft., breadth 14 ft., depth 9 ft.

The Peterboro and Lake Simcoe Navigation Co., is reported to have acquired



Longitudinal Section of Car.

the steamboat Geneva, for operation on Rice Lake, in place of the company's steamboat Otonabee, which is to be operated on Lakes Simcoe and Couchiching. The Geneva was built at Orillia in 1905.

The U.S. Board of Engineers for rivers and harbor work, is endorsing the project to straighten the Detroit channel between Fighting Island and Wyandotte. There are five turns in five miles, and it is estimated that to dredge away the curves, thus making a straight channel, 800 ft. wide, and 22 ft. deep, would cost $310,000.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat Dalhousie, which is being built at Collingwood, will, it is anticipated, be completed in time to make her first trip to Toronto, June 15, when she will immediately be placed on her route between Toronto and Port Dalhousie in conjunction with the steamboat Garden City.

The s.s. Filgate, which has been sold by the Montreal and Cornwall Navigation Co., to the Cornwall and Montreal Transportation Co., Cornwall, was built at Montreal in 1879, and is a paddle wheel steamer with engine of 100 n.h.p. Her dimensions are, length, 158 ft., breadth, 25.4 ft., depth 7.8 ft.; tonnage, 425 gross, 237 register.

The Detroit and Windsor Ferry Co., incorporated under the laws of the State of Michigan, has been licensed to carry on its business in Ontario, provided that it shall not use, in Ontario, a larger amount of capital, than $500,000, without further application for supplementary license. N. A. Bartlet, Windsor, has been named as its attorney.

The annual meeting of the Merchants Mutual Line Ltd., was held at Toronto, Apr. 15, when the financial reports for 1910 were submitted and approved. Following are the officers and directors for the current year:—President, D. B. Hanna; Vice President, Z. A. Lash, K.C.; other directors, Sir Henry M. Pellatt, F. Nicholls and W. H. Moore.

A London, Eng., press dispatch, of Apr. 3, says: "A Newcastle correspondent wires confirming the report that Furness, Withy and Co., are moving a big scheme for securing direct communication between Liverpool and the Canadian lakes. Three companies operating on the lakes will become one large concern, working from Montreal with ocean steamships provided by Lord Furness."

The Canadian Lake and Ocean Navigation Co's annual meeting was held at Toronto, Apr. 15, when the accounts for the past year were submitted and approved. Following are the officers and directors for the current year:—President, D. B. Hanna; Vice President, Z. A. Lash, K.C.; other directors, Hugh Sutherland, F. H. Phippen, K.C., F. Nicholls, E. R. Wood, Sir Henry M. Pellatt and Noel Marshall.

Some trouble has arisen between the parties operating ferries between Fort Frances, Ont., and International Falls, Minn., and it is probable that the matter will be referred to arbitration. In the meantime, the ferry service is at a stand still.. Gagne Bros., Fort Frances, have the Canadian license to run the ferry, and L. W. Wilson, International Falls, the U.S. license, and they have hitherto worked in conjunction.

The Inland Lines steamboat Dunelm, which was stranded at Isle Royale, last fall, has been docked at Port Arthur for repairs. She is the first vessel to be docked at the Western Dry Dock and Shipbuilding Co.'s yards. After completion of these repairs, her place on the dock will be taken by the steamboat Trevor, which was also wrecked at Isle Royale, last fall, and subsequently purchased and salved by F. S. Wiley, Port Arthur.

In connection with the press reports to the effect that P. Paton, of Collingwood, has been appointed General Agent Inland Lines, and Northern Navigation Co., at Winnipeg, we are advised that it is somewhat misleading, as such an appointment has not been made, either by the Inland Lines or Northern Navigation Co. Upon the projected amalgamation of the two companies being completed, it is said that he will be appointed western representative of the amalgamated concern, with headquarters at Winnipeg.

The Rainy River Navigation Co. will operate both its vessels on the Lake of the Woods, this year, the Keenora running between Kenora and Rainy River, where she will transfer passengers, etc., to the Agwinde, which will run up to the Rainy River at Fort Frances. Considerable difficulty has, at times, been experienced with low water at the mouth of the river, but it is anticipated that the dredging now being carried out there, will keep the channel open during the time the boats are operating.

Included in the work to be undertaken on the Trent Valley canal this season is a number of repairs, the cost of which is stated as about $53,000, as follows:—between Kirkfield lift lock and Lake Simcoe, $5,000; Sturgeon Lake, Lindsay river, $4,000; rip-rap Balsam lake, Lake Simcoe division, $5,000; duplicate lock gates, $5,000; reservoir waters, Jumbo lake, $9,000; entrance piers at Buckthorn lock two piers above the one below, $4,000; moving bridge at Fenelon Falls, $2,000; purchase of land, etc., and repairs to lock at Bobcaygeon, $15,000.

The steamboat Cataract, owned by the Cataract Ice Co., Niagara Falls, Ont., was damaged by fire to the extent of about $8,000, recently. It is stated that the after part of the boat including the hull and machinery was destroyed. She was formerly known as the Myles and owned by the Myles Transportation Co., Hamilton, and was built at Hamilton in 1882, her dimensions being, length 175 ft., breadth 33.6 ft., depth 14.6 ft.; tonnage, 957 gross, 598 register and she was equipped with engine of 200 n.h.p driving a screw.

An examination of the steamboat John Sharples, which was wrecked on Galloup Island, Lake Ontario, last fall, shows that she is in comparatively good condition. There is a large hole in her starboard quarter, but otherwise the damage does not appear considerable. A portion of the cargo, about 12,000 bush. of grain, was removed during the winter but otherwise it is intact. The Reid Wrecking Co., Sarnia, have the contract from the underwriters for salving the vessel, for $20,000.

The Department of Marine and Fisheries will receive tenders, May 1, for two twin screw gasolene launches for the Fisheries Patrol Service on the Great Lakes. The dimensions of the boats must be, length between perpendiculars, 56 ft., breadth 10 ft., draught, 3 ft.; speed 10½ knots an hour, and each is to be equipped with two 34 h.p. gasolene engines of a type satisfactory to the Deputy Minister. One boat is to be delivered at Parry Sound, and the other at Sault Ste. Marie, Ont.

The Trent Valley Navigation Co., steamboat Esturion is reported to have been sold to a Fenelon Falls syndicate, and it is stated that she is being thoroughly overhauled, for operation between Lakes Simcoe and Rice Lake, this season. She was built in Toronto in 1884, and is paddle wheel driven, with engine of 31 n.h.p. Her dimensions are, length 96 ft., breadth 17 ft., depth 6.2 ft.; tonnage, 118 gross, 75 register. It is also stated that the owners will be known as the Trent Valley Navigation Co., Ltd.

A Belleville deputation waited on the Ministers of Railways and Canals and of Public Works recently, in reference to the proposed removal of the shoals in the Bay of Quinte at Telegraph Light and Point Anne, and also in Belleville harbor, and also to ask for the construction of a new wharf at Belleville, for which plans were submitted. Both Ministers promised early consideration, and it is said that engineers are to be sent down to make the necessary surveys for the preparation of estimates.

A meeting of the Canadian Society of Civil Engineers, in Montreal, Mar. 30, discussed the resolution passed at a previous meeting, requesting the Society's council to urge upon the Government the importance of study and report before any commitments are made in reference to the damming of the St. Lawrence or the carrying out of any other great scheme of canal transportation A resolution was passed delaying further action on the previous resolution, until the matter had been further considered.

The U.S. Lake Survey reports the levels of the Great Lakes, in feet above tidewater, for Mar., as follows:—Superior 600.69; Michigan and Huron 579.30; Erie 570.97; Ontario 244.96. As compared with the average March levels for the past 10 years, Superior was 1.22 ft. below; Michigan and Huron 0.98 ft. below; Erie 0.76 ft. below, and Ontario 0.76 ft. below, and it is anticipated that, during April, Superior would remain stationary, Michigan and Huron would rise 0.3 ft.; Erie would rise 0.6 ft., and Ontario would rise 0.7 ft.

The British Canadian Shipbuilding and Dock Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $10,000,000, and office at Toronto, to design and build docks of every description, wharves, steam and other vessels of all kinds; to carry on a general ship building and repairing business, with kindred and allied trades, and to act as ship owners, agents, forward-

ers, etc. The incorporators are Sir Henry M. Pellatt, Hon. J. M. Gibson, Toronto; C. Ellis, Clydebank, Scotland; A. Gracie, Glasgow, Scotland, and A. C. Ross, Sydney, N.S.

The Merchants' Mutual Line, will, this season operate the following vessels:—A. E. Ames, H. M. Pellatt, J. H. Plummer, Beaverton, Mapleton, and Saskatoon, owned by the Merchants Mutual Line, Ltd., Toronto; Acadian and Canadian, owned by the Mutual Steamship Co., Ltd., Toronto; D. A. Gordon, owned by the International Steamship Co., Ltd., Toronto; C. A. Jaques, owned by the Jaques Transportation Co., Ltd., Montreal: Bickerdike. owned by the Montreal and Great Lakes Steamship Co., Ltd., Montreal; City of Ottawa, City of Hamilton and City of Montreal, owned by the Montreal and Lake Erie Steamship Co., Ltd., Montreal; A. E. McKinistry, owned by the Interlake Transit Ltd., Toronto, and Advance, owned by the Montreal Transportation Co., Ltd., Montreal.

The Nipissing-Pontiac Steamboat Co., has been organized at New Liskeard, to acquire the steamboat Aileen from the Upper Ontario Steamboat Co., and to operate her on Lake Timiskaming, between North Timiskaming, Guigues, Haileybury and New Liskeard. The Aileen is 78½ ft. long, by 12½ ft. beam, and has capacity for about 80 passengers and 20 tons of freight. A covered scow has also been acquired, a dock at Tomstown and a dock and storehouse at New Liskeard. the price paid for the whole being given as $6,500. Provisional directors were elected as follows: Messrs. Monaghan and Renaud, North Timiskaming; Piche and Gotnier, Guigues; Warrell, Brickendem, Fullerton, Bolger anl Burwash, New Liskeard. It was decided to apply for incorporation immediately.

A press dispatch from Montreal, Apr. 20, stated that following an important meeting of the Richelieu and Ontario Navigation Co., there, it was learned, that after conferences with the representatives of the Northern Navigation Co., and Inland Lines Ltd., the two companies have been bought out by a syndicate, of which Lord Furness is the head, and it is understood that the same syndicate has purchased a large block of R. & O.N. Co.'s stock, which will give it a large representation in the company. It was decided to issue 10,440 new shares at par, thus increasing the capital by $1,044,000, and making the total paid up capital, $4,176,000. The new stock will be issued to shareholders in the proportion of one share for every three now held, and a special meeting will be held, May 1 to ratify the directors' actions.

The steamboat which is being built at Kingston for Capt. A. Foster, mayor of Smiths Falls, was launched there, Apr. 19, and christened Buena Vista. It was intended to name her Venture, but, as there is already a vessel of that name, a new one had to be found. Her dimensions are, 96 ft. long over all; beam 18 ft., depth 6½ ft. She is of the composite type, with keel, stem and stern posts and deadwood of white oak, with 2 in. sides and 2½ in. bottom, frames 2½ by 2½ in. steel angles, and shear strake running the entire length, centre keelson 12 by 5 in. girder iron, boiler and machinery keelsons 12 by 3 in., and additional two 6 by 3 in. keelsons running the entire length of the bottom. On the promenade deck there is a saloon cabin with circular front and two state rooms. And aft of these two toilet rooms. Aft of the stairway are the galley and mess rooms, and the stern is taken up by a restaurant. The wheelhouse and captain's quarters are on the upper deck. The machinery consists of fore and aft compound condensing vertical engines with cylinders 9 and 18 ins. diar., by 14 ins. stroke, supplied with steam at a working pressure of 150 lbs, by a Fitzgibbon boiler. There is also a complete equipment of pumps and fire extinguishing appliances. She will run between Kingston and Smiths Falls.

◆

Manitoba, Saskatchewan and Alberta.

The Hyland Navigation and Trading Co., Ltd., has been granted supplementary letters patent, increasing its capital stock from $200,000 to $1,000,000.

The Hyland Navigation and Trading Co., has recently completed a large barge 200 ft. long, by 44 ft. wide, for use on the Red River. The officers and directors of the company for the current year, are: President and General Manager, J. L. Hyland; Vice President, J. L. Spencer; other directors, D. B. Sprague, J. R. Cote and W. E. Robinson.

V. Maurice of Grouard, Alta., is building a steamboat at Athabasca Landing, for operation on the rivers and the Lesser Slave Lake. She will be 60 ft. long, with 14 ft. beam, and equipped with engine of about 30 h.p. She will be used exclusively for freight, and will have a capacity for about 15 tons. It is expected to have the boat ready for operation about the middle of May.

The Hudson Hope and Vermillion Transportation and Development Co., which is reported to have secured a charter for the navigation of about 1,350 miles on the Peace River, is said to be arranging to build two steamboats at Athabasca Landing, Alta. The first vessel, will, it is anticipated, be ready for operation this season, and the other will be commenced about the end of the year. They will be used in shipping mineral products from the company's mines, and will connect with the Northern Transportation Co.'s vessels.

The Lake Winnipeg and Red River Navigation Co., the incorporation of which we announced in our last issue, has a capital of $300,000, divided into 30,000 shares of common stock, at a par value of $10, with power to issue first mortgage serial 6% gold bonds to the extent of 60% of the constructive value of steel clad steamships. It is making an issue of 15,000, at par, with a bonus of income warrants of equal value, which shall not be operative until the earnings have provided for regular 10% dividends on all stock issued, and for a surplus beyond the requirements of the dividends, of $150,000, for re-investment in extensions. The provisional directors are Capt. S. Sigurdsson, Gimli, Man.; J. McDiarmid, A. Davidson, W. F. Merrill and H. Cooper, Winnipeg.

The Northern Transportation Co.'s steamboat Northland Call, now under construction, and which it is anticipated will be completed and ready for operation by June 1, is built of wood, the hull being tamarac, and the upper works and cabin of spruce and B.C. cedar. Her principal dimensions are, length over all 98 ft., beam on water line 18 ft., depth, forward, 4 ft., draft, light, 14 ins. She is equipped with engines of patent inside valve drive with two main cylinders 7 ins. by 48 ins., direct connected to the 14 ft. stern wheel, and supplied with steam at a pressure of 200 lbs., by a Clyde dry back boiler 66 ins. by 96 ins. Other equipment includes pumps, electric lighting installation, and wireless telegraphy. The steamboat Northland Light, which was running to Slave Lake last year, and which, towards the end of the season, struck on a rock and sank, has been overhauled and repaired, and will be again in operation on the re-opening of the season during May, as will also the steamboats Northland Star and Northland Sun. All these vessels, except the Northland Star, are being equipped with a wireless telegraph installation, and a land station has also been equipped at the company's headquarters at Athabasca Landing, Alta., where the vessels will be operated from.

◆

B.C. and Pacific Coast Marine

The G.T.P. Coast Steamship Co.'s s.s. Prince John, on arrival on the coast, from Glasgow, Scotland, is to be equipped with a wireless telegraph installation.

The large dredge, which was recently built in Renfrew, Scotland, for dredging on the B.C. coast, has been overhauled and repaired after her trip from Great Britain, and has been named Mastodon.

The directors of the North Vancouver Ferry Co., at a recent meeting decided to ask the city council to submit a bylaw providing for raising $150,000, to be utilized for the building of another ferry steamboat and a Vancouver wharf.

The site for the dry dock, which the B.C. Marine Railway Co., proposes to construct, and for which the Government has been asked to grant a subsidy, has been chosen at Lang Cove. The dock will be of the first class, 900 by 100 ft., and will be the largest on the Pacific coast.

The C.P.R. s.s. Princess Charlotte, which has been equipped with the necessary machinery to enable her to burn oil as a fuel, was replaced on her run in the middle of April, the s.s. Princess Victoria being laid off for a similar equipment.

The purchasers of the property and assets of the Fort George Lumber and Navigation Co., are reported to be closely allied to the J. D. McArthur Co. The F.G.L & N. Co., last year operated three steamboats on the Fraser River, Chilco, Chilcoten and Fort Fraser.

The Westminster Marine Railway Co., has recently launched a stern wheel steamboat, which is owned jointly by it, and Capt. N. P. Roman, who will have charge of its operation. It is 100 ft. long, with 22 ft. beam, and will be used for general towing purposes, principally in the North Arm.

The C.P.R. s.s. Princess May, which has recently been thoroughly repaired and overhauled, and equipped for oil burning, recently completed her first voyage, using oil as a fuel, between Skagway and Vancouver, with the most satisfactory results. It is stated that her speed proved to be greater than anticipated

The B.C. Government has purchased the steam launch Kiora for patrolling the coast to prevent depredations on the Crown timber lands, making three vessels used for this purpose. She is screw driven with engine of 2 n.h.p., and was built at Victoria in 1906. Her dimensions are: length 37 ft., breadth 10.7 ft., depth 4.3 ft.; tonnage, 12 gross, 9 register.

The Union Steamship Co.'s s.s. Chelohsin, which is under construction at Dublin, Ireland, will, it is anticipated, be completed early in May. She is a twin screw vessel, 183 ft. long by 34 ft. beam, and is built on the same lines as the company's steamships Camosun and Cowichan. G. T. Legg, Manager, left Vancouver recently for England, to take delivery.

The C.P.R. has purchased the hulk Melanope, from Griffiths Bros., Seattle, Wash, to replace the wrecked barge Robert Kerr. The Melanope is on the British register, and was built at Liverpool, Eng., in 1876, as a fully rigged ship, and traded for a number of years between Great Britain and Australia. She was converted into a coal hulk in

1897, when she was purchased by Griffiths Bros. Her dimensions are, length, 258 ft. 2 ins., breadth 40 ft., 2 ins., depth. 23 ft.

The California Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $200,000 and office at Vancouver, B.C., to build, own and operate steam and other vessels, wharves, piers, warehouses, etc., and to carry on a general transportation business along the coast or on inland waters. The incorporators are, A. Baillie, Seattle, Wash.; T. W. Brownsmith, London, Eng.; H. G. Anderson, W. Houston, J. H. Lawson, Jr., Vancouver.

The s.s. Iroquois, running between Sidney and the Gulf Islands, sank near Robert's Bay, Apr. 10, and the majority of the passengers and crew were drowned. It has been stated that the disaster was due to the cargo shifting, causing the vessel to capsize. She was a wooden steamer, built at Port Moody in 1900. Her dimensions were: length, 82 ft., breadth, 20 ft.; depth, 7.7 ft.; tonnage, 195 gross, 94 register, and she was equipped with engine of 20 n.h.p., driving a screw.

'PHONE MAIN 5003. No. 5 JORDAN ST.

TORONTO

The All Red Line Ltd., recently incorporated under the B.C. Companies Act, as mentioned in a previous issue, has an authorized capital of $150,000, and its head office is at Vancouver. The company owns the steamship Selma, which is being operated in the passenger and freight trade, between Vancouver and Sechelt. The officers and directors for the current year, are: President, Capt. Polkinghorne; Secretary, M. G. Walton; other directors, S. Mortimor, —. Townsend and —. Anderson, Vancouver.

The Dominion Government hydrographic steamboat Lillooet, sailed Apr. 11, from Esquimalt, for a surveying cruise in northern waters. She will first take up her quarters at Grenville channel to complete the work left unfinished last fall, and afterwards proceed to Skidegate and the Hecate Strait, and on finishing the work there, will commence surveying the harbors of Queen Charlotte Islands, and take soundings at the western end of the Dixon entrance. She is not expected to return to port until November.

Tenders were recently received for the purchase of the British survey ship Egeria, which has been in service on the B. C. Coast for a number of years. It is reported that the Canadian Navy League had made a bid for the vessel, and hope to acquire it for navy training purposes.

Press reports from Nelson, state that the C.P.R. has decided to build another vessel for service on Kootenay Lake. It is stated that plans have been forwarded to Winnipeg, by J. C. Gore, Superintendent, B.C. Lake and River Service, and until they are approved, no definite announcement will be made. The plans provide for a vessel 200 ft. long, with 39 ft. beam, equipped with tandem compound condensing engines, berth accommodation for about 160 passengers, and general accommodation for about 1,000 on her three decks. There will be special observation saloons, one fore and one aft, one being reserved for ladies. She will be a modern stern wheeler, with a speed of about 18 miles an hour.

The Vancouver-Quesnel Navigation Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $25,000, and office at Vancouver, to own and operate steam and other vessels, and carry on a general business as merchants and carriers by land and water, etc. Among those interested are J. R. Stewart, T. Marion and T. Connor. The steamboat Quesnel has been purchased from T. Marion, and it is reported that an option has been taken on another steamboat. The company intends operating on the Upper Fraser River between Soda Creek and Fort George, and, it is stated that it may also run a vessel on waters adjacent to Vancouver. The Quesnel is a paddle wheel steamboat with engine of 3 n.h.p. Her dimensions are, length, 70 ft., breadth, 16.2 ft., depth, 3.7 ft.; tonnage, 130 gross, 77 register. She was built at Quesnel in 1909.

◆

Vessels Removed From the Register.—The following vessels were removed from the register, during March, for the reasons assigned:—Steam.—Cunaxa, St. John, N.B., 2,048 tons, sold to foreigners; Iona, Vancouver, B.C., 36 tons, broken up. Sailing.—Adventure, Port Hawkesbury, N.S., 54 tons, broken up; Pilgrim, Lunenburg, N.S., 99 tons, transferred to Barbadoes; St. Pierre, Quebec, 44 tons, broken up; Shanks, Windsor, N. S., 1,034 tons, burnt; Souvenir, Yarmouth, N.S., 71 tons, broken up; Theta, Windsor, N.S., 420 tons, missing; W. M. Vogler, Port Medway, N.S., 46 tons, supposed to be out of existence.

CITY OF TORONTO

Tenders for Construction of Ashbridges Bay Docks.

Tenders will be received by registered post only, addressed to the Chairman of the Board of Control, City Hall, Canada, up to noon on Tuesday, 23rd May, 1911, for the construction of dock in Ashbridges Bay.

Envelopes containing tender must be plainly marked on the outside as to contents.

Specifications and forms of tender may be obtained upon application to the Department of Railways, Bridges and Docks, City Engineer's Office, Toronto.

The lowest or any tender not necessarily accepted.

G. R. Geary, (Mayor),
Chairman Board of Control.
City Hall, Toronto, April 12, 1911.

Improvements in the Modern Locomotive.

By George Black, Road Foreman of Locomotives, G. T. R., Stratford, Ont.

In preparing this paper I have endeavored to give a review of the most important improvements in the modern locomotive brought about by the varying conditions and requirements from the time of its first appearance to the present time. In doing this I have been unable, in the limited time at my disposal, to give the exact dates of the introduction of the various improvements, but have trusted chiefly to my memory.

The first idea of steam navigation was set forth in a patent obtained in 1736 by Jonathan Hulls, for a machine for carrying vessels against wind and tide. In 1778 Thomas Paine proposed in America this application of steam. In 1781 the Marquis de Jouffray constructed one on the Seine, and in 1785 two Americans published descriptions of it.

In 1789, W. Symington made a voyage in one on the Forth and Clyde canal, and soon after Fulton visited Mr. Symington, took notes and then went to America and in 1807 started a steamboat on the Hudson River and made a success of it. In June 1819, the Savannah of 350 tons went from New York to Liverpool by steam. Steam power to convey coal on a railway was first used by Blenkinsop at Hunslet near Leeds, and afterwards for passengers and goods on the Stockton and Darlington Railway, the speed was from five to eight miles an hour.

In the trial of locomotive steam carriages at Liverpool, in October, 1829, Braithwaites' carriage, including water and fuel, weighed 8,220 lbs. Stephenson's weighed 9,216 lbs., and ran from 14 to 18 miles an hour. Braithwaites' ran 22 miles an hour, the size of the cylinder was six ins., the stroke 12 ins., and the load hauled was 10 tons. These figures are in striking contrast to the modern mastodon weighing 225 tons, and having cylinders of 36 ins. diameter, and 34 ins. stroke, and capable of hauling 4,000 tons or more, but it is a great tribute to Stephenson that we find on the great majority of the locomotives in service today the link motion for steam distribution invented by him, and the strange part of it is that we have not as yet found anything to beat it. Stephenson also saw the advantage of added weight to increase the traction power of an engine, and engines were made heavier and wheels were coupled in series to bring about this result.

Then we find another important matter to be considered, viz., the power to control and stop the engines and trains at the required time and place. This brought about the introduction of brakes, the first of these was of the crudest type and consisted of a block of wood attached to a long lever which, when not in use was hung on a hook, and when required was let down off the hook and exerted a retarding force on the wheel. The next thing was a brake operated by a crank, and a series of levers which did the service for a great many years until the introduction of power brakes, the first of which I believe was the vacuum brake which consisted of a series of suitable levers and a cylinder on each car and engine, and a pipe connecting all to an ejector on the engine. This ejector was capable of creating a partial vacuum in the cylinders, and the pressure of the atmosphere acting on the opposite side of the piston caused it to move and exert a force through the levers, etc., to the wheels, and thus bring about the desired result, but this had the great disadvantage that when the pipe connection got broken or leaked or the train broke in two the brakes could not be operated. This condition brought about the introduction of the automatic vacuum which would overcome this difficulty, for when the train broke in two or the pipes of the brake were disconnected, the brakes would automatically apply and stop the train. The name of the inventor of this brake was Smith. About this time there were other brakes operated about in the same manner, some by steam and some by compressed air, but it remained for Geo. Westinghouse to give to the world the brake that has made possible the controlling of heavy trains at high speeds, and added the element of safety in handling the commerce of the country and the enormous amount of passengers that travel over the great railways of today. The first of these brakes, as I said before, was rather crude, but as time went on, the requirements were noted and met on all sides, so that from the beginning, with the brake only on the engine, and then applied to a few passenger cars, we now have brakes on every wheel of the train, whether passenger or freight.

H. B. Spencer,
Superintendent, District 4, Eastern Division, C.P.R.

When the Westinghouse automatic brake was first introduced we had the old style plain triple valves operated by a three way cock on the engine, and it was found that the operation on long trains was slow on the rear cars and quicker on the cars next to the engine, than when the flow of air from the train pipe was suddenly cut off by the abrupt closing of the three way cock by the engineer, the air would surge from the rear of the train and release the brakes on the front of the train and engine, and sometimes cause damage to draft gear. This brought about the introduction of the equalizing discharge valve, which, by its gradual opening and closing, made the brakes operate uniformly. Then again on longer trains with plain triples, the brakes in an emergency were too slow to apply on the rear of trains and this brought about the introduction of the quick action triples which operate so quickly that the brakes on the last cars are set before the slack has time to run in. Pump governors have also been put on to govern the pressure of air in main reservoirs, feed valves to regulate the pressure in train pipes and auxiliaries and reducing valves to regulate the brake cylinder pressures in the operation of high speed brakes, so that trains running at high speeds can be brought to a stand in the shortest possible distance without shock or the skidding of wheels.

The improvements which have been made to the modern locomotive, are of two classes, those which have been adopted on account of their mechanical advantages, and those which have been adopted to effect economy in steam consumption. The piston valve, the Walschaert valve gear, and the mechanical stoker belong to the first class, and will be considered in the above order. To the second class belong the compound engine and the superheater. These are, without doubt, the most important improvements made in the locomotive and have, with one exception, the Walschaert valve gear, been successfully developed within the last 15 years.

THE WALSCHAERT VALVE GEAR.

The real test which should be applied to every detail which is assumed to in-

Galena Long Time Burner Oil

for use in Switch and Semaphore Lamps, and all lamps for long time burning, to avoid smoked and cracked chimneys and crusted wicks.

Tests and correspondence solicited.

S. A. MEGEATH,

PRESIDENT

crease the cylinder power of a locomotive, concerns its effect on the steam consumption of the engine. Will its use produce a horse power upon less steam than the device which it supersedes. If it will, then, when the boiler is supplying all the steam it can make, it will permit the cylinders to deliver more power than they were able to do without it. If it does not increase the efficiency of the cylinder action it cannot really increase the power.

This suggests the inquiry as to whether the distribution of steam in the cylinders of simple engines is satisfactory, whether, for example, we ought to persist in efforts to secure square cornered cards. The reply is, that in most cases wherethe gear is sufficiently heavy and stiff, to do the work for which it is designed, the distribution as obtained from present gears is satisfactory. The typical locomotive card, displaying the wire-drawing action throughout the cycle, which, especially at high speed, is strongly marked, is, after all, a card of high efficiency. The steam consumption of the locomotive is less than that of most other forms of high speed steam engines employing atmosphere exhaust, even when the speed is increased to limits which far outstrip those common to stationary engines. Its work is to be regarded as highly efficient. So well do the better class of valve gears which are now in common use perform their work that anyone who attempts to increase the power of a modern locomotive by improving its steam distribution will find but a narrow margin on which to work. The Stephenson link motion has been used on locomotives for very many years, almost since its first development. However, on large power, the Walschaert gear, on account of its important mechanical advantages, is displacing it to quite an extent.

The most suitable form of radial gear for locomotives is unquestionably the one invented by the Belgian engineer, Egide Walschaert, in 1844, and applied to locomotives a few years later, but it was not properly understood or appreciated during the first 20 years following its invention, and has ever since then made slow headway until a few years ago, when it took quite a sudden move forward and is at present the dominating valve gear throughout the continent of Europe, and is fast gaining ground in this country. This gear may be said to be based on a fundamental principle of its own, but has been subject to a few modifications without any improvements over its original form. The motion of the valve is derived from two sources—namely, the main crank by connection to the crosshead, and from an eccentric placed approximately at right angles to the main crank. The crosshead connection imparts the motion of lap and lead at the extremities of the stroke of the piston at which moment the link is in its central position. Therefore in mid gear with the reverse lever in its centre notch, this will be all the motion imparted to a radius equal to the length of the radius bar. By moving the reverse lever forward the eccentric motion is brought into combination with the motion from the crosshead, producing a valve opening for a forward motion of the engine, and by moving the reverse lever backward the link block is brought to the opposite side of link fulcrum, resulting in a valve opening governing the backward motion of the engine, in effect similar to that of the Stephenson motion. The action of this one eccentric is therefore the same as if there were two eccentrics, one for forward and one for backward motion placed diametrically opposite each other, and the angle of advance in the Stephenson motion is taken care of by the main crank in the crosshead connection. The latter motion being constant, it follows that the lead remains constant at all points of cut-off.

The proportions of the various parts of the Walschaert gear cannot be determined experimentally, nor should any change in setting the valves be made unless the effect of the change is known in advance. It is, therefore, important that the different parts of the motion should be made and set correctly from the beginning, and there will be no need for changes when the original dimensions are maintained. The difference in this gear for outside and inside admission valves must be considered in setting the eccentric crank, and as the forward motion of the engine should preferably be taken from the lower end of the link, when the eccentric crank will follow the main crank for inside admission valve and lead the main crank for outside admission valve. For outside admission valve the radius bar is connected to the combination lever below the valve stem and for inside admission above the valve stem.

The motion is reversed by an arm connected to the radius bar. The sliding lifter, the best method of suspension of the radius bar but due to wheel arrangements of various designs of engines, this is not always applicable, but must be substituted by swinging lifters, which when properly placed give for all practical purposes equally good results.

Following are general notes for adjusting Walschaert gear:—

1. Ascertain by the following method the position of the eccentric crank. Mark the position of the link relative to its midde position on both of the dead centres of the main crank. If the position of the link is the same in both cases the eccentric crank position is correct, if not, the eccentric crank should be lifted until this occurs, or as near so as possible.

A TRIBUTE FROM QUEBEC.

J. G. Scott, ex-General Manager Great Northern Railway and Quebec and Lake St. John Railway, writes from Quebec:—

"I have much pleasure in enclosing my renewal subscription to the Railway and Marine World. I am ashamed to send so small a trifle for so valuable a publication. It is replete with the most interesting information, and is worth ten times the subscription. I do not see how any railway man in Canada could be without it."

2. After the eccentric crank has been correctly set, the eccentric rod should be lengthened or shortened, as may be required to bring the link in its middle position, so that the link block can be moved from its extreme forward to its extreme back position without imparting any motion to the valve.

3. The difference between the two positions of the valve on the forward and back centres of the engines is the lap and lead doubled, it is the same in any position of the link block and cannot be changed by changing the position of the reverse lever.

4. The train marks of the opening moments at both ends of the valve should be marked upon the valve stem and the latter lengthened or shortened until equal leads at both ends are obtained.

5. Within certain limits this lengthening or shortening may be made on the radius bar, if it should prove more convenient, but it is desirable that its length should be so nearly equal to the radius of the link that no apparent change in the lead should occur in moving the link block as stated in no. 2.

6. The lead may be increased by reducing the lap, and the cut-off points will then be slightly advanced. Increasing the lap produces the opposite effect on the cut-off and reduces the lead by the same amount. With good judgment these quantities may be varied to efface the irregularities inherent in transforming rotary into lineal motions.

7. The valve events are to a great extent dependent on the location of the suspension point of the lifter of the rear end of the radius bar, when swinging lifter is used, which requires that this point should be properly laid out by careful plotting.

The chief point of difference between the Walschaert and Stephenson gear, when both are in proper condition is, as previously stated, that the former gives to the valve a constant lead at all cut-offs whereas the latter produces an increase of lead by linking up the engine and becomes excessive at short cut-offs. This very point has been the subject for much controversy, and has probably done more than anything else to retard the progress of the use of Walschaert gear, as it has been argued that in full gear, when the speed of the engine, generally is low, only small lead is needed, but at a high speed more lead is required, which is accomplished by the Stephenson motion, though this admittedly becomes excessive at early cut-offs, causing considerable compression and pre-admission detrimental both to maintenance and smooth running, and in fact, to some degree counteracts the work done by the steam on the driving side of the piston, which thereby also affects the speed of the engine.

It was generally discovered that the required lead for short cut-off and high speed was of no practical detriment to the working of the engine in full gear, as the pre-admission at that point is disappearingly small. The proper amount of lead, however, is dependent somewhat on the service, and the port opening becomes larger with a larger lead, or in other words, when all other conditions are equal in a Stephenson or Walschaert gear, the openings differ by the same amount as the lead, so that one-sixteenth more lead gives one-sixteenth wider port opening, but it is hardly advisable to make this over one-quarter or five-sixteenths inch as a maximum, as the advantage of any additional port opening by means of a larger lead is more than offset by the increase in compression and pre-admission, the larger lead would bring about at early cut-offs, and would do no good in the later cut-offs even if it does no harm.

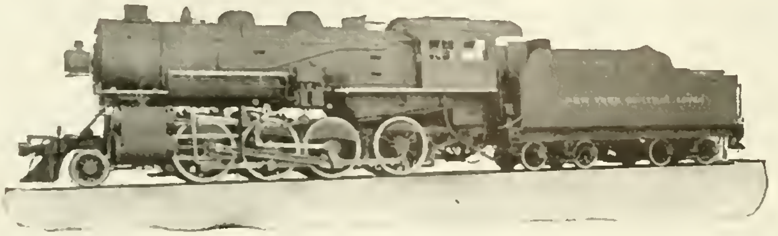
There is no fundamental reason why the Walschaert gear should produce any economy in steam consumption over the Stephenson motion when both are in the best condition, but an advantage in this respect comes to the former by the fact that it remains in its good condition if once made so, from one stopping to another and is, therefore, on an average more economical both in steam consumption and maintenance of the gear than the latter.

On one engine, no. 912, on the Lake Shore and Michigan Southern after making 39,000 miles, the total lost motion in the valves was one-sixteenth inch. Another engine, no. 5912, equipped with Stephenson link motion had five-sixteenths inch lost motion in the valve stem after making 32,000 miles.

Large eccentrics, besides occupying too large space, wear unevenly, and lubrication is difficult with the high surface velocities of the larger sizes. With hardened pins and bushings the Walschaert gear has not this disadvantage.

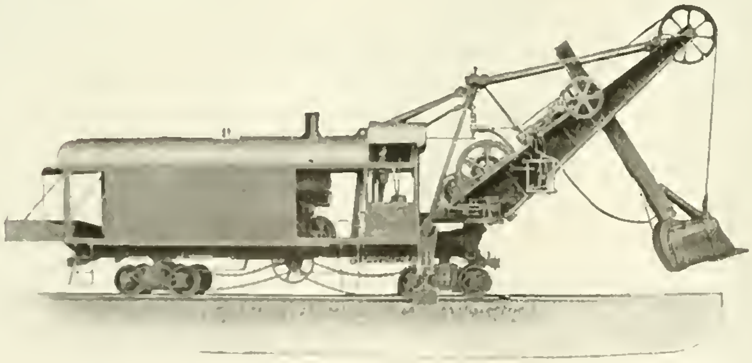
Stephenson links, under the influence of two eccentrics, move through wide angles, resulting in a wedging action of the link block, which strains the gear when working hard, and produces lost motion, whereas the Walschaert links

LOCOMOTIVES



Consolidation Type Freight Locomotive built for New York Central Lines (M.C.R.R.)
Total weight of engine in working order 237,500 pounds
Weight on driving wheels 212,000 pounds
Diameter of driving wheels 63 inches
Boiler pressure 200 pounds
Cylinders 23 x 32 inches
Maximum tractive power
45,700 pounds.

ATLANTIC STEAM SHOVELS



Atlantic Steam Shovels eliminate shut downs.

They are efficient, simple in design, and cheap to operate.

Wire rope hoist reduces friction and increases the efficiency of the shovel. It lasts almost as long as chain (in some cases longer), costs one-fifth to one-third as much to replace, gives warning of wear and can be renewed at close of day when shovel is idle.

Removal of the hoisting machines from the car body permits the use of locomotive type of boiler, giving a greater amount of heating surface and increased steaming capacity.

The Class 25-11-1¼ shovel saves the cost of one shovel, because it can be mounted on traction wheels or trucks, or purchased as a combination.

The purchase of an Atlantic shovel means additional dollars, because of the saving in cost of fuel, repairs and oil.

MONTREAL LOCOMOTIVE WORKS, LTD.

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

oscillate through smaller angles, producing practically no wedging effect and less lost motion.

In many cases the gear can be designed so that the motion is transferred from the eccentric crank to the valve stem in one vertical plane so that practically all of the pins can be put in double shear and all tendency to twist the valve motion is avoided, a thing that is almost impossible in the Stephenson motion.

While it may not be possible to adjust the valve as readily with the Walschaert gear as with the Stephenson motion, for the reason that the parts and connections are not as susceptible to change, it is not as liable to become disarranged, and if correctly designed and fitted up will give accurate results.

Equal cut-offs in both ends of the cylinders are more easily secured than with the Stephenson motion, which requires an exact location of the saddle pin with regard to the centre line of the link, and the play of the engine on its springs has no more effect on the valve than has the Stephenson motion.

The constant lead of the Walschaert motion prevents the sidling of the cylinders by the piston valve when the piston is at the end of its travels or approaching it, whereas with the link motion either by derangement or excessive wear, the valve laps the ports at the end of the stroke, causing excessive compression and many other consequent troubles.

The accessibility for attention and examination of the Walschaert gear is a great point of undisputed advantage over the Stephenson motion. There is not enough room for the Stephenson gear under a very large locomotive. The eccentrics are crowded, and proper inspection, not to speak of proper care, is extremely difficult.

It will be borne out in the course of time that the lateral bracing between the frames permitted by the Walschaert gear will bring about a considerable reduction in the maintenance expenses by the less wear and tear this additional rigidly will impart to the entire engine.

Another very important advantage of the Walschaert gear over the Stephenson gear is the great saving of weight possible. A saving of 1,700 lbs. was possible by using the Walschaert gear in the case of a very heavy passenger locomotive built for the Lake Shore and Michigan Southern. Stephenson gear weighing as much as two tons is far too heavy to be satisfactorily reversed twice in every revolution on fast running locomotives.

And finally a feature which appeals particularly to the engineer is the ease of handling the reverse lever when the locomotive is running at a high rate of speed.

THE PISTON VALVE.

With the large increases of the power developed in one cylinder of the modern locomotive and the high steam pressure used, the ordinary and balance valves increase in size proportionately and while they are balanced in the same ratio as the valves on smaller engines the difference in the unbalanced surface increased with the size of the engine, and this combined with the additional weight of the valve and the yoke, increases the wear on the valve, the motion and the eccentric straps and also the work necessary on the part of the engineer to handle the engine.

For these reasons the piston valve, which is perfectly balanced, has been very extensively adopted. Another reason for its adoption is its adaptability for compound cylinders since one valve can be arranged to effect the steam distribution of two cylinders, one high and one low.

With the slide valve on a large engine it will hardly exceed 25,000 miles before the valves need facing, which means the loss of the engine for a day, while if the piston valve were used and the rings were broken or needed attention the valve can be removed, new rings applied in from 30 to 40 minutes and the engine is ready for service. Of course the bushings wear, but they very rarely need renewing for less than 200,000 miles.

Another advantage to the piston valve over the slide valve is accessibility to its parts. When an engine needs its valves reset after running for some time, the port marks on the valve stems become obscured, and possibly the man, who is about to do the work, has a different train or wants to get new marks on the stem. With the slide valve, the machinist has to take off the steam chest cover before he can take his new port marks, while with the piston valves he simply has to remove one plug on each end of the chest leading directly to the edge of the steam port. With the piston valve there is a much larger port opening than with the slide valve, and this large opening gives a much better admission and release of the steam to and from the cylinder than can be obtained with the slide valve.

Since the piston valve is so perfectly balanced it is not necessary to have a small surface bearing valve, as it is with the slide valve. For this reason the ports can be brought up straight to the valve chamber, instead of curving up as they do for the D valve, resulting in a reduction in clearance loss for the piston valve due to the shorter ports.

There are two types of the piston valve, inside and outside admission. These are modified, some being solid and some hollow.

With the use of the inside admission piston valve, the metallic valve stem packing may be done away with, as there is only the exhaust pressure on the packing side, which results in an appreciable saving in maintenance cost, as the fibrous packing answers the purpose and lasts satisfactorily a long time.

Another feature of the inside admission valve is the protection to the live steam by being jacketed by the exhaust cavities, thus delivering the steam to the cylinder at a higher temperature than would be the case with the outside admission valves. For these reasons the inside admission valve is used much more than the outside admission.

Since the difference of pressure on the two ends of the inside admission solid valve often amounts to over a ton, for each exhaust, the valve acts as a piston and takes up the slack in the valve motion and increases the lead, which is very hard on the valve gear.

For the outside admission solid valve, the moment after exhaust takes place the valve becomes unbalanced on the admission side as the steam enters the cylinder and the higher pressure on the opposite end takes up the slack and decreases the lead as the valve gear wears.

In the outside admission hollow valve the area of the valve stem unbalances this type to the extent of about 600 lbs. at 200 lbs. boiler pressure, and always in the same direction, which causes the engine to go lame as the gear wears.

With the inside admission hollow valve these defects are absent and the valve is so well balanced that it works very much more easily and does not get out of square so soon as the other types. For these reasons it is the type of piston valve most extensively used.

With the ordinary slide valve, when there is an accumulation of water in the cylinder, the piston in its movement forces the water through the ports to the valve seats, the valve lifts and lets the water pass into the steam chest and out the stack. This will also be true for any excess pressure, on the piston and head, that may take place at the end of a stroke. With the piston valve, the valve sits solid in the bushings and will not admit any water or steam to pass over from steam port into steam chest when that port is closed by the valve. The pressure of this water would cause damage to the engine by the breaking of the cylinder head or the piston or bending the main rod if means were not taken to provide for it. This is done by a combined pops and by pass valve, the valve chamber being cast in one with the cylinder. This effectually eliminates the danger of any excess compression.

MECHANICAL STOKERS.

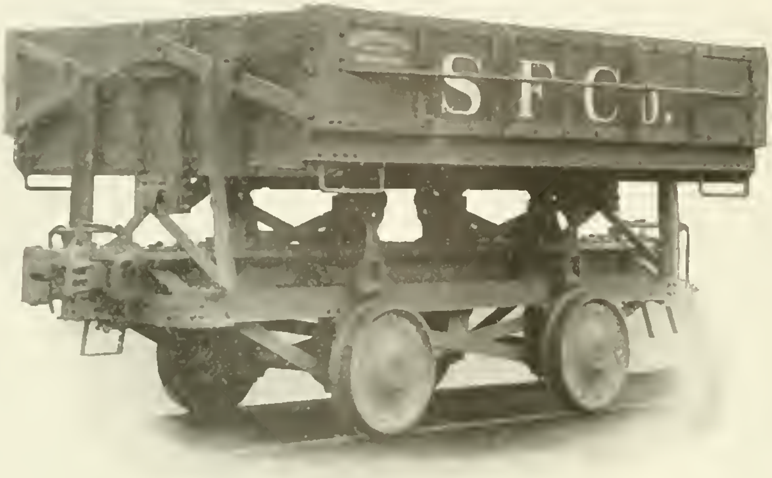
By the process which goes on within the firebox of the modern locomotive each pound of coal will, under favorable conditions, sustain one i.h.p. for from 12 to 15 minutes at the speed of 10 miles an hour, it will serve to carry six tons of freight per mile. Within certain limits the power developed is nearly proportional to the coal burned.

In the development of the modern locomotive, grates have been enlarged, and heating surface extended that larger amounts of fuel may be burned. In one direction only has the designer found his way blocked against his ingenuity. He has not been able materially to augment the strength of the fireman and consequently when running under constant conditions the power of the locomotive has not increased in proportion to its dimensions. A laborer is working at a fair rate when, in unloading coal from a gondola car, merely dropping it over the side, he handles 6,000 lbs. an hour. At the limit a locomotive fireman will handle an equal amount standing on an unsteady platform placing it upon some particular part of the grate and usually closing the door after each shovelful. This rate will serve to develop, approximately, 1,200 i.h.p. This rate cannot be exceeded under sustained conditions of running, though for short intervals the rate of power may outrun the rate of firing. Because of the limitations upon the strength of the fireman it is probable that further growth in locomotives will await the coming of an automatic stoker, which will remove its operation from dependence upon the physical condition and endurance of a single man.

In order to provide for this the following different makes of stokers have been developed: the Victor, Kincade Lucky, Straus, Crosby, Monarch, and Haydon. All of the stokers are very similar in operation, either by a series of pistons or plungers which produce longer or shorter exhausts or strokes, or steam jets, and tend to throw the coal closer to the flue sheets or the back end of the fire box and spread the coal very uniformly over the grate surface. Some of these use deflection plates to spread the coal.

The Haydon stoker is a representative type of the steam jet design. The method of operation is as follows: The coal is taken from the tank through a grating with three inch openings by an elevator operated by a quadruplex engine, then it passes into a conveyor and is elevated to the conveyor located over the fireman's head and is dropped into a hopper over the firebox door by a worm screw and falls by gravity through a slide gate opening in the firebox door, on to a table located just inside the firebox door 24 ins. long and 7 ins. wide and is blown by a blast of steam varying in length as desired, by five separate nozzles or pets in the firebox door, which have a tendency to cool the table and prevent its burning out. The centre jet blows the coal towards the flue sheet. The two jets on either side are located to place the coal in the front corners of the firebox. The two outside jets are located so that the coal will be distribut-

Russel Heavy Duty Dump Cars



The only dump car built that will stand the severe service of the heaviest steam shovels. Acknowledged by the operator to be the best car on the Mesaba Range.

Detroit, Mich., U.S.A.

ed along the sides and back corners of the firebox. They are governed by separate valves to regulate the blast of steam through each valve by common steam valves and can be adjusted at will at any time.

The steam that furnishes the blast to place the coal is controlled by a quadruplex engine, located on the back end of the boiler butt, which has a crank movement actuated by a screw wheel, operating a control valve, which admits steam through a one inch pipe passing to the nozzles, which are regulated by means of a globe valve. The control valve, as a general proposition, is run only one turn open and varies with the weight and amount of coal to be handled. The length of the blast is governed largely by the raising or lowering of the latch on the trip valve and the speed at which the engine is run. The greater the speed the less coal is thrown at one blast. If desired the valve can be tipped by hand and all of the coal in the hopper can be blown into the firebox. In fact, the fire can be covered black inside of half a minute. The steam connection to the engine operating the stoker conveyor is by one inch pipes, that to the stoker connection is three-eighths inch pipe which is open probably only a quarter of a turn. This stoker has on various occasions fired a locomotive 30 and 40 miles and even farther without there having been any necessity to open the fire door, and on opening the door the fire was found to be absolutely level. Occasionally coal will pile up in some place in the firebox, making it a necessity that it be levelled down, and may be caused by a clinker forming or a little deviation in front of engine and holes in grate. All that is necessary is to close the hopper, blow the coal off the table, when the door can be easily opened and the fire levelled with a rake if desired. There is nothing to be removed and it is a very easy operation, nearly as much so as though the engine were being fired by hand.

The Victor stoker is of the plunger design, and consists of the following essential parts: 1. A main cylinder and a trough in which reciprocates a piston and plunger which, with a variable stroke, throws the coal to the different parts of the firebox. This variable stroke is given to the plunger by means of a rotary valve, three separate steam ports, leading from the said valve to the rear end of the cylinder, and three choke plugs—one for each of the said steam parts. 2. A small controlling engine. It has been found desirable to place the controlling engine on the boiler-head on the fireman's side. This removes the liability of condensation and consequent dryness of engine parts when placed on and below the stoker itself. The steam for the operation of this engine is taken directly from the dome. 3. A hopper with two spiral conveyors journaled in the bottom of the hopper pan. The conveyors carry the coal to the front of the hopper on to the apron of the plunger, which, upon the return of the plunger, falls by gravity in front of it, giving a regular and uniform feed. The speed of the conveyors can be increased or diminished by giving more or less steam as may be required, to the controlling engine. This also increases the number of strokes made by the plunger but does not affect its velocity, or in any manner affect the distribution of coal in the firebox, the latter being governed by the three choke plugs.

4. A smaller steam chest containing a rotary valve which regulates the number of strokes made by the plunger. The portion of the stoker forming this valve chest is cast on one piece with the main cylinder, and has three separate steam ports leading to the rear end of the cylinder for the admission of steam behind the plunger or piston. These steam ports terminate in one common port before entering the rear end of the cylinder, the steam, after reaching this common port, communicates with the rear end of the cylinder, first through a small preliminary port at the end of the cylinder (which also acts in the form of compression by retarding the exhaust on the last portion of the return stroke), and after the piston has advanced a short distance it uncovers the main port, which also leads from the common port, giving free passage to the steam. A choke plug is placed in each of the steam ports between the valve sleeve and the common port. The function of the three choke plugs is to vary the amount of steam reaching the rear end of the cylinder through the various ports and thereby giving a variable stroke to the plunger. The valve operates in a rotary manner, each of the ports stopping full open in front of its corresponding steam passages in regular succession. Beginning with number three (the port nearest the rear end of the stroke) the steam, after leaving this valve passes through port number three into the common port and the rear end of the cylinder. By choking down this steam port until it is almost closed we get a very light stroke of the plunger, distributing the coal over the grate near the fire door. The other two operate in the same manner, each taking its respective turn. They are adjusted so that more steam is admitted on the second stroke than on the third, thus distributing coal over the middle portion of the grate, and more on the first than on the second, thereby scattering coal over the front end of the grate. By this adjustment of the choke plugs any range of distribution can be obtained that may be desired.

The rotary valve and cylinder are provided with suitable live steam exhaust ports for the return of the plunger and the exhaust steam from each end of the cylinder. In the front end of the main cylinder, is a very small live steam port, connected directly with the live steam supply, and its function is to return the plunger after its forward stroke, and also to add volume to the steam retained after the piston has passed over the forward exhaust port, this giving the desired compression to prevent the piston striking the front cylinder head. By means of a valve this port can be enlarged to give increased compression, necessary when expelling water from condensed steam in starting the stoker when it is cold.

5. The furnace door. Each machine is supplied with a furnace door made to fit the standard door frame of the locomotive to which the stoker is to be attached. This door has an opening to receive the stoker through, and is provided with suitable brackets for holding the machine in position. Cast upon its inner side are curved lugs, which serve the purpose of hinges for a deflector for spreading each charge of coal over the width of the firebox. The end of this deflector can be raised, if necessary, to aid in the distribution of coal by means of a set screw directly under its centre. It also has a small vertical sliding door for use when inspecting the fire, and the deflector can be turned vertically and held in place by a latch to close the opening when the stoker is removed. When using the stoker the smoke is very much lighter, indicating more thorough combustion of the gases. The darkest color when the stoker is used is not more than brown, while most of the time the emission from the stack is pure steam. This is a most important feature when it is taken into consideration that the smoke problem of railroads is becoming serious, now that the large cities are objecting so much to the smoke nuisance. There is no doubt that with the stoker in use very much less trouble with leaky flues will be found, on account of its maintaining a more even heat in the firebox. The sheets of the firebox will last longer for the same reason. It has been proved that corrugation in fireboxes is largely due to the changes in temperature. When the stoker is used the steam pressure may be kept absolutely constant. This is due to the irregularity with which the coal is placed on the grates, the evenness of the distribution and also the fact that the furnace door being closed, the furnace is not cooled by the inrush of air. This should effect a great saving in coal, since it is estimated that 15 lbs. of coal is lost when a boiler pops. With a stoker properly installed and set up in a tank, using coal that it will handle properly, the fireman can operate the engine with a saving of 33 to 50% labor, at the same time maintaining a uniform pressure of steam with a large reduction of leaking of flues and furnishing steam under all conditions better than can be done by hand firing, and with a noticeable saving in fuel.

COMPOUND LOCOMOTIVES.

In endeavoring to secure efficiency in the utilization of the steam, thermodynamic reasons make it imperative to use high pressure steam and a long expansion. The high ratio of expansion required cannot—from the point of view of steam economy—be so efficiently carried out in a single cylinder as in two or more cylinders. If expanded in one stage only the condensation and piston leakage losses are too great for efficiency. In marine service, where efficiency is of first importance, single expansion engines have been altogether superseded by multiple expansion engines in the large sizes. In locomotive practice steam economy is of great importance, but the difficulties of maintenance make unnecessary complications undesirable, and thus practically limit the number of successive expansions to two. In order to take advantage of this economy in steam consumption, and consequently coal consumption, the following types of compound have been developed. The two cylinder cross over compound, the four cylinder tandem compound, the four cylinder balance compound, and the Mallet articulated compound.

The two cylinder compound can show practically the same efficiency of steam consumption as the four cylinder, and has fewer working parts. On the other hand, the power developed is not always equally divided between the two sides of the engine, for instance, when the high pressure cylinder is being worked at a long cut-off the steam exhausting from it and supplying the low pressure cylinder is at a much higher pressure than that exhausting from the high pressure at a short cut-off, causing more work to be done on one side of the engine than on the other. Also the excessive diameter of the lower pressure cylinder required for high power increases their liability to break and requires an excessive width of the locomotive, and this puts a limit on this class of engine.

The tandem compound gives equal power on both sides of the engine and economical steam consumption. The heavy reciprocating parts, due to both pistons being on the same rod, make the engine difficult to balance, making it very undesirable for high speed work, although at low speeds this is not a great disadvantage. The only factor limiting the growth of this locomotive is the rigid wheel base, the best that can be done being to get six axles in 24 ft. 7 ins. or five axles in 19 ft. 9 ins. Apart from the great internal resistance of a twelve coupled engine of this description the excessively long wheel base would render it extremely awkward on curves.

If more tractive force is required, the Mallet type compound seems to offer the greatest facilities for development. The wheels are in two groups, and as these groups have a flexible connection between them, the locomotive can curve easily. The rear group of wheels is driven by two high pressure cylinders, and the front group by the two low pressure cylinders, so that the same power is developed on both sides of the engine. The double expansion of the steam gives economy in fuel and the whole construction of the locomotive is comparatively simple. These engines have been used almost altogether for taking heavy trains over very heavy grades, very little in road service, and altogether for low speed service.

The four cylinder balanced compound is, considering everything, the best of these types. By using four cylinders, two high and two low pressure, and placing them so that each high pressure moves in the opposite direction to the corresponding low pressure piston, both the internal and external forces can be largely balanced. Where only two cylinders are used, the moving parts of the engine must perforce be largely left unbalanced, and at high speeds the engine rocks itself to pieces and exerts a destructive influence on the track. With the perfect balance obtainable with four cylinders these difficulties may be largely avoided. The mechanical advantages of proper balancing are obtainable with four high pressure cylinders, but the four cylinder compound adds to the balancing, the economies resulting from the double expansion of the steam. To this combination of advantages is due the high place taken in modern locomotive practice by engines of the four cylinder balanced compound class.

There are also mechanical advantages which favor the adoption of the four cylinder balanced compound. For one thing, the weight on the driving wheels may be increased on account of the complete elimination of the hammer blow on the track. In the case of an engine built, it was decided in view of this fact to increase the weight per driving axle from 47,000 to 55,000 lbs., which would result in a greater tractive effort for this type of engine for the same number of wheels.

On account of the large amounts of steam which can be worked through the cylinders at long cut-off there is an increase in sustained horsepower at high speeds; without modification of the boiler. The original simple engine developed 1,400 to 1,500 indicated horsepower; the four cylinder balanced compound has developed from 1,900 to 2,000 i.h.p., actually realizing 1,688 at 67 miles an hour, and 1,980, at 75 miles an hour in service. (From results of a test of a four cylinder balanced compound on the Pennsylvania Rd. testing plant at the Louisiana Purchase Exposition at St. Louis in November, 1904.)

Also the power is divided between four cylinders and may be divided between two axles resulting in a reduction of bending stress on the crank axle, and the use of light moving parts which renders them easily handled, and which minimizes the wear and repairs of parts.

The De Glehn four cylinder balanced compound, which is used extensively in Europe, is characterized by an arrangement of cylinders, which divides the application of the power between two driving axles and provides a separate valve gear for each cylinder, so that high and low pressure cut-offs can be independently varied. The high pressure cylinders are placed outside, while the low pressure are inside between the frames. The Walschaert valve motion is used throughout. The gears for the low pressure cylinders are driven from eccentrics placed on the forward driving axle, while those for the outside cylinders are driven from the second pair of driving wheels by return cranks placed on the crank pins.

The outside, or high pressure cylinders are connected to the second pair of driving wheels, while the inside, or low pressure, are connected to the first pair, which has a cranked axle. In order to keep the main rods of as nearly the same length and weight as possible, the high pressure cylinders are set some distance in the rear of the low pressure.

In the Von Boiries type, also used in Europe, the cylinders are all in the same transverse plane, the high pressure cylinders being on the outside. There is only one valve motion for each side, but there are four valves, one for each cylinder. The main rods of both high and low pressure cylinders are connected to the front driving axle, resulting in a somewhat short main rod.

In America there are also two principal types in use, the Cole and the Vauclain. In the Cole type, the low pressure cylinders are located outside of the frame and are connected to the second driving axle while the high pressure cylinders are inside the frames, and are set in advance of the outside cylinders so that the back head of the high pressure is even with the front head of the low pressure. The high pressure cylinders are connected to the leading pair of driving wheels, which has a crank axle. There are two piston valves, one for each cylinder, on the same valve stem, but there is only one valve chamber. The high pressure valve is arranged for central admission and the low pressure for central exhaust, both valves being hollow.

The Vauclain type differs from the Cole in placing the cylinders in the same transverse plane, the high pressure being inside and the low pressure outside, of the frames. There is only one piston valve used for both cylinders.

In both the Vauclain and the Cole types the connections of the main rods may be varied. By setting the high pressure or inside cylinder high and giving it an inclination all the main rods may be connected to the second driving axle and thus may be the same length. Where the first driving axle is far enough away from the cylinders all the main rods may be connected to the front driving axle.

SUPERHEATED STEAM AND SUPERHEATERS.

The necessity of greater economy in steam work is daily becoming a matter of increasing interest. The simple locomotive using saturated steam has been excelled by the compound four cylinder balanced locomotive, yet the fact remains that there is still room for improvement and that other and far more effectual means of obtaining an increase of power and economy lies in the use of superheated steam. It unquestionably constitutes the most important feature of steam locomotive development of modern times.

In the matter of the evident advantages resulting from the use of superheated steam, care must be taken to separate the increased efficiency of the boiler from the corresponding increase in cylinder efficiency, which does not depend, as in the case of saturated steam, upon an increase of pressure. On the contrary, superheated steam at a pressure of 90 lbs. per sq. in. can work as efficiently as the other at 180 lbs. The running has, up to the present, been done with a short cut-off ranging from ¼ to 1-10 of the stroke, while the throttle is kept wide open or partially closed, dependent on the speed.

The reason for this is, that with a partially closed throttle, the absolute superheating rises. For example, if steam at a pressure of 180 lbs. per sq. in. is superheated to 575° F. the actual superheating is 575°—377, which is temperature due to pressure, =198°. At 75 lbs. per sq. in. with the same superheating we have an effective superheat of 575°—287 =288°, so that the excess is such that cylinder condensation does not take place, even with an early and economical point of cut-off. In this is to be found a great advantage of superheated steam.

This advantage is only slightly augmented with an increase of pressure, and any closing of the throttle is rather apt to be wasteful, because the rise of temperature, above that due to pressure by an excessive closing of the throttle, can scarcely be detected in the working of the cylinder.

It has been said by Peabody that the safe production of superheated steam at a temperature of 570° F., in a locomotive boiler, and its successful use in the cylinders was an impossibility.

Whenever superheated steam has been used to give a notable gain in economy the superheating has been accomplished in a separate apparatus which has taken the form of a coil of pipe exposed to the products of combustion beyond the boiler.

Plates and tubes, thin enough, endure long service in a boiler when exposed to the fire, because they are kept at a moderate temperature by the water in the boiler. If steam is to be superheated strongly in a coil of pipe or other device, which is exposed to hot gases, the metal of the superheater must be strongly heated, and is sure to waste away rapidly. There is no material that can stand long service when exposed at once to high pressure and a high temperature. There is little risk therefore in predicting that all superheating devices now used will eventually be discarded for this reason.

The best design by Schmidt was a superheater in the smoke box, directly connected to the boiler. Examination of one of these superheaters in an engine after it had been in service for two years showed it to be free from any defects, although with suitable coal it raised the steam to a temperature of 645° F. The valves, packing boxes and pistons were also in excellent condition. So that Peabody's prediction is not borne out in actual practice.

The development of the Schmidt idea and others has, however, demonstrated the great advantages of superheated steam for locomotive work, and tests show that the efficiency of the boiler will be increased about 25% by superheating the steam 180° F. Initial condensation in the cylinders can also be reduced by the use of superheated steam. There appears then to be a prospect of bringing the locomotive back to the construction of the simple engine, and at the same time increasing its efficiency.

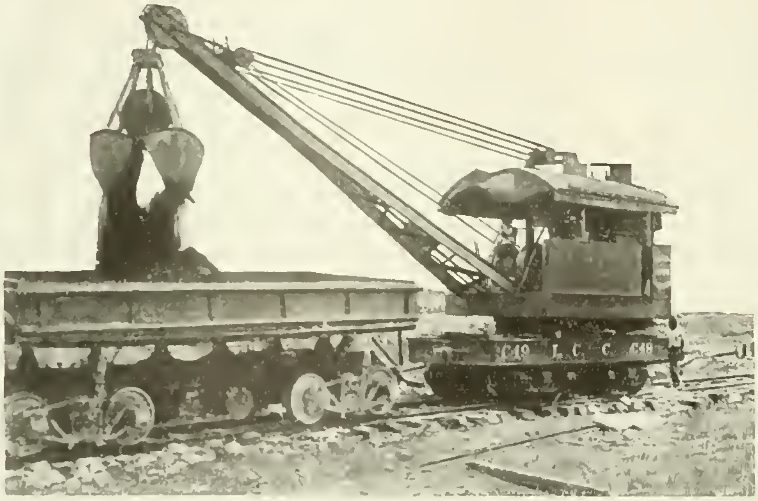
Schmidt defines superheated steam as steam having a temperature of at least 575° F. or in general a steam which at a pressure of 150—180 lbs. has been raised about 180° above the temperature corresponding to its pressure at saturation. Such a high degree of superheat absorbs about 10% of all the heat generated. Experiments made with stationary steam engines show that the efficiency of the boiler was increased about 25% when steam superheated about 180° F. was used. The saving in feed water averaged about 33%, and in coal 25%. This saving was in part due to the short cut-off which is possible when superheated steam is used.

The great value and advantage of using superheated steam lies not alone in the increase of power but also in the substantial reduction of steam consumption.

In American practice the steam is generally superheated about 150° F.,

A FEW OF THE MANY THINGS YOU GET WHEN YOU BUY AN

"American" Locomotive Crane



CAPACITY	Much greater than we rate it. Consequently there is a LARGE SAFETY FACTOR.
ENGINE NON-REVERSING	The only engine that performs the movements of HOISTING, TRAVELLING, SLEWING, RAISING AND LOWERING THE BOOM simultaneously, or reverses any one or all of these movements, each being absolutely independent of the other.
FRICTION	A slight pressure on the friction lever engages or disengages the "AMERICAN" expansive friction. It is QUICK, POSITIVE, DEPENDABLE and cannot yield or waver in the hardest service. It will outwear any other style three to one. The operator likes it because it works easy.
BOILER	ONE-THIRD LARGER than ordinarily furnished with 30% more flues. Consequently a more rapid steamer and greater capacity.
DRUMS	Liberally proportioned and BRONZE BUSHED, lengthening their wear 300%.
TURNTABLE	Two hard bevel paths with 20 accurately finished conical BRONZE BUSHED rollers running in oil, thoroughly protected from dirt. Perfect distribution of load on all rollers.
CONVENIENT LOCATION OF OPERATOR	Operator stands well to the front of the Crane, away from the heat of the boiler and pipes. He has a clear, unobstructed view of the work at all times.

This only briefly tells the story but if you will write us we will explain fully how the "AMERICAN" LOCOMOTIVE CRANE is made and tested, how little it will cost you for maintenance and repairs, how long it will last and all the different kinds of work it will do for you.

Catalogue No. 35 will be mailed on request.

American Hoist and Derrick Co.

ST. PAUL, MINN.

above its temperature due to pressure, while in European practice the superheat is raised 250° to 300° F., without impairing lubrication, when a high flashing lubricating oil is used.

The steam should be delivered to the cylinder at a temperature of about 600° F., in which case it may be defined as highly superheated steam. Its chief superiority over saturated steam lies in the fact that owing to the excess of heat over the point of saturation, it entirely prevents cylinder condensation, which is the most serious of all sources of waste. Apart from this advantage, superheated steam has a greater temerity and increases in volume corresponding to the superheat applied from 25 to 40%, as compared with equal weights of saturated steam of equal pressures. But superheated steam will not only effect a direct saving in fuel and water, but a direct or indirect saving in other ways. Due to the prevention of condensation and the augmentation in the volume of steam the boiler capacity is increased. Very high steam pressures are not absolutely necessary without sensibly affecting the economy, as this depends on the degree of superheat.

A reversion to relatively normal pressures will ensure a longer life of the boiler and firebox, and will render easier the work of keeping the various joints and fittings tight, besides mitigating the staybolt difficulties. The importance of this point is too obvious to need insisting upon.

The principal reason for the economy of the compound locomotive lies in the fact that the losses due to condensation, which in ordinary simple engines amounted to as much as 35%, are reduced to about 20%. By the use of highly superheated steam these losses are entirely obviated. This phase of the question may be summed up as follows: By the consumption of one ton of coal it is possible to produce in a certain time 650 h.p. in a saturated steam simple engine, 750 h.p. in a saturated steam compound, 850 h.p. in a superheated steam simple engine, and 875 h.p. in a superheated steam compound.

It does not seem likely that the superheater will be extensively used upon the compound, as the composite saving of the two is not enough in excess of the superheater alone to make the combination of the two worth while. It seems very likely, therefore, that we will see a reversion to the simple engine, even to the exclusion and discarding of the compound.

In Schmidt's superheater the high degree of superheating averaging about 575° F. is obtained by bringing a portion of the hot firebox gases into direct contact with superheater. In order to do this a fire tube from 11 to 12 in. in diameter is placed between the regular tubes and the bottom of the shell of the boiler.

The superheater consists of 62 tubes from 1 3-16 to 1 5-16 inches inside and from 1½ to 1⅝ inches outside diameter. These tubes are placed about the smokebox in three concentric rings. They are arranged in groups set one behind the other. At their upper extremities these tubes are expanded into a long steam header which branches out to the right and left. The 21 tubes of the inner group are arched up at the bottom away from those of the other two groups so that an open space, called the superheating firebox, is found, into which the hot gases enter from the large fire tube. The inner jacketing of the body to the right and left of the smokebox up to the top of the exhaust nozzle, so that nearly the whole of the superheater is enclosed in an iron casing, which can be opened or closed on each side of the smokebox by small dampers operated by the engineer.

The distributing steam header is at the right hand side of the smoke box and has a partition in the middle. When the throttle is opened the damp steam enters the back end of this steam chamber and flows through the rear to ten of the three-fold groups of tubes, and passes over to the left side being dried and superheated to some extent. In this steam box there is no partition, so that the partially superheated steam enters the forward tubes of the three groups and flows back to the right hand steam box and thence to the cylinders.

The hot gases from the firebox pass through the large fire into the arched chamber formed by the upward bending of the inner group of tubes thence upwards over the whole length of the tubes and escape at the stack. The action of this flow of the hot gases over and about the superheating tubes is in an almost exact ratio to the working of the locomotive and ceases almost entirely when the throttle is closed. This flow of gases can furthermore be regulated by the damper. This simple arrangement also makes it possible to easily avoid all overheating of the covering of the superheater. The connections to the blower and the superheater damper can be so arranged that the damper will be closed when the blower is at work.

Measurements which have been taken indicate that at the middle point of the superheating chamber the average prevailing temperature is about 1,290 F., and that the escaping gases are about 660° F.

The lower rows of the superheater are placed so far apart that all of the sparks carried through by the draft can be collected at the spark trap. Furthermore, a proper adjustment of the tubes of the superheater makes it possible to do away with the jacketing of the side sheets. The soot is removed by a jet of steam. The entire superheating arrangement occupies only a comparatively small part of diameter of smokebox.

Tests on the Berlin division show that in nine days' trial over a run of 102.5 miles, with a train weighing on an average 280 tons, to which 80 tons should be added for the engine, the following comparative results were obtained. For each train mile engine no. 74 using superheated steam burned 12.94 lbs. of coal and evaporated 78.1 lbs. of water, while the compound locomotives burned on an average 14.47 lbs. of coal, and evaporated 105.35 lbs. of water. The compounds consumed about 11.8% more coal and nearly 30% more water than the one with the superheater.

Following the Schmidt smokebox superheater came the Schmidt smoke tube superheater. In this design a double chambered niggerhead extends horizontally across the front flue sheet and at right angles to the dry pipe, to which one chamber is connected midway, while the other chamber is in connection at either end with a steam pipe leading to a cylinder. The under surface of this niggerhead is faced and in it are eight series of ports or openings, the alternate ports in each series leading to one of the two chambers. To this under surface are suspended by means of straps bolted to the niggerhead, square blocks into each of which are secured two sets or pairs of the circulating or superheating tubes. These circulating tubes extend downward at an angle to a point in line with their respective smoke tubes, where they turn and enter the smoke tube and extend to within 30 ins. of the back flue sheet. At the firebox end a return bend is applied to make a connection between the two circulating tubes, one leading from each of the chambers and secured to the same block. Thus the steam leaving the dry pipe, passes through one chamber of the niggerhead, out through one circulating tube and back through its complementary tube, thence through the other chamber of the niggerhead to the steam pipes and on to the steam chests.

The front end opening to the smoke tubes can be entirely closed by a damper, so that there will be no flow of the hot gases from the firebox through the smoke tubes when the engine is not working, thus eliminating the danger of burning out the circulating tubes.

Another design of the smoke tube superheater is the Cole-Field tube arrangement. In this design eight double chambered headers are used, which, being secured to the niggerhead, extend vertically downward in front of the tube sheet, and the circulating tubes are entered from the back on a line with the smoke tubes through holes in the back wall of the header chamber and are therein made steam tight. A plugged hole in the front face of the leader permits of getting at the end of the tubes to expand and fasten them in the header as well as to plug or work on them in case of their becoming ruptured or leaking. The Field tube, not proving as successful as was desirable, was later superseded by the return bend circulating tube. The two chambers of each header have independent walls and are joined together by a web.

A design which has been very extensively adopted on the C.P.R. is the Vaughan-Horsey, which, in principle the same, differs materially in detail from the other two. There are two elongated chamber castings, each entirely independent of the other, and each cast with a series of fingers which act in the capacity of headers. One chamber casting, acting as a niggerhead, is bolted centrally to the dry pipe in such a manner as to have the fingers extend vertically downward, while the other chamber casting, fastened at either end to a short steam pipe, has its fingers extending upward. These fingers when in position interlace, but with sufficient space between to permit the introduction of the circulating tubes. One end of the circulating tube is jumped and a collar upset on it. The end of the tube is then so bent that the milled face of the collar will be parallel to the length of the tube. With a steel union nut the bent end of the circulating tube is secured to a drop-forged two or four way passage, which is screwed into the outer face of one of the fingers of one chamber, while the corresponding end of the companion tube is similarly secured to an adjacent finger of the other chamber. These passage-ways are in line with the smoke tubes and the circulating tubes enter the smoke tubes the same as in the Schmidt and Cole designs.

The Baldwin is another design of the smokebox type of superheater. It is much simpler than the Schmidt design, and consists only of two headers on either side of the smoke box, the two on either side, being connected by a series of circulating pipes which are bent to conform to the shape of the smokebox. Two methods for connecting the headers to the niggerheads and steam pipes are provided for, one with the steam entering the superheater at the top back end and emerging at the lower front end, and the other with the steam entering at the top front end and emerging at the bottom back end. The second arrangement would probably give the better results for the reason that the steam leaves the superheater at the point where the gases are the hottest. In this, as well as in the Schmidt type, diaphragms are employed to cause the gases, on their travel from the smoke tubes to the stack to circulate about the superheater pipes.

With the smoke tube type of superheater the number of circulating pipes employed in the several designs would depend largely upon the size of the boiler, but the common practice is to use 22 smoke tubes, placed in the upper part of the boiler, with two sets of circulating tubes in each. The smoke

Branch Offices : - - Winnipeg and Vancouver tubes are five inches outside diameter at the front sheet, into which they are expanded and beaded over. This diameter is maintained to within seven inches of the firebox end, where it is swedged down to four inches, and enters the sheet at that diameter. The hole in the firebox sheet is threaded, care being taken to make it perfectly true and parallel and in line with the corresponding hole in the front sheet and the tube is screwed into the sheet and then beaded over. The circulating tubes are of cold drawn steel, 1¼ inches outside diameter, and extend into the smoke tube to within 30 ins. of the firebox, where the return bend joins the two tubes together, and all four circulating tubes are separated as well as being supported in and held away from the walls of the smoke tube, to permit of the free flow and circulation of the gases, by means of lugs or feet cast on the return bends. These tubes, reaching as they do so near the firebox, and being subjected to very high temperatures, would be liable to burn off at the end when no steam was passing through them, were they not to receive attention.

This is afforded them by means of a damper placed in the front end immediately below the large smoke tubes and between the headers and flue sheet. The damper opens and closes automatically with the opening and closing of the main throttle by means of a cylinder piped to the steamway in the cylinder saddle, and piston and weight attached on the outside of the smokebox to an extension of the damper rod.

One of the things that has given a great deal of trouble in the operation of superheater engines has been the difficulty experienced in getting oil to the valves and pistons, especially to the pistons, because of the erroneous idea, imported with the superheater, that a pump lubricator was necessary. A number of these pump lubricators have been tried, but with very indifferent results. Experience has demonstrated that the modern hydrostatic lubricator will deliver the oil in sufficient quantities at all times, and that the usual amount of the better grades of valve oil is sufficient for lubricating valves and pistons. It is noticeable with engines using superheated steam that the walls of the steam chests and cylinders take on a bright polish, but never get rough and cut as is so often the case with the cylinders of compound engines. While there have been some cases of excessive wear of piston packing rings when the rings have failed to make a mileage of 10,000 miles, due partly to insufficient lubrication and partly to soft material, the life of the rings ordinarily is very satisfactory.

While the Schmidt smoke box superheater produces a very high degree of superheat, its expensive and complicated construction and inaccessibility for repairs render it rather undesirable for general adoption.

The Schmidt smoke tube design has in the past required the least attention of any; and when once the equipment is made steam tight but very little trouble is experienced thereafter. However, the blocks into which the circulating tubes are assembled, being secured to the headers by straps, each strap holding a corner of two blocks, when repairs are required, such as inserting a new circulating pipe tube, and one of the blocks must be taken down, two other blocks are thereby loosened, and this means the taking down of all the blocks and a remaking of all the joints. A steam leak between the header and a block soon cuts grooves, entailing the refacing of the ports, which means a great deal of labor.

The Vaughan-Horsey design probably embodies the most successful arrangement of any. Owing to its peculiar construction not only is a higher degree of superheat obtainable, but defective parts are more easily repaired or renewed. Should a circulating tube break and another one not on hand, all that is necessary to do is to remove the front plates, uncouple the defective tube, and screw a cap on the passage way. Also it is very little more work to insert a new tube. It is not advisable to plug too many of these tubes, for it reduces the total area, thereby restricting the flow of steam and weakening the engine.

In conclusion let it be understood that the addition of a superheater entails no extra expense or attention to be bestowed on an engine aside from that arising from the repairs of mechanical defects, the keeping of the large smoke tubes free from cinders, and the keeping of the damper working. It is not unreasonable to expect that the defects should in time be practically eliminated and an engine go from one stopping to another without having the front plates removed, as some of them are now doing. Unless the cleaning of the tubes is thoroughly and regularly done, a material deterioration in the efficiency of not only the superheater but of the engine itself will follow. With any kind of soft coal, cinders are bound to collect in the large smoke tubes and fill in around the circulating tubes, and it is found that the air blast usually applied is not always sufficient to remove them. A strong pressure of water is necessary to thoroughly cleanse the tubes, and this should be resorted to at least every washing out of the boiler. The results from this washing, in the better steaming of the engine and the higher superheat obtained, will more than repay for the work performed.

The foregoing paper was read before the Central Railway and Engineering Club recently.

June Birthdays

Many happy returns of the day to—

Jas. Anderson, Manager, Sandwich, Windsor and Amherstburg Ry., Windsor, Ont., born at Ayr, Ont., June 20, 1851.

W. C. Bowles, Division Freight Agent, Pacific Division, C.P.R., Vancouver, B.C., born at Montreal, June 3, 1875.

J. H. Boyle, Assistant Superintendent, District 4, Eastern Division, C.P.R., Ottawa, born at Waterloo, Que., June 26, 1869.

F. P. Brady, Member Government Railways Managing Board and General Superintendent Government Railways, Moncton, N.B., born at Haverhill, N.H., June 22, 1853.

H. W. Brodie, General Passenger Agent, Lines West of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

E. Callaghan, Agent, Hamilton Steamboat Co., Toronto, born at Kingston, Ont., June, 17, 1875.

A. E. Doucet, District Engineer, National Transcontinental Ry., Quebec, born at Montreal, June 9 1860.

E. W. DuVal, Superintendent, District 1, Saskatchewan Division, C.P.R., Moose Jaw, born at Toledo, Ohio, June 5, 1885.

G. H. Eaton, Assistant Master Car Builder, Western Lines, C.P.R., Winnipeg, born in Staffordshire, Eng., June 9. 1860.

A. A. Goodchild, Auditor of Stores and Mechanical Accounts, C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

H. W. Harding, Local Secretary, Canadian Northern Ry., London, Eng., born there June 6, 1869.

F. M. Hawley, City Ticket Agent. G.T.R., Cobourg, Ont. born at Campbellford, Ont., June 22, 1874.

L. R. Johnson, Assistant Superintendent of Motive Power, C.P.R. Eastern Lines, Montreal, born at Abingdon, Berks, Eng., June 22, 1855.

L. K. Jones, I.S.O., Secretary, Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

A. C. Lytle, Assistant Trainmaster, District 1, Eastern Division, C.P.R., Farnham, Que., born at Hemmingford, Que., June 6, 1854.

R. S. McCormick, Chief Engineer, Algoma Central and Hudson Bay Ry., and Manitoulin and North Shore Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

D. McDonald, General Manager, Montreal St. Ry., and President Canadian Street Railway Association, born at St. Thomas de Montmagny, Que., June 17, 1859.

S. J. McLean, Dominion Railway Commissioner, Ottawa, born at Quebec, June 14, 1871.

J. V. McNab, Resident Engineer, C.P.R., Moose Jaw, Sask., born at Ayr, Ont., June 11, 1884.

C. E. McPherson Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1861.

W. R. MacInnes. Freight Traffic Manager, C.P.R., Montreal, born at Hamilton, Ont., June 7, 1867.

H. J. Maguire, District Baggage Agent, Pacific Division and B.C. and Pacific Coast Service, C.P.R., Vancouver, B.C., born at Toronto, June 16, 1881.

G. Manson, Assistant to Vice President C.P.R., Winnipeg, born at Thurso, Scotland, June 8, 1863.

J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto, born at London, Ont., June 15, 1857.

L. Mulkern, District Freight Agent, C.P.R., London, Ont., born there, June 18, 1871.

Index to The Railway and Marine World.

A complete index to the matter contained in The Railway and Marine World for 1910, Jan. to Dec., both inclusive, has been mailed to subscribers who applied for it. The indexes for previous years met with much favor, and we have no doubt the one for the past year will be equally appreciated. A large portion of the matter we publish from month to month is of great permanent value for reference, and of course this value is much enhanced by a complete classified index. We were much gratified when we issued our first index for 1907 to find that a large number of subscribers file and bind the paper.

We do not make a general distribution of the index, but a copy will be sent to each subscriber who desires one, and who will notify us to that effect. A letter or post card, simply stating that the index is desired, and giving the subscriber's name and address, will be sufficient. Any subscriber who wishes a copy and has not already applied should do so at once.

G. T. R. Semi-annual Meeting.

The half-yearly meeting was held in London, Eng., April 20, when the report for the half-year, ended Dec. 31, 1910, was presented. The following summary shows a comparison of the revenue of this period with that for the corresponding period 1909:—

1909.		1910.
£3,632,903	Gross receipts	£3,699,898 10 10
	Deduct—	
2,753,143	Working expenses, being at the rate of 75.43%, as compared with 75.78% in 1909	2,790,685 18 3
£ 879,760	Net traffic receipts	£ 909,212 12 7
39,953	Balance of income from rentals, outside operations, and car mileage.	38,436 17 9
£ 919,713	Total net revenue	£ 947,649 10 4
	Add—	
16,013	Amount received from International Bridge Co.	16,012 16 7
6,507	Interest on bonds of Central Vermont Ry.	6,506 14 1
68,743	Interest on securities of controlled lines and on St. Clair Tunnel bonda acquired by the issue of G. T. R. 4% debenture stock	70,941 1 6
27,631	Balance of general interest account	40,146 0 3
£1,038,607	Net revenue receipts	£1,081,256 2 11

Following are the net revenue charges, for the half years 1910 and 1909:—

1909		1910.
£ 77,603	Rents (leased lines)	£ 77,603 0 9
508,572	Interest on debenture stocks and bonds	525,749 8 7
36,589	Interest on debenture stock and bonds of lines consolidated with the company	32,331 17 4
17,368	Canada Atlantic Ry. deficit	40,079 17 5
.....	Toledo, Saginaw and Muskegon Ry. deficit, 1908-9-10	23,390 0 8
£ 640,132		£ 699,154 4 9
12,067	Deduct — Detroit, Grand Haven, and Milwaukee Ry. aurplus	3,862 17 10
£ 628,065		£ 695,291 6 11
410,542	Leaving a surplus of	385,964 16 0
£1,038,607		£1,081,256 2 11

Adding the balance of £12,552 16s. 0d. at the credit of net revenue account on June 30, 1910, to the above surplus of £385,964 16s. 0d., the amount available for dividend is £398,517 12s. 0d., from which the directors recommend the payment of the following dividends for the half year:—

4% guaranteed stock	£204,958 7 8
First preference stock	85,420 15 0
Second preference stock	63,210 0 4
½% on third preference stock	35,823 3 7
	£389,412 6 7

leaving £9,105 5s. 5d. to be carried forward.

Following is a comparison of receipts for the half-years ended Dec. 31, 1910 and 1909:—

Description	1910	1909	Increase
	£	£	£
Passengers	1,127,908	1,091,426	36,482
Mails and express	197,414	182,855	14,559
Freight and live stock	2,254,619	2,252,106	2,513
Other receipts	119,958	106,516	13,442
	£3,699,899	£3,632,903	£66,996

TRAFFIC STATISTICS

	1910	1909	Increase	Decrease
Passengers carried	6,097,437	6,212,275	......	114,838
Average fare per passenger	44.40d	42.17d	2.23d	......
Tons of freight and live stock	8,890,164	9,265,763	......	375,599
Average rate per ton	60.87d	58.33d	2.54d	......
Tons carried one mile	1,538,361,407	1,622,599,284	......	84,237,877
Earnings per train mile	91.97d	87.61d	4.36d	......

The average rate per ton per mile on the entire freight business was 0.71c., compared with 0.68c. in the corresponding half-year.

The working expenses, including taxes, were £2,704,091, or 73.09% of the gross receipts, as compared with £2,675,662 or 73.05% in the corresponding half year, an increase in amount of £28,429, but a decrease of 0.56% in proportion to gross receipts.

Following is a comparison of revenue expenditure, including taxes, for half-years ended Dec. 31, 1910 and 1909:—

Description of expenditure	1910	1909	Increase	Decrease
	£	£	£	£
Maintenance of way and structures	592,719	628,698	......	35,979
Maintenance of equipment	647,680	669,889	......	22,209
Traffic expenses	116,768	97,935	18,833	......
Conducting transportation	1,256,911	1,198,611	58,300	......
General expenses	90,014	80,529	9,485	......
Taxes	86,594	77,481	9,113	......
Total	£2,790,686	£2,753,143	37,543	......
Percentage of gross receipts	75.43	75.78	......	0.35
Expenditure per train mile	69.37d	66.40d	2.97d	......

The train mileage compares with that for the half-year ended Dec. 31, 1909, as follows:—

Description	1910	1909	Increase	Decrease
Passenger	4,423,504	4,399,734	23,770	......
Freight	4,974,601	5,284,643	......	310,042
Mixed trains	256,454	267,110	......	10,656
Total	9,654,559	9,951,487	......	296,928

From the foregoing statements it will be observed that the gross receipts show an increase of £66,996, or 1.84%; the working expenses, including taxes, an increase of £37,543, or 1.36 %; and the train mileage a decrease of 296,928 or 2.98%.

The total charges to capital account were £376,963 12s. 1d. Of this £12,502 12s 4d. was for the acquisition of $6,500 of G.T. Western Ry. first mortgage bonds issued in respect of a similar amount of North Western G.T. bonds, which matured Jan. 1, 1910, and were paid off during the half-year, and $51,700 D., G. H. and M. Ry. consolidated bonds; and £59,292 6s. 2d. for discount and commission on 4% debenture stock and 4% guaranteed stocks sold during the half-year.

The expenditures on capital account in respect of new works, new rolling stock, double track and land purchased, was as follows:—

New worka	£270,773 0 8
New rolling stock	23,272 19 9
Double track	1,119 3 11
Land purchased	10,003 9 3
	£305,168 13 7

No additions to rolling stock at the expense of capital have been made during the half-year, but £23,272 19s. 9d. has been charged to capital account for materials supplied on account of 1,000 additional steel coal cars, to be subsequently delivered. Five Pacific type passenger engines, 10 baggage cars, and 660 steel under-frame box cars have been purchased, and two dining, three parlor and 3 parlor buffet cars, and one snow plow have been built in the company's works on revenue account.

CANADA ATLANTIC RAILWAY.

The following shows the results for the half-year compared with the corresponding period of 1909:—

1909.		1910.
£230,104	Gross receipts	£198,239
188,480	Working expenses	179,763
41,624	Net traffic receipts	18,476
1,122	Balance of income from rentals, outside operationa, and car mileage	4,474
£ 42,746	Total net revenue	£ 22,950

The interest charges were £63,030, against £60,114 and there was a net revenue deficiency of £40,080, compared with £17,368 in 1909.

The number of passengers carried was 287,943, against 290,729, a decrease of 2,786, or 0.96 %; and the passenger receipts, including mails and express, were £48,808, against £49,006, a decrease of £198, or 0.40%.

The quantity of freight moved was 720,415 tons, against 1,258,375 tons, a decrease of 537,960 tons, or 42.75%, and the receipts from freight traffic were £130,875, making £171,079, a decrease of £40,204, or 23.50%.

GRAND TRUNK WESTERN RY.

The following shows the results for the half-year compared with the corresponding period of 1909:—

1909.		1910.
£637,166	Gross receipts	£640,798
468,976	Working expenses	502,464
168,190	Net traffic receipts	138,334
Dr. 49,094	Balance of income from rentals, outside operations and car mileage	Dr. 49,409
£119,096	Total net revenue	£ 88,925

The net revenue charges were £92,150, against £93,307, and there was a net revenue deficiency of £3,225, which is carried forward, as compared with a net revenue credit of £25,789 in 1909.

The number of passengers carried was 1,079,337, against 1,052,197, an increase of 27,140, or 2.58% and the passenger receipts, including mails and express were £242,899, against £230,519, an increase of £12,380, or 5.37%.

The quantity of freight moved was 1,642,548 tons, against 1,740,216 tons, a decrease of 97,668 tons, or 5.61 % and receipts were £379,704, against £391,015, a decrease of £11,311, or 2.89%.

DETROIT, GRAND HAVEN & MILWAUKEE RY.

The following shows the results for the half-year, compared with the corresponding period of 1909:—

1909.		1910.
£219,978	Gross receipts	£215,501
159,486	Working expenses	174,021
60,492	Net traffic receipts	41,480
Dr. 11,444	Balance of income from rentals, outside operations, and car mileage .Dr.	636
£ 49,048	Total net revenue	£ 40,844

THE EFFICIENCY OF

VANADIUM STEEL

is a subject that deserves the close investigation of every railroad officer who has anything to do with keeping operating costs down.

A locomotive with Vanadium Cast Steel Frames and Cylinders, Vanadium Forged Steel Side Rods, Connecting Rods, Tires and Axles, is more nearly shop-proof than any other locomotive, and will yield 15 per cent. increased efficiency in life and service.

A Vanadium steel locomotive has the minimum of dead load with the maximum of resistance to fatigue or failure of parts by crystallization. The re-boring of cylinders and the replacement of bushings occur less frequently because Vanadium Castings wear to an extremely resistant mirror surface.

324 Frick Building - Pittsburgh, Pa.

The net revenue charges were £36,981, the same as in 1909. There was a net revenue surplus of £3,863, as compared with £12,067 for the corresponding period of 1909.

The number of passengers carried was 478,246, against 487,122, a decrease of 8,876, or 1.82 %; and the passenger receipts, including mails and express, were £74,673, against £75,032, a decrease of £359, or 0.48%.

The quantity of freight moved was 1,079,293 tons, against 1,116,699 tons, a decrease of 37,406 tons, or 3.35%, and the receipts from freight traffic were £120,432, against £125,074, a decrease of £4,642, or 3.71%.

GRAND TRUNK PACIFIC RAILWAY.

Track was laid to the western end of the Prairie Section at Wolf Creek last year, and has since been extended 63 miles beyond Prairie Creek, which is 186 miles west of Edmonton and within 60 miles of the summit in the Rocky Mountains through the Yellowhead Pass. During the winter construction camps were established from Prairie Creek westerly through the Yellowhead Pass to Tete Jaune Cache, 110 miles, and arrangements have been made for the vigorous prosecution of this work during the present year. On the western end of the Mountain Section from Prince Rupert on the Pacific coast, track has been laid easterly for 100 miles, and will be available during the coming season for the transportation of materials and supplies for the contractors, and also for the use of prospectors and settlers going into the interior of the country. From the present end of the track easterly to Aldermere, 145 miles, construction camps are established, and the work is being carried on as rapidly as the weather conditions and the supply of labor will permit. On this section of the line there is a considerable amount of rock cutting and tunnel work, and a large bridge will have to be constructed across the Skeena River near Hazelton. Every effort, however, will be made to complete the grading to Aldermere, and to lay a considerable portion of the track by the end of the present year.

Construction on the branch lines was continued from the date of the report presented in October to the end of the season in December, but work was almost entirely suspended during the winter. The contractors, however, have kept their forces organized, and every pressure has been brought to bear upon them to put on an increased force of men and teams at the opening of the coming season.

REPORTS OF OFFICIALS.

The Chief Engineer, H. G. Kelley, reports, the length of the G.T.R. maintained and operated during 1910 was the same as in 1909, viz., 3,536 miles. The work in connection with the terminal improvements at Ottawa is progressing favorably. The new hotel and station buildings have been erected and roofed in, and a fair proportion of the interior piping and electric wiring has been done. A new power house has also been built, and the equipment is now being installed.

The renewal of the Canada Atlantic railway bridge across the St. Lawrence at Coteau is practically completed. The bridge consists of the following:—4 fixed spans, each 219 ft., 10 fixed spans, each 213 ft., 2 fixed spans, each 171 ft., 1 fixed span, 135 ft., 1 swing span (river), 1 swing span (Soulanges Canal), and three short spans, making a total length of actual steel work, 4,085 ft. 3 ins.

The expenditure during 1910 for maintenance of way and structures was $4,663,272.30, against $4,384,252.58 in 1909, an increase of $279,019.72, or somewhat over 6.36%. Total average cost per mile, $1,318.80.

The outlay on track and permanent way, including ballast and ballasting, clearing snow, renewals of rails and ties, and also including their proportion of superintendence, was $3,186,471.96 in 1909, or at the rate of $901.15 per mile. In 1910 the amount was $3,244,751.98, or at the rate of $917.63 per mile, an increase of 1.83%.

For the renewal and repair of bridges, trestles and culverts, the expenditure during 1910, shows an increase of $158,990.46, or nearly 46½% as compared with the outlay during 1909, the figures being $501,352.55 and $342,362.09 respectively.

The cost of repairs and renewals of buildings and fixtures was $672,999.72, compared with $564,230.08 in 1909, an increase of $108,769.64, or almost 19.28%.

New stations were built at Danville Jct., Lacadie, St. Martine, Henrysburg, Moose Creek, Downsview, Malton, Waterloo, Vineland, Goderich, Bothwell, Nixon, Amagari, Ada and Fenton—15 in all

The materials used for repairs and renewals of main tracks and sidings were:—

New steel rails	33,304.80 tons.
Partially-worn steel rails laid in branch lines and sidings	26,512.80 tons.
New ties placed in track	1,915,896
Ballast	401,356 cub. yds.

The Superintendent of Motive Power, W. D. Robb, reports the expenditure, mileage, etc., as follows:—

Half-year ended	Total expenditure	Train mileage	Rate of expense per mile		
			Train	Engine	Car
			Cents	Cents	Cents
Dec., 1910	$4,843,710	9,524,919	50.85	39 19	3.30
" 1909	4,849,724	9,951,487	48.73	38 33	2.96

A decrease in expenditure of $6,014 or 0.12% compared with a decrease in train mileage of 426,568, or 4.29%.

	Passenger	Freight	Mixed
The average number of cars moved per train was	5.0	25.3	7.1
And for the corresponding period	5.0	26.5	7.1

During the half-year six engines were scrapped, leaving 20 old light capacity engines set aside, to be scrapped. Five Pacific type passenger engines were purchased, and put into service. The actual stock at Dec. 31, 1910, was 929, against the official figure of 803, being a surplus of 126.

The comparative cost of repairs per train, engine and car mile was:—

Cost per mile	Repairs and renewals of locomotives		All repairing charges, including shop, machinery, tools and marine equipment, etc.	
	1910	1909	1910	1909
	Cents.	Cents.	Cents.	Cents.
Train	15.77	15.47	18.07	17.17
Engine	12.16	12.17	13.93	13.53
Car	1.02	0.94	1.17	1.04

J. Coleman, Superintendent of Car Department, reports expenditure, mileage, etc., as follows:

Half-year ended	Total cost of repairs and renewals.	Total miles run by car			Cost per mile	
		Passenger	Freight	Total	Car.	Train.
					Cents.	Cents.
Dec. 1910	$1,528,290	22,883,579	124,004,693	146,888,272	1.040	16.05
" 1909	1,605,676	22,529,586	141,494,586	164,021,154	0.979	16.14

A decrease in expenditure of $77,386, or 4.82%, and a decrease in car miles of 17,135,882, or 10.45%.

The report was adopted without comment, and the following dividends authorized to be paid: 2% on the 4% guaranteed stock; 2½% on the first preference stock; 2½% on the second preference stock, and one-half per cent. on the third preference stock, for the half-year. A resolution was also adopted, assenting to the Grand Trunk Act, 1911, and authorizing the directors to guarantee the G. T. Western Ry. first mortgage bonds, as covered by the act, and to issue from time to time, additional 4% debenture stock, the aggregate interest on which shall not exceed £100,000 a year.

The Chairman stated that the five miles of the G. T. Western Ry., between Valparaiso and Sedley, is to be double tracked immediately, and other work, consisting of the installation of a new block-signaling system, additional siding accommodation and rolling stock, also undertaken, and in order that the company may be put in a strong position financially, powers have been taken to create a blanket mortgage of $30,000,000 to be guaranteed as to principal and interest by the G.T.R. Of this $15,000,000 will remain in the treasury to redeem the existing first mortgage bonds, at maturity, the remainder being issued as required for the work above mentioned, and also to complete payment for the Battle Creek shops, and to repay money advanced by the G.T.R. The act also

tee, pledge and sell the securities of the Montreal and Southern Counties Ry., and to issue debenture stock to provide the necessary funds.

Following are the directors for the current year:—A. W. Smithers, Chairman; Sir Henry M. Jackson, C. M. Hays, President; G. Von Chauvin, J. A. Clutton-Brock, Col. F. Firebrace, Sir Felix Schuster, Lord Welby, Sir William H. White and Sir W. Lawrence Young.

Nova Scotia Railway Report.

The Provincial Engineer of Nova Scotia, R. McColl, in his annual report for the year ended Sept. 30, 1910, states that the work of his department, so far as it refers to railways, consisted generally of the supervision of the subsidized railways, there being no railway construction during the year. The principal work otherwise has been the examination into the proposed Halifax and Eastern Ry. and its final location.

Business generally, especially as regards railway traffic, has been considerably affected by the labor troubles in the mining districts, causing a great falling off in the coal shipments. The returns as a whole show a considerable decrease for the past year, there being a falling off of over $20,000 in the receipts, or about 2%, and as 1909 showed a decrease from 1908 of 8%, this makes a total decrease of 10% from 1908. This, however, is almost entirely accounted for by the labor troubles, as if the Sydney and Louisburg Ry., and the Cumberland Ry. and Coal Co. are excepted, there is an increase on the other lines of over $60,000. The most gratifying increase is that of the Halifax and South Western Ry., which shows a total of $39,000 increase for last year, or nearly 10%, and the net returns show an even greater increase.

There is no change in the railway mileage in the province, there being 634 miles of line under provincial jurisdiction, the Dominion Atlantic Ry. of 221 miles coming under the Board of Railway Commissioners, and the Intercolonial Ry. of 467 miles being under the Department of Railways. The total mileage is 1,322, or one mile of line for every 340 inhabitants, slightly less than the average for the Dominion. The construction of the Halifax and Eastern Ry. will increase this ratio considerably, so that considering there is no place in Nova Scotia more than 60 miles from navigable water, it may be said that practically all parts of the Province will be pretty well accommodated with railways.

The statistics given in the report are those for the year ended June 30, 1910, which were given in the tables published in our Jan. and Feb. issues. The receipts vary from $400 a mile in the case of the Cape Breton Ry. and the Nova Scotia Steel Co.'s Ry., to $80,000 a mile in the case of the Sydney and Louisburg Ry., and the operating expenses vary from $540 to $7,500 a mile, the net receipts varying from a loss of $540 and $443 a mile on the Cape Breton Ry. and the Nova Scotia Steel Co.'s Ry. respectively to a profit of $1,445 a mile on the Inverness Ry. and Coal Co.'s line. The Dominion Atlantic Ry. shows gross receipts of $2,855 a mile, and a net profit of $1,069.41, while the Intercolonial Ry. shows loss of $309 a mile. This shows that the lines in Nova Scotia not under the jurisdiction of the province occupy a much better territory as regards revenue than those under provincial control, with the exceptions of the Sydney and Louisburg Ry. and Inverness Ry. and Coal Co.'s line. Leaving out the two lines reporting a loss, it is shown that the receipts per train mile are on an average about 30% lower than on the larger Canadian railways, and even allowing for the fact that the trains will be somewhat heavier on the larger railways, the figures show that the provincial railways give more service in proportion to their revenue than do the larger railways. The difference in operating expenses is not nearly so marked as is the difference in the case of receipts. Notwithstanding the increase in the wages of trainmen, there is, with one exception, a decrease in operating expenses per train mile. In reference to net receipts, it is shown that the provincial railways are not getting as much for their shareholders as any of the large Canadian companies.

The traffic carried by most of the provincial railways, particularly the Sydney and Louisburg Ry., the Maritime Coal, Ry. and Power Co., and the Inverness and Richmond Ry. and Coal Co., is due to freight from mines owned by the owners of the railway, so the question of rates is not so important to the general public as it is on some of the other roads, such as the Halifax and South Western Ry. This line is of more interest to the province than other lines, not only on account of its length, but because it does only a general passenger and freight business. It is therefore very gratifying to find such a large increase, viz., 10%, in the annual traffic on that line, and at the same time a decrease in the operating expenses. The service given on this line during the summer of 1910 was without doubt the most convenient yet given, and the trains have shown a marked improvement as regards running time. There has also been a very considerable improvement in the road-bed, and a great improvement as regards derailments. While there is considerable to be accomplished yet, and while the trains are so frequent as many would like during the winter months when the traffic is light, there is a general improvement in nearly every way, and not only has the company succeeded in increasing earnings, both gross and net, but it has reduced the freight rates in many cases. While the line has not yet proved much of an earner of dividends for the shareholders, it is pleasing to find such an improvement and advantage to the people of the south shore counties. Before the building of the line, the cost of travelling worked out at about 6c. a mile, and the cost of freight about 20c. a ton a mile. The passenger tariff on the railway is 3c. a mile, and the freight rate averages about 5c. a ton a mile. This works out to a saving of about $1,000 a mile on the traffic as compared with conditions existing before the railway, to say nothing of the convenience and saving of time.

Six persons were killed and 13 injured by accidents on the provincial lines, as against 5 killed and 13 injured in the preceding year. The accidents to others than pasengers and employes were unusually low, and were all due to trespassing.

FROM AN ENGINEER OF SURVEYS.

H. M. Killaly, Engineer of Surveys, Canadian Pacific Railway, Montreal, in renewing his subscription to the Railway and Marine World, which he has taken for a number of years, writes:—

"Enclosed is another year's subscription for your valuable and interesting paper. It certainly keeps one well posted in regard to the latest news concerning railways, etc."

◆

L. J. Rouleau, Travelling Freight Agent, Grand Trunk Railway and National Despatch—Great Eastern Line, Montreal, writes:—"I always look forward to the receipt of the Railway and Marine World, every issue of which contains very valuable and reliable information."

St. Clair Tunnel Locomotives Flange Wear.

Since electric operation of the G.T.R. St. Clair tunnel was begun the driving wheels of the locomotives have been subject to excessive flange wear. After 10 months' operation, when the locomotives had made only 80,000 miles, it was necessary to turn the driving wheels and form new flanges. To do this 5/16 in. of metal had to be cut off the treads and the operation was expensive owing to the cost of removing and replacing the wheels and the loss of good metal. Under normal conditions the tires should last six years. The following information regarding the nature and probable cause of the excessive wear has been furnished by W. D. Hall, Superintendent of Power Plant and Electrical Equipment of the tunnel.

The three locomotives in use each consists of two duplicate half-units. Each half-unit is mounted on three pairs of driving wheels 62 in. in diameter. No guiding wheels are used and the rigid wheel base is 16 ft.. The total weight of each half-unit is 67½ tons, which is evenly divided on the three pairs of driving wheels. The motors are each of 250 h.p., and are geared to the driving axles. The height of the centre of gravity of the locomotive is 51 in.

Almost all the flange wear takes place on the leading wheels at each end of the half-units, which are turned end for end at regular intervals to distribute the wear as evenly as possible. The flange wear on the interior wheels is very slight and wear on the tread of any wheel is barely perceptible. The depth of the flanges is 1¼ ins. and the minimum thickness allowed is 1 in. The steam locomotives which formerly were used for hauling trains through the tunnel did not show excessive flange wear on any wheels.

While some of the flange wear on the electric locomotives is due perhaps to the frequent application of the brakeshoes in descending the 2% grades in the tunnel, there is no doubt that it is mainly due to curve resistance encountered in the tunnel yards. Conditions have been improved very much since last June. Up to that time various wheel flange lubricators had been tried, but satisfactory results were not obtained, mainly on account of the heating of the tires due to the almost continuous braking which is necessary in descending the long approaches.

Mr. Hall designed an apparatus which would spray oil on the wheel flanges and one which would do this only when the tires required lubricating to enable them to take the curves with as little resistance as possible. By pressing an electric contact button at any controller, or, in the case of a steam locomotive, by opening a small air valve, oil is sprayed on the flanges of the leading wheels of each locomotive from one lubricator. The action of the combination of oil and air not only lubricates the flanges, but cleans them from grit as well, as the spray forces the dirt and grit to the outer edge of the flange. When two or more locomotives are coupled together the pressing of a button on any locomotive will cause the leading wheels of each locomotive to be lubricated. For steam locomotives, or where electric current is not available, the action of the lubricator is the same except that it is controlled by an air valve placed near the operator and controlled by hand. This device has been giving very satisfactory results since all the electric locomotives were equipped.

The first lubricator of this design has been in continuous operation since July 10, 1910, but a sufficient time has not elapsed to determine just what saving has been effected.

ABSOLUTELY FIREPROOF

ARTHUR M. GRANT,
MANAGER.

Carillon and Grenville Ry.

A press report states that Mackenzie, Mann & Co. interests have acquired, or are about to acquire, this railway. It is the only broad gauge railway now in Canada, the gauge being 5½ ft. It extends from Carillon to Grenville, Que., connecting at both ends with the steamers of the Ottawa River Navigation Co., and is operated only during navigation. The line is 13 miles long, and its construction was necessary in order to connect the upper and lower navigable reaches of the river. The line is owned by the Ottawa River Navigation Co. There is $200,000 of common stock outstanding, which represents the entire capital obligations of the railway. No Government or municipal aid was given towards its construction. The gross earnings for the year ended June 30, 1910, were $2,148.60, and the operating expenses $4,701.21, showing a deficit of $2,557.61. It carried in the same period 3,550 passengers, and 45 tons of revenue freight, and its trains ran a total of 2,418 miles. The rolling stock consists of two of the old Birkenhead locomotives, originally built for the G.T.R., five passenger cars, and three freight cars.

Canadian Westinghouse Company, Ltd.

The report for the year 1910 shows net profits of $697,393.56, an increase of 40% over 1909.

From the year's profits quarterly dividends at the rate of 6% per annum and at the close of the year a bonus of 1% were paid, amounting to $306,362; $100,000 has been added to the general reserve for depreciation of property and plant, which reserve now stands at $400,000 on the books; $30,000 has been added to the reserve for inventory adjustment, increasing to $50,000 the amount set aside for that purpose should fluctuation of value require; and following the same prudent plan as adopted last year $70,522.21 has been written off items in property and plant account which are not directly productive from a manufacturing standpoint. The remaining balance of $190,509.35 has been carried forward to the credit of profit and loss, which shows the total unapportioned surplus to be $726,613.22.

A review of the physical activities for 1910 would closely resemble that of the previous year, except in the matter of volume. The sustained and increased demand for apparatus of all types in the electrical field, and the stability of orders for air brakes, have enforced a continual and cumulative growth of manufacture to satisfactorily care for these desirable conditions, resultant in factory output aggregating an increase of approximately 44% over 1909. As the factories were operated in 1909 to almost their normal capacities, the results of 1910 were obtained under a condition of considerable congestion. The volume of business offered in the latter part of 1909 and in the early part of this year made it apparent that some additional space would be required to facilitate its handling. Extensive additions to the warehouse and detail buildings were undertaken and are about ready for occupancy, and an extension of the foundry building, about doubling its capacity, is under way and will be completed with the opening of spring. The probability of still further increased business raises the question of additional machine shop facilities at a not distant date.

The insistent demand for apparatus involving the highest development of engineering and manufacturing skill has continued, and the large share of business with which the company has been favored in standard and special lines, particularly in those fitted for the extensive generation and distribution of high voltage electrical energy and its economical application to various industrial uses, demonstrates the standing accorded it throughout the Dominion. A new high record for sales was reached during the year, approximately an increase of 25% over 1909, the period of previous maximum. The larger volume has come from extensions to existing plants as well as from numerous new power developments, and has been well distributed geographically from ocean to ocean. Competition has been keen at the hands of home and foreign manufacturers, the latter having been reinforced by additional entrants attracted by the large developments undertaken in Canada. The established Westinghouse standards of design and construction have been fully maintained, along with continued efficiency in manufacturing costs. Appreciation is due the operating and directing forces in all departments.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H and M. Ry. separately, for Mar., as compared with Mar., 1910:—

GRAND TRUNK RAILWAY.

	1911.	1910.
Earnings	$3,027,000	$2,887,400
Expenses	2,181,000	2,088,200
Net earnings	$ 846,000	$ 799,200

CANADA ATLANTIC RAILWAY.

	1911.	1910.
Earnings	$ 166,000	$ 165,000
Expenses	143,000	125,000
Net earnings	$ 23,000	$ 40,000

GRAND TRUNK WESTERN RY.

	1911.	1910.
Earnings	$ 553,400	$ 582,650
Expenses	451,100	399,400
Net earnings	$ 102,300	$ 183,250

DETROIT, GRAND HAVEN AND MILWAUKEE RY.

	1911.	1910.
Earnings	$ 163,000	$ 158,100
Expenses	160,200	122,600
Net earnings	$ 2,800	$ 35,500

Aggregate from Jan. 1 to Apr. 30:—

TRAFFIC RECEIPTS OF THE SYSTEM

	1911.	1910.	Increase.
Grand Trunk ..	£2,202,838	£2,097,064	£105,774
Canada Atlantic.	125,594	119,710	5,884

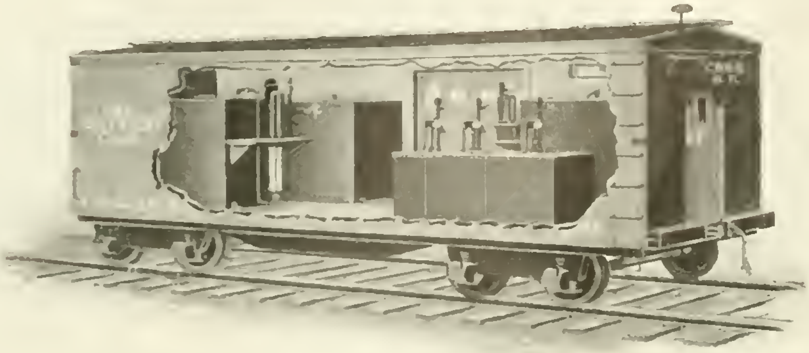
Nov. 17-18.—American Association of Freight Traffic Officers, Cincinnati, O.

◆

During March, 18 employes were killed, and 26 were injured in the course of their work in connection with the construction and operation of Canadian railways. Of the fatalities, 12 were due to being run over, three to collisions, and one each, to a derailment, to being caught between cars and to a dynamite explosion, while of the other accidents, seven were due to collisions, six to falls, five to being caught between cars, three each to being run over and to falling material, and one each to flying material and to exposure.



To the General Storekeepers

You have probably wondered how you could most economically and expeditiously distribute oil supplies to the different points of consumption.

The above illustration reproduces a special car fitted with a

Bowser Storage System

for this purpose. This has proven a highly satisfactory arrangement after severe tests. It is fitted with large storage tanks and self-measuring pumps, so pre-determined quantities can be delivered at the way stations and an account kept of it.

It represents ONE of the adaptations of the Bowser Systems to railroad oil storage requirements.

Every phase of this broad question is satisfactorily covered by our complete line. These systems are a necessity where all waste and excess operating expense must be eliminated.

We have just published a new and attractive book on railroad oil storage, illustrating the different systems and listing the railroads using it. Get a copy of it. It will help you. Ask for Booklet No. 91.

Recent Nova Scotia Legislation.

The following acts relating to the transportation interests were passed at the recent session of the Nova Scotia Legislature:—

Arisaig and Country Harbor Iron, Coal and Ry. Co.—Amending powers.

Atlantic Coal Co.—Amending statutes of 1902, chap. 152.

Bear River and Caledonia Ry.—Amending statutes of 1907, chap. 144.

Blomidon Ry.—Incorporation.

Cape Breton Electric Co.—Amending statutes of 1910, chap. 130.

Dartmouth and Cow Bay Electric Ry.—Incorporation.

Dominion Coal Co.—Amending statutes of 1903, chap. 145.

Electric Railways.—Authorizing aid for building electric railways.

Halifax and Guysboro.—Amending act of 1906 to provide for building of railway between Halifax and Guysboro.

Halifax and South Western Ry.—Amending charter powers.

Intercolonial Ry.—Amending act of 1909 respecting cost incurred by North Sydney for extension of I.C.R. into the town.

Liverpool and Caledonia Ry.—Incorporation.

Lunenburg Electric Ry.—Incorporation, and a second act authorizing Lunenburg municipality to make cash contributions in aid of purchase of right of way within the municipality.

Margaree Coal and Ry. Co.—Extending time for construction.

Margaretville Steamship Co.—Amending statutes of 1907, chap. 157.

Maritime Coal and Ry. Co.—Extending time for construction.

Maritime Engineering Co.—Respecting company's powers.

National Coal and Mining Co.—Amending acts.

Nova Scotia Car Works.—Authorizing city of Halifax to assist company financially.

Shelburne and Bear River Ry.—Incorporation.

Shipbuilding.—An act to encourage the building of iron and steel ships at Halifax; and an act to enable city of Sydney to grant a bonus for purpose of establishing a shipbuilding, repair shop, wrecking plant and engine shop on Sydney harbor.

Street Railways.—Relating to street railways.

Sydney and Louisburg Ry.—Amending statutes of 1910, chap. 171.

Sydney, New Waterford and East Bay Mono Rail Co.—Incorporation.

Yarmouth Yacht Co.—Incorporation.

◆

Michigan Central Railroad Report.

The annual report of the M.C.R. for the year 1910 shows a total of 1,803.29 miles of line operated, against 1,746.46 miles in 1909. The mileage includes 270.07 miles of main line owned, 345.05 miles of proprietary lines, 1,096.16 miles of leased lines, and 92.01 miles of lines operated under trackage rights. During the year 23.60 miles of a line in the U.S. were taken up, and there were added 78.01 miles of lines operated under trackage rights, and 2.42 miles in respect of the Detroit River Tunnel. The capital stock authorized and outstanding remained at $18,738,000; the funded debt had been reduced from $42,159,000 to $41,870,578.68.

Referring to the double tube tunnel under the Detroit River, of which the entire capital stock is owned by the N.C.R., the directors say it has proved an entire success. It was put into experimental use for through freight traffic Oct. 9, 1910, and an order authorizing its use was issued by the Board of Railway Commissioners for Canada, after a thorough inspection, Oct. 14. Regular freight and passenger service was inaugurated Oct. 16. There still remained some work to be done, consisting principally of the interlocking system and additional equipment for the electrical sub-station, which it is estimated will cost $200,533, making the total cost, including interest on the money advanced from time to time by the M.C.R., $8,922,165. The acquisition of terminal freight and passenger yards and station buildings by the Tunnel Co. will require a considerable sum in addition to the amount mentioned.

The gross receipts from operation were $29,694,815.71, an increase of $2,279,348.51, and the operating expenses $21,628,906.26, an increase of $3,129,378.02, leaving a net revenue from rail operation of $8,065,909.45, a decrease of $850,029.51. After deducting $56,315.13 loss on certain outside operations, and $1,357,019.92 for accrued taxes, and bringing in other accounts, the gross corporate income was $7,746,254.32, a decrease of $938,481.24. The fixed charges, etc., absorbed $6,028,923.48, leaving a surplus of $1,717,330.84, from which dividends of $1,124,280 had been declared, leaving a balance of $593,050.84 to be carried forward to the current year. In explanation of these figures the directors state part of the increase of $763,609.44 in the deductions from income was due to additional rent paid to the Canada Southern Ry. in accordance with the terms of the lease.

The statistical tables annexed to the report show that the deductions from income included $840,000 interest on the 6% first mortgage bonds, $300,000 interest on the 5% second mortgage bonds of the Canada Southern Ry.; $5,200 interest on the 4% Leamington and St. Clair mortgage bonds; $450,000 rental of the Canada Southern Ry., being at the rate of 3% on a capitalization of $15,000,000. The expenditures on betterment of the Canada Southern Ry. were $599,344.15. The stocks owned or acquired under lease amount to $20,924,529.17, including $7,810,000 Canada Southern Ry.; $3,000,000 Detroit River Tunnel Co.; Toronto, Hamilton and Buffalo Ry., $446,400, and the bonds valued at $1,190,000, include $257,000 of the bonds of the Toronto, Hamilton and Buffalo Ry. These securities are carried in the books of the company at $8,655,994.09.

◆

Machine Shop Primer.—This is the title of a 148 page book prepared by F. H. Colvin, and F. A. Stanley, which, as its sub-title declares, is "an introduction to machine tools and shop appliances, with illustrations, names and definitions." The volume is intended primarily for the use of students and instructors in mechanical service. Section one contains sketches of 508 numbered machines, tools and appliances, which are named in section two, while in section three is an alphabetical reference to general information about shop matters, including concise definitions or bits of information about the tools or appliances named in sec. 1. Where cuts are used in sec. 3, they show machine tools with their parts numbered, the names being arranged in numerical order underneath. The book is issued at $1 net, the publishers being the McGraw-Hill Book Co., New York. It can be obtained through The Railway and Marine World's Book Department.

The United Engineering and Construction Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000, and office at Toronto, to build and equip, railways, tramways, telegraph and telephone lines, docks, harbors, piers, wharves, canals, etc., and carry on a general contracting business. The incorporators are, F. P. Metzler, W. J. Taylor, G. B. Taylor, J. M. Spinks, E. Gillis, Toronto.

Great Northern Ry. Lines in Canada

Midland Great Northern Ry.—The proposed agreement as to the building of terminals in Winnipeg came up once more before the city council May 9, and was laid over for future consideration. The agreement submitted to the meeting was drawn up May 3, and provides for four subways south of the Assiniboine River, at Crescent Road on the north, at Wilkes Avenue, the south boundary of the city, and at two other crossing avenues that may be designated by the city. Special provision is also made for subways when required on the north side of the river at the crossing of Lavinia, Ellice and Sargent avenues. These avenues have not been opened up to the right of way of the M.G.N.R., but when they are and the city deems it necessary the railway will put in subways at its own cost. A. H. Hogeland, Chief Engineer, in an interview May 3, said it was the company's intention to begin work first on the terminals in the heart of the city. He could not state definitely whether the company would use its own tracks altogether at first, but work on the whole proposition would be pushed ahead. An agreement might be reached with the C.P.R. for the temporary use of its tracks to some point north of the river, but this would only be for a very short period. Notice has been given to the tenants of the property along Ross and Pacific Avenues west from Isabel to Nena St., to vacate the premises held by them by June 1, after which date the company will proceed to clear the site for the freight station and yards.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—J. H. Kennedy, Chief Engineer, has been in Ottawa for the purpose of discussing with the Department of Railways the route of the company's line through the Coquihalla Valley, where it and that selected for the Kettle Valley Lines extension conflict. Mr. Kennedy also discussed the possible routes through the Hope Mountains, and the possibility of an arrangement being made for running rights over the Canadian Northern Pacific Ry. from Hope Summit to Sumas River. It is expected that an arrangement will be made for an early start on construction from Penticton to Hope Summit.

Good progress is being made with the building of the 20 mile section between Abbottsford and Chilliwack, B.C., by J. W. Stewart and Co. An arrangement has been made by which a new station is to be built at New Westminster this year.

A plan for the improvements in the bed of False Creek, Vancouver, B.C., in connection with the terminals there, has been approved by the Board of Railway Commissioners. An arrangement has been made by which the company obtains control of 290 ft. of water frontage on Burrard Inlet, which, added to the frontage already owned, will give about 700 ft. of frontage there. It is said that wharves and terminals will be built as soon as possible. (May, p. 427.)

◆

The Michigan Central Rd. is now operating its trains by telephone, between St. Thomas and Windsor, Ont., and it is anticipated that the lines between St. Thomas and Buffalo, and between Bay City and Mackinaw will be similarly operated during the year. The company now operates its trains by telephone over its main line and divisions, as follows:—St. Thomas to Windsor; Detroit to Jackson; Jackson to Niles; Jackson to Grand Rapids; Jackson to Bay City; Detroit to Toledo and Detroit to Bay City. The work has been carried out under the supervision of J. J. Ross, Superintendent of Telegraphs, Detroit, Mich.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Albert and Moncton Ry.—While the bill was passing through the House of Commons recently, the name of R. L. Johnston was substituted for that of C. MacKinnon, among the promoters, the latter having died. (April, pg. 319.)

Alberta Central Ry.—Large gangs of men, it is reported from Red Deer, Alta., have gone out to the construction camps, on the line being built to Rocky Mountain House, and it is said that grading is being pushed forward as rapidly as possible. (May, pg. 409).

Alberta Pacific Ry.—Nothing is being done in the way of arranging for the building of the line at Pincher Creek, Alta., under this company's charter. (Feb., pg. 109.)

Algoma Central and Hudson Bay Ry.—The Board of Railway Commissioners has approved the location plans of the extension from Hawk Lake to Hobon, Ont., on the C.P R. transcontinental line, between mileage 0 and 30.23.

We have been advised that it is expected to begin track laying early in June on the extension of the line from Hawk Lake, Ont., and that it is hoped to have the grading completed to Hobon, the junction with the C.P.R. transcontinental line, by the end of June.

The completion of the line from the present end of track near Pangissin northerly to Hawk Lake Jct., the junction point with the Michipicoten branch, is being proceeded with from both ends, in the expectation of reaching Montreal River from the south end before the end of May. Immediately after the track is laid to this point, the Canadian Bridge Co., will start work on the erection of a viaduct 1,500 ft. long and 125 ft. high across the river. It will be the largest bridge on the line, and is the only steel one being erected at present. There will, however, be some large bridge trestles to build, some of them containing about 1,000,000 ft. b.m. of lumber. The large trestles are generally over dry valleys, the only river crossings, aside from the Montreal River, are spanned with timber structures as temporary bridges. It is expected to replace these with steel bridges on concrete foundations.

At Sault Ste. Marie, Ont., it is expected to begin the construction of new terminal yards, including new roundhouses and shops, and the building of a new terminal station. Part of this work will be done during the current season. It is also intended to fill in some of the timber trestles on the first 69 miles of the line, between Sault Ste. Marie, and Pangissin.

The viaduct which is to be built across the Montreal River by the Canadian Bridge Co. will be 1,550 ft. long between parapet walls, and will consist of alternate tower and free spans. The tower spans will consist uniformly of 30 ft. deck plate girders, and the free spans of girders varying from 40 ft. to 85 ft. long, the majority being 60 ft. spans, although at the deepest portion of the viaduct these will, for economy's sake, be made 75 ft. An 85 ft. span will be used where a somewhat longer span will be necessary to extend from firm ground to firm ground over water. The distance from base of rail to masonry at the deepest point will be somewhat more than 122 ft., and the weight will be slightly more than a ton per lineal foot of viaduct. The feature of the viaduct will be a heavy curve, being eight degrees at one end and nine degrees at the other, with compensation The plans for the viaduct were made by Boller and Hodge, consulting engineers, New York City, and the work of erection is in the immediate supervision of R. S. McCormick, Chief Engineer of the railway

Brandon Transfer Ry.—The route recommended by the Board of Railway Commissioners' engineer for this projected line is said to be along 29th St., south to Lorne Ave., thence east to 25th St., and south along that street to the Canadian Northern Ry. track. This line will connect up all the lines now entering the city. It is also said to be recommended that the line be built by the C.P.R., the Canadian Northern Ry., and the city, and that it be operated by the Great Northern Ry. The city is favorable to the acceptance of the report, and is awaiting the decision of the companies interested and the order of the Board. (May, pg. 409.)

Burrard Inlet Tunnel and Bridge Co.—An arrangement has been arrived at between the company and the Vancouver, Westminster and Yukon Ry., whereby the company will build its proposed bridge across the second narrows at the site chosen for a proposed bridge to be built by the V., W. and Y. Ry. This will enable the company to secure a bridge subsidy of $200,000 which had been voted by the Dominion Parliament. The agreement also provides that the V., W. and Y. Ry. shall construct the approaches to the bridge and the connecting lines. The site of the bridge as now arranged will be 600 ft. west of that originally proposed. (April, pg. 319.)

Canada and Gulf Terminal Ry.—We are advised that it is expected that further construction on this line, from the present track end at Matane Que., towards Gaspe Basin, will be gone on with as soon as possible. Some detail matters in connection with construction have yet to be arranged. (May, pg. 409.)

Chicago, Milwaukee and St. Paul Ry.—Chicago, Milwaukee and Pacific Ry.—The latter is the title under which the C.M. & St. P. Ry. is extending its line to the Pacific Coast, and is associated with certain charters for railway construction in Alberta and British Columbia. Press reports stated that the C.M. and St. P. R. has secured options on considerable property in the vicinity of Lipton St., just south of Portage Ave., Winnipeg, for terminal purposes, and that a line will shortly be built into the city from Grafton, N.D. The report further states that the Lipton St. property will be utilized for freight terminals, and that running rights will be secured into the Fort Garry union station for passenger traffic.

From Vancouver, B.C., it is reported that a general office for the company's western business is to be opened immediately, and that additions will be made to the staff. The western extension of the C.M. and P.R. is being pushed forward to Everett, Wash., and press reports state that a branch line will be built from near Seattle into Vancouver. (Feb., pg. 111.)

Essex Terminal Ry.—The Board of Railway Commissioners has approved location plans for the line from lot 75, con. 2, Sandwich West tp., and the Saginaw Salt and Lumber Co.'s property, Sandwich, Ont. The Board of Railway Commissioners has authorized the company to carry its line across Becker St., Huron Church Line, Felix Ave., Chippewa St., Centre Road and Bedford St., Sandwich tp., Ont. (Feb., pg. 111.)

Halifax and Eastern Ry.—In connection with this projected railway, for the building of which the Nova Scotia Government has been offering considerable inducements, extending over the last ten years, the House of Commons has been asked by the Minister of Railways to vote $2,000,000 towards the building of the following lines, each line being voted $1,000,000:—From New Glasgow, or from Sunny Brae (in the event of the branch line to that place—the Nova Scotia Steel Co.'s line being acquired, as it may under the appropriation), to Guysboro, and from Cross Roads Country Harbor to the deep water there; and from Dartmouth, via Musquodoboit Harbor and the valley of the Musquodoboit River to Dean Settlement. The proposal is to build these lines as branches of the Intercolonial Ry. (Feb., pg. 111.)

Howe Sound and Northern Ry.—This company, which was incorporated by the B.C. Legislature, is applying to the Dominion Parliament for a declaration that its undertaking is a work for the general advantage of Canada, for authorization of the construction of additional lines, as follows: From near Lillooet, northerly along the valley of the Fraser River to Fort George, and northerly to and along the Parsnip River Valley to the Peace River and thence easterly to Peace River Landing, and to build a branch line from Newport, at the head of Howe Sound to North Vancouver and Vancouver. Power is also being asked to build, own and operate telegraph and telephone lines, elevators, wharves, warehouses, steam and other vessels, etc.

Plans are said to have been deposited with the Department of Railways for the section of the line from the summit of Anderson Lake to Lillooet, B.C. This line as projected was to start from Newport, on the seaboard, and to run by Green Lake, thence to Pemberton Meadows and on to Lillooet, a distance of about 120 miles. Press reports state that track has been laid on the first 12 miles inland from Newport, and that a considerable quantity of lumber is being taken out over the line and that the plans for the route to the main divide near Anderson Lake were deposited with the department some time ago, and that the plans now deposited cover the remainder of the route to Lillooet. The plans, it is stated, show a maximum gradient of 1.6%, and that only for a short distance at the main divide. A. McEvoy, the company's solicitor, in an interview May 1, is reported to have said, the company had 12 miles of its line built, and intended to add to it from time to time, the company had not been approached as to the purchase of its line by the G. T. Pacific Ry. or any other company. (April, pg. 319.)

Hudson Bay and Pacific Ry.—A Prince Albert, Sask., dispatch states that a communication has been received by the Board of Trade to the effect that a contract has been signed for the building of the projected line from Prince Albert, to Fort Churchill, and that work will be started right away. (May, pg. 409.)

Hudson Bay, Peace River and Pacific Ry.—Press reports from Winnipeg state that an engineering party is about to proceed to Fort Churchill to make a survey for the company's projected main line from that place towards Edmonton, Alta., and Port Simpson, B.C. The line as projected will run in a nearly straight line to the south of Lake Athabasca, by Peace River Landing, and on to Port Simpson, about 1,500 miles. Another party, it is stated, will make a survey from Winnipeg to Fort Churchill, running east of Lake Winnipeg, and a third party will work from Edmonton on a line to connect with the main line. (May, pg. 409.)

High River, Saskatchewan and Hudson Bay Ry.—A meeting of the provisional directors of this proposed new company, is reported to have been held at High River, April 28 when Dr. G. D. Stanley was elected President; N. H. Sheppard, Treasurer, and F. Crandall, Secretary. An executive committee was appointed to make arrangements for a preliminary survey of the route and an estimate of the cost of the line. (May, pg. 409.)

BALLAST AND SWITCH ROPES

We manufacture Ballast and Switch Ropes—in all sizes and length. Our many years of experience in manufacturing wire ropes of all kinds enables us to offer the best to be had anywhere. Our Switch and Ballast Ropes are serviceable and dependable.

Let us figure on your special requirements.

Intercolonial Ry.—We were officially advised early in May with reference to the appropriation for locomotive and car shop equipment, the new freight yard and the proposed cut-off at Moncton, N.B., that nothing had been definitely decided as to what would be done nor when the work would be commenced.

In the supplemental estimates laid before the House of Commons May 8, provision was made for the following additional expenditures: Further amount required to strengthen bridges, $45,000; further amount required for the general protection of highways, $135,000; further amount required to increase accommodation and facilities along the line, $25,000; docks and wharves at Halifax, $600,000; towards the construction of a railway from Dartmouth to Dean Settlement, etc., N.S., $1,000,000; towards the construction of a railway from New Glasgow to Guysboro, Country Harbor, etc., $1,000,000; improvements at Mulgrave, N.S., $30,000; further amount required to increase accommodation at Truro, N.S., $42,800; towards the construction of a railway from Alba to Baddeck, on Cape Breton Island, $200,000; further amount required for addition to general office building at Moncton, N.B., $48,500; further amount required to increase accommodation at Fredericton, N.B., $18,000; towards construction of spur line from Hampton station to Hampton village, $15,000; further amount required to increase accommodation at Campbellton, N.B., $27,000.

Tenders were received to May 20 for the construction of an addition to the general office building at Moncton, N.B. (May, pg. 409.)

Inverness Ry. and Coal Co.—Press reports state that the extension of the line to St. Rose, N.S., at an early date, is contingent upon the success met with in the development of the coal areas in that district. (Sept., 1910, pg. 727.)

Kaslo and Slocan Ry.—A public meeting was held in Nelson, B.C., recently, at which $25,000 was subscribed to take up an option for the purchase of this line, and $13,000 additional was subscribed as a sinking fund. Mine owners in the district are behind the project, J. L. Retallack being the most prominent in the negotiations. The railway, which has not been operated for a long time, is being acquired from the Great Northern Ry. Co., U.S It is proposed to form a local company to rebuild the line, for which purpose, it is stated, the Provincial Government will guarantee a loan of $200,000, no interest being payable by the railway for three years. It is proposed to put the line in first class condition to McGuigan, and put a tug and barge on Kootenay Lake, so that ore cars can be delivered for transit to the smelters by the C.P.R., or the Great Northern Ry. (May, pg. 411.)

Kipp to Suffield, Alta.—According to a statement attributed to A. M. Grace, Chief Engineer of the South Alberta Land Co., surveys have been completed for a line from Kipp, Alta., about eight miles from Lethbridge, to Suffield, about 26 miles west of Medicine Hat on the C.P.R. main line. No mention is made in the statement as to what company made the surveys, or whether immediate construction is proposed.

Kettle Valley Lines.—The Board of Railway Commissioners has approved of location plans for the extension of the line from Westbridge to Wolverine Creek, B.C., mileage 20.9 to 35.3; and also authorizing the company to carry its line across eight highways.

Speaking at a meeting of the Penticton Board of Trade, May 1, J. J. Warren, President K.R.V.R., said construction work would be started east and west from that town within two months, and that by the end of the year it was expected 125 miles of track would be laid—about half the mileage between Midway and Merritt A wharf and a passenger station are to be built on the lake front at Penticton at once. (May, pg. 411.)

Kootenay and Alberta Ry.—The Chief Engineer, L. B. Merriman, arrived in Pincher Creek, Alta., April 30, from Winnipeg, to make an inspection of the work in progress. The branch line to Beaver Creek, which is under construction, is to be pushed forward with a doubled force of men, so as to be completed by Sept. (May, pg. 411.)

Manitoulin and North Shore Ry.—The Board of Railway Commissioners has approved of location plans for the extension of the line, now under construction, from mileage 46.73, to 80.49. (May, pg. 411.)

Mattawa to National Transcontinental Ry.—Press reports state that the Dominion Government proposes, in the event of the C.P.R. declining to extend its line along the east shore of Lake Timiskaming, to have surveys made to secure a route for an independent line from Mattawa, Ont., through Ville Marie, Que., and on to a convenient point on the N.T.R.

Montreal Central Terminal Ry.—Plans have been deposited with the Montreal city authorities showing that the company desires to enter the city by a bridge terminating near the Bonsecœurs market. The company is desirous of using Craig St., east and west, so that its lines can reach Maisonneuve and the Upper Lachine road, and wants to make connection with the Canadian Northern Quebec Ry. in the east, and with the C.P.R. and G.T.R. in the west. The plans show that the company wants to use the streets by sinking a cut in them on which trains will be operated. The city attorney said the council did not want to block the company from coming into the city, but it was useless for any company to think of occupying any open space in the streets for the purpose of operating cars. (April, pg. 321.)

New Brunswick and Prince Edward Island Ry.—Tracklaying has been completed on the branch line to the Fawcett foundry, and ballasting is being gone on with. The branch is being extended from the foundry to the quarries. (May, pg. 411.)

Ontario and Abitibi Ry.—In passing through the House of Commons, where the bill was read a third time, May 15, the title of the company proposed to be incorporated as the New Ontario and Quebec Ry., was altered as above. (May, pg. 411.)

Prince Edward Island Ry.—In addition to the amounts already voted for betterments on this line, provision was made in the supplementary estimates submitted to the House of Commons, May 8, for the following:—Original construction, $1,000; branch line from O'Leary to West Point, $50,000; branch line from Kensington to Stanley Bridge, via Long River and Clifton, $100,000. (May, pg. 413.)

Quebec and Saguenay Ry.—The construction on the first section of this line to be placed under contract is in charge of H. Doheny of O'Brien and Doheny, contractors. Work has been started, and it is expected to have the 56 miles completed by Sept. 1912. The 7.5 miles which has been let to the Bishop Construction Co., Montreal and Toronto, extends from Pointe a Pic, at the end of the 56 miles section, to Keeler, the site of the East Canada Power and Pulp Co.'s works.

O'Brien and Doheny, general contractors, have let sub-contracts as follows:—Mileage 30 to 33, O'Brien and Martin; mileage 33 to 36, Ryan and McDonald; mileage 36 to 39, Doheny and Thomson; mileage 39 to 41, D. R. McDonald; mileage 41 to 43.5, F. C. Jackson; mileage 48 to station 2855 P. river, St. F. X., Gagnon and Massicotte, mileage 56 to 60, Jas. McDonald; mileage 60 to 62.5, J. O'Neill; mileage 62.5 to 67, Mitchell and Sutherland; mileage 72 to 75, Irvine and Morrison; mileage 83.5 to 85.5, J. H. Stewart.

There have been deposited in the office of the Register of Charlevoix county, in the Saguenay district, plans and profiles of the route of this line, now under construction, from mileage 85.6 to 92.8 in Charlevoix county. (May, pg. 445.)

Reid Newfoundland Co.—A cargo of 4,500 tons of steel rails arrived at St. John's, Nfld., May 2, for use on the branch line under construction to Trepassey.

The first sod of the new Trepassey branch was turned May 9. The branch starts at Waterford bridge and will run through the Ferryland district to Trepassey.

Grading on the South Shore branch has been started at Waterford Bridge, on the main line, H. Burton being in charge of the work for the company, with W. F. Joyce as engineer. About 20 miles of track remain to be laid on the Bonavista branch, and this, is it expected, will be completed about the end of July. Surveys are in progress on the branch to Hearts Content, and it is expected that construction will be gone on with during the year. (April, pg. 321.)

Saguenay River to Cape Charles Bay.—A London, Eng., cable states that a syndicate is being formed for the purpose of building a railway from the Saguenay River, Que., to Cape St. Charles on the Labrador coast, some 650 miles from Quebec. J. N. Greenshields, K.C., of Montreal, who is interested in the matter, has been in London in consultation with representatives of the syndicate. It is stated that the proposal is to extend the Quebec and Saguenay Ry., as soon as it is completed to Saguenay River, to Cape St. Charles, and to construct there such works as will make it an all the year round trans-Atlantic port. In an interview, the Premier of Newfoundland said in New York, May 9, there were then in the city representatives of a British syndicate which had acquired rights in a railway running out of Quebec, with a charter to build a railway in the direction of Cape St. Charles. He saw no reason why such a railway should not be built and operated in connection with a line of fast steamers between St. Charles and Newfoundland. The Dominion Parliament and the Quebec Legislature, have both incorporated companies having powers to build lines in the territory named.

Temiskaming and Northern Ontario Ry.—We were officially advised May 6, in connection with the building of the branch to Porcupine Lake, that 28 miles of the branch had been definitely located and placed under construction. The grading of the first 17 miles was completed and ready for tracklaying, and the grading on the remaining 11 miles was well advanced and will, it is expected, be completed by June 1. Track had been laid on 12 miles, and the first lift of ballast had been given to the first nine miles. All the temporary bridging had been completed. There is but one steel bridge on the branch, at the crossing of Frederick House River. A temporary bridge will be put up so as to get the tracks across, when the concrete abutments will be put in, and the steel superstructure erected.

An engineering party will be sent out during the summer for the purpose of exploring the Moose River country, sloping from the height of land to James Bay. A special examination will be made of the shores of the bay with a view of selecting a suitable location for a harbor, to which the T. and N.O.R. gives the G.T.R. power to hold, guaran- may be extended.

The party which will make the survey from Cochrane to James Bay, will be a small one, and will be in charge of C. S. Ellis.

J. L. Englehart, Chairman of the Commission, on his return to Toronto, May 13, said steel had been laid on the Porcupine branch as far as Frederickhouse River, about 15 miles. The temporary bridge across the river had been completed. It consists of 400 ft. of pier trestle, and 400 ft. of approaches. Arrangements were made so that passengers could be carried over the branch, beginning May 15. According to the progress being made, the entire branch should be ready for traffic July 1. On the main line it is proposed to build stations at Golden City, Thornloe, Iroquois River and Matheson. (May, pg. 413.)

Toronto, Hamilton and Buffalo Ry.—The Board of Railway Commissioners has ordered an overhead crossing of the Hamilton Radial Electric Ry. on the north side of Princess St., Hamilton, Ont. (April, pg. 323.)

Vancouver to Fort George, B.C.—A meeting of business men was held in Vancouver, May 15, to urge the Provincial Government to vote a subsidy in aid of a railway from Vancouver to Fort George, B.C.

The G.T. Pacific Ry., the Howe Sound and Northern Ry., the British Columbia and Alaska Ry., and other companies have authority under Provincial or Dominion acts, to build a line between these two points.

Vancouver, Westminster and Yukon Ry.—Construction on lines to connect with the proposed bridge over the Second Narrows, Vancouver, B.C., will, it is stated, be started shortly. (Sept., 1910, pg, 729. See also Burrard Inlet Tunnel and Bridge Co.)

◆

Rutland Railroad Report.

The annual report for the year 1910, covers the operation of the system, a total of 468.11 miles, of which 18 miles are leased, and 53 miles operated under trackage rights for passenger trains only. The leased lines includes the Rutland and Noyan Ry. to Noyan Jct., Que., 3.39 miles, and the lines operated under trackage rights are:—Noyan Jct. to Iberville Jct., Que., 22.50 miles; Iberville Jct. to Montreal, Que., 30.50 miles. The gross corporate income was $918,895.83, and after meeting fixed charges there was a surplus of $313,011.97, which was appropriated as follows: Additions and betterments, $21,029.03; improvements, $270,000; carried forward to current year's accounts $21,982.94. The amount at credit of profit and loss account is $942,011.31. The total revenue from operation was $3,339,833.83, and the operating expenses $2,356,256.24. The fixed charges include $4,000 interest on the 4% first mortgage bonds of the Rutland and Noyan Ry., paid as rental, and $54,000 interest on 4% Rutland-Canadian first mortgage bonds; and the securities owned by the company, which are carried at $1,698,380.17 in the books, include $100,000 stock and $100,000 first mortgage bonds of the Rutland and Noyan Ry., with $25,000 of the $1,330,000 bonds of the Rutland-Canadian Rd.

◆

We are advised that it is the G.T.R. management's intention to put the standard code of operating rules, as approved by the Board of Railway Commissioners into effect on its lines in Canada, as soon as the examination of the employes can be completed. The General Transportation Manager states that he hopes the examinations will be completed by June 18.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Taylor & Arnold, Limited, Railway Supplies, Montreal, have issued a post bound sectional catalogue devoted to locomotive and car specialties and compressed air devices.

The Hiram L. Piper Co., Ltd., has removed to 93 St. Remi Street, St. Henry Ward, Montreal, where it has built a commodious brick factory specially for the manufacture of railway lamps, signals, locomotive headlights, marine lamps, etc.

We are advised that the suit of the U.S. Light and Heating Company, vs. J. B. M. Electric Co., Gould Coupler Co., and John W. Jepson, involving patent applications serial 404,271 and serial 404,272, in the Western District of New York, before Judge Hazel, has been decided in favor of the U.S. Light and Heating Co.

The Orenstein Arthur Koppel Company, which is making extensive additions to its plant at Koppel, has ordered from Tate, Jones & Co., Inc., Pittsburg, Pa., a contract for the complete oil burning equipment and furnaces, consisting of pumping system, large rivet forges, open forges, forging furnaces, and pipe bending furnaces.

The T. H. Symington Co., Baltimore, Md., has recently published an attractive booklet illustrating and describing the Farlow draft rigging which is so largely used on cars and locomotives in this country and abroad. The booklet, which is entitled "Two Yokes in Transportation," enumerates concisely thirty Farlow facts which are of interest to all motive power and transportation department railway officials.

Press reports stated recently that the Canadian Steel Foundries, Ltd., had contracted for additions to its Welland, Ont., plant, to cost about $250,000. We are officially advised that the reports are very much exaggerated. Contracts have been given for the construction of two buildings at its Welland, Ont., plant. The one is a small oil house, the other will contain a chemical laboratory, a small emergency hospital and a storage room with office.

The Universal Vanadium Co. has been incorporated under the laws of the State of Delaware, with the following officers and directors: Ed. M. McIlvain, President, 30 Church St., New York City; Col. Millard Huneker, Vice President, 23 Rue de la Paix, Paris, France; J. C. Gray, Secretary and Treasurer, Frick Bldg., Pittsburgh, Pa.; J. W. DeWyckoff, European Representative, 64 Victoria Street, Westminster, London, England; E. Marshall Fox, Wetley Rocks, Staffordshire, England; S. D. Townsend, Jr., Wilmington, Delaware; W. McIlvain, Reading, Penna. Ever since the formation of the American Vanadium Co. its entire product, consisting of vanadium alloys, has been marketed by the Vanadium Sales Co. of America. The offices of both companies have been in the Frick Building, Pittsburgh, Penna., and their products, especially ferro-vanadium, have been sold in every manufacturing country in the world. The Universal Vanadium Co. was formed for the purpose of acting as selling agents for the American Vanadium Co. in a more comprehensive and effectual manner, and it will act in a selling capacity in conjunction with the Vanadium Sales Co. of America, both companies thus taking charge of the entire product of the American Vanadium Co.

◆

New England Connections with Canada.

In a recent interview, E. H. Fitzhugh, First Vice President G.T.R., is reported as stating that the company had under consideration a proposition to extend its line to Boston, Mass. Within a few months it was hoped to begin work on building the Southern New England Rd. from Palmer to Providence, R.I.

The bill granting the S.N.E.R. access to the waterfront at Providence, either over or under the New York, New Haven and Hartford Rd. tracks, was signed by the Governor of the State, May 5. An agreement has been reached between the two companies, under which there will be a grade crossing at one point, and at another a tunnel under the tracks.

A conference was held in Boston, May 5, between the representatives of the two companies with a view of adjusting the differences as to the lines in the vicinity of Brattleboro and Bellows Falls, Vt. It is expected that a satisfactory agreement will be reached.

Notice has been given by the Boston and Maine Rd., cancelling a traffic agreement with the Central Vermont Ry., which has been in operation for some years. The N.Y., N.H. and H. Rd., controls the B. and M.R. (May, pg. 439.)

Oil for Fuel for C. P. R. Locomotives.

Elsewhere in this issue it is stated that W. Whyte, Vice President, C.P.R., had announced that crude oil would be used for fuel in the mountains. He recently stated that it had been decided to make an experiment and that he would recommend to the President the use of oil for fuel for the entire distance through the mountains, in order to remove the conflagration hazard. In reference to a reported failure of the large locomotives now in use, Mr. Whyte said: "It is not a failure of the locomotive. It is a failure of the fireman. A fireman shovelling coal on one of these locomotives for a distance of 130 miles, is physically completely exhausted before getting to the end of the run. When hiring firemen at present we look for broad chested, stalwart men. When we use oil, we will look not for physical strength but for intelligence. We will need men skilful enough to regulate the flow of oil to correspond with the use of steam. So far as men are concerned, it is estimated that three times as many employes are needed to handle coal as are required to handle oil. Oil is also much more efficient in the production of steam. So far as economy is concerned, we do not yet know what the result will be, but the experiment will be tried. None of the locomotives have yet been prepared for the change, but the alteration can be readily made. On our coast steamships, the test has already been made, and it has been quite successful."

◆

Railway Lands Patented. — Letters patent were issued, during March, in respect of the following railway lands in Manitoba, Saskatchewan, Alberta and British Columbia:

	Acres.
Canadian Northern Ry.	516.89
Canadian Pacific Ry.	205.02
Canadian Pacific Ry. roadbed and station grounds	4.83
Grand Trunk Pacific Ry.	52.74
Total	778.98

Fairbanks Track Scales

A HIGH GRADE INVESTMENT

FOR ACCURACY AND SERVICE

Valuable information that vitally concerns every manufacturer, can be obtained by the use of Fairbanks Track Scales

You should have absolute evidence of delivery of **Quantity** as well as **Quality**—and there is no reason why you cannot secure it by the proper use of our Scales.

In our Suspension Platform Track Scales the shock is absorbed in the suspension bearings, and the Type Registering Beam absolutely eliminates all possibility of error in reading the weight. They meet the most exacting demands for a modern weighing machine.

BOSTON & MAINE

FAIRBANKS
STANDARD
R. R. TRACK SCALE

The Canadian Fairbanks Co., Limited

Montreal, Ottawa, Toronto, St. John, N.B., Winnipeg, Saskatoon, Calgary, Vancouver.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale - - -	9.15 p.m.	Arrive Ottawa, 6.50 a.m.
Leave West Toronto - - -	9.30 p.m.	Arrive Montreal 7.00 a.m.
Arrive North Toronto - - -	9.40 p.m.	Daily except Sunday.
Leave North Toronto - - -	10.00 p.m.	Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service. .

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

13463. Apr. 19.—Authorizing Central Electric and Gas Co., Portage La Prairie, Man., to erect wires across C.P.R. at Main St.

13464. Apr. 19.—Authorizing C.P.R. to build bridge 96.3 over Johnston Creek, Laggan sub-division, Alberta Division.

13465. Apr. 19.—Authorizing T.H., & B. Ry. to cross by overhead structure, the Hamilton Electric Radial Ry. on north side of Princess St., Hamilton, Ont.

13466. Apr. 19.—Authorizing Central Electric and Gas Co., to erect wires across C.P.R. at Tupper St., Portage La Prairie, Man.

13467. Apr. 20.—Approving C.P.R. plan of standard no. 1 freight shed.

13468. Apr. 20.—Approving C.P.R. plan of standard tell tale.

13469. Apr. 19.—Approving Manitoulin and North Shore Ry. location from mileage 46.73 to 80.49, Ont.

13470. Apr. 21.—Authorizing Central Ontario Ry. to open for traffic, its Whitney extension for 14½ miles from Maynooth station.

13471. Apr. 19.—Authorizing C.P.R. to build bridge 148.6 on its Portal sub-division, Saskatchewan Division.

13472. Apr. 21.—Authorizing Standard Natural Gas Co., Dunnville, Ont., to lay pipe under G.T.R. at Onondaga Road.

13473. Apr. 4.—Authorizing Central Ontario Ry. to take for better station accomodation, additional land in Hillier tp.

13474. Apr. 13.—Fixing time up to which C.N.Q.R., C.P.R., and G.T.R., shall receive freight in their Montreal warehouses. This order is given in full on another page.

13475. Apr. 19.—Ordering C.P.R. to divert public road in Ops tp., Ont., 2 miles south of Lindsay, at mileage 19.95.

13476. Apr. 22.—Approving G.T.R. plan for change of alignment in vicinity of Rideau canal and across Main and Elgin Sts., and Echo Drive, Ottawa.

13477. Apr. 22. Authorizing G.T.P.R. to cross highway in n.w. ¼ sec. 15, tp. 53, r. 28, w. 2 m., Sask.

13478. Apr. 19.—Authorizing Temiscouata Ry. to install half-interlocker at level crossing of its main line with C.P.R. siding at Edmundston, N.B.

13479. Apr. 4.—Authorizing G.T.R. to install interlocking plant at C.P.R. expense, at crossing near Fergus, Ont., to be completed by Aug. 1.

13480. Apr. 15.—Authorizing Berlin, Ont., Sewerage Commissioners to lay two pipes under G.T.R.

13481, to 13483. Apr. 21.—Authorizing Seymour Power and Electric Co., to erect wires across Bell Telephone Co.'s wires in Port Hope, Ont.

13484. Apr. 22.—Approving plans of station to be erected by G.T.R. at Beauharnois, Que., as required by order 12504, Dec. 9, 1910.

13485. Apr. 19.—Declaring collection of interswitching charges by C.P.R. on shipments of Atikokan Iron Co., Port Arthur illegal. This order is given in full on another page.

13486. Apr. 22.—Authorizing C.P.R. to build a no. 11 modified station at Osgoode, Ont.

13487. April 25.—Authorizing C.N.O.R. to divert public road on lot 6, con A, Tyendinaga, tp.

13488. April 25.—Authorizing C.P.R. to build additional track across road allowances in Medicine Hat, Alta.

13489. Apr. 21.—Approving Rutland Rd. Standard Passenger Tariff C.R.C. 339, at 3c. a mile.

13490. April 25.—Approving C.N.R. location through tps. 13-16, r. 24-26, w. 2 m., Sask., mileage 58.27 to 85.1.

13491. April 25.—Approving plan re improvements on bed of False Creek, Vancouver, B.C.

13492. April 25.—Authorizing C.N. Alberta Ry. to cross seven highways.

13493. April 25.—Authorizing Kettle River Valley Ry. to cross eight highways in British Columbia.

13494. April 19.—Standard regulations regarding pipe crossings under railways.

13495. April 25.—Ordering appointment of watchman at Montreal Rolling Mills siding. Montreal.

13496. April 4.—Rescinding order 11880, Oct. 5, 1910, re G.T.P.R. Standard Freight Mileage Tariff, C.R.C. 7.

13497. April 25.—Authorizing Ontario Hydro-Electric Commission to erect wires across Toronto, Niagara and Western Ry. at Hurontario St., Toronto tp.

13498. April 25.—Authorizing C.P.R. to build spur for Perfection Concrete Co., lots 43-44, St. James Winnipeg.

13499. April 25.—Ordering G.T.R. within 90 days to install improved electric bell at Gravel Road between Millbrook and Port Hope, Ont., 20% to be paid from railway grade crossing fund.

13500. April 25.—Approving Kettle River Valley Ry. location from Westbridge to Wolverine Creek, mileage 20.9 to 35.3, B.C.

13501. April 25.—Authorizing Jones, Sherwood, and Burns, municipalities, Ont., to build crossing over G.T.R. between cons. 4 and 5, Sherwood tp.

13502. April 25.—Authorizing C.P.R. to build four bridges on its Ontario and Alberta divisions.

13503. April 25.—Authorizing C.P.R. to build spur for Canadian Western Lumber Co., at Fraser Mills, B.C.

13504. Apr. 25.—Authorizing city of Toronto to erect wires across C.P.R. on Perth Ave.

13505 to 13507. Apr. 25.—Authorizing town of Dauphin, Man., to lay water pipe under C.N.R. at Main, First and Second Sts.

13508. Apr. 26.—Authorizing C.P.R. to build spur for Dominion Bridge Co., Toronto.

13509. Apr. 26.—Authorizing C.N.R. to take possession of certain C.P.R. lands in the western provinces.

13510. Apr. 27.—Authorizing G.T.P. Branch Lines Co. to cross with its Regina Boundary branch, 17 highways in Saskatchewan.

13511 to 13514. Apr. 27.—Authorizing municipality of city and county of St. John, N.B. to build certain drainage works under C.P.R. at North St., Union Point Road, Main St., etc.

13515, 13516. Apr. 28.—Authorizing Vancouver Power Co. to erect wires across C.P.R. at Hazel St., and Essenden Ave., Abbotsford, B.C.

13517. Apr. 28. Authorizing Saraguay Electric and Water Co. to erect wires across C.N.Q.R. at St. Leonard St., Pointe aux Trembles.

13518, 13519. Apr. 27-28.—Authorizing C.P.R. to build bridge 57.8 on its Brandon sub-division, Manitoba Division, and bridge 39.5 on its Havelock sub-division, Ontario Division.

13520. Apr. 27.—Extending to July 1, effective date of tariff of track-scale allowances filed by certain railways.

13521. Apr. 15.—Authorizing Windsor Gas Co. to lay pipe under Essex Terminal Ry. at Walker Road, Walkerville, Ont.

13522. Apr. 28. Authorizing city of Hamilton, Ont., to lay water pipe under G.T.R. on Ferguson Ave.

13523. Apr. 28.—Authorizing Esesx Terminal Ry. to cross Becker and Huron Sts., Church Line, Felix Ave., Chippewa St., Centre Road and Bedford St. Sandwich, Ont.

13524. Apr. 28.—Authorizing C.N.O.R. to divert public road on lot 7, con. 4, Tyendinaga tp.

13525. Apr. 29.—Authorizing C.N.R. to cross highway overhead at sec. 6, tp. 9, r. 32, and sec. 1, tp. 9, r. 33, w. p. m., Sask.

13526. Apr. 28.—Authorizing C..P.R. to operate its Quill Lakes Branch across 43 highways in Manitoba and Saskatchewan.

13527. Apr. 28. — Authorizing G.T.P. Branch Lines Co. to divert road on its Calgary Branch in s.e. ¼ sec. 6, tp. 26, r. 27, w. 4 m., Alta.

13528. Apr. 29.—Approving G.T.P. Branch Lines Co.'s Melville-Regina Branch from city limit, mileage 92.62 to west side of Albert St., mileage 97.57, Regina, Sask.

13529. May 1.—Granting railways leave to appeal to Supreme Court, re Regina rates case.

13530. Apr. 28.—Authorizing C.N.R. to build spur for Winnipeg Sandstone Brick Co., west of Pembina St., Fort Rouge, Winnipeg.

13531. May 1.—Authorizing Canadian Northern Western Ry. to cross with its Brazeau Branch, G.T.P.R. Tofield Branch, Alta.

13532. May 1.—Amending order 13492, Apr. 25, re location of Canadian Northern Alberta Ry.

13533. May 1.—Approving revised plan of C.N.O.R. bridge across Moira River, Belleville.

13534. May 1.—Authorizing C.N..O.R. to divert and cross public road on lot 25, con. 1, South Elmsley tp.

13535. May 1.—Amending order 1415. Aug. 30, 1906, re crossing of James Bay Ry. by Georgian Bay and Seaboard Ry. (C.P.R.), at mileage 41.8, near Brechin, Ont.

13536. May 1.—Authorizing Georgian Bay and Seaboard Ry. (C.P.R.), to cross G.T.R. Haliburton Branch overhead.

13537. May 1.—Approving plans of C.N.O.R. subway at Division St., Cobourg.

13538. May 1.—Rescinding clauses 7 and 8 of order 13509, Apr. 28, which authorized C.N.R. to take certain C.P.R. lands.

13539. May 1.—Authorizing C.P.R. to build bridge 104.49 over Blind River, (west arm), on its Sault Ste. Marie Branch, Ont.

13540. May 1.—Ordering C.P.R. to provide graded access from roadway to farm gate for L. McArthur, Priceville, Ont.

13541. May 1.—Extending for six months from date, time for filing revised Standard Tariff of Maximum Freight Tolls of Esquimalt and Nanaimo Ry. (C.P.R.), as provided by order 12179.

13542. Apr. 26.—Dismissing complaint of Connecticut Oyster Co. re rates charged by express companies on returned empties to Toronto, from points in Western Canada.

13543, 13544. May 2.—Authorizing Seymour Power and Electric Co. to erect wires across G.N.W. Telegraph Co.'s wires and across C.P.R. at lot 12, con. 1, Hope tp., Ont.

13545. May 2.—Authorizing Trenton Electric and Water Co., to erect wires across C.N.O.R. at Brighton.

13546. May 2.—Authorizing city of Toronto to lay sewer under C.P.R. at Shaw St.

13547, 13548. May 2-1.—Authorizing town of Sault Ste. Marie, Ont., to lay sewer under C.P.R. at Pim and Superior Sts.

13549, 13550. May 2.—Authorizing Montreal Light, Heat and Power Co. to lay pipe under C.P.R. at Maguire and Hadley Sts., Montreal.

13551. May 2.—Approving plans showing layout of interlocker for new drawbridge over Welland Canal at Welland, Ont., including interlocker of M.C.R. and T.H. & B.R. by Niagara, St. Catharines and Toronto Ry.

13552. May 2.—Authorizing M.C.R. to build bridge at Mancell drain, Tilbury East tp., Ont.

13553. May 2.—Relieving G.T.R. from further protection of Talbot Road crossing, North Cayuga tp., Ont.

13554. May 2.—Ordering C.N.R. within 30 days under penalty of $25 a day, to fence its right of way just west of Odessa townsite, Sask.

13555. May 2.—Approving Ottawa and New York Ry. bylaw respecting certain officials issuing tariffs of tolls.

13556. May 2—Correcting error in C.N.Q.R. application re location of its St. Jacques branch, from St. Jacques to Rawdon.

13557. May 2.—Allowing correction in C.P.R. book of reference re spur line in Fort William, Ont.

13558. May 2.—Approving C.P.R. plans for station at Gleichen, Alta.

13559, 13560. May 2.—Authorizing C.P.R. to build three bridges on its Nipigon subdivision and to use six bridges on its North Bay subdivision, Lake Superior Division. .

13561. May 3.—Authorizing C.P.R. to build extra track across road allowance between secs. 27 and 28, tp. 9, r. 17, w. 4 m., Alta.

13562. May 2.—Authorizing C.P.R. to cross with its Pheasant Hills branch, 44 highways and divert same between mileage 254.5 and 328.3.

13563. Apr. 24.—Approving portion of location of South Ontario Pacific Ry. from near Guelph Jct., to Hamilton, Ont.

13564. Apr. 24.—Authorizing C.N.O.R. to build overhead farm crossing on south half of lot 27, con. D. Scarboro tp.

13565. May 3.—Authorizing city of Strathcona, Alta., to build steel bridge or viaduct, as highway over Edmonton, Yukon and Pacific Ry.

13566. May 3.—Approving C.P.R. class A station at Bird's Hill, Man.

13567. May 2.—Authorizing C.N.Q.R. to build siding for Imperial Syrup Co., Montreal.

13568. Apr. 25.—Ordering C.P.R. and G.T.R. to file plans by Aug. 1, for viaduct and station at Toronto; work is to be completed in two years from that date.

13569. May 2.—Authorizing C.N.O.R. to divert highway in Tyendinaga tp.

13570. May 3. Approving location of six G.T.P.R. stations in the western provinces.

13605. Apr. 24.—Authorizing C.P.R. to build three spurs for Canadian General Electric Co., Peterboro, Ont.

13606. May 6.—Authorizing Hamilton Cataract Power Co. to erect wires across N. St. C. & T. Ry., in Crowland tp., Ont.

13607. May 6.—Authorizing Michel Water, Light and Power Co. to lay pipe under C.P.R. at mileage 14.9, Cranbrook section, B.C.

13608. May 8.—Approving G.T.R. plans of steel work, east and west abutments and centre pier, Humber River bridge, Toronto.

13609. May 10.—Authorizing Shawinigan Water and Power Co. to erect wires across C.N.Q.R. near l'Epiphanie, Quebec.

13610. May 1.—Authorizing Canadian Northern Ry. to take for right of way certain C.P.R. land grants in the Calgary irriga-

13617. May 9.—Authorizing C.N.R. to cross nine streets in Rapid City, Man.

13618. May 10.—Authorizing C.N. Western Ry. to cross with its Stettler-Brazeau branch the C.P.R. Calgary-Edmonton Branch in s.e. ¼ sec. 15, tp. 39, r. 27, w. 4 m., Alta.

13619. May 9.—Extending for 60 days from June 1, time within which C.P.R. shall instal power brakes in accordance with order 10462, May 3, 1910.

13620. May 9.—Authorizing C.P.R. to build spur for Beatty Bros., Fergus, Ont.

13621. May 10.—Extending to Aug. 1 time in which C.P.R. may build spur for Hamilton Powder Co., near Barnet Station, B.C.

13622, 13623. May 10.—Approving plans of C.P.R. Standard no. 3 engine house and standard freight car shop.

13624, 13625. May 10.—Relieving G.T.R. from further protection at crossings ¼ mile east of Kearney station, and at mileage 56.30, Coteau Landing, Que.

13626. May 10.—Approving plans of subway crossing at Windermere and Ellis Aves., Toronto.

13627. May 10.—Authorizing G.T.P.R. to cross highway with its main line at n.w. ¼ sec. 30, tp 53, r 9, w. 5 m., Alta.

13628. May 9.—Approving G.T.R. bylaw 26, authorizing J. W. Loud, F.T.M., J. Pullen, A.F.T.M., and C. A. Hayes, G.F.A., to issue tariffs of tolls in respect to freight traffic.

13629. May 9.—Authorizing G.T.R. to build siding into premises of Alexander Bremner, Ltd., St. Henri Ward, Montreal.

13630. May 9.—Approving location of G.T.P.R. Standard no. 1 station at Leaman, Alta.

13631, 13632. May 10.—Authorizing city of Winnipeg to lay water pipe under G.T.P.R. and C.N.R. at Hugo St.

13633. May 11.—Authorizing Ontario Pipe Line Co. to lay pipe under G.T.R. at Hilliard St., Hamilton.

13634. May 11.—Authorizing Shawinigan Water and Power Co. to erect wires across Bell Telephone Co.'s wires near Three Rivers Que.

13635. May 11.—Authorizing G.T.R. to build spur into Carroll Bros'. premises, Humberstone tp., Ont.

13636. May 12.—Authorizing G.T.R. to build spur into Longford Quarry Co.'s premises, Rama tp., Ont.

13637. May 12.—Ordering C.P.R. to build station at Markinch, Sask., before Aug. 1.

13638, 13639. May 11.—Authorizing city of Nanaimo, B.C., to lay pipe under Esquimalt and Nanaimo Ry. at Franklin and Wentworth Sts.

13640. May 11.—Authorizing city of Edmonton, Alta., to lay extension of Rat Creek sewer near junction of Riverview Ave. and Eastern Boundary of Dominion Government reserve.

13641. May 11.—Authorizing Rev. A. Comeau, St. Hilaire, N.B., to lay water pipe under Temiscouata Ry.

13642. May 11.—Authorizing New Brunswick and P.E.I. Ry. to build branch to Sackville Freestone Co.'s premises, Sackville, N.B.

13643. May 12.—Extending to July 1 time for G.T.P.R. road diversion in n.e. ¼ sec. 34, tp. 45, r. 21, w. 4 m., Alta.

13644. May 12.—Approving C.N. Alberta Ry. location through tp. 53, r. 7-10, w. 5 m., mileage 62.47 to 82.62, Alta.

13645. May 12.—Authorizing G.T.P.R. to divert road through the n.w. ¼ sec. 13, tp. 35, r. 23, w. 4 m., Alta.

13646, 13647. May 12, 13.—Authorizing Seymour Power & Electric Co. to erect wires across Bell Telephone Co.'s and G.N.W. Telegraph Co.'s wires at Darcy St., Cobourg, and at Kingston Rd., Northumberland county, Ont.

13648. May 15.—Ordering C.N.R. to fence its right of way through s.w. ¼ secs. 35, 36 and 34, tp. 50, r. 6, w. 4 m., Vermilion District, Alta., before June 1, under penalty of $25 a day.

13649. May 15.—Authorizing C.P.R. to build bridges 117.8, Bow River, Alberta Division; 75.6, Cascade subdivision, B.C. Division; 104.9, Grand Coulee, Moose Jaw subdivision, Saskatchewan Division.

13650, 13651. May 15.—Approving C.P.R standard enclosed tank and standard No. 1 enclosed water tank.

13652. May 15.—Authorizing C.P.R. to build industrial spur for Western Supply & Equipment Co., Lethbridge, Alta.

13653. May 15.—Authorizing G.T.R. to build extension to siding into M. Beatty & Sons' premises, Welland, Ont.

13654. May 15.—Authorizing National Transcontinental Ry. Commissioners to lay sewer under C.N.R. at mileage 246.5 near St. Boniface, Man.

13655. May 2.—Authorizing C.N.O.R. to cross overhead, public road on lot 29, Nepean tp.

13656. May 2.—Approving amended location of Vancouver, Victoria & Eastern Ry., from mileage 0 to 12 and mileage 16 to 17 from Coquihalla summit, B.C.

13657. May 2.—Authorizing C.P.R. to build spur to Dominion Government military camp near Farnham, Que.

13658. May 16.—Authorizing C.P.R. to build bridges 124.9, Cataract Creek, and 121.2, Bath Creek, Laggan subdivision, Alberta Division; 6.2 and 129.3, Brandon subdivision, Manitoba Division; 75.0, Old Man River, Crow's Nest subdivision, Alberta Division; 108.6, Cascade subdivision, B.C. Division.

13659. May 16.—Authorizing C.P.R. to build two additional tracks across road allowance between secs. 23 and 24, tp. 10, r. 12, w. 4 m., at Burdette station, Alta.

13660. May 16.—Authorizing G.T.P. Branch Lines Co. to build bridge over Red Deer River on its Calgary branch, Alta.

13661. May 16.—Authorizing G.T.P.R. to carry traffic between Edmonton and Prairie Creek, Alta., at a speed limit of 15 miles, west of Edson.

13662. May 16.—Authorizing Central Ontario Ry. to build station at Hillier.

13663. May 16.—Authorizing G.T.P. Branch Lines Co. to cross C.P.R. Bulyea branch with its Melville-Regina branch in n.w. ¼ sec. 32, tp. 17, r. 19, w. 2 m., Sask., and ordering interlocker to be installed.

13664. Apr. 26.—Dismissing Bell Telephone Co.'s application for order to amend joint tariff for service with Michigan State Telephone Co. by raising rate for long distance messages from Sarnia, Ont., to Detroit, Mich., and from Windsor, Ont., to Port Huron, Mich., from 40c. to 50c. per three-minute conversation.

13665. May 4.—Authorizing A. Frazer, Lucknow, Ont., to use as cattle pass, opening under G.T.R. at m. p. 53.87 on lot 1, con. 4, Huron tp.

13666. May 5.—Extending to Aug. 1, time for carrying G.T.P. Ry. over Norton St., Edmonton, Alta.

13667. May 18.—Authorizing G.T.P. Branch Lines Co. to cross C.N.R. spur with its Melville-Regina branch, in s.w. ¼ sec. 26, tp. 17, r. 20, w. 2 m., Sask., and ordering interlocker to be installed.

13668. May 18.—Authorizing C.N.O.R. to build bridge over Rideau River, Gloucester and Nepean tps.

13669. May 16.—Authorizing C.P.R. to join Georgian Bay & Seaboard Ry. with Lindsay, Bobcaygeon and Pontypool Ry. near junction at mileage 72.91.

13670. May 18.—Authorizing Ontario Pipe Line Co. to maintain gas pipe under G.T.R. at Sherman Ave., Hamilton, Ont.

13671 to 13673, May 17, 19.—Authorizing Seymour Power & Electric Co. to erect wires across G.N.W. Telegraph Co.'s wires and G.T.R. at three points in Ontario.

13674, 13675. May 18.—Authorizing city of Winnipeg to erect wires across C.P.R. at two points on McPhillips St.

13676. May 18.—Authorizing town of Edmundston, N.B., to maintain pipe under C.P.R. at Victoria St.

13677. May 18.—Authorizing Canadian Coal Consolidated, Ltd., to maintain water pipe under C.P.R. Crow's Nest branch, Alta.

13678 to 13680, May 18, 19.—Authorizing C.N.R. to divert three public roads on its Hallboro branch, with consent of Blanshard, Miniota, and Saskatchewan municipalities, Man.

13681, 13682. May 19.—Authorizing C.P.R. to build bridges at mileage 106 and 112.2, Sherbrooke subdivision, Que.

13683. May 19.—Authorizing H. B. Johnston & Co. to maintain water pipe under C.N.O.R. and C.P.R. at Toronto.

13684. May 19.—Authorizing G.T.R. to build siding for Oneida Lime Co., near Nelles Corners station, Ont.

13685. May 19.—Authorizing G.T.R. to build siding into Laprairie Brick Co.'s premises, Laprairie, Que.

◆

A Winnipeg press report, April 18, stated that the Great Northern Ry. was arranging to run a through express train from St. Paul, Minn., to Edmonton, Alta., using the Canadian Northern Ry. from Brandon, Man., the terminus of its own line in Canada. We are officially advised by a C.N.R. official that the report is unfounded.

A Railway to Hudson Bay.

The Minister of Railways has asked the House of Commons to vote $2,000,000 on account of the construction of this projected railway from Pas Mission, Sask., to either Port Nelson or Fort Churchill, on Hudson Bay.

A party of engineers under F. P. Moffatt recently completed 10 months work in the field between The Pas and Split Lake, in preparation for construction. In connection with construction work it is reported that supplies will be shipped from Halifax, N.S., to York Factory, and taken inland by canoe and trail route, instead of as at present overland to The Pas via Winnipeg, and thence by canoe and trail route. The present route is said to result in considerable delays in getting provisions and other supplies through.

An announcement was made in Ottawa, May 22, that tenders will be invited next month for the construction of the first 120 miles of the proposed line from The Pas in the direction of Hudson Bay. This will cover the mileage in regard to which there is no question whether the ultimate terminal on the Bay is Fort Churchill or Port Nelson. It is expected that construction will be well in hand in the beginning of 1912, and that the section will be completed by the end of 1914. A full description of the projected route, with an estimate of the cost, was given in our Feb. issue, pg. 97.

Orders for Steel Rails.

The Canadian Pacific Ry. has this year so far ordered 107,200 tons of steel rails. By far the larger portion has been ordered from the Algoma Steel Co., and nearly all the balance from the Dominion Iron and Steel Co.

Particulars of orders placed by Mackenzie, Mann & Co., for 90,000 tons of steel rails, for the Canadian Northern Ry. and allied lines, were given in our April issue. The orders have since been increased to 115,000 tons, 10,000 tons 80 lbs., and 10,000 tons 60 lbs., having been ordered from the Algoma Steel Co., and 5,000 tons 80 lbs., from the Dominion Iron and Steel Co.

As stated in our last issue, the Grand Trunk Pacific Ry., has ordered 18,000 tons 60 lbs. rails from the Algoma Steel Co., for use on branch lines. We have since been advised that 12,500 tons of these were to be rolled during May, and the balance will be rolled a little later in the year.

The s.s. Hans B., has been chartered to sail from Sydney, N.S., early in June, for Prince Rupert, B.C., with 6,100 tons 80 lbs. rails on the Grand Trunk Pacific Ry.'s 1909 contract with the Dominion Iron and Steel Co.

The National Transcontinental Railway Commissioners have ordered 34,927 gross tons from the Algoma Steel Co., and 26,273 tons from the Dominion Iron and Steel Co., all 80 lbs.

The Grand Trunk Ry. has ordered 37,500 tons of 100 lbs. rails, divided between the Algoma Steel Co. and the Dominion Iron and Steel Co.

◆

The Canadian Railway Club held its annual meeting and smoking concert, at Montreal, May 3. Following are the officers for the current year:— President, A. A. Goodchild, Auditor of Stores and Mechanical Accounts, C.P.R.; First Vice President, J. Coleman, Superintendent of Car Department, G.T.R.; Second Vice President, R. W. Burnett, General Master Car Builder, C.P.R.; executive committee, C. Murphy, Superintendent of Transportation, C.P.R.; W. McNab, Principal Assistant Engineer, G.T.R.; C. Kyle, General Master Mechanic, C.P.R.; P. Webb, F. Ditchfield, Canada Car Co., and R. M. Hannaford, Chief Engineer, Montreal St. Ry.

REMEMBER

When you require any new equipment in the line of Iron or Woodworking tools, —Williams & Wilson can furnish the most modern equipments. Here are a few of our Agencies:

CANADA MACHINERY CORPORATION,
Iron and Woodworking Machinery.
FOOTE-BURT CO., High Duty Drilling Machinery.
NEWTON MACHINE TOOL WORKS,
Cold Saws, Milling Machines, Etc.
BULLARD MACHINE TOOL CO.,
Rapid Production Vertical Turret Lathes.
AJAX MFG. CO., Forging Machinery for Smith Shop.
WARNER & SWASEY, Turret Lathes for Brass and Iron.
LANDIS TOOL CO., Grinding Machinery.
KEARNEY & TRECKER, High Duty Horizontal Millers.
AMERICAN TOOL WORKS CO., Radial Drills, Etc.
—And numerous others.

We will gladly send Descriptive Circulars or Catalogues of any of the above. Send us your inquiries.

Williams & Wilson, Limited, Machinery & Machinery Supplies
320 to 328 St. James St., MONTREAL

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED

BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY

THROUGH TRAINS between BOSTON (via Boston & Maine R.R. and Cent. Vermont Ry.) MONTREAL, TORONTO and CHICAGO.
THROUGH TRAINS between NEW YORK, TORONTO and CHICAGO via Lehigh Valley R. R. and Niagara Falls.

Dining and Parlor-Library-Cafe Cars on Day Trains. Pullman Sleeping Cars on Night Trains.

THE "INTERNATIONAL LIMITED" The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario

H. G. ELLIOTT, Gen. Passenger Agent, MONTREAL

C.P.R. Betterments, Construction, Etc.

Dominion Atlantic Ry.—D. McNicoll, Vice President C.P.R., is reported as having stated May 4, that the question of taking over the D.A. Ry. by the C.P.R. was under consideration. Legislation necessary to enable this to be done has been passed by the Dominion Parliament. Considerable work in the way of betterment is being done, as described in our last issue, and local reports state that when the line is taken over by the C.P.R., still more extensive betterments will be made. (May, pg. 409.)

Branch Line at Farnham.—The C.P.R., exercising the franchises of the Atlantic and North West Ry., is applying to the Board of Railway Commissioners for authority to build a branch line from chainage 437+20 on the main line of the Farnham section, St. Brigide parish, Que., to the military camp grounds on lot 341, West Farnham parish.

The Orford Mountain Ry. was practically completed from Mansonville, Que., to the International boundary, 3.5 miles, during 1910, and the line is now being extended from the boundary to North Troy, Vt., 5,000 ft. The work is being done by the company's own forces, and it is expected that it will be completed by June 4.

Windsor St. Station, Montreal.—Rapid progress is being made with the steel work for the addition to the Windsor St. station, and it is expected that this part of the work will be completed early this month. The stone work has been completed to the second story, and a start has been made with the brick work, and with the concrete floors.

Place Viger, Montreal.—While the Notre Dame St. viaduct has not been fully completed, vehicles and pedestrians are allowed to cross it from Berri St. to Montcalm St. Good progress is being made with the building of the bridge from the station building to Notre Dame St. Practically all the brick work on the station has been completed, the interior partitions put in, and the concrete floors laid. It is expected that the station will be ready for occupation about the end of the month.

Mile End, Montreal.—The new station at Mile End., has been completed, and the staff took possession May 12. It is a one story building with interior fittings of white ash. In the main building are the ticket offices, waiting rooms, baggage rooms, etc., while at either end are 75 ft. shelters. The main waiting room is 45 by 35 ft., and the ladies' waiting room 24 by 15 ft. Besides these there are smoking rooms, toilet rooms, and two large reservations for the baggage and express departments.

Montreal-Toronto Second Track.—A second track is being built from Smiths Falls to the point where the projected new lake shore line to Toronto will leave the present line at Glen Tay, 16 miles. The contract for this work was let some time ago to Jones and Girouard, Ottawa.

Campbellford, Lake Ontario and Western Ry.—Engineering parties are in the field making location surveys for the new line from near Glen Tay station to Leaside Jct. In a recent interview, D. McNicoll, the Vice President, said the location would extend from Glen Tay southerly to Belleville, and thence along the lake shore connecting with the present line into Toronto, at Leaside Jct. The new line will be a single track one, with gradients of 0.4%, and is expected to be within a mile or two as short as the present line between the same points. The surveys are being gone on with from both ends, and it is expected that construction will be started next year.

Georgian Bay and Seaboard Ry.—The Board of Railway Commissioners has authorized the diversion of the public road in Ops tp., two miles south of Lindsay, at mileage 19.25, and the building of a bridge to carry the line across the G.T.R. Haliburton branch.

We are advised that a contract has been let to the John S. Metcalf Co., Ltd., Montreal, for building a wharf at Victoria Harbor, Ont., in addition to contracts for wharves previously awarded. The new order is for about a third of a mile of wooden crib structure, below water, with reinforced concrete superstructure. This will bring the total length of wharves which have been built for the C.P.R. at Victoria Harbor, by the John S. Metcalf Co., up to a mile and a quarter.

Rapid progress is being made with the construction of this line, which will join the Montreal-Toronto line at Bethany Siding. Track laying will be started, it is expected some time in July, and it is hoped to have the line completed before the end of the year. The line starts at Victoria Harbor, on Georgian Bay, and runs through Coldwater, and Lindsay to Bethany Siding.

Track was laid into Orillia, from Coldwater Jct., May 14, and is being proceeded with in the direction of Lindsay.

South Ontario Pacific Ry.—The Board of Railway Commissioners has approved location plans of a portion of this line between Guelph Jct. and Hamilton, Ont.

A small quantity of grading has been done at Guelph Jct., and in the way of getting in material, yard tracks, etc. The general contractors, the Toronto Construction Co., we were advised May 15, expected to start in work on an extensive scale at an early date.

London Station, Etc.—Five sets of plans showing routes of the proposed new line in the vicinity of Pottersburg, Ont., have been sent by the engineers for the consideration of the management officials at Montreal.

London Engine House.—We are advised that the general contract for the 22-stall roundhouse with machine shop and boiler house, mentioned in our last issue, has been let to John Hayman and Sons, of London, Ont. The contract for the structural steel work has also been let.

Eastern Lines Betterments.—We are officially advised that the principal new works which will be started this year, or upon which work had been started last year, which will be carried out during this year include the following:—

BRIDGES.—The bridge over the St. Lawrence River at Lachine to be double-tracked; a new steel bridge across the Ottawa River at Mattawa to replace the present structure; the replacing of numerous wooden bridges on various lines by steel bridges, large sections of the structures to be filled by solid embankments.

STATIONS, ETC.—Large freight-shed and yard at St. John, N.B.; large freight and storage sheds at Montreal, and enlargement of yards; new passenger station at Place Viger, Montreal, enlargement of passenger station and head offices at Windsor St. station, Montreal; large concrete engine house and machine shop at Ottawa; new passenger stations at North Toronto, West Toronto, and enlargement of West Toronto yards; two subways at North Toronto; three subways at West Toronto; new freight sheds at West Toronto, north Toronto, and Cherry St., Toronto; large new engine house, machine shop and coaling plant at London, also enlargement of yard.

NEW LINES, ETC.—Completion of Georgian Bay and Seaboard Ry., from Coldwater Jct., to Bethany, Ont.; new line from Hamilton to Guelph Jct., Ont.; second track work between Smiths Falls and Glen Tay, Ont.; second track work, Mile End to St. Martins Jct., Que.; second track work South Jct., Montreal, to Adirondack Jct., Que.; large new freight shed and flour shed; new station and the completion of new wharves at Victoria Harbor, Ont., the lake terminal of the Georgian Bay and Seaboard Ry.

North Bay Shop Extensions.—Plans and estimates are reported to have been prepared for extensive additions to the shops at North Bay, Ont., but it is said no decision has been reached as to when anything will be done.

Lake Superior Division.—The Board of Railway Commissioners has authorized the company to use six bridges on the North Bay sub-division; to build three bridges on the Nipigon sub-division, and to build a bridge over the west arm of Blind River at mileage 104.49 on the Sault Ste. Marie branch.

Fort William Improvements.—The new station at Fort William, Ont., has been fully opened.

Press reports state that plans for extensive improvements are being prepared, the new works to include, a coal dock, wharf and plant, capable of storing 1,000,000 tons of coal, and a new cleaning elevator.

A start has been made in the building of a second track between Port Arthur and Fort William, and it is expected to have the work completed by Sept.

The bridge over the Kaministikwia River, which was described in our August, 1910 issue, has been completed. The double track railway and highway bridge over the McKellar River, for the Fort William Terminal and Bridge Co., has also been completed.

Western Lines Fencing.—Contracts are reported to have been let for 730 miles of wire fencing in Saskatchewan, and for 270 miles in Alberta.

Winnipeg Shops, Etc.—Contracts are reported to have been let to Carter-Halls-Aldinger Co., Ltd., for the building of an upholstering shop, 100 by 40 ft., of brick on a stone foundation; to Jackson, Goldie & Co., for the construction of a turntable at the shops; and to R. J. Barber for the erection of two new freight sheds on Higgins Ave., one 260 by 40 ft., and the other 260 by 60 ft.

Press reports state that the company is purchasing considerable areas of property on the north side of Henry St., west of Main St., for the purpose of adding to the yard space.

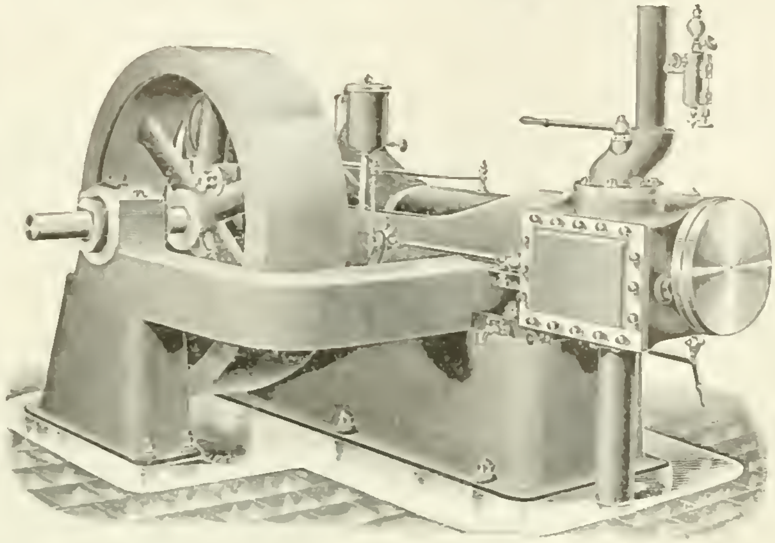
Winnipeg Beach Station.—Press reports state that the company has purchased land between McPherson and Elm avenues, and between Stevens St., and the old Gimli road, Winnipeg Beach, Man., upon which to erect a new station

Water Supply at Virden.—Plans are being prepared for the provision of a water supply for the company's use at Virden, Man. It is said the water will be brought from the Assiniboine River, by a pipe line about five miles long.

Union Station at Regina.—In an interview at Regina, Sask., May 9, F. W. Peters, Assistant to the Vice President, said he had not the least idea what the cost of the proposed union station with the Canadian Northern Ry. would be. It would be erected a little south east of the present building, between Hamilton and Broad streets. The main entrance would be directly opposite Rose St., and provision would be made on the ground floor for ticket offices, waiting rooms, etc., while on the second floor, there would be offices for the other departments. The C.N.R. would be provided with accommodation in the station, and would have running rights into it and over the yards. It is expected that construction will be started on the station this year.

Regina Freight Shed.—Foundations have been prepared for a freight shed about 400 by 25 ft, and the building is in course of erection by Smith Bros and Wilson. It is expected to have it completed by July 1.

BEARINGS IN LINE



In sizes up to 125 horse power, the outboard bearing of our side crank engines is connected to the frame by a wing, keeping the bearings perfectly in line.

These engines are built on the interchangeable system and duplicate parts are kept in stock, ready for shipment on receipt of order.

They have our latest improved governor and oiling system and are strictly high class in every respect.

Hawarden to Saskatoon, Sask.—Press reports state that preliminary surveys are being made for a line from Hawarden to Saskatoon, Sask. The building of such a line would give Saskatoon direct connection with Moose Jaw and other points, which at present is only possible by way of Lanigan and Regina.

Estevan to Forward, Sask.—Work was started April 24, by J. D. McArthur & Co., on the construction of this 35 miles. It is expected that 25 miles will be ready in time for wheat traffic in the fall.

Weyburn to Lethbridge.—The Lethbridge, Alta., Board of Trade is desirous that construction shall be started in that town easterly towards the line from Weyburn, Sask., heading in the direction of Lethbridge. A letter was received May 8, from W. Whyte, Vice President, stating that full consideration would be given to anything the board had to say in favor of starting construction at the western end.

Southern Alberta Irrigation District.—The Southern Alberta Land Co. has been negotiating with the C.P.R for the construction of certain lines through its irrigated property, and in this connection a press report said that a line from Kipp to Suffield had been decided on. We are officially advised that nothing definite has been decided so far as such a line is concerned.

New Shops for Western Lines.—W. Whyte, Vice President, was in Medicine Hat, Alta., May 3, in connection with the proposal for the location of some new shops for the western lines. A deputation pressed the claims of Medicine Hat, as a deputation from Calgary had done the claims of that city a few days previously. Mr. Whyte stated that the matter would be discussed with the President on May 26, and an announcement made shortly thereafter.

Hotel at Calgary.—The plans for the projected hotel at Calgary, Alta., were received by the city authorities from the C.P.R. architect's department, Montreal, May 9. The design of the building will conform to that of the Royal Alexandra at Winnipeg.

Irrigation and Colonization Building at Calgary.—A contract is reported to have been let to J. McDiarmid and Co., Winnipeg, for the erection of a building in Calgary for the company's irrigation and colonization staffs. The building will be 122 by 45 ft. and will be four stories high, with a basement. The structure will be of reinforced concrete, the outer walls of sandstone veneer, and partitions of hollow tile. It is expected to have the building completed in Oct.

Cardston to Pincher Creek.—The Cardston, Alta., Board of Trade appointed a committee, May 10, to confer with the C.P.R. officials relative to the building of the projected line to Pincher Creek, through Cardston. This projected branch is an extension of the Alberta Ry. and Irrigation Co.'s lines.

Kaslo to Three Forks, B.C.—A press report states that it is proposed to build a line from Kaslo to Three Forks, B.C., about four miles, in order to provide for some mines.

C.P.R. Building in Vancouver.—A press report states that the company proposes to replace its present telegraph building on Hastings St., Vancouver, B.C. by an eight story one at a cost of about $200,000. The site has a frontage of 75 ft. and a depth of 120 ft.

Westminster Jct.—Coquitlam, B.C., Plans.—The general plans of the company with respect to terminal yards and shops for the Pacific coast were brought up for discussion April 26, at a conference between C.P.R. officials and the Coquitlam council, and approved by the latter body. The proposed work will cost several million dollars and will require several years to complete. Work will be commenced as soon as the plans have been sanctioned by the Railway Commission. The proposed works comprise storage, sorting and shop yards, repair shops, and other buildings. The yards will contain 95 miles of sidings, and provision will be made for sites for manufacturing plants.

Esquimalt and Nanaimo Ry.—The contractors are pushing work on the extension of this line and expect to get it fully completed into Alberni by June 30.

R. Marpole, General Executive Assistant, returned to Vancouver from Montreal, May 15, after having discussed plans for the extension of the company's lines on Vancouver Island with Sir Thos. G. Shaughnessy. While no official announcement has been made, press dispatches state that the plans for the extension of the line to Comox have been approved, and that construction will be started at an early date.

Surveys are being made by a party under A. Stewart, for the location of a line from Port Alberni to Great Central Lake, via Sprout Lake, and another party is working a survey from Campbell River to Quatsino Sound. (May, pg. 421.)

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for March, $31,335, against $34,260 for March, 1910. Cumulative net profits for nine months ended Mar. 31, $278,585.

Caraquet Ry.-Gulf Shore Ry.—A meeting of shareholders of the Gulf Shore Ry. was held at Bathurst, N.B., recently to ratify an agreement for the amalgamation of the company with the Caraquet Ry. Co. in accordance with the terms of the company's acts.

Central Ontario Ry.—The annual meeting was held at Toronto, May 17. Following are the officers and directors for the current year:— President, C. E. Ritchie, Akron, O.; Vice President, J. J. Warren, Toronto; General Manager and Secretary, G. E. Collins, Trenton, Ont.; other directors, E. B. Stockdale, and J. Moss, K.C.

Cumberland Ry. and Coal Co.—The Dominion Coal Co.'s report presented at the meeting of shareholders May 19, contains the following paragraph:— "During the year the Dominion Steel Corporation, Ltd., came under agreement to purchase the entire capital stock of the Cumberland Ry. and Coal Co., and an agreement for the lease of its property to this company was entered into under which its collieries are now being operated as collieries of the Dominion Coal Co. The Cumberland Co. owns large and valuable coal areas in Cumberland county and in Cape Breton; it has two collieries at Springhill, a well-equipped standard gauge railway from Springhill Jct. to Parrboro, 32 miles in length, a large area of timber lands, and other property."

Detroit River Tunnel Co.—The following directors were elected for the current year, at the annual meeting at Detroit, Mich., May 4:—W. K. Vanderbilt, F. W. Vanderbilt, H. B. Ledyard, W. C. Brown, W. H. Newman, N. Kingsmill, W. P. Torrance, H. Russell, W. K. Vanderbilt, Jr., L. C. Ledyard and G. F. Baker.

Dominion Atlantic Ry.—Gross earnings for Mar., $67,600, against $85,937 for Mar. 1910. Aggregate gross earnings for nine months ended Mar. 31, $964,200 against $1,049,935 for same period 1909-10.

Grand Trunk Ry.—A Grand Rapids, Mich., dispatch, May 17, says the Circuit Court Judge has given a decision denying the demurrer of the defendants in the State of Michigan against the Detroit, Grand Haven and Milwaukee Ry., one of the companies owned by the G.T.R. in the U.S. The action is brought to recover $2,000,000 alleged to be due for back taxes. It is announced that an appeal against the decision will be taken to the Supreme Court.

Intercolonial Ry.—The House of Commons, May 5, voted a further sum of $353,000 on account of collection of revenue. The Minister of Railways explained that the vote was necessary for the adjustment of accounts, and did not provide for further expenditures. The only effect, he added, was that it would reduce the amount that would appear as surplus revenue of last year.

Lake Erie and Detroit River Ry.—At the annual meeting at Walkerville, Ont., May 2, the retiring directors were re-elected. The meeting was purely a formal one, the company's line being owned by the Pere Marquette Rd.

Manitoulin and North Shore Ry.—A meeting of shareholders was held at Sault Ste. Marie, Ont., May 29, to pass a bylaw reducing the number of directors from 12 to seven.

Montreal and Vermont Jct. Ry.—The annual meeting was held at Stanbridge, Que., May 10. Following are the officers and directors for the current year:— President, C. M. Hays; Vice President, E. H. Fitzhugh; A. H. Gilmour, Secretary Treasurer; W. H. Chaffee, Assistant Secretary Treasurer; G. C. Jones, Managing Director; other director, C. W. Aitkens.

Michigan Central Rd.—The annual meeting was held at Detroit, Mich., May 4, when the following directors were elected for the current year:—W. K. Vanderbilt, F. W. Vanderbilt, H. B. Ledyard, W. C. Brown, J. P. Morgan, C. M. Depew, W. Rockefeller, J. Stillman, W. H. Newman, G. F. Baker, W. K. Vanderbilt, Jr., L. C. Ledyard and M. Hughitt.

Napierville Jct. Ry.—The annual meeting was held, May 8. Following are the officers and directors for the current year:—President, L. F. Loree; Vice Presidents, C. S. Sims and W. H. Williams; Secretary, L. J. Beique; other directors, G. Hartt, F. L. Beique, F. A. Beique and R. Adair.

Quebec and Lake St. John Ry.—Total earnings for April, $45,508.58, against $48,678.17 for April 1910. Aggregate total earnings for four months ended Apr. 30, $163,656.18, against $168,270.71 for same period 1910.

Quebec Central Ry.—Gross earnings for Feb., $71,321.50; expenses $58,231.52; net earnings $13,089.98, against $62,417.33 gross earnings; $53,788.57 expenses; $8,628.76 net earnings for Feb., 1910. Gross earnings for March, $103,240.21; expenses $65,997.49; net earnings $37,242.72, against $92,681.07 gross earnings; $58,601.99 expenses; $34,079.07 net earnings for March, 1910. Aggregate gross earnings for nine months ended Mar. 31, $859,170.03; expenses $594,046.83; net earnings $265,123.20, against $796,922.75 aggregate gross earnings; $555,697.25 expenses; $241,225.50 net earnings, for same period 1909-10.

South Shore Ry.—The Imperial Privy Council gave a decision, May 4, in the case of the appeal of the Attorney General against the Standard Trust Co., of New York, and the S.S. Ry., arising out of the decision of the Judge of the Exchequer Court as to the division of the money paid by the Delaware and Hudson Co., for the purchase of the S.S. Ry. The Government contended that a portion of the $600,000 paid to the Standard Trust Co. should have been distributed among the other creditors of the old company. The Privy Council by its decision upholds the decision of the Exchequer Court.

National Transcontinental Railway.

Tenders will be received to June 14, for the erection of station and other buildings on the following sections:—From Plaster Rock, N.B., westward to the N.B.-Quebec boundary; from mileage 161.5 to 194 east of Quebec bridge; from mileage five to 105 east of Quebec bridge; from Quebec Bridge westward to mileage 45; from mileage 55 to 194 west of Quebec bridge; at Cochrane, Ont.; from the divisional yard at Graham, Ont., eastward for 60 miles.

The Chairman of the N. T. Commission, in an address to the Quebec Board of Trade, May 5, gave an explanation of the plans for the erection of the union station at the old Champlain market, and for the workshops which it is proposed to build on the Ste. Foye heights, near the Quebec bridge. He said the station will be a monumental structure, 250 ft. long, and three stories high, being 77 ft. from the ground to the highest point of the roof. A wharf 2,000 ft. long will be constructed alongside the station. This will later be prolonged to 6,000 ft. west. The extreme depth of these wharves will be 55 ft. at low tide, and will leave room for the location of the agency of the marine department and shipping. The workshops are to be erected at the western approach to the bridge which has been found the most practical location for them. It is at the limits of Ste. Foye, and permits the erection of big shops, which would be impossible anywhere else. The proposed shops will be second only to Winnipeg. Their site will cover 155 acres. The buildings proposed to be erected include the following:—Coach paint shop, 120 by 200 ft.; upholstering shop, 40 by 120 ft.; transfer table, 85 by 55 ft.; coach shop 120 by 200 ft.; cabinet shop 40 by 120 ft.; planing mill, 80 by 250 ft.; dry kiln, 35 by 70 ft.; lumber shed, 60 by 150 ft.; freight car shop, 80 by 400 ft.; power house, 100 by 125 ft.; store house, 70 by 150 ft.; oil house, 35 by 55 ft.; office, 60 by 60 ft.; boiler and tank shop, 150 by 150 ft.; erecting shop, 150 by 388 ft.; forge shop, 100 by 150 ft.; foundry shop, 100 by 150 ft.; pattern shop, 50 by 70 ft.; roundhouse, 20 stalls; water tanks, 50,000 galls., and 100,000 galls. capacity; boiler plate and tube rack, 25 by 150 ft.; coaling trestle, 950 ft. long; sand house, 46 by 19 ft.; ashpits and cinderhoists; iron rack, 20 by 100 ft.; ice house, 59 by 29 ft.; local station, 116 by 30 ft.; store house, 74 by 20 ft.; midway crane, 1,420 ft runway; wheel foundry and machine shop, 125 by 100 ft.; wheel storage, 105, by 100 ft. As soon as details in connection with the plans are worked out, tenders will be asked for the erection of the buildings. The route which will be followed by the line would be from Sillery Cove, into the Champlain market, and shunting grounds will be provided at Wolfe's Cove.

Reports from Cochrane, Ont., state that E. F. and G. E. Fauquier have completed their 70 miles of grading west of that point, and are engaged in ballasting the track. Further west, O'Brien, McDougall and O'Gorman, have large gangs of men at work, clearing the right of way and grading. East of Cochrane, about 40 miles of track have been laid, and the ballasting completed and the contractors, Foley, Welch and Stewart, are pushing their grading gangs further east.

We are advised that there is no foundation for the report that a contract has been let, or is about to be let to Haney, Quinlan and Robertson, for the erection of a coach and car shop at Transcona, near Winnipeg. At present, the commissioners are unable to say what further will be done in the way of building at the shops at Transcona.

GRAND TRUNK PACIFIC RAILWAY.

Replying to questions in the House of Commons April 24, the Minister of Railways said the estimated cost to Canada of the western division of the National Transcontinental Ry. is the interest for seven years on the bonds required to finance 75% of the cost of construction of the mountain section, and this interest is estimated at $13,293,000. In addition the direct cost to the Government for inspection, auditing, etc., in connection with the western division is estimated at $135,000. The details upon which these estimates are based are as follows:—

Estimated cost to complete, Mar. 31, 1914:—

Cost of construction	$58,520,000
Terminals, Prince Rupert	3,000,000
Interest during construction	6,000,000
Total estimated cost	$67,520,000
Amount to be financed by 3% government guaranteed bonds, 75% of $67,520,000	50,640,000
Par value of government guaranteed 3% required to finance cost of construction, estimated to be sold at net price of 80%	63,300,000
Interest on $63,300,000 at 3% for 7 years	13,293,000
Estimated direct expenditure by government for engineering, auditing, etc., in connection with western division	135,000

The above estimate is made on the assumption that the liability of the government as guarantor of the bonds, will be in accordance with the judgment rendered by the Supreme Court of Canada, as to the meaning of par. 5 of the agreement of Feb. 18, 1904, schedule to chap. 24 of the Acts of that year.

Following is the estimated cost of construction of the mountain section:—

Description of Service.	Amount.
Preliminary and legal expenses, engineering	$ 3,200,000
Right of way and real estate	250,000
Grading and tunnels	33,000,000
Bridges, trestles and culverts	10,000,000
Ties	1,500,000
Rails, fastenings, frogs and switches	5,700,000
Tracklaying, surfacing and ballasting	2,390,000
Buildings and water stations	1,500,000
Fencing, crossings and cattle guards	20,000
Snow sheds	500,000
Docks	200,000
Telegraph line	260,000
	$58,520,000
Terminals at Prince Rupert	3,000,000

The Minister added that the foregoing details of estimates are subject to revision. The fluctuating labor conditions prevailing, and the tendency to an increasing cost for labor, on the line of construction, renders this statement necessary.

A contract has been let to J. D. McArthur, Winnipeg, for the completion of the line from Regina, Sask., in a generally southerly direction to the International boundary. This contract will carry the line from the end of the section at present under contract, on which there is about 40 miles of grading to be be completed.

The contract for building the first 50 miles of the projected branch from Biggar, Sask., to Calgary, has been let to Foley Bros., Welch and Stewart.

The contract for the new branch from the Alberta coal branch has been let to Foley, Welch and Stewart. This will be known as the Mountain Park coal branch.

We were officially advised May 1, that the location of the G. T. Pacific Ry. terminals in Calgary, Alta., had not been decided, and that all reports stating that particular properties had been acquired for that purpose were incorrect.

While land has been acquired at Edmonton Alta., for the purpose of building an hotel thereon, we are advised that nothing has been definitely decided as to the size and character of the proposed building.

E. J. Chamberlin, Vice President and General Manager, is reported to have stated in an interview at Winnipeg, May 4, that it is doubtful whether a contract will be let this year for the building of the G.T.P.R. hotel at Winnipeg. The plans had not then been finally completed, and were not likely to be ready before June 1. It was impossible to say anything definite as to the accommodation, equipment, or cost of the building until all the plans had been approved.

Speaking of the proposed line into Brandon, Man., Mr. Chamberlin is reported to have said recently that the surveys would be begun almost immediately, but it was impossible to say when construction would be gone on with. This line would extend northerly from the G.T.P.R. to Neepawa.

Referring to the work on the lines which will centre in Regina, Sask., Mr. Chamberlin is reported as saying that everything was being done that could be done to have the line completed into Regina by July 31. The grading was well ahead, and the company was rushing the track laying and ballasting, with the object of having the branch in operation by the opening of the Exposition. The tracklaying gang reached Fort Qu'Appelle May 12. The question of the building of an hotel had been considered, but nothing was likely to be done this year. The Board of Railway Commissioners has approved of location of the Melville-Regina branch from the city limits at mileage 92.62 to the west side of Albert St., at mileage 97.57, Regina, Sask.

R. Hyland, of the contracting firm of Rigby, Hyland and Plummer, in a recent interview said the grading of the branch from Regina into Moose Jaw, would be completed by Aug. 1. Grading is being proceeded with west of Cottonwood Creek, four gangs being at work. A 1,500 ft. trestle bridge is nearly completed over the creek, and another bridge is being built across Wascana Creek. The course of the line is almost straight from Regina to close to Moose Jaw, where it deviates to the south, so as to secure the easiest possible entrance into the city. An agreement has been reached between the company and the city council as to the route by which the line will cross Moose Jaw. The agreement provides that the line is to be completed and in operation through the city by Jan. 1, 1912. A resolution was passed May 9, approving of some slight deviation from the original plans.

Plans were deposited with the Minister of Railways May 12, showing the route of the entry of the company's line into Calgary. The plan does not show that any provision has been made for terminal facilities in the city. E. J. Chamberlin, Vice President, stated at Winnipeg, May 5, that the company had never for a moment considered the idea of erecting an hotel in Calgary.

The plans for the proposed hotel at Edmonton, Alta., said Mr. Chamberlin, at Winnipeg, May 5, are expected to be ready about July 1, when tenders for the building would be asked.

Construction work is being gone on with rapidly on the Alberta coal branch, which runs southerly from the main line at Edson, Alta., and it is expected that it will be ready to transport coal from the mine by Nov. 30. With Edson as a centre, a survey party under W. Silcox is making a survey for the location of a line to Grande Prairie, and on towards the Peace River country.

Construction on the main line west of Edson, is being pushed, and it is expected to have the track laid to Tete Jaune Cache by the end of the season. On the section being built easterly from Prince Rupert, a certain amount of rock work was done during the winter, and it was reported May 8, that over 2,000 men had gone in to take up work this season. (May, pg. 425.)

Richmond, Que.—A fire which started in one of the offices at the Richmond, Que., station, May 11, did over $5,000 worth of damage. The station was practically destroyed.

Montreal Track Elevation. — At a special meeting of the committee of aldermen and controllers having under consideration the plans for the elevation of the tracks from Bonaventure station to St. Henri, May 11, it was unanimously decided that if it were possible, from an engineering standpoint, the tracks should be depressed and not elevated, but that if this were not possible, the embankments should be of stone and concrete, and not of earth as proposed.

The company's plans for the work were submitted to the city council April 28, and have since been under consideration. In connection with the track elevation the work of building a new terminal station at Bonaventure is to be undertaken. This station building will have to be constructed so that entrance will be made to the platforms from the second floor, which will be level with the tracks. The new building will be 285 by 170 ft., with a long elevated platform extending all the way to Mountain St., at which point the first subway or viaduct will be built, the viaduct continuing over every thoroughfare to beyond the city limits. Thirteen passenger tracks will run into the new station and four freight lines into the new sheds. The plans show subways having spans of different widths, from 40 to 66 ft., and one estimate states that 1,300,620 cubic yards of embankments will be necessary. The estimated cost of the entire work was tabulated for the city committee as follows:—

Rights of way	$2,390,829
Excavations of foundations	96,833
Embankments	520,248
Concrete for abatments, piers and flooring	366,865
Concrete for retaining walls	66,713
Steel works	539,172
Paving	132,748
Tracks	247,633
Ballast	107,795
Station buildings	3,210,751
Miscellaneous	475,386
Total	$8,154,973

A sum is added for superintendence and contingencies at 10%, $815,497; with interest for a year and a half at 5%, amounting to $448,529 making a grand total of $9,419,000. Under an act of the Quebec Legislature, the city is authorized to contribute up to $2,000,000 towards the cost of carrying out the work.

The G.T.R.'s application to the Board of Railway Commissioners for an order for grade separation, or the elevation of its tracks in order to provide for improvements in connection with Bonaventure station and terminals, came before the Board at the sittings, which opened in Montreal May 18.

Ottawa Improvements.—The Board of Railway Commissioners has approved plans for change of alignment in the vicinity of Rideau Canal, and across Main St., Elgin St., and Echo Drive, Ottawa.

In connection with the C.P.R. proposal to build a tunnel along a portion of the Rideau Canal in order to secure a new entrance to the centre of the city, the G.T.R. is said to have prepared a plan for submission to the city council. The proposition is said to aim at bringing all the railways in over intersecting roads as far as the Deep Cut, to allow the Canadian Northern Ry. to run from there to the central station, and to have the C.P.R. tracks parallel those of its own line through Ottawa East, near the present union station.

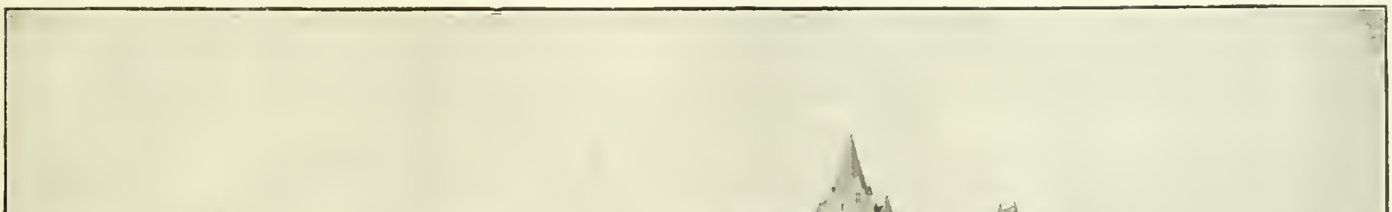
The new station is expected to be ready for opening in Sept., about the same time as the new hotel. Other improvements planned include additions to the workshops, but it is not expected that these will be undertaken until the matter of the entrance of the various lines into the city is settled. However, new steel coal chutes will be erected, having a storage capacity of 350 tons, at a cost of about $15,000, to replace the existing trestles.

G.T.R. Cobourg Freight House, etc.—The Board of Railway Commissioners has approved plans for the rearrangement of tracks in the yard, and for the erection of a freight house at Cobourg, Ont.

G.T.R. Brock Ave. Subway, Toronto.—The Board of Railway Commissioners has approved plans for a subway under the tracks at Brock Ave., Toronto.

Niagara Falls-Paris, Ont.—The replacing of the present 80 lb. rails with 100 lb. ones, between Niagara Falls and Paris, Ont., is being proceeded with rapidly. (May., pg. 431.)

New Station at Stratford.—The site chosen for the new station at Stratford, Ont., is on Shakespeare St., not far from Nile St. It is proposed to erect a two story building in which accommodation will be provided for the travelling public on the ground floor, and on the second floor, provision will be made for offices for the various operating departments. The company's plans also involve considerable re-arrangement of the yard.



G.T.R. STATION AND HOTEL AT OTTAWA.

The illustration made from a drawing, shows in the lower right hand corner a portion of the G.T.R.'s new central station at Ottawa, which will also be used by the C.P.R., for some of its Ottawa trains, and also by the Ottawa and New York Ry. The G.T.R.'s new hotel Chateau Laurier is shown across the street from the station. The new plaza across the Rideau canal, which is being created by the joining of the two bridges, will make a splendid thoroughfare. At the left of the illustration are the Parliament Buildings, and the eastern and western departmental blocks at the top, and lower down, facing the plaza, is the Post Office Building.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

Export Rates on Lumber.

13436. April 15.—Re order 12301, Sept. 20, 1910, made upon the application of the Canadian Lumbermen's Association and the Montreal Board of Trade Transportation Bureau, directing the Canadian Pacific, the Grand Trunk, and the Canadian Northern Quebec Ry. Companies to publish and file tariffs effective not later than Jan. 1, 1911, reducing the export rates to Montreal on lumber from points in the Province of Quebec north and east of Montreal, so that the same difference shall exist between the present domestic rates on lumber to Montreal and the said rates for export, as existed between the old domestic rates and the old rates for export. A question having arisen as to the scope of the order, upon the report and recommendation of the Chief Traffic Officer of the Board, it is ordered that the Canadian Pacific, the Grand Trunk and the Canadian Northern Quebec Ry. Companies publish and file tariffs, to be made effective not later than May 1, 1911, reducing the export rates on lumber, in carloads, to Montreal, for export, from points in the Province of Quebec, east of the city of Montreal, and east of and including the C.P.R. Laurentian subdivision, between and including St. Lin Jct. and Nominingue, and east of and including the Canadian Northern Quebec Ry.'s Montfort branch between and including St. Jerome Jct. and Huberdeau, so that the same differences shall exist between the present domestic rates on lumber to Montreal and the said rates on lumber to Montreal for export, as existed between the old domestic rates and the old rates for export. Order 12301 is rescinded.

Acceptance of Freight at Sheds in Montreal.

13474. April 13.—Re application of Transportation Bureau of Montreal Board of Trade for an order requiring the G.T.R., the C.P.R. and the C.N.Q.R., to rescind their regulation that freight will not be accepted from their cartage agents or from the public, at their freight sheds in Montreal, after 5 p.m, and requiring them also to furnish a proper cartage service for handling freight traffic to their freight sheds. It is ordered that not later than May 1, 1911, the respondents receive into their warehouses all freight tendered to them for shipment from vehicles which have reached the said warehouses, or the approaches thereto, and are ready for unloading by 5 p.m. from Nov. 15 to March 14, both inclusive, and 6 p.m., from March 15 to Nov. 14, both inclusive, and so much later as may be reasonable in case of any vehicle delayed by breakdown or other unavoidable accident, or by open drawbridges, on its way to the said warehouses. Provided that this order shall not be construed by the respondents to prevent them from accepting shipments of freight, without discrimination, later than the said hours.

Interswitching at Port Arthur.

13485. April 19.—Re application of Atikokan Iron Co., Ltd., of Port Arthur, Ontario, complaining that the C.P.R. did not absorb the C.N.R. interswitching charges on pig iron shipments from Port Arthur to eastern points: It is declared that the General Interswitching Order 4988 applied to said shipments by the applicant on pig iron from Port Arthur east; that the proportion of the C.N.R. interswitching charges payable by the applicant was one-half cent per 100 lbs. subject to a minimum charge of $3 and a maximum charge of $4 per car; and that the collection of interswitching charges by the C.P.R. on the said shipments in excess of this amount was therefore illegal.

Allowances From Track Scale Weights.

13520. April 27.—Re application of Canadian Stoves Manufacturing Association, the Jenckes Machine Co., of Sherbrooke, and others, for an order postponing the effective date of the tariffs of track-scale allowances filed by certain railway companies, it is ordered that the effective dates of the following schedules, namely, C.R.C. no. E.2312 and W.1684, C.R.C. no. E.2067, C.R.C. 390, C.R.C. 245 and supplement 1 to C.R.C. 149, filed by the G.T.R., C. P. R., Bay of Quinte, Canadian Northern Ontario and Temiscouata Railway Companies, be postponed until July 1, 1911, except that the provision in the said schedules that "An allowance of 500 lbs. weight per car will be made for standards, strips, stakes, supports and temporary racks, on flat or gondola cars, if loaded with carload shipments requiring their use," as required by order 13226, dated March 29, 1911, which is hereby declared to be an addition to the railway companies' present tariffs, becomes effective not later than May 1, 1911, as provided in the said order.

Rates From Eastern Canada to Regina.

13529. May 1.—Re application of the corporation of the city of Regina, Sask., under secs. 314 and 339 of the Railway Act, for an order directing a reduction in the rates on classes 1 to 10 on goods shipped from Eastern Canada to Regina, and re the application of the Canadian Northern Ry. and the C.P.R., under sec. 56 of the Railway Act, for leave to appeal to the Supreme Court of Canada from order 12520, dated Dec. 10, 1910. Upon the hearing of the application in the presence of counsel for the two railway companies, and for the respondents, and upon reading the notice of motion and the affidavit of E. W. Beatty, and what was alleged at the hearing, the appellants undertaking to get this case set down for hearing at the next sittings of the Supreme Court, unless, in the view of the Supreme Court, itself, or a judge thereof, the case should not be set down. It is ordered that the said railway companies be granted leave to appeal to the Supreme Court of Canada from the said order upon the questions hereinafter stated, which, in the opinion of the Board, are questions of law, subject to and upon the terms and conditions following: 1. That the applicant undertake to set the appeal down for and expedite the hearing thereof at the next sittings of the Supreme Court. 2. That if the appeal be not argued at the said sittings of the Supreme Court, for any reason for which the applicant may be to blame, then the appeal shall not operate as a stay of the order dated Dec. 10, 1910, unless this Board shall otherwise order. 3. That the questions for argument upon the said appeal arise out of the following facts: (The facts are then set out at length). That the order issued herein dated Mar. 15, 1911, be rescinded.

Rates on Trunks and Valises.

13596. Feb. 21.—Re the application of Lamontagne, Limited, of Montreal, for an order directing that such a change in rule 2 of Canadian Classification 15 be made as will enable the applicants to ship mixed carloads of trunks, valises and saddlery between points west of and including Port Arthur, Ont., and from points east of Port Arthur, to Port Arthur and points west thereof, and vice versa. It is ordered that Canadian Classification 15 be amended by the addition to the saddlery list, page 66, of trunks and valises, as shown at page 72 as items 2, 3, and 5; excluding the note re trunks containing wearing apparel and personal effects; the said amendment to be incorporated in the first supplement to the said classification.

The Regina Rate Case.

In the Supreme Court at Ottawa, May 15, in the appeal from the Board's order in this case, Mr. Larmonth applied to have the appeal set down for hearing at the present session. Mr. Orde, K.C., appeared on behalf of the Regina Board of Trade, and mentioned the possibility of constitutional points being raised on the appeal. The court ordered the appeal to be set down for hearing at the opening of the autumn session, and that notices should be given and served upon the Atorney General of Canada and the Attorney General for Manitoba.

"Parisian Politeness" on the C. P. R.

George Bury, General Manager, Western Lines, has issued the following circular to passenger conductors, agents, etc.:—

> "Politeness costs nothing, and gains everything."—Lady M. Wortley Montagu.
>
> "A man has no more right to say an uncivil thing than to act one; no more right to say a rude thing to another than to knock him down."—Dr. Samuel Johnson.

Ever since this railway was opened for traffic, the courtesy of our employes has been proverbial. Through that, almost every passenger who has once honored us with his patronage has become a lifelong friend. Such friendship has contributed to the prosperity of the company, and the prosperity of the company has been shared in full measure with the employes. The politeness which in the first place was dictated by the natural good taste of the men, can therefore be justified on other grounds as an exhibition of enlightened selfishness.

Other railway companies have come to realize the advantage we enjoy in this respect, and it has become the fashion to send out circulars enjoining politeness on all those having direct relations with the public. No such circular is necessary in our case, but we cannot allow our position of proud pre-eminence to be endangered, and I offer a suggestion which I know will receive your acceptance.

The immense growth of our business in recent years makes it necessary for us to employ a number of new men. Many of these have not had all the advantages; none of them are fully seized of the traditions of our service when they start in. Is it not our duty to quietly and tactfully impress on them the advantages to themselves and to their employers of courtesy and consideration toward the public? If the reputation of the company is not maintained its popularity will diminish, and the loss of traffic must ultimately effect the interests of every one of us.

I am convinced that you are heartily with me in endeavoring to see that any patron, present or prospective, who addresses an employe of this company will receive a courteous and intelligent reply.

Please influence those about you.

Dominion Railway Subsidy Contracts. The Department of Railways has entered into contracts April 25, with the Quebec and Lake St. John Ry. under the terms of the act granting aid to certain railways for the building of the following lines:—From Valcartier station to St. Catherines, Que., 3.8 miles, and from Valcartier station, towards Gosford, Que., 5.5 miles. Track was laid on these two lines in 1908.

A New Orleans, La., dispatch says stock in the New Orleans, Fort Jackson & Grand Isle Rd., which was owned by Representative C. D. Haynes, of New York and his associates has been transferred to C. D. Warren, of Toronto. The line extends from New Orleans to Buras, 59.6 miles. Mr. Warren was formerly President of the Lake Superior Corporation

Canadian Northern Ry. Construction, Etc.

Quebec and Lake St. John Ry.—A contract was entered into April 25 with the company under the Dominion act granting aid to certain railways, in respect of the construction of a line from Valcartier station to St. Catherines, Que., 3.8 miles, and for the construction of a line from Valcartier station towards Gosford, Que., a distance of 5.5 miles. Track was laid on these two lines during 1908.

Canadian Northern Quebec Ry.—The Board of Railway Commissioners has issued an order correcting an error in the application for the approval of the location of the St. Jacques branch, from St. Jacques to Rawdon, Que.

The company has under consideration the question of terminals in Montreal, and reports in real estate circles in that city, credit the C.N.Q.R. and its owners, Mackenzie, Mann & Co., with being at the back of nearly all the large property changes in the centre of the city. The latest report is that the site of the Jesuit College, on Bleury St., which has just been sold, has been secured for the terminal station.

Canadian Northern Ontario Ry.—Contracts for the construction of the remaining portion of the C.N.O.R. between Toronto and Ottawa were let May 19. The line will have a total length of about 250 miles. Its building was started two years ago, when a contract was let to Angus Sinclair for a section of 100 miles from just outside Toronto to Trenton. Since then there have been acquired in the interests of the company, the Central Ontario Ry., the Bay of Quinte Ry. and the Brockville, Westport and Northwestern Ry., and these purchases necessitated some deviations from the route which had been originally laid out. As a result, certain portions of these lines will be taken in, and in course of time certain alterations and improvements will be carried out, notably on the Bay of Quinte Ry. from Deseronto to Sydenham. The contract held by Angus Sinclair was extended to cover work done beyond Trenton, and has now been extended to cover the construction of the line to Deseronto, where connection is to be made with the Bay of Quinte Ry., which is to be used from Deseronto to Sydenham. Mr. Sinclair will also build some four miles of line, in revision of location on the Bay of Quinte Ry. From Sydenham, mileage 163, a contract covering grading, fencing, bridges and culverts, tracklaying and ballasting, has been let to J. P. Mullarkey, to mileage 180, and from mileage 200 to mileage 250, and for the bridges, culverts and other work between mileage 180 and mileage 200, the grading and timber work on which will be done by Ewen Mackenzie.

The Board of Railway Commissioners has approved of the opening for traffic of the Whitney extension of the Central Ontario Ry. from Maynooth station to 14.5 miles northerly. It has also authorized the company to take, for better station accommodation, without the consent of owners, additional land in Hillier tp., Ont.

Representatives of the city of Hamilton were in Ottawa, May 10, in connection with the company's application for approval of the plans for its entrance into that city. The city council objects to level crossings and to the cutting into the park property. The plan submitted shows a route cutting through Harvey Park. The Minister said he would map out a route if the city and the company failed to agree.

Canadian Northern Ry.—The Minister of Railways had before him May 10 the company's application for approval of its proposed new entrance to the Union Station at Winnipeg. After hearing what the company and the city had to say, the plans were referred to the Board of Railway Commissioners to decide as to the conditions which should be imposed.

The Dominion Engineer at Winnipeg has reported that the new bridge across the Assiniboine River has been built in accordance with the plans, that provision is made for a lift span, and that the girders already placed in position are part of the lift span. There has been a delay in the delivery of the lifting machinery.

The Board of Railway Commissioners has issued an order extending for three months from April 18, the time within which the branch line of the Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co., on Lauriston St., Saskatoon, Sask., may be built, as authorized by the Board's order of April 19, 1910.

The work of reballasting the line from Regina to Prince Albert, Sask., is being proceeded with, the section of the work at present in hand being that between Saskatoon and Hanley. It is reported that the present 70 lb. steel rails are to be replaced with 84 lb. ones at an early date.

An arrangement is reported to have been completed with the C.P.R. by which the Canadian Northern Ry. will secure an entrance into and the use of the new station which the C.P.R. is about to build in Regina, Sask.

The branch line which the company is building from Maryfield westerly, is rapidly approaching Moose Jaw, Sask., the grading gangs being reported, May 9, to be well beyond New Warren. The work is expected to reach about four miles from Moose Jaw by July 1, by which time the definite approach into the city will have been arranged for. Track is expected to be laid into Moose Jaw by the fall.

The Board of Railway Commissioners has approved of location plans for the Saskatoon-Calgary branch through tps. 13 to 16, ranges 24 to 26, west of the second meridian, Sask., mileage 58.27 to mileage 85.1.

Plans have been approved by the Minister of Railways for a line from Battleford, Sask., in the direction of its lines now under construction in Southern Alberta.

The building of the line from Vegreville to Calgary is being pushed rapidly forward. The grading gangs have reached the city limits of Calgary, but there are yet some points where there are steam shovels at work, notably at the Elbow, at the cement works, and at Valleyfield. Tracklaying is being proceeded with south of the Red Deer River, and steel is being laid at a rapid rate. Considerable property has changed hands of late in the city in the vicinity of First St. W. and Eighteenth Ave., the company being reported as having secured altogether 640 ft. of frontage on First St. and 150 ft. on the avenue. It is expected that this site will be utilized for station purposes.

In connection with the survey work which was started at Lethbridge, May 1, one of the staff is reported as saying that the line proposed to be built from Lethbridge will strike the Vegreville-Calgary branch east of the Bow River, near where the C.P.R. crosses, about four miles from Calgary.

Work is being pushed rapidly on the Stettler-Brazeau line. The Northern Construction Co. has had a large quantity of plant and material delivered at Red Deer, and is engaging all the men available. The line is being built under the charter of the Canadian Northern Western Ry., which company the Board of Railway Commissioners has authorized to cross the C.P.R. Calgary and Edmonton branch, in s.w. ¼ of section 15, tp. 39, range 27, west of the fourth meridian. Press reports state that the company has secured a section of land bordering on Sylvan Lake, just west of Red Deer, on this line, which it is proposed to lay out as a summer resort.

A number of gangs of men are reported to be at work grading an extension of the line, now terminating at Stoney Creek, in the direction of Athabasca Landing, Alta. It is stated that there is a possibility of the line being completed to that point this year.

Notice has been given by the Government that the Dominion Parliament will be asked to consider, when it reassembles in July, an amendment to chap. 6 of the statutes of 1910, under which aid was given by guarantee of bonds to the C.N. Alberta Ry. The amendment proposes to substitute for the line then proposed to be aided, the following:—A line of railway of the C.N.A.R. from near Edmonton or St. Albert generally westerly to the coal areas, situate on the company's authorized line near Brule Lake in Jasper Park, and by providing that the aid granted by the act of 1910 shall be given to the new line, and that the securities shall be secured by a first mortgage upon the line to be built.

The Board of Railway Commissioners has approved of location plans for the C.N. Alberta Ry. through tp. 53, ranges seven to 10, west of the fifth meridian, mileage 62.47 to mileage 82.62.

The Cowan Construction Co. is reported to have started work on a 40 mile section of a line heading for the Peace River. This line leaves the line to Yellowhead Pass at Onoway, about 30 miles west of Edmonton, runs northwest to Pembina, to the Athabasca River, crossing at Habaska, about 30 miles below the mouth of the McLeod River. The surveys for about 80 miles of the projected line are reported completed, and it is stated that the surveys will be completed through to Dunvegan, on the Peace River, next year.

Canadian Northern Pacific Ry.—The route map for this railway shows a line from New Westminster to Yellowhead Pass, on the British Columbia-Alberta boundary, having a total length of 502 miles. The line runs along the south bank of the Fraser River, the C.P.R. being on the north bank, for just over 140 miles, and crosses both the river and the C.P.R. between Cisco and Lytton, continuing parallel to the C.P.R. to Kamloops, where it turns along the valley of the North Thompson River, and the northern branch of that river to Tete Jaune Cache, and then turning southerly reaches the Yellowhead Pass. An arrangement is being negotiated with the Vancouver, Victoria and Eastern Ry. and Navigation Co. (Great Northern Ry., U.S.), as to a portion of the route between Chilliwack and the Hope Mountain, and in the Fraser River canyon, some difficulties had to be settled with the C.P.R. There were no difficulties in regard to other portions of the route, except such as usually arise in securing the most feasible line for construction, and the work is well advanced between New Westminster and Hope, and tenders were received on May 12 for the 163 miles from Hope to Kamloops. The tenders were asked for in sections, as follows: from Hope to Boston Bar, about 40 miles; Boston Bar to Lytton, about 28 miles; Lytton to Ashcroft, about 44 miles; Ashcroft to Kamloops, about 51 miles. This distance covers the canyons of the Fraser and Thompson rivers, and includes the heaviest work on the whole line. It comprises about 25,000 ft. of tunnelling and a large number of bridges, crossing and recrossing the Fraser and the Thompson rivers. The location and size of these bridges are not yet sufficiently definitely located for particulars of them to be given. There are two long tunnels, one at Battle Bluff on Kamloops Lake, 2,740 ft., and another opposite Yale, 2,000 ft. The line is located on a

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

CHICAGO

0.4% gradient compensated for curvature, and the sharpest curve is eight degrees.

Three cargoes, consisting altogether of 30,000 tons of steel rails, have been delivered at Port Mann, and two other cargoes, consisting of 20,000 tons of rails, are on their way to the same place, for use on the B.C. lines.

Vancouver Island.—Reports from Victoria state that construction has been thoroughly opened up from about a mile and a half east of Parson's Bridge to the Smoke River, about 34 miles from Victoria. The work in some places is well advanced, and good progress is being made with the heavier portions of the work. Several engineering parties are at work on the route right into Alberni, revising the location already made. The work is rather heavy between Nitinat and the shores of Albernl canal owing to the rocky character of the formation and the heavy growth of timber. (May, pg. 429.)

Railway Rolling Stock Notes.

W. P. McNeil & Co., New Glasgow, N.S., have ordered 1 flat car, 60,000 lbs. capacity, from the Canadian Car and Foundry Co.

The Canadian Bridge Co., Walkerville, Ont., has ordered 2 flat cars, 80,000 lbs. capacity, from the Canadian Car and Foundry Co.

The Hart-Otis Car Co., has ordered 16 dump cars, 60,000 lbs. capacity, for the British Columbia Electric Ry., from the Canadian Car and Foundry Co.

The Grand Trunk Pacific Ry. has received three dining cars, nos. 4003 to 4005, and five colonist cars, nos. 3018 and 3021 to 3024, from the Canadian Car and Foundry Co., Montreal.

The Dominion Government recently voted $21,750 for additional rolling stock for the Prince Edward Island Ry., which amount, we are officially advised, is to cover one tank car and 15 Hart-Otis dump cars, which will be built in the P.E.I. Ry. shops at Charlottetown.

The Intercolonial Ry. has ordered two first class coaches and three colonist cars from the Canadian Car and Foundry Co., Montreal, and three first class coaches from the Preston Car and Coach Co., Preston, Ont. It has also received four stock cars from its Moncton shops.

Press reports state that after a study of the various types of passenger cars in use on this continent, the Austrian State Railway System has decided that the C.P.R. observation cars are the best suited for the tourist service in eastern Europe, that a contract has been placed with the C.P.R. for some of these cars to be built at the Angus shops, and that others of the same type will afterwards be built in Austria.

A Winnipeg dispatch says W. Whyte, Vice President C.P.R., has announced that crude oil is to be used for fuel for the locomotives running through the mountains. The only changes that would be necessary in order to make the locomotives suitable for oil burning would be the construction of a reservoir on the tank to hold oil instead of coal, and the application of oil burners and suitable brick work.

The Canadian Northern Ry. has ordered five consolidation locomotives from the American Locomotive Co., and four ten-wheel locomotives from the Baldwin Locomotive Co., and five 72 ft. combination passenger and baggage cars from the Preston Car and Coach Co., Preston, Ont. It is also receiving tenders for the supply of 250 box cars and 100 flat cars for the Duluth, Winnipeg and Pacific Ry.

The Intercolonial Ry. three first class coaches ordered from the Preston Car and Coach Co., Preston, Ont., will be finished in Sar Jago mahogany, inlaid, with polished brass trimmings, and equipped with walk-over seats upholstered in plush, the smoke room seats, also. The steam heating will be the Safety Car Heating and Lighting Co.'s direct system, and the lighting will be by Pintsch gas. The car bodies will be 72½ ft. long and the car 80 ft. 5¼ ins. over all.

The Canadian Northern Ry. five combination passenger and baggage coaches ordered from the Preston Car and Coach Co., Preston, Ont., will have the interiors birch finished, left natural in the baggage end and stained mahogany in the passenger end. They will be equipped with the Canadian Gold Car Heating and Lighting Co.'s heating system, and lighted by acetylene gas. The wheels and axles will be supplied by the Canada Iron Corporation. The length of the bodies will be 72½ ft.

The C.P.R., between Apr. 14 and May 14, ordered the following rolling stock: 50 vans and ten D.10 locomotives from its Angus shops, Montreal; 15 D.10 locomotives and 10 N.3 locomotives from the Montreal Locomotive Works; two Lidgerwood ballast unloaders, from Allis-Chalmers-Bullock, Ltd., Montreal; two steel underframes for Lidgerwood ballast unloaders, from the Canadian Car and Foundry Co., Montreal; one 100 ton wrecking crane and one ballast spreader in the U.S.

The Canadian Northern Ry., between Apr. 15 and May 15, received the following additions to rolling stock: 150 box cars, three first class cars from the Canadian Car and Foundry Co., Montreal; seven cabooses, two second class cars, 80 stock cars from the Crossen Car Manufacturing Co., Cobourg, Ont.; 160 Hart-Otis cars from the Hart-Otis Car Co., Montreal; two second class and baggage cars from the Preston Car and Coach Co., Preston, Ont., and 60 box cars from the Nova Scotia Car Works, Halifax, N.S.

A gasoline electric car which was recently built for the Buffalo, Rochester and Pittsburg Rd., proceeded under its own power from the shops at Schenectady, N.Y., to its destination, over the New York Central Rd., making the trip of 225 miles without delay or trouble of any kind, and furnishing an excellent proof of its adaptability for general service. The power plant consists of a gasoline engine directly connected to an electric generator, which furnishes current for standard motors mounted upon the axles. It carries a storage tank for 100 gallons of gasoline, on which it can travel 200 miles.

The C.P.R., between Apr. 14 and May 14, received the following additions to rolling stock: five sleeping cars, 23 suburban cars, 503 box cars, 33 refrigerator cars, passenger; one pile driver, five first class passenger and smoking cars, six vans, five switching locomotives and one Mallet locomotive from its Angus shops, Montreal; 120 steel flat cars and six steel flat cars for the Esquimalt and Nanaimo Ry., two steel frames for Lidgerwood unloaders, from the Canadian Car and Foundry Co., Montreal: six D.10 locomotives from the Canadian Locomotive Co., Kingston, Ont.; and 18 tank cars, two wrecking cranes, three steam shovels, from the U.S.

Following are chief details of the six first class coaches which the G.T.R. is building at its Montreal shops, as mentioned in our last issue:—

Length over end sills	67 ft. 6 ins.
Length over buffers	75 ft. 6 ins.
Width at lower deck crown moulding	10 ft. 1 in.
Width of upper deck	6 ft. 7 ins.
Height from rail to top of lower deck crown moulding	11 ft. 5 ins.
Height from rail to top of roof at centre	14 ft. 1 in.
Height from rail to top of roof over all	14 ft. 6 ins.
Height from rail to centre of coupler	2 ft. 11 ins.
Height from rail to platform	4 ft. 3⅜ ins.
Wheel base, one truck	10 ft. 6 ins.
Wheel base, total	62 ft. 1 in.
Passenger compartment, length inside	48 ft. 8 ins.
Pasenger compartment, width inside	8 ft. 9 ins.
Smoking room, length inside	12 ft. 9 ins.
Smoking room, width inside	6 ft. 5 ins.
Length inside, total	66 ft. 6 ins.
Width inside, total	8 ft. 9 ins.
Inside lobby	5 ft. 10 ins.
Height from floor to under side deck rails	7 f.t 7 ins.
Weight	112,600 lbs.
Trucks	Six wheeled
Wheels	38 ins. steel tired
Journals	5 ins. by 9 ins.
Platforms	Steel
Vestibules	Standard, wide
Couplers	Tower
Seating capacity, passenger	61
Seating capacity, smoking room	12
Hoppers	Duner Co.

Following are chief dimensions and special equipment of the two first class vestibule coaches and three colonist sleeping cars, which the Intercolonial Ry. is having built by the Canadian Car and Foundry Co., Montreal:—

First Class Coaches.

Length over platforms	80 ft.¼ in.
Length over end sills	72 ft.
Width over side sills	9 ft. 10 in.
Wheel base of truck	10 ft. 6 iu.
Interior finish	Mahogany.
Body bolsters	Double, cast steel.
Trap doors	Wood.
Lighting equipment	Pintsch gas.
Heating equipment	Safety Car Htg. & Ltg. Co.'s direct steam.
Platforms	Standard Coupler Co.
Vestibules	Pullman.
Air brakes	Westinghouse P.M. 1612.

Colonists' Sleeping Cars.

Length over buffers	71 ft. 7¼ in.
Length over end sills	63 ft. 7 in.
Width over side sills	9 ft. 10 in.
Wheel base of truck	10 ft. 6 in.
Interior finish	Ash.
Body bolsters	Double, cast steel.
Trap doors	Wood.
Platforms	Standard Coupler Co.
Lighting equipment	Pintsch gas.
Heating equipment	Safety Car Htg. & Ltg. Co.'s direct steam.
Vestibules	Pullman.
Air brakes	Westinghouse P.M. 1612.

Trucks for each type of car:

Style	6 wheel, 80,000 lbs. capacity, wood frame.
Wheels	Steel tires, 36 in.
Journal wedges	Drop forged, 5 by 9 in.
Axles	M.C.B. steel, 5 by 9 in.
Journal boxes	McCord & Co.
Centre bolsters	Cast steel.
Brake beams	Simplex high speed.
Brake shoes	Steel back.

The Quebec Bridge.

C. N. Monsarrat, heretofore Bridge Engineer for the C.P.R., was by an order in council, passed May 7, appointed Chairman of the Board of Engineers in charge of the construction of the Quebec Bridge, in succession to H. E. Vautelet, resigned. Another order in council, was passed May 16, appointing C. C. Schneider, of New York, a former President of the American Society of Civil Engineers, and for many years Chief Engineer of the American Bridge Co., to be a member of the commission in place of C. MacDonald, who had only accepted office temporarily. Ralph Modjeska, the only member of the original commission, and Mr. Schneider, will act as consulting engineers, while Mr. Monserrat will devote his whole time to superintending the erection of the bridge.

The supplementary estimates submitted to the House of Commons, May 8, contain an item of $550,000, of which $250,000 is to be paid to the Province of Quebec, and $300,000 to the city of Quebec, as refunds of the subsidies paid to the Quebec Bridge and Ry. Co., towards the erection of a highway and railway bridge.

Replying to a question as to what amounts had been expended in connection with the Quebec Bridge, in addition to the $31,000 odd paid to the engineers who investigated as to the circumstances connected with the building and collapse of the Quebec Bridge, the Minister of Railways said in the House of Commons, recently, the net amount paid for the year ended Mar. 31, 1909, was $35,822.41; the amount paid for the year ended Mar. 31, 1910, was $111,788.02, and the amount for the year ended Mar. 31, 1911, was $194,450.41; making a total of $342,060.84. (May, pg. 435.)

A HISTORY OF THE PAY-AS-YOU-ENTER CAR

AND ITS LESSON

The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550; International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. Co., Washington, D.C., 100; Capital Traction Co., Washington, D.C., 51; Municipal Traction Co., Cleveland, Ohio, 180; United Rys. Co. of St. Louis, Missouri, 310; Portland Ry., Lt. & Pwr. Co., Portland, Ore., 25; Columbus Ry. & Lt. Co., Columbus, Ohio, 10; Wichita R.R. & Lt. Co., Wichita, Kan., 14; Jacksonville Elec. Co., Jacksonville, Fla., 5; Dallas Elec. Co., Dallas, Texas, 20; Houston Elec. Co., Houston, Tex., 41; Northern Texas Trac. Co., Ft. Worth, Texas, 25; Ithaca Street Ry., Ithaca, N.Y., 2; Peoria Street Ry., Peoria, Ill., 13; Urbana & Champaign Ry., Champaign, Ill., 3; Mutual Lt. & Water Co., Brunswick, Ga., 4; Rochester Ry. Co. Rochester, N.Y., 25; Ft. Dodge, Des Moines & So. R.R. Co., 2; Muskogee Elec. Trac., Muskogee, Okla., 6; Union Traction Co., Dubuque, Ia., 4; Topeka Ry. Co., Topeka, Kas., 12; United Rys. & Elec. Co., Baltimore, Md., 32; Detroit United Ry., Detroit, Mich., 225; Cincinnati Traction Co., Ohio, 50; Montreal Street Railway, 400; British Columbia Elec. Ry., 30; Calgary Street Railway, 18; Metropolitan Street Ry., Kansas City, Mo., 50; Edmonton Radial Ry., 4; San Antonio Traction Co., San Antonio, Tex., 6; Rockford & Int. Ry., Rockford, Ill.; Cairo Street Ry. & Lt. System, 6; Des Moines City Railway, Iowa, 12; Macon Ry. & Lt. Co., Macon, Ga.; Virginia Ry. & Power Co.; Columbia Elec. St. Ry. & Lt. & Power Co., Columbia, S.C.; Aurora, Elgin & Chicago Ry., Chicago, Ill.; Wichita Falls Traction Co., Wichita Falls, Tex.; Ottawa Electric Ry. Co., Ottawa; Bloomington & Normal Ry. & Lt. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

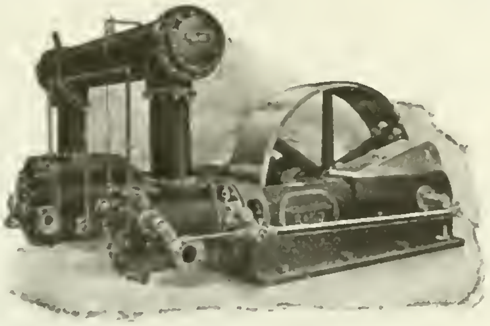
THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

RAND DUPLEX POWER-DRIVEN COMPRESSORS



In buying Rand Compressors, you buy future machines, not low price, but high grade, high efficiency, large capacity machines, that mean sustained economy.

Saving in power consumption, breakages and delays are more important considerations than a slight saving in first cost.

See Rand designs, then compare with other constructions. No unnecessary weight, but judicious distribution of metal.

COMMERCIAL UNION BUILDING, MONTREAL, CAN.

Offices at: TORONTO COBALT WINNIPEG ROSSLAND VANCOUVER HALIFAX

SOLUTION OF ISOLATED COMPRESSED AIR POWER UNITS

The FRANKLIN Tandem Gasoline Engine-Driven Air Compressor, running at high speed, will yield a much greater output of compressed air than is given by a slower running, less efficient compressor of equal weight and size. This Compressor is a complete independent power unit; no dependence need be placed on steam boilers, belts, electric power, nor any appliances not forming a part of the Compressor Unit.

Write us for prices and literature.

Of course, it is needless to say that we can supply "anything pneumatic."

PROFESSIONAL CARDS.

THE RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the managements and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. THE RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

WOOD'S FLEXIBLE NIPPLE END PROTECTOR

FOR AIR-BRAKE AND SIGNAL HOSE

Prevents chafing and abrasion effecting a saving of from 40 to 50% in maintenance of air-brake hose.

THE MONOGRAM BRACKET

will absolutely stop shifting and leaking of air-brake train pipes. All M.C.B. requirements are obtained and maintained.

P. & W. HOSE PRESERVATIVE

FOR AIR-BRAKE AND PNEUMATIC TOOL HOSE

will prevent cracking of rubber cover and deterioration due to climatic changes. Easily applied.

MAINLY ABOUT PEOPLE.

Sir Wm. C. Van Horne, returned to Canada, from Europe, at the end of April.

Hayter, and Mrs. Reed left Montreal during May for a short stay at St. Andrews, N.B.

Mrs. Maver, wife of A. A. Maver, Master Mechanic, G.T.R., Montreal, died there, May 2.

C. M. Hays, President, G.T.R. and G.T.P.R., returned to Canada, May 18 from England.

Sir Wm. Mackenzie, President Canadian Northern Ry., left Toronto for England, early in May.

A. A. Allan, of the Allan Line, accompanied by Mrs. Allan, sailed from Montreal, for England, May 12.

Jas. Hamilton, formerly Manager, Shedden Forwarding Co., at Hamilton, Ont., died there, May 2, aged 66.

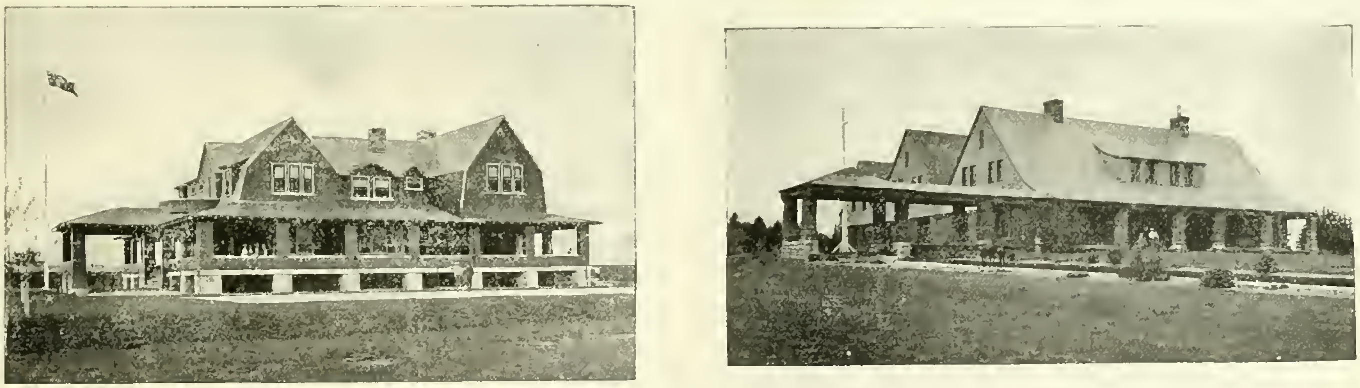
The engagement is announced of W. J. Shaughnessy, son of Sir Thos. G. Shaughnessy, to Miss M. L. Graham.

W. Kemp, chief clerk, Division Freight Agent's office, G.T.R., Portland, Me., was married in Manchester, Eng., May 12.

W. B. Boyd, Chief Electrician, Toronto Ry., has been elected a Member of the Institute of Electrical Engineers of Great Britain.

Sir Wm. C. Van Horne is reported to have purchased a picture by Rubens, for $100,000, while in Paris, France, recently.

SUMMER HOUSES AT ST. ANDREWS, N.B.



Fort Tipperary, Sir Thos. G. Shaughnessy.

Covenhoven, Sir Wm. C. VanHorne.

Mrs. MacTier, wife of A. D. MacTier, Assistant to the Vice President, C.P.R., Montreal, is spending the summer in England.

John Hargrave, who has done considerable railway contracting during the past ten years, died at Winnipeg, May 4, aged 81.

W. R. MacInnes, Freight Traffic Manager, C.P.R., Montreal, who went to England early in April, returned to Canada, May 12.

G. T. Bell, Assistant Passenger Traffic Manager, G.T.R., and G.T.P.R., has been elected a Vice President of the Canadian Club, Montreal.

The engagement is announced of Miss R. M. Elliott, daughter of W. S. Elliott, Division Freight Agent, C.P.R., North Bay, Ont., to A. H. Rosevear.

R. Marpole, General Executive Assistant, C.P.R., Vancouver, B.C., was in Montreal early in May, on business connected with the British Columbia lines.

H. S. Holt, President, Montreal Light, Heat and Power Co., has been elected a director of the C.P.R., in place of the late Hon. L. J. Forget.

A. D. Smith, who was for many years, connected with Foley, Welch and Stewart, contractors on the G.T. Pacific Ry., died at Cochrane, Ont., May 8.

John Harvie, who was the first conductor on the old Northern Railway of Canada, celebrated his golden wedding at Toronto recently.

W. R. Baker, Secretary, C.P.R., who returned to Canada May 5, from a short trip to England and the Continent, was received at Windsor by the King and Queen.

W. G. Ross, ex-Managing Director, Montreal St. Ry., who has been staying at Nice, France, for some time, recently won a silver medal there, in one of the weekly golf handicaps.

Lt.-Col. the Hon. J. S. Hendrie, M.P.P., Chairman of the Ontario Legislature's railway committee, and Mrs. Hendrie, have returned to Hamilton, from Europe.

W. J. Power, who is reported to have been appointed Assistant General Freight Agent, Great Northern Ry., St. Paul, Minn., was from 1891 to 1895 in the C.P.R. freight office, at London, Ont.

H. A. Parker, a former Vice President and General Manager, Chicago, Rock Island and Pacific Ry., and recently a consulting engineer of the G.T.P.R., died at Chicago, Ill., May 3.

F. C. Wilson, President of Williams & Wilson, Ltd., Montreal, who left in March for a Mediterranean trip with Mrs. and Miss Wilson, are expected to return in June.

Lord Mount Stephen has offered to give £10,000 towards the institution of a pension fund for ministers of the Church of Scotland, on condition that there are nine other contributors of like amounts.

W. E. Fowler, ex-Master Car Builder, C.P.R., who has been in California for some time, returned to Montreal in May to take his family to California, where they will reside in future.

A. A. Allan, of the Allan Line, and President of the Shipping Federation of Canada, has been elected a director of the Merchants Bank of Canada, vice H. A. Allan, resigned on account of his residence in England.

J. J. O'Neil, whom newspaper reports speak of as Inspector of Bridges and Buildings, T. & N.O.R., North Bay, Ont., was presented with a grandfather's clock recently by a number of the local employes, on his retirement from the service.

H. Watson, heretofore Travelling Passenger Agent, C.P.R. Steamships Service, Winnipeg, Man., has been appointed General North Western Agent, Allan Line, at Minneapolis, Minn., vice O. N. Westlund, resigned to enter other business.

G. H. Shaw, General Traffic Manager, Canadian Northern Ry., Toronto, sailed from Montreal, on the s.s. Royal Edward, May 17, with Mrs. Shaw, on business connected with his department, in Great Britain. He expects to return about the middle of July.

Sir Wm. Mackenzie, President, Canadian Northern Ry., and Hon. R. Dandurand, director, Grand Trunk Pacific Ry., have been elected directors of the Dominion Steel Corporation Ltd., in the places of the late Hon. L. J. Forget, and the late H. F. Dimock.

R. J. Mackenzie, of the Canadian Northern Ry., who owns a number of race horses, is reported to have decided to dispose of the whole of them, as the railway and other interests, with which he is connected, do not allow him the time which they appear to demand.

D. A. Story, General Freight Agent, Intercolonial Ry., Moncton, N.B., who has been granted an extended leave of absence, on account of ill health, and who recently returned from a trip to Bermuda, is spending a few weeks in the White Mountains.

G. A. Walker, who has been connected with the Toronto office of the C.P.R. Legal Department, for 21 years, was presented with a gold watch, May 6, by the staff there, on his leaving for Calgary, to take charge of the C.P.R. Legal Department for Alberta.

Dearborn Feed Water Treatment

Relieves Locomotive Boiler Troubles

Dearborn Preparations are made to suit the water conditions and prevent foaming, scale and leaking.

Dearborn Treatment is standard on more than 100 RAILROADS, because we are the only house working along scientific lines in the treatment of boiler feed waters. Complete Mineral Analyses are made in our laboratories of the waters causing trouble, and treatment prepared to meet the conditions found: Our success in practice proves the value of our method.

Canadian Northern Railway Construction, Montreal to Port Arthur.

The Dominion Parliament has passed an act, to which assent was given May 19, authorizing the Government to aid in the construction and completion of a line of railway extending from Montreal, Que., to Port Arthur, Ont. The act provides that the line to be aided shall include the mileage already in part built by the Canadian Northern Ontario Ry. and by the Canadian Northern Quebec Ry., from a point in Quebec province opposite Hawkesbury, Ont., to Rideau Jct., west of Ottawa, and the line already built from Capreol tp., to Sellwood Jct., Ont., 10.6 miles. The aid is to be given by a guarantee of principal and interest of the company's bonds, debentures or other securities to the amount of $35,000 a mile of line, the interest being at the rate of 3½%, the principal to be payable in 50 years. These guaranteed securities are to be secured by way of first mortgage, the trustees to the deed to be approved by the Government, over all the line from Montreal to Port Arthur except in regard to the 10.6 miles to Sellwood Jct., where the mortgage shall rank after the existing mortgages; and also shall be secured upon $2,558,500 of bonds or other securities issued under the trust deed of Aug. 24, 1909, subject to release of a portion of the deposit on account of the Sellwood Jct. 10.6 miles. The fourth section of the act provides that there shall also be a general charge, ranking after the general charge created by the trust deed of June 28, 1909, on the Hawkesbury-Niagara River line.

The line is to be built to the classification of the Heavy Standard Specifications of the Department of Railways, of 1908, with 80 lb. steel rails, the maximum curves to be of not less than 716 ft. radius with gradients of 0.5% against eastbound and of 0.6% against westbound traffic, but under special circumstances curves of 573 ft. radius and gradients of 52.80 ft. to the mile may be allowed. The Government, at the request of the company, may pay all or any portion of the interest for the first two years, and shall not enforce the payment of the same from the company until the maturity of the bonds, when the amount shall be payable with interest at the rate of 3½%. Any money paid by the Government under the guarantee shall be held to be paid in discharge of the Government's liability and not in discharge of the company's liability, and the moneys so paid shall be held to be still secured by the guaranteed securities and deed of trust, and the Government shall be subrogated in and to all the rights of the holders of guaranteed securities, the interest upon or the principal of which has been paid by the Government.

It is declared that the aid provided for is for the express purpose of encouraging transportation through Canadian channels, and that before it is granted the C.N.R. and the C.N.O.R. Companies shall enter into an agreement undertaking that all freight originating on either line or its branches not specifically routed otherwise by the shipper, shall, when destined to points in Canada, be carried over either of the lines mentioned or the connectons of either of them, or over any railway within Canadian territory, and that the through rate on export traffic from the point of origin to the point of destination shall at no time be greater via Canadian ports than via U.S. ports, that all such traffic not otherwise routed by the shipper shall be carried to Canadian ocean ports and that the C.N.R. shall not encourage the transportation of freight by routes other than those mentioned, but shall use their utmost endeavors to secure the development of trade through Canadian channels and ocean ports. The company is to establish suitable terminals in Montreal, to interchange traffic with the Intercolonial Ry. at Montreal upon terms to be agreed upon or to be fixed by the Board of Railway Commissioners; and in the event of the default of the company, and the consequent taking over of the line by the Government, it shall not oppose an application to the Board of Railway Commissioners for an order for the use of the terminals at Port Arthur or Montreal.

It is specified that all traffic originating on the C.N.R. and the C.N.O.R. or the branches thereof, not specifically routed, and when destined for points in Canada, shall be carried over such lines or their connections; that the through rate on export traffic shall at no time be greater via Canadian than via United States ports, and that the aid is granted upon the general condition that trade is to be developed through Canadian channels and through Canadian ocean ports.

In the course of the discussion in the House of Commons, the Minister of Railways said that except for a few miles eastward from Port Arthur, the line would serve an absolutely new country for the greater part of the distance to North Bay, and between North Bay and Ottawa would give railway connection with many points that do not now have it. The line would be approximately 1,000 miles long and most of the route had been approved by him. The only amendments of importance made in the bill in its passing through Parliament were the following: That the guarantee of bonds be on a mileage not exceeding 1,050 miles; and providing for the draftin of the agreement as to the interchange of traffic with the Intercolonial Ry., before the guarantee is affixed to the bonds.

Sir Donald Mann is reported as having stated in an interview at Ottawa that the line will start at Montreal, taking in the summer resorts of Ste. Eustache, Carillon, and St. Andrews, crossing the Ottawa River, and running on to Ottawa, passing through L'Orignal, Rockland and Cumberland. Leaving Ottawa one line will cross the river at Chats Falls into Quebec, pass through Norway Bay and back into Ontario at Portage du Fort, following the Ottawa River to Pembroke, and then along the valley of the Petawawa Valley, and by a direct route to North Bay, and on to Sellwood Jct. From North Bay the line will be carried through the clay belt to near Lake Nipigon, and then work south to Port Arthur, where connection will be made with the existing line.

The first section of the line includes the line in Quebec, now under construction from near Hawkesbury to Montreal, and the line from Hawkesbury into Ottawa, which was completed a couple of years ago. The second section connects up with the existing line north of Sudbury, and will run over 10.6 miles of it, to near Sellwood Jct., from which point the final section will be run to Port Arthur.

Sir Donald Mann added at the conclusion of the interview, that it was expected to have the whole line in operation by 1915. The line will go through about 300 miles of the clay belt, and through about 100 miles of mixed farming land, and there is a lot of mineral land in the territory to be served. The line will approximate 1,000 miles against 993 miles between the same points on the C.P.R.

In a further interview, May 20, Sir Donald Mann is reported as stating that the cost, roughly speaking, of the line will be about $50,000 a mile, but that this was mere guess work. While no time had been set for the completion of the line, the work of building it will be pushed as rapidly as possible. Tenders are to be asked for at once for the construction of a section of about 550 miles from Port Arthur, easterly to Selwood Jct.

The question of the terminals in Montreal is being discussed extensively in the newspapers, and while Sir Donald Mann is reported as saying that their cost will amount to about $10,000 a mile of line, the newspaper reports are to the effect that Montreal will absorb about $30,000,000 and Toronto $5,000,000 or $6,000,000.

◆

Government Acquisition of Branch Lines in Maritime Provinces.

Under the terms of chap. 25 of the statutes of 1910, "An act to authorize the Government of Canada to acquire, by lease, lines of railway connecting with the Government Railways," the Government Railways Managing Board, undertook, since June, 1910, the investigation of a number of lines in Quebec, New Brunswick and Nova Scotia, connecting with the Intercolonial Ry. As a result of the investigation the Minister of Railways gave notice in the House of Commons, May 17, that he would move a resolution, to be afterwards put in the form of an enactment, that the Government proceed to acquire by lease, under the terms of the act, for a period not exceeding 99 years, the following lines of railway:—

Temiscouata Ry.—From Riviere du Loup, Que., to Connors, N.B., 113 miles. This line is practically owned by the same interests which own the Quebec Central Ry.

Quebec-Oriental Ry.—From Matapedia to Paspebiac, Que., 100 miles. A portion of this was the old Baie des Chaleurs Ry., afterwards known as the Atlantic and Lake Superior Ry., and lately sold to the Quebec Oriental Ry., a company in affiliation with the Atlantic, Quebec and Western Ry., which was being financed by the Charing Cross Bank, London, Eng., now in liquidation.

International Ry. of New Brunswick.—From Campbellton to the St. John River at St. Leonards, N.B., 113 miles. This company, of which T. Malcolm is President, has authority to build a bridge across the Restigouche River at the Quebec-New Brunswick boundary, which would enable this line to be connected up with the Quebec Oriental Ry.

Caraquet and Gulf Shore Ry.—From Bathurst to Tracadie, N.B., 85 miles.

Moncton and Buctouche Ry.—From Moncton to Buctouche, N.B., about 28 miles.

New Brunswick and Prince Edward Island Ry.—From Sackville to Cape Tormentine, N.B., about 30 miles.

Kent Northern Ry.—From Kent Jct. to Richibucto, N.B., about 27 miles.

Albert Ry.—From Salisbury to Albert, N.B., about 45 miles.

Elgin and Havelock Ry.—From Elgin to Havelock, N.B., about 28 miles.

Hampton and St. Martins Ry.—From Hampton to St. Martins, about 30 miles.

York and Carleton Ry.—From Cross Creek to beyond Stanley, N.B., about 10 miles.

Vale Ry., the property of the Acadia Coal Co., from New Glasgow to Thorburn, N.S., six miles.

Cape Breton Ry.—From Point Tupper to St. Peters, N.S., about 30 miles.

The lease in each case is to include the rolling stock of the several companies. The value of each line is to be determined by the Court of Exchequer upon report of the Engineer of the Government Railways Managing Board, and the resolutions set out the principles upon which the valuation is to be made. In the case of railways which have been sold under foreclosure, and have been reconstituted, the valuation is to be based upon the amount paid for the railway. Nothing in the resolutions is to be deemed to require the taking over of any one of the lines named, if the terms and conditions proposed by the company are not fair and reasonable. When taken over the lines will be operated as part of the Government railways.

Recent Dominion Legislation.

A second lot of acts of the Dominion Parliament for the current session were assented to May 18, of which the following affect transportation interests:—

ALBERT AND MONCTON RY.—Incorporation.

ALBERTA ELECTRIC RY.—Incorporation.

ALBERTA RY. AND IRRIGATION CO.—Respecting additional lines to be built.

ALGOMA CENTRAL AND HUDSON BAY RY.—Extending time for construction, and granting power to build additional line.

ALGOMA EASTERN RY.—Changing title of Manitoulin and North Shore Ry. to the A.E.R., and extending time for building authorized lines.

ALSEK AND YUKON RY.—Extending time for construction.

BRITISH COLUMBIA AND DAWSON RY.—Incorporation.

BRITISH COLUMBIA AND WHITE RIVER RY.—Incorporation.

BUFFALO, NIAGARA AND TORONTO RY.—Extending time for construction.

CANADIAN NORTHERN ONTARIO RY.—Granting aid in respect of the line from Montreal to Port Arthur.

CANADIAN PACIFIC RY. — Extending time for construction of certain branch lines, etc.

CARIBOO, BARKERVILLE AND WILLOW RIVER RY.—Extending time for construction.

CHATHAM, WALLACEBURG AND LAKE ERIE RY.—Extending time for construction.

GRAIN GROWERS' GRAIN CO.—Act of incorporation, authorizing company to erect or purchase elevators..

GRAND TRUNK RY.—Amending act passed at present session respecting guarantee of securities of G.T. Western Ry.

HUDSON BAY, PEACE RIVER AND PACIFIC RY.—Incorporation.

HURON AND ONTARIO RY.—Extending time for construction.

IMPERIAL STEAMSHIP CO.—Incorporation.

IMPERIAL TRACTION CO.—Incorporation.

INTERNATIONAL RY. — INTERNATIONAL Traction Railways.—Defining ownership of certain lines.

INTERNATIONAL WATERWAYS. — Relating to establishment and expenses of International Joint Commission under Waterways Treaty of Jan. 11, 1909.

JOLIETTE AND LAKE MANUAN RY.—Extending time for construction.

LAKE ERIE AND NORTHERN RY.—Incorporation.

MONTREAL PARK AND ISLAND RY.—Extending time for construction.

ONTARIO AND ABITIBI RY.—Incorporation.

ONTARIO-MICHIGAN RY.—Incorporation.

PACIFIC AND HUDSON BAY RY.—Incorporation.

PACIFIC AND PEACE RIVER RY.—Incorporation.

PEOPLE'S RY.—Declaring company's undertaking to be a work for the general advantage of Canada, and authorizing building of additional lines.

QUEBEC AND NEW BRUNSWICK RY.—Extending time for construction.

RAILWAY ACT.—Amending the Railway Act.

RAILWAYS AND CANALS.—Amending act relating to Department of Railways and Canals.

RICHELIEU AND ONTARIO NAVIGATION CO.—Providing for increase in capital stock.

ST. JOHN VALLEY RY.—Authorizing Dominion Government to lease a certain line of railway in New Brunswick.

SASKATOON AND HUDSON BAY RY.—Incorporation.

SIMCOE, GREY AND BRUCE RY.—Incorporation.

SONGHEES INDIAN RESERVE.—Providing for transfer of the Songhees Indian Reserve, Victoria, B.C., in connection with railway extensions.

STEAMSHIP SUBSIDIES.—In relation to subsidies granted to certain lines of steamships.

TORONTO HARBOR. — Amending and consolidating acts.

WATER-CARRIAGE OF GOODS.—Amending act of 1910.

WESTERN ALBERTA RY.—Extending time for construction.

WESTERN CANAL CO.—Incorporation.

WESTERN CENTRAL RY. — Extending time for construction.

The first list of acts assented to appeared in our May issue, pg. 401.

◆

Alberta and Great Waterways Ry.—A number of claims have been made against the Alberta Government for damages alleged to have been caused through the confiscation of the amount realized by the sale of the bonds guaranteed by the Government. The claims have been filed by the company, and by others who had been given contracts in connection with the carrying out of the company's projects. "Those of which I have knowledge," a Toronto lawyer is reported as stating, "will amount to about $2,500,000, and there may be others."

Albert and Moncton Ry.—In the passing of the bill through Parliament the list of provisional directors was amended, by leaving out the names of the following:— Hon. P. McSweeney, Moncton; J. W. Domville, Rothesay; J. D. Mackenzie, London, Eng., and by adding the name of R. L. Johnston, St. John, N.B. This leaves the following as provisional directors:— F. V. Wedderburn, T. M. Robinson, R. L. Johnston, St. John; W. S Gardner, E. Domville, Montreal; J. C. D. Mackenzie, J. E. Hawkins, London, Eng.

Temiscouata Ry.—Profit on operation for March, $3,019. Aggregate profit for three months ended Mar. 30, $1,770.

St. John Valley Railway.

The bill authorizing the Dominion Government to acquire by lease a line to be built along the St. John Valley under guarantees by the New Brunswick Government, and to operate it as part of the Intercolonial Ry. system, was read a third time in the House of Commons, May 4. The only amendment of moment made in the bill in passing through the House was that the Dominion Government will provide the equipment necessary for its operation. The original proposition was that the Dominion Government would lease the line when built and equipped.

An exhaustive report as to the surveys made under the direction of the New Brunswick Government by D. F. Maxwell as Chief Engineer, has been laid before the Legislature. In starting the surveys it was decided to divide the whole outlined route into the following divisions:—Grand Falls to Woodstock, about 78 miles; Woodstock to Fredericton, about 65 miles; Fredericton to St. John, about 85 miles, with alternative lines to Westfield and Welsford, some 50 miles additional; and to make surveys of such portions of the route as had not heretofore been surveyed for railway purposes. The divisions of the route between Grand Falls, Woodstock and Fredericton have been surveyed several times, the latest being in 1906-07, by G. C. Dunn, for the National Transcontinental Ry. Commissioners. The records of this survey were placed at Mr. Maxwell's disposal. The profiles of this survey show that gradients of 0.4% going east, and 0.6% going west were adhered to, and the plans show that the location followed closely the St. John River, crossing over to the western bank at Andover, and thence on through Woodstock, along the western bank to Fredericton.

Three parties of 16 men each were put in the field, the first working from Fredericton via Gagetown to St. John, and taking the alternative route to Westfield. The second party worked over the part of the route lying between Woodstock and Grand Falls, which would pass through Centreville and Lakeville, and connecting with the N.T. Ry.-St. John Valley survey referred to, near the crossing of the River du Chute. The third party worked over the alternative route from Welsford, on the C.P.R., to a connection with a line run by the first party in the parish of Hampstead.

The acts referring to the aid to be granted towards the construction of the line state in one part that it is to have gradients not to exceed 0.4%, and in another part that if the line is built from Andover or other points in Victoria county, the gradients are not to exceed those of the Intercolonial Ry. Although the gradients on the Intercolonial Ry. do not exceed 1%, they were not compensated for curvature, and must be considered greater than 1% in proportion as the radii of curves vary in length. These facts were all taken into consideration in making the surveys, and in suggesting alternative routes.

The principal line surveyed was from Fredericton to St. John, in continuation of the survey made for the National Transcontinental Ry. The route as laid out starts from near the C.P.R. station in Fredericton, parallels the C.P.R. on the upper side for about two miles, crossing that line at grade at the Victoria Mills siding, then follows the St. John River, keeping where possible above the line of extreme high water flowage, through Lincoln, Oromocto, Burton Court House, Cambridge, Upper Gagetown, Gagetown proper, Hampstead, and Evandale, in Kings county. In order to locate the shortest possible line to St. John, with Courtenay Bay as the objective point, the route crosses to the left bank of the St. John River at The Mistake, or over Graham Creek, Kingston Head, along Kingston Creek, and through Kingston to the Kennebeccasis River, which is crossed near Gondola Point Ferry. The surveyed route then follows the left bank of the Kennebeccasis River through Rothesay, Renforth, and Torryburn, then over the Intercolonial Ry. by an overhead crossing near Brookfield station. The line enters St. John via the Marsh Creek, to the head of Courtenay Bay, and Haymarket Square. This route is 71 miles long, but may be slightly shortened on final location, and added to the mileage of the Grand Falls-Fredericton surveys previously made, makes a total of 207 miles between Grand Falls and St. John. This is no doubt the shortest possible route for a railway that can be obtained with the continuous low gradients acquired between the two points named.

This route, as between Fredericton and St. John has the disadvantage of having two expensive bridges, one over the St. John River at Evandale, and the other over the Kennebeccasis River at Gondola Point, as also the possible construction of a tunnel of about 3,500 ft. through Kingston Head. In view of the great cost of bridging the Kennebeccasis River at Gondola Point, an alternative line was run from near Kingston to an easier point of crossing the river near Gondola Point, but that would add three miles to the length of the route, and involve the building of another tunnel of 3,500 ft. through Tower Hill. It would be possible to use the Intercolonial Ry. from Rothesay, which would save about eight miles of rather expensive construction.

The alternative line to Westfield starts from the above line near Evandale, crosses the Nerepis River near its mouth, and joins the C.P.R. about a mile west of Westfield Beach station, a distance of 20.5 miles. This would make the distance from Fredericton to St. John, 85 miles. This alternative route would involve the construction of a bridge 3,000 ft. long over the Nerepis River.

For the survey of another alternative line, described in the act as being "to a point on the C.P.R. between Westfield and Welsford," it was necessary to leave the river at a point below Gagetown. After making an inspection of the country it was apparent that it was impossible to obtain a 0.4 gradient on either of the two possible routes, and a 1% gradient has been adopted. The first route, while the shorter, would pass largely through woods and serve no local interests, while the other, starting from the C.P.R. near Welsford station, follows the right bank of the Nerepis River to Armstrong's Corner, then crossing to the left bank reaches the summit at a distance of 19 miles and an elevation of 420 ft., then crossing the Little River to Central Hampstead, 25 miles to a connection with a line run by the first party, making the distance from Fredericton to Welsford 67 miles.

On the Grand Falls-Woodstock end of the route, a line was run through Centreville and Lakeville, some five or six miles from the river, but a 1% gradient had to be adopted. This survey was from Woodstock to Lakeville, 16 miles, and to Centreville, a total of 23.5 miles. The work done shows that it may be possible to get a 0.4% gradient by one of two routes, but by adding two or more miles to the distance. On the one route the distance between Grand Falls and Woodstock would be 76 miles, with a summit of 560 ft.; and the other would make the distance 74 miles with a summit of 585 ft. Both these lines would make connections with the National Transcontinental Ry. survey, already referred to. This survey is followed between Clearview and Grand Falls for 37 miles, and will be a very heavy one to construct owing to the bridges necessary over the St. John, Salmon, and other rivers. The act authorizes a connection with the National Transcontinental Ry. at some other point than Grand Falls, and it is possible that a cheaper connection might be made by running a line to New Denmark, but the distance would be increased somewhat.

Plans and profiles of all the surveys have been made, but the engineers do not make any recommendations in favor of any one of them, leaving it to the Government to decide as to what will be done. There is appended to the report an estimate of the cost of the work upon the several surveys, arranged according to the divisions already mentioned.

These estimates are as follows:—

WOODSTOCK-GRAND FALLS DIVISION.

Grand Falls to Clearville along line of N.T. Ry., survey, 37.5 miles, standard gradients, $52,000 a mile, or $1,950,178.

Clearville to Centreville, via Antworth Summit, 14 miles, Intercolonial Ry. gradients, $36,347 a mile, or $536,861.

Bairdsville to Centreville, via Royalton Summit, 20.75 miles, Intercolonial Ry. gradients, $35,000 a mile, or $717,055.

Centreville to Woodstock, via Lakeview, 23 miles, Intercolonial Ry. gradients, $30,660 a mile, or $705,310.

Grand Falls via Antworth Summit, Centreville and Lakeville to Woodstock, 74 miles, $43,140 a mile, or $3,192,349.

WOODSTOCK-FREDERICTON DIVISION.

From Woodstock to Fredericton via N.T.R. surveys, standard gradients, 62 miles, $40,660 a mile, or $2,520,965.

FREDERICTON-ST. JOHN DIVISION.

From Fredericton to Evandale, 48 miles, standard gradients, $32,600 a mile, or $1,564,183.

From Evandale, via Gondola Point to St. John, 23 miles, standard gradients, not including bridges, $42,370 a mile, or $974,504. Estimated cost of bridge over St. John River at Evandale, $528,000; estimated cost of bridge over the Kennebeccasis River at Gondola Point, $1,317,625.

From Evandale, via Perry Point to St. John, 26 miles, standard gradients, including all bridges, $75,340 a mile, or $1,959,893.

From Evandale to Westfield, C.P.R. connection, 19.5 miles, standard gradients, $40,000 a mile or $780,239.

From Fredericton to Hampstead, 42 miles, standard gradients, $31,870 a mile or $1,338,570.

From Hampstead to Welsford, C.P.R. connection, 24 miles, Intercolonial gradients, $30,473 a mile or $761,835.

These different surveys show altogether two possible routes between Grand Falls and St. John, and two to a connection with the C.P.R., the estimates being:—

From Grand View via Gondola Point to St. John, including all bridges, 207 miles, $48,830 a mile, or $10,107,626.

From Grand Falls via Perry Point to St. John, including all bridges, 210 miles, $43,980 a mile, or $9,237,390.

From Grand Falls to C.P.R. connection at Westfield, 203.5 miles, $40,000 a mile, or $8,057,736.

From Grand Falls to C.P.R. connection at Welsford, 202 miles, $38,000 a mile, or $7,733,719.

In connection with the suggestion that a line be built from Andover, with Intercolonial gradients, the following estimates are submitted:—

From Andover via Centreville, Lakeville, Woodstock, Fredericton, Gagetown and Perry Point to St. John, 185 miles, including all bridges, $40,370 a mile, or $7,467,319.

From Andover to C.P.R. at Westfield, 178 miles, including all bridges, $35,750 a mile, or $6,380,558.

From Andover to C.P.R. at Welsford, 177 miles, including all bridges, $34,920 a mile, or $6,181,541.

In conclusion, the Chief Engineer, D. F. Maxwell, points out that sec. 37 of the act authorizes the Government to grant running rights over the line, to any through railway seeking a connection with St. John, L'Etang, St. Andrews, or other port in Charlotte County, and suggests that it would not be advisable to build a railway along the St. John Valley, particularly below Woodstock, except with gradients not exceeding 0.4%, as the saving of cost in building a road with the higher gradients, would not be at all proportional to the real value of the lines for transportation purposes. "The importance of the St. John Valley as a route for a great railway cannot be over-estimated," he adds, "and the proposition to build a railway along it, is not merely local, but national in both scope and character, and the line is now within measurable distance, when more than one transcontinental railway, entering this valley by the national road, now building, or by what may be a shorter route across the State of Maine, and seeking an ocean terminus at St. John, must of necessity traverse some portion of this line now under consideration." (April, pg. 352d.)

American Civil Engineers Pocket Book

There has just been issued from the press the first edition of a new pocket book for the use of civil engineers, to which the above title has been given. The editor-in-chief is Mr. Merriman,M.A. Soc. C.E., and his staff consisted of 12 associate editors, all of whom are engineers of high standing, or engaged in lecturing on engineering subjects at different universities in the United States. In the preface the editor says a pocket book must be prepared so that facts, formulas, tables and methods can be found more quickly, than by referring to treatises, and that the information contained in it should cover the ground with great conciseness and clearness, and be thoroughly up-to-date. As a result the new pocket book which has been produced, contains nearly all the topics to which civil engineers desire most often to refer, the matter is so condensed that a very great many subjects are dealt with, but the presentation of all of them is clear and full.

The work is divided into 13 sections, containing 75 chapters, 620 articles, 495 tables, and 944 numbered figures, which the editor estimates to be equivalent to 1,200 ordinary cuts, as in many cases several similar figures are grouped together. Section one gives tables for approximate mathematical computations; section two to 11 inclusive. deal with civil engineering proper; sections 12 and 13 treat of mathematics, mechanics, physics, meteorology and weights and measures. These thirteen sections fill 1,314 pages, and they are followed by a detailed alphabetical index of 66 pages.

The volume is thoroughly well printed, on thin paper, of convenient size, is bound in morocco, and is sold at $5 net. The publishers are John Wiley & Son, New York, who are represented in Canada by the Renouf Publishing Co., Montreal. It can be obtained through the Railway and Marine World's book department.

The G.T.R. has decided to operate a motor car service on its line between Black Rock and Port Colborne, Ont., during the summer, for the accommodation of the residents at the various beaches.

The Board of Railway Commissioners will take up at Ottawa, on June 6, the question of fixing the length of sections to be worked by section gangs on railways, and the minimum number of men to compose such gangs.

Too Late for Classification.

C.P.R.-Esquimalt and Nanaimo Ry.—On his return to Vancouver from Montreal recently, R. Marpole. General Executive Assistant, is reported to have stated that it is intended to place survey parties in the field at once north of Comox and north of Campbell River to finally revise the location along the proposed extensions. The exact final location of the extension north of Black Creek, between Courtney and Campbell River will depend a good deal on the result of the examination now being made of the mineral resources of the Quinsam Lake district.

C.P.R.-Georgian Bay and Seaboard Ry.—The Board of Railway Commisioners has authorized the company to connect its tracks with those of the Lindsay, Bobcaygeon and Pontypool Ry., near the junction at mileage 72.91.

C.P.R. Second Track Work, Near Montreal. — The company's divisional forces are building the second track between Mile End and Quebec Jct., and between South Jct. and Adirondack Jct. The first of these pieces of work is expected to be completed in June. On the second there is a new double track steel bridge under construction, the steel superstructure for which is being erected by the Dominion Bridge Co.

Dominion Pacific Ry.—Application is being made for the incorporation of a company with this title to build a line from the International boundary in range 23 west of the fourth meridian, northwesterly via Pincher Creek to Cardston, to the C.P.R. Crows Nest branch near Lundbreck, thence northerly and west of the Porcupine Hills to Calgary, and on to Edmonton, by a route passing west of Snake Lake, Gull Lake, and Pigeon Lake; thence generally northwesterly to Fort St. John, B.C.; with a branch line from Pincher Creek southwesterly along the South Fork of the Old Man River to the boundary of British Columbia. O. E. Culbert, Ottawa. is solicitor for applicants.

Grand Trunk Pacific Ry.—The Board of Railway Commissioners has authorized the company to operate trains over its line between Edmonton and Prairie Creek, Alta., with a speed limit of 15 miles an hour west of Edson to end of track.

G.T.R. General Betterments, Etc.—W. G. Brownlee, Manager of Transportation, is reported as stating in an interview May 20, that nothing more will be undertaken in Toronto this year beyond what has been put in hand. The plans for the Toronto viaduct are being prepared and will be filed with the Board of Railway Commissioners very soon. A roundhouse is to be built at Midland, Ont., and a good deal of betterment work will be done all over the Ontario lines. The work, however, in most cases will be of the ordinary character, without involving new construction.

Intercolonial Ry.—An Ottawa press dispatch states that the total income for the financial year ended Mar. 30, was $9,863,783, and that after deducting operating expenses. and the following amounts; $600,000 for equipment account, $25,000 for revenue account on equipment, $76,000 to cover cost of replacing shops destroyed by fire at Campbellton, N.B., and $5,000 a month expenditure on new fire acount, there remains a surplus of $272,712.

Intercolonial Ry.—The general office accommodation at Moncton, N.B., is to be increased by the erection of an extension of the present building. It will be 139 by 57 ft., three stories with mansard roof, and will be built of red pressed brick with grey freestone trimmings. An Ottawa dispatch, May 23, says the contract has been let to Rhodes, Curry & Co., of Amherst, N.S.

National Transcontinental Ry.—Replying to questions in the House of Commons May 18, the Minister of Railways said the total expenditure on the line from Quebec to Winnipeg to Feb. 28, was $69,983,500; and the estimated amount required to complete the line was $43.-052,850 while the total expenditure on the line from Quebec to Moncton to the same date was $26,634,800, the estimated amount required to complete it being $5,668,550. The cost of right of way for terminals in Quebec city, and the expenditure on the Quebec Bridge are not taken into account in these figures.

Temiskaming and Northern Ontario Ry.—J. L. Englehart, Chairman of the T. & N.O. Ry. Commission, is reported as stating that with a view of meeting the demand for a line into the Gowganda, a short time ago he proposed to some New York capitalists that if they furnish the capital, the Commission would build the branch and operate it, turning over to the investors 62½ or 65% of the total receipts. He had not received any reply to the offer, which was the best the Government could do, as it would not be right to use Government funds to build a line which had not for its object the opening up of areas of agricultural land.

Tobique and Campbellton Ry.—A press report from Perth, N.B., May 17, states that an arrangement has been made by which the C.P.R. will guarantee the 5% bonds of the T. and C. R. Co. to the amount of $15,000 a mile, in aid of the building of the line from Plaster Rock to Campbellton, N.B. Plaster Rock is the present terminus of the C.P.R. Tobique Valley line. J. E. Stewart, Andover, N.B., the principal promoter of the company, stated recently in an interview that the company would build the line giving the C.P.R. a mortgage, and that the C.P.R. would operate the line for 40% of the total receipts. The location surveys were made four years ago, and provided a route with a maximum gradient of 1.5 %.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The Board of Railway Commissioners approved of the amended location from mileage 0 to 12, and mileage 16 to 17, from Coquihalla Summit, B.C.

W. Stapleton. District Passenger Agent, Canadian Northern Railway, Saskatoon, Sask., writes:— "I find The Railway and Marine World exceedingly useful."

The returns for the Cuba Rd., of which Sir Wm. C. VanHorne is President, for the past nine months, show a surplus of $584,697, an increase of $158,548 over corresponding period of previous year.

In the litigation respecting the proceeds of the guaranteed bond issue of the Alberta and Great Waterways Ry., the Provincial Government's appeal against the order joining the Canada West Construction Co. and the A. and G.W. Ry. Co., as defendants along with the Royal Bank, has been dismissed.

The Western Canada Railway Club's annual meeting was held at Winnipeg, May 8, when a paper was read by J. T. Warde, chief clerk, General Car Foreman's office, C.P.R., on the prevention and cure of hot boxes and the economy of proper and efficient oiling of rolling stock. The following officers were elected for the current year:— President, R. R. Neild, General Foreman Locomotive Shops. C.P.R.; Vice President, S. J. Hungerford, Superintendent of Rolling Stock, C.N.R.; Second Vice President, T. Duff Smith, General Fuel Agent, Grand Trunk Pacific Ry. The honorary officers and Secretary and Treasurer were re-elected.

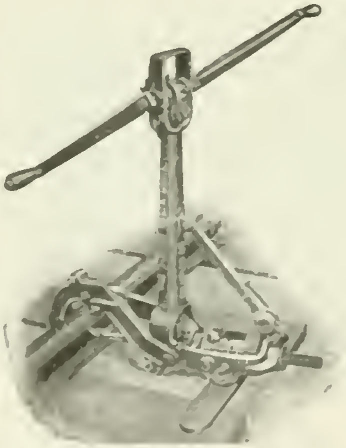
INTERCOLONIAL

THE MOORE TRACK DRILL



Over-Clutch Pattern

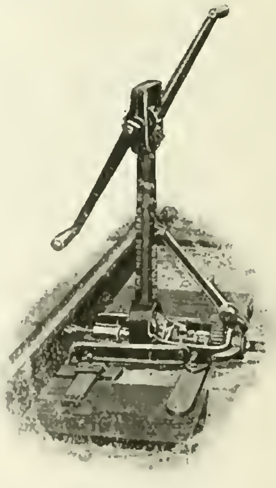
Has been weighed in the balance and NOT found wanting.

It is positively the only drill which can be used in yards and on busy roads without interrupting traffic.

And it has other advantages too numerous to mention in this space.

Write us and we will tell you all about it.

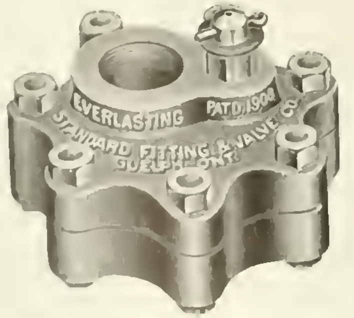
Kalamazoo Railway Supply Co.
MANUFACTURERS, - Kalamazoo, Mich.



Under-Clutch Pattern

EVERLASTING BLOW-OFF VALVE

"What we have been looking for for years" is what a prominent steam goods man remarked when he saw it first.



Especially adapted to locomotive service. It will outlast the boiler and give uninterrupted service and satisfaction.

"SIMPLE AS A.B.C."

Manufactured and sold under Canadian Patents by the

STANDARD FITTING & VALVE CO., Ltd., GUELPH, ONT.

Maintenance and Operating Features of the Electrified St. Clair Tunnel.

The G.T.R. St. Clair tunnel has been electrically equipped since May 18, 1908, and the severest requirements of the service are said to have been met very successfully by the single-phase system. The tunnel is a single track bore, lined with a cast-iron shell, and has an inside diameter of about 19 ft. The length of the tunnel from portal to portal is 6,032 ft. The open tunnel approach on the Port Huron side is slightly over 2,500 ft. in length, while that on the Sarnia side is nearly 3,300 ft. in length. The total distance between the Canadian and United States summits is 12,000 ft., or about 2¼ miles. The grade on the tunnel approaches and the shore sections of the tunnel is 2%, while that in the flat middle section of the tunnel, about 1,700 ft. in length, is of 0.1% downward toward the east to provide for drainage.

The specifications for the electrification of the tunnel service stipulated, in addition to various guarantees regarding efficiencies at different parts of the system and of the system as a whole, that the installation when completed should be capable of hauling a 1,000-ton train through the tunnel from terminal to terminal in 15 minutes, that in doing so the maximum speed should not exceed 25 m.p.h., and that the minimum speed when ascending a 2% grade should not be less than 10 m.p.h.

The single-phase system was chosen for this work on the score of economy in operation. Preliminary figures showed the first costs for the two systems to be about equal if no battery were installed. The estimates including batteries were slightly favorable to the d.c. system. However, the increased first cost with a battery would have been large in either case because of the nature of the load with frequent high peaks and short intervals during which charging could be done. The guaranteed efficiencies of the two systems without batteries indicated a considerable saving in the cost of power by the use of the a.c. system. The distribution losses and the use of current for rheostatic control lowered the relative efficiency of the d.c. system. Preliminary guaranteed figures for the power consumption for one locomotive trip hauling a 1,000-ton train through the tunnel were 141 kw-hours for the single-phase system. In practice, considerably better figures of performance than those guaranteed have been obtained. The electrical equipment includes six three-motor locomotive units fed with 3,300-volt, 25-cycle current generated in a steam turbine station and distributed by a catenary supported copper wire.

The St. Clair Tunnel Co. has furnished some comparative figures for steam and electrical operation which are of interest, indicating as they do in a general way the relation between important items of operating costs. These data refer to two years operation—one before and one after electrification. Although the amount of traffic handled during these two years was not identical, the service performed was sufficiently similar for purposes of approximate comparison of figures.

The cost of coal with electrical operation was 39% of the cost of coal under steam operation. A part of this saving is due to the greater economy of the electrical system so far as coal consumption is concerned, while another large part of the saving is due to the fact that it was necessary to burn anthracite coal in the steam locomotives that formerly operated through the tunnel, while ordinary run-of-mine or even slack coal is used for power plant operation. The total service charges, including all items that are charged by the railway company against locomotive service, but not including fixed charges, indicate that this charge under the electrical operation is about 60% of the charge under steam operation. If, however, the fixed charges, including both interest and depreciation on equipment, are added in each case, it is found that the total charge for locomotive service under electrical operation is approximately 84½% of the charge under steam operation. If a comparison be made of fuel costs under steam operation with the cost of electrical energy delivered at trolley under electrical operation, it is found that, disregarding fixed charges, the cost of power delivered to the locomotives under electrical operation is 69% of the cost of the fuel under steam operation. If, however, the fixed charge (and depreciation) due to the initial investment for the electrical generating plant and distributing system be added to the charge for electricity delivered at the locomotive, this charge then practically equals fuel cost under steam operation. This indicates that the saving is effected in other items than that of cost of power delivered to the two locomotives in the form of electrical energy in one case and of fuel in the other. One of the large items in this saving is in the maintenance and repairs to locomotives, which for the years under comparison indicates the electrical cost to be about 55% of the steam cost. Other items chargeable to steam operation, such as the coaling of locomotives, water supply, etc., do not appear at all in the charges for electric locomotives.

Three locomotives are available for use in the tunnel and switching service. At present the entire traffic is handled by two locomotives, each of which consists of two half-units. The half-units are duplicates in every respect and are equipped with the multiple-unit system of control. Each half-unit is mounted on three axles driven through gears by three single-phase motors with a normal rating of 250 h.p. Inasmuch as the motors have a very liberal overload rating it is possible to develop 2,000 h.p. with two half-units. The locomotives are powerful enough easily to start a 1,000-ton train on a 2% grade. In a test made on a half-unit using a dynamometer car it was found that a single half-unit would develop a 43,000-lb. draw-bar pull before slipping the wheels. The locomotives have a maximum speed of 35 m.p.h., but they are never called upon to operate faster than 25 m.p.h. to handle the full number of trains. The general dimensions of a locomotive half-unit are as follows:

Length over all	23 ft. 6 in.
Height from top of rail to top of pantograph bow when lowered	14 ft. 11 in.
Width of cab over all	9 ft. 8 in.
Total weight of half-unit	67½ tons.
Length of rigid wheel base	16 ft.
Diameter of driving wheel	5 ft. 2 in.
Normal speed with 100-ton train ascending 2% grade	10 m.p.h.
Normal speed on level track	25 m.p.h.

The electric locomotives have required very little change in design or unusual maintenance work. A two-track section of a roundhouse in the Sarnia yards has been equipped as an inspection shed for the electric units. The locomotives may be taken in or out of this shed at either end.

An annunciator system has been installed here in connection with the 3,300-volt trolley wire to provide against accidents. Ordinarily the section of trolley wire inside of the inspection shed is disconnected from the trolley line outside. When current is desired to move or to test a car a hook switch installed about 10 ft. above the floor at one end of the building is thrown to connect the interior and exterior trolley wires. Within the box of this switch a ground connection is provided so that when the knife of the switch is pulled open, to cut the shed trolley off from the line, the trolley wire within the car house automatically is grounded. An annunciator bell rings at 15-second intervals to warn the men while the 3,300-volt trolley is alive.

A regular programme of inspection is followed and each half-unit is held in the inspection shed for 12 hours every three days. In addition to this short inspection each half-unit is held for more thorough care for 24 hours once every 24 days. Thus the units are in service 80% of the time, which is considerably more than is possible with steam locomotives. The roundhouse force includes a foreman, two day and one night inspectors, one wiper and one overhead lineman whose services are available either here or in trolley work. In making one of the regular 24-day half-unit inspections the various parts of the unit are inspected and checked off according to the programme laid down on the inspection card. The inspection, which is made every three days, includes the following: Back of switch groups; intake strainers; fan and main motor nettings; jumper pins (these are spread to insure good contact); foot buttons which include bell and two sanders; poppet valves (main and emergency reservoirs); reducing valves; overload trip relay; hand air pump; hand brake (this is well lubricated and kept in good operating condition); pantograph tension and operating mechanism. The inspectors keep a log of all the work done and make daily reports to the superintendent.

The change from steam to electric service was made without any undue delay. At the beginning of electric operation when the alternate steam and electric service was operated, the electric locomotives were taken into the shop after each 18-hour run and thoroughly inspected. After the first few weeks of service, when it was quite certain that all parts of the equipment were operating smoothly, the regular inspection period of once every three days was adopted.

It has been found necessary to turn the locomotive tires once every 12 months. This is on account of flange wear rather than hollowing of the tread. The flange wear is attributed to the low centre of gravity of the unit. One every 30 days each locomotive is turned around so that the flange wear may be evenly distributed. The motor of journal bearings have given no trouble. The armature of each of the three motors drives its axle through a pinion with 16 teeth and a gear with 85 teeth. The life of these pinions is from 50,000 miles to 60,000 miles and some have run 64,000 miles. None of the gears has yet been renewed after two years service. Whenever a pinion has run more than 30,000 miles and the wheels are removed for any purpose, a new pinion is put on so that the wheels may not have to be removed unnecessarily.

The standard Westinghouse galvanized sheet-steel pantograph shoe is used, one on each half-unit. The average life of these shoes is about 3,000 miles. The shoe is adjusted to have a pressure against the wire of 7½ lb. in the winter and 5 lb. in the summer. These low contact pressures are made possible by the limited speed of 25 miles an hour at which the trains operate. Shoes with copper wearing surfaces were tried with the idea that they would not wear the wire, but as no apparent advantage was realized and as their life was much shorter than that of the galvanized steel shoes, the trial was abandoned. The steel shoes apparently do not wear the wire so much as the copper shoes. This is attributed to the reduction in friction when dissimilar metals are used. A spring balance is used when adjusting the pantograph tension. Such adjustments are needed very infrequently, but if any undue flashing is noted during operation the tension is inspected and usually it is found that the pantograph spring has become weak or that the joints in the pantograph are stiff.

When the electric locomotives were first put into service classes of instruction were held every afternoon for two months. The men who had been operating the steam locomotives attended

these classes when off duty. Later when the school work was concluded the steam locomotive engineers were put in charge of the new electric locomotives and instructors rode with them. The men who formerly operated the steam locomotives and now run the electric locomotives are enthusiastic over the change, even though their rate of pay is slightly reduced by their being required to work longer hours. The locomotive crews are made up of two men, an engineer and an assistant. The assistant spends his time in looking over the electrical apparatus in the cabs of the two half-units while they are in operation, and when not thus engaged he rides in the rear half-unit. Formerly two brakemen were required for each train passing through the tunnel. The smoothness with which the trains are handled has made it safe to operate with but one brakeman.

A round trip through the tunnel, including the terminal switching when a train is handled in either direction, requires a run of about 10 miles. The freight trains are made up so as not to exceed 1,000 tons each and all cars are inspected before passage through the tunnel. This is necessary for the prevention of accidents and because the tunnel is the dividing section between two main divisions of the G.T.R., one in Canada and one in the U.S. While the freight trains stand in the yards for inspection the air-brake piping system is charged from a yard air service pipe line which extends through the tunnel and is fed by an electrically operated air pump at Sarnia. The charging, which is done before the electric locomotive couples on to the train, requires no additional layover because the train must stand in the yard to be inspected, and use is made of the yard air supply system so that the air-compressor equipment on the locomotive may be relieved of the unnecessary duty of charging a long freight train just prior to starting through the tunnel.

Under normal conditions passenger trains are hauled through the tunnel with two-unit locomotives, but one-half unit would be ample so far as pulling capacity is concerned. However, 1,000-ton freight trains are handled most frequently and as these require full locomotives, the locomotive pairs already coupled for freight service are used also to handle the passenger trains. Otherwise, if the half-units were separated, one-half would be idle on one side of the river while the other was pulling a passenger train through the tunnel. At the end of the run the halves would be available for hauling only passenger trains or freight trains below the maximum rating. Thus to simplify operation the two half-units are always operated as one locomotive. The average mileage for each locomotive is in the neighborhood of 2,700 miles per month. The maximum monthly mileage was 3,540 miles. Looking at it in another way each locomotive made an average of 10 round trips of the electric zone per day.

An indicating ammeter in each locomotive cab serves to assist in keeping the demand on the power station within a safe maximum. The locomotive engineers are required not to let the motors of one-half unit exceed a maximum of 3,500 amp. There are 17 running positions on the controllers. The first, second and third notches are only for switching, coupling up a train and other purposes where slow speeds are desired. The fourth to the twentieth notches, inclusive, are running notches and the controller can be left on any of these, according to the speed that is desired. The engineers become very adept at gauging the amount of power required when starting trains of various loads. When using the ammeter it becomes possible to accelerate the train and to notch up the controller as the current tends to drop. If a train will not start on 3,000 amp. or less per half-unit the crew is instructed to look for trouble in the air-brake system.

One of the pairs of locomotive units is equipped with a speed indicator and recorder. A short section of one of the records from this tachometer is reproduced. By means of the speed-measuring apparatus the traveling speed of the locomotive is, at all times, graphically recorded on a roll of paper. The rate of speed is also indicated on a dial within the view of the locomotive engineer. The chief use of this device is to provide a means for preventing the over-speeding of the locomotives. Operating rules require that at no time shall the speed exceed 25 miles an hour, and as every movement of the train is permanently recorded within the box as well as indicated by a pointer the use of the device is very effective.

The principal mechanism of this speed-measuring apparatus is enclosed in a substantial iron box, the moving parts being driven from one of the main axles of the locomotive while the train is in motion, and by a clockwork for 20 minutes after the train has come to a stop. The clockwork spring is automatically wound during running by an eccentric and pitman feeder. The device which moves the paper on which the record is made automatically punches the three-minute intervals and in addition to this the record shows the rate of speed in the form of a curve. One roll of paper will last for about 375 hours of operation. During service the speed indicating and recording device requires no attention except when the train stops for longer than 20 minutes. Then the apparatus must be wound up by hand. In the instruction book suggestions are included for maintaining the speed-measuring apparatus in good condition. The suggestions conclude with the statement, "It is necessary in the engineer's own interest that the time of stoppage particularly should be registered exactly."

The trolley circuits for the entire electrified zone normally are all in one electrical section. Switches are provided at each tunnel incline for cutting off the yards from the tunnel section, if such sectionalization should ever be needed. Since operation was started there have been practically no electrical troubles or mechanical defects in the trolley circuits. At one time a high brake wheel on an especially large car grounded the trolley wire in the tunnel and opened the breaker, but the trolley wire itself was not damaged enough to interfere with the continued operation of the same train after the brake staff had been bent out of the way. Aside from three of the porcelain spool insulators that were cracked when installed, the trolley wire insulation and suspension have given no trouble.

Within the tunnel bore the messenger cables are insulated from the conductor wires. The messengers are carried on porcelain spools and the trolley wires are supported from the messengers by special wood-break hangers 3 in. square and 15 in. long. The effective insulating length of these hangers is about 5 in. If a porcelain insulator breaks down and allows the messenger cable to ground on the tunnel shell, then the wood-break hangers are put under electrical stress and the weakest one begins to smoke. As stated in the preceding paragraph three such breakages have occurred. In each instance the smoking wood insulator was noted in time so that repairs were made before service was interrupted. A tunnel patrolman is always on duty inspecting the tracks and whenever this man notes any unusual condition of the trolley wire he makes a mark on the tunnel lining for relocation and advises the motive power department by calling up from the nearest tunnel telephone.

The pantograph shoes are lubricated with a mixture of cheap grease and graphite. This lubricant distributes itself over the trolley wires and so coats them with grease that ice has never yet formed to a thickness sufficient to interfere with regular operation.

Connections between the power station switches and the conductors and the track return in the tunnel are made through lead-covered cables for the feed line and bare copper return cables. The cables pass from the power station in underground ducts for a distance of about 150 ft. to a shaft leading down to the tunnel bore. An extra lead-covered cable, with end bells ready for quick connection at both ends, is available in case the feeder cable gets damaged.

Westinghouse gravity type lightning arresters with metal arcing points are used for protection of the trolley and messenger in the electrical zone outside of the tunnel. The metal arcing points of these arresters, which are mounted on the steel catenary bridges, afforded a convenient perch for birds and until precautionary measures were taken the breakers not infrequently were opened by short-circuits caused by the birds alighting on the arcing points. The bodies of the birds would carbonize and afford a path to ground for the current and so the fuse stick would not fall and disconnect the arrester. The passage of current to ground would thus open the circuit breaker at the power house, but sometimes the arc would be so severe before the breaker opened that the metal support of the lightning arrester would weaken and let the heavy insulator fall. The possibility of the recurrence of such lightning arrester troubles has been effectively provided against by adding a perch for the birds directly above the metal arcing points. An ordinary two-wire porcelain cleat is supported from one end only by a small metal bracket. Thus the bird uses the cleat rather than the arcing points as a perch and protection from a short-circuit is afforded.

In installing the power telephone circuit cable was used throughout and no part of the line is carried on poles. The object of this special construction was to avoid any mechanical interference with the service. The telephone service on such installations has its greatest value in times of trouble and so the circuits were installed to avoid any probability of mechanical interference. So far the telephone has given uninterrupted service. The telephone circuit used by the motive power department has instruments connected with it at the following points: One on the power station switchboard, one in the power station office, two in the tunnel, one at the top of the tunnel cut on the power house side, one in each of the two tunnel pumping stations and one each at dispatcher's office in Sarnia and the roundhouse in Sarnia. All of these instruments are bridged on the line and a ringing code is used for calling the different stations.

The generating station which supplies 3,300-volt alternating current for the electric zone is located in Port Huron on the St. Clair river front, about 150 ft. distant from the line of the tunnel. The boiler house equipment includes four 400 h.p. B. & W. sectional water-tube boilers, each having three drums 42 in. in diameter by 23 ft. 4 in. long. The tubes are arranged 21 wide in order to secure quick steaming, and the three drums provide a large hot-water storage capacity to assist in maintaining steam pressure under excessive demands. Each battery of boilers is fed by six underfeed stokers controlled by an automatic regulator. On account of the great variations in the load on this plant a steel-plate fan 11 ft. deep by 3 ft. 5 in. wide, driven by an enclosed vertical engine, is used to accelerate quickly the fires of each group of boilers. The speed of the fan engines, through the control of a regulating valve, is varied according to the steam pressure at the turbines. This forced draft apparatus, like all other parts of the plant, is in duplicate to provide for continuity of

It may be of interest to describe the operation of the train of automatic apservice. paratus which serves under severe overload to keep the steam pressure high enough to prevent a slowing down of the turbine unit. While no trains are in the tunnel the load on the station is about 400 kw; but when a freight train passes into the tunnel and starts to climb the incline a peak load amounting to about 2,000 kw is thrown on to the turbine suddenly and unannounced. This electrical overload makes a heavy demand for steam in the turbine and it is necessary for the boilers to be forced immediately or their reserve capacity will be exhausted and the pressure fall below a good operating point.

The interaction of the various parts of the steam supply when excessive load comes into the turbine is as follows: Attached to the supply line is a pressure line extending to the valve which is located in the boiler room. The diaphragm in this valve is under two pressures. On one side is the 200-lb. pressure of the live steam main and on the other side is the 125-lb. pressure of the auxiliary main. A balance lever serves to keep the valve in equilibrium. When the heavy demand comes on the steam line to the turbine and the pressure in that line falls, the valve is thrown out of balance and the movement of it in turn opens the throttle of the engine which drives the forced draft fan. Normally a difference in pressure of 4 lb. will operate this valve. As the load on the turbine continues to draw heavily on the boilers the steam pressure lowers and the valve feeds more steam into the fan engine until the fan is driven at full speed. The increase in air fed to the boilers forces more rapid combustion.

With the coming on of the load the fuel is fed more rapidly. The stoker-control valves are driven through a system of belts operating off from the flywheel of the fan engine. As the fan speeds up the wheel which drives the regulating valve is accelerated and the stokers operate faster. Thus the auxiliary apparatus furnishes more air and more fuel to the firebox very quickly after the load comes on the steam turbine.

When the control valve for the fan engine was first installed the high-pressure tap was made from the main steam header in the boiler house. The valve then lacked sensitiveness and so to improve the service the live steam tap was made at a point in the steam line close to the turbine throttle. Thus the valve is affected by the additional drop in pressure caused by the increased load and the resistance of the header and turbine connections. In addition to making the valve more sensitive this change in location of the pressure tap has reduced the temperature in the valve. Formerly the valve diaphragms lasted only two or three weeks, but since the longer pressure line has been used the life of the diaphragms has been increased to three or four months.

A separately fired superheater is installed between the two batteries of boilers. This superheater has the capacity for heating 36,000 lb. of steam per hour at 200 lb. per sq. in. to a final temperature of 587 deg. Fahr., which corresponds to a superheat of 200 deg. The grates are hand-fired and the temperature of the steam is controlled automatically by means of the thermo-couple in the stream outlet of the superheater. This thermocouple is connected to a relay with a large solenoid which opens and closes the valves to a hydraulic piston. These valves move dampers in the air ducts and thus regulate the draft.

In practical operation the regulating devices have been found to control the temperature very closely, notwithstanding the great variation in load to which the power plant is subjected. The superheater is of especial value because on periods of normal and low load the piping and turbine are kept highly heated by it, and thus initial condensation is greatly reduced at the time of the sudden demands.

The two Westinghouse-Parsons turbogenerators which comprise the main units of this plant are designed to operate at a normal voltage of 3,300 volts with a frequency of 25 cycles per second. They are three-phase machines and by the specifications are required to furnish their full rated load of 1,250 kw from a single phase. Each of the turbine units is capable of handling the entire load and so one machine always is held in reserve. Either turbine regularly handles peaks of from 2,000 kw to 2,300 kw, single phase, which last for four or five minutes at intervals of about 15 minutes. This phase also carries the lighting load. The other phases carry the load of the pumping and auxiliary apparatus, amounting to 200 kw.

With normal traffic through the tunnel the daily output of the plant is about 10,000 kw-hours. The maximum output for one day was 12,000 kw-hours and the highest peak load, 2,750 kw. This plant has been in continuous service without any interruption in the delivery of current since starting in April, 1908. After nearly two years of operation the turbines were opened and it was hardly possible to detect any erosion, even on the low-pressure vanes; the tool marks were still plainly visible in the main bearings.

The turbine glands have a water seal and because of the necessity for maintaining the water supply continuously an emergency connection has been made with the city water service. The city water line connects with the discharge line from the house pump. The house service is under 75 lb. pressure and the city pressure varies from 35 lb. to 60 lb. A check valve in the city water connection provides against the use of city water except when the house supply pressure falls below that of the city pressure. Because of this emergency connection, the house pump can safely be stopped without endangering the water glands at the main turbine bearings.

The main generators are cooled by means of air drawn through the coils by vanes mounted on the rotor. The supply of air for this cooling service as originally installed was all taken from out of doors. An independent supply duct serves each turbine. The ducts are short and so air is taken into the turbine generator at practically the outdoor temperature. Formerly difficulty was experienced in severe weather because of frost accumulating on the air intake screens and cutting down the circulation. To provide against this condition an opening was cut through the side of each duct. Now in cold weather the turbine cooling air is taken from the basement. The circulation of this air through the turbine gentrator also serves to warm the building.

When the plant was first started each turbo-generator set was used on alternate days. Now the load is shifted from one machine to the other twice a week. It is stated that the daily change was made at the beginning of operation so that the men would become familiar with the programme of starting and stopping the units. After the service was well under way, however, it was not thought desirable to shift the load so frequently because of the stresses set up in a turbine when it is warming or cooling.

A voltage regulator set is a very essential part of the regulating equipment of this plant. This set is connected with the locomotive phase of the generator only and maintains it practically constant at 3,300 volts, even though the load swings from 250 kw to 2,500 kw. When a heavy train goes through the tunnel and a maximum lead comes on the railway phase, the other two phases get considerably out of balance and so, to keep the voltage on the lighting supply constant, all the lighting transformers are connected with the locomotive phase. The smaller pump motors, machine shop and other motors are all of the three-phase induction type operating directly across the 3,300-volt line, and so they are not unduly affected by the locomotive phase being out of balance with the two unloaded phases.

On account of the widely variable nature of the load it is necessary to keep an espelially careful watch over the turbine governors and emergency valves. A systematic method of testing these safety devices is followed. Whenever a turbine unit is shut down, and the load is changed from one to the other twice a week, the emergency valve tripping device is given a service test. The engineer moves the governor rod so that the speed of the turbine is increased, meanwhile watching the frequency indicator and noting at what frequency the emergency valve closes. The valve is set to open at 10% above normal speed and it is thus put to an actual test twice each week.

All the circuit breakers on the station switchboard are now equipped with contact points which complete a circuit and ring an annunciator bell whenever a breaker opens. This system of announcing the opening of a breaker has made it possible for the turbine engineer also to act as switchboard attendant. If the engineer needs assistance at any time he has a push-button available on the board so that he can ring gongs located in the boiler house and in the basement where the auxiliaries are located, and call either the boiler tender or the oiler. There also is a speaking tube from the engine room to the boiler room. At night the fireman reports to the engineer every 15 minutes. If he fails to report regularly the engineer blows a whistle or sends the oiler to see whether the fireman needs assistance. A telephone instrument, connected with the electrical department line, is mounted on the power station switchboard so that the turbine engineer can quickly answer emergency calls coming from the tunnel or the yards.

A barometric jet condenser with a 30-in. inlet serves each stem turbine. A 36-in. exhaust pipe connects the exhaust outlet for the turbine with a reducing fitting attached to the condenser head. There are two bends in the connection and on low loads when the plant was first operated it was found that water accumulated in the bottom bend. This accumulation of water, unless withdrawn, would cause water-hammer as well as offer a resistance to the passage of steam from the turbine to the condenser head.

INTERNATIONAL LIBRARY OF TECHNOLOGY

YOU Need This Railroad Library

—a library that will give you the best up-to-date modern practice. There is no other reference work in the world that so completely meets the needs of the railroad man as the INTERNATIONAL RAILROAD LIBRARY. This is an epitome of the years of experience of the best railroad experts in the country edited in a style that 18 years of experience in publishing home-study textbooks has proved the easiest to learn, to remember, and to apply. The volumes of this library are a part of a series of textbooks that cost $1,500,000 to prepare. They are recommended by the highest authorities and are used in nearly all our leading universities and colleges. Not only can they be used to great advantage by superintendents, railroad officials, foremen, engineers, firemen, conductors, and brakemen as an authoritative guide in their work, but since they can be used so clearly understood even by persons having no knowledge of higher mathematics, they can be used by all classes of railroad employes that are desirous of advancing to higher positions. To provide against this undesirable feature a drip tank has been installed in the basement. This tank has a capacity of about 20 gal. A pipe leads directly to the tank from the bottom of the U-shaped condenser connection. Any water forming in the condenser connection during low load drains into the storage tank in the basement. A water gauge is provided on the tank and the hot water is drawn off from the tank once an hour. Valves are placed in the drip connection so that the vacuum will not be lost while the tank is being emptied. When the water has been drawn from the tank and it is again connected with the turbine exhaust connection, there is about 3½ in. drop in the vacuum.

The power station is illuminated by eight Nernst lamps in the turbine room and two in the boiler room, in addition to nearly 200 incandescent lamps located suitably for special illumination. Lighting current is taken from the main a.c. generator. Normally the exciter unit, which is controlled by a regulator, is below voltage and so its current would not be suitable for lighting. Four oil lamps are kept burning every night for emergency use, but as yet have never been needed. The lighting circuit switch is of the double-throw type and so connected that in emergency it can be thrown over and lighting current taken from a steam-driven exciter which, though not normally used, can be started quickly.

The power station staff includes the following: First engineer, turbine engineer, oiler, fireman (and water tender), machinist, ash handler, janitor, and laborer. The night staff includes turbine engineer, oiler and water tender. The turbine engineer acts as switchboard operator. Only one of the two turbine units is ever required to carry the entire load and as the switchboard is within a few feet of the steam end of the turbine and requires practically no attention, one man can easily attend to both the turbine and the switchboard.

The operation and motive power features of the St. Clair tunnel are in charge of W. D. Hall, Superintendent of Power Plant and Electrical Equipment and Superintendent of Tunnel, who reports to W. D. Robb, Superintendent of Motive Power, G.T.R. Reporting to Mr. Hall are four subdivisions of the force: A first engineer in charge of the power house, four pumping plant attendants, roundhouse foreman and the line crew of two men who take care of the electric lighting and trolley maintenance.—Electric Railway Journal.

Among the Express Companies.

The Canadian Northern Ex. Co. has re-opened its office at Cap Rouge, Que., and has closed its offices at St. Augustin and St. George, Que.

F. M. Smith has been appointed route agent, Canadian Ex. Co., for lines west of Fort William, Ont., with headquarters at Winnipeg, Man.

F. R. Jelf, heretofore agent, Dominion Ex. Co., Brandon, Man., has been appointed agent at Calgary, Alta., succeeding D. G. McKenzie.

C. Dowling, heretofore chief clerk in Superintendent's office, Dominion Ex. Co., Winnipeg, has been appointed Agent there, vice J. H. O'Connor, resigned to enter other business.

J. H. Connor, who has recently resigned from the position of Agent, Dominion Ex. Co., Winnipeg, was presented with an address and a number of silver and cut glass articles by the staff, May 17.

The Dominion Ex. Co. recently accomplished a quick delivery of a carload of imported stallions from St. John, N.B., to Regina, Sask., 2,230 miles in 3 days 14 hrs., which, it is claimed, is a record.

D. G. McKenzie, agent Dominion Ex. Co., Calgary, Alta., was entertained to dinner by a number of friends, May 2, on his leaving Calgary for a long vacation, after which, it is stated, he will be transferred to another office. He was presented with a silver service.

The Minister of Railways introduced a bill into the House of Commons, May 4, amending the Railway Act, and providing that express companies shall conform to the law now existing in respect to railways, under which statements of business and operations must be submitted to the Board of Railway Commissioners.

Through the absorption of the Alaska-Pacific Ex. Co., by Wells, Fargo and Co., the following lines will be included, with others, in the company's Alaska Yukon Division:— C.P.R. Alaska route, Victoria and Vancouver, B.C., to Skagway; Northern Navigation Co., St. Michael to Dawson, Yukon; and White Pass and Yukon Route, Skagway to White Horse, White Horse to Dawson, Caribou to Atlin, B.C.

The Western Ex. Co.'s offices and messenger service, on the Wisconsin Division of the Minneapolis, St. Paul and Sault Ste. Marie Ry., the Duluth, South Shore and Atlantic Ry., and the Mineral Range Rd., have been transferred from the Northern, to the Southern Division; St. Paul and Minneapolis will remain in the Northern Division and Duluth and Superior will be in the Southern Division. S. A. Davis is Superintendent of the Northern Division, with office at St. Paul, Minn., and C. W. Smith is Superintendent of the Southern Division, with office at Chicago, Ill.

The Dominion Ex. Co. has issued a circular to its agents, as follows:— "We are informed that where changes have been made in the classification or rates, such changes have been, in some cases, attributed to action on the part of the Railway Commission. This is wrong and agents are cautioned against making such statements. While the Railway Commission approved the classification upon application of the express companies, the companies are not prevented from making changes in the rates if they choose to do so, provided the classification or tariffs are duly amended and approved in accordance with the Railway Act; but the act requires that the classification and tariffs that are in effect must be strictly adhered to, and if customers request special concessions contrary to the tariffs filed they should be informed that the law will not permit it."

Grain Elevator Notes.

The Western Canada Flour Mills Co.'s elevator at Gilbert Plains, Man., with about 11,000 bushels of grain, and an adjacent flour house, were burned to the ground May 4.

The Saskatchewan Co-Operative Elevator Co., recently established by the Saskatchewan Government, received, to the end of April, 90 applications regarding elevators, as provided in the act. The act allows a Government loan of 85% of the cost of construction for any local elevator, the balance being paid by the applicants, who form a local company, the loan being paid out of profits.

It is reported in Winnipeg that the vacancy on the Manitoba Elevator Commission, caused by the resignation of D. B. MacLennan, will not be filled for the present. No additional elevators will be purchased this year. The commission will shortly call for tenders for the remodelling of a number of elevators in different parts of the province, plans and specifications for which are in course of preparation.

Montreal daily papers of May 10 stated that the Harbor Commissioners had commenced to build a grain storage elevator with a capacity of 500,000 bush. on Windmill Point. This is incorrect. The elevator which is to be built at Windmill Point is for the G.T.R., and will be operated by the Montreal Warehousing Co., a subsidiary of the G.T.R., in connection with the existing G.T.R. elevator there, as announced in our May issue.

Dominion Flour Mills, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,500,000, and office at Montreal, to carry on a general grain and flour business, and in connection therewith to build, own and operate steam and other vessels, elevators and other similar facilities. The incorporators are, C. G. Greenshields, E. Languedoc, E. R. Parkins, W. Taylor and R. Brodeur, Montreal.

Press reports from Montreal state that an arrangement for the consolidation of the International Milling Co. and the Canadian Cereal and Milling Co. has been arrived at, and that a holding company will be formed, under the name of the International Milling Co. of Canada, with an authorized capital of $3,500,000 in 7% cumulative preference stock, and $2,500 000 in common stock, of which $2,500,000 and $1,500,000 respectively, will be issued now, to acquire the shares of the two companies. In addition, there will be a bond issue of $2,000,000. It is also reported that, in addition to the enlargement of the International elevator at Moose Jaw, Sask., a line of elevators will be built throughout the northwest.

Telegraph and Cable Matters.

A. E. Starr, of the C.P.R. Telegraph Department, Victoria, B.C., has been appointed manager, C.P.R. Telegraph office at Vancouver, succeeding W. J. Christie, resigned.

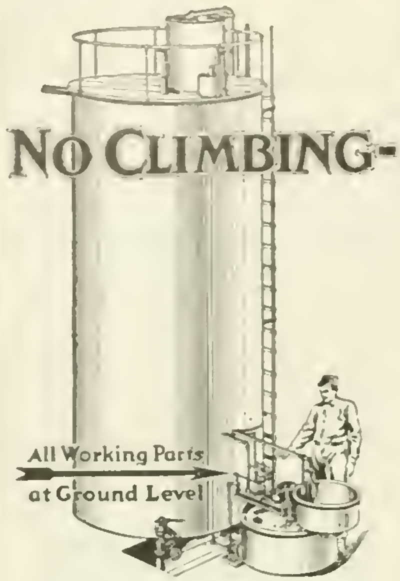
At the Order of Railway Telegraphers convention in Toronto, May 9, eight delegates were appointed to interview the C.P.R. management regarding a general increase of salary, improvements for all operators, and changes in the working rules.

The Dominion Parliament has passed votes for the Government telegraph lines in the west, as follows:—Athabasca Landing, Peace River Landing line extension to Grande Prairie, $22,500; Moose Jaw, Wood Mountain line, renewals and reconstruction, $18,500; Northwest lines, shifting of line from farm lands to establish roadway, $5,000; telegraph line from North Battleford to Isle la Passe, $37,500; total, $83,500.

Work was resumed early in May on the erection of the Government telegraph line from Kitsumkalum to Stewart, B.C., 150 miles, and it is expected to have it ready for operation early in July. This is a branch from the Prince Rupert line, which is, itself, a branch from the direct line between Ashcroft and Dawson. Gangs are stringing wire from Lava Lake and Alice Arm to the Naas River. The work was commenced last year, and was about half completed when it was suspended for the winter.

The British Postmaster General, in the House of Commons, May 4, in response to questions regarding the control of the cable service between Great Britain and America, said that negotiations were being completed whereby the control of the Anglo-American Co.'s business will pass to the Western Union Co., but he was not aware that the Direct United States Cable Co. was included in the arrangement. The new deal would not make communication between Great Britain and America entirely dependent on the combine, and it was quite certain that the British Government will control the rates, for British protection. It is reported that under the agreement the Western Union Co. will guarantee 3¾% on the ordinary stock, and 1½% on the deferred stock of the Anglo-American Co.

NO CLIMBING-



Careful investigation will convince you that when you buy a Booth Water Softener your money becomes worth more than if invested in some other machine.

Our claim of greater efficiency, greater simplicity, and greater economy of operation is fully demonstrated by results being obtained.

If you investigate thoroughly and are looking for simplicity—efficiency—and a machine that can be relied upon at all times to produce—the right results—at the right cost—a Booth Water Softener will be your first choice.

TITANIUM ALLOY

—With Carbon
—Without Carbon

We make Titanium Alloy without carbon, and with carbon in almost any percentage of Titanium.

But we recommend the use of Titanium Alloy with carbon.

It costs less than half as much as Titanium Alloy without carbon—its melting point is a great deal lower—it is more efficient in its purifying action. These statements are borne out by the experience of foundrymen everywhere—thousands of tons of **Titanium Alloy with carbon** have been and will be used.

We are prepared to furnish Titanium Alloy with or without **carbon** in any quantity desired.

Booklet No. 30 will interest you.

Titanium Alloy is made for Canadian consumption by **Electro Metals**, Ltd., Welland, Ont.

A System of Accounting for Track Construction Expenditures.

By H. F. Smith, Comptroller Montreal Street Railway,

In explaining the system in use by the Montreal St. Ry. in recording expenditures made for track construction and renewals of track, it is with the hope that it may prove of sufficient interest to other companies, to promote discussion and criticism that may result in the bringing out of some ideas that will help in perfecting a system of records for this class of work.

It has been my experience that it is not a simple task to get an accurate cost of each job when a number of pieces of work are under way at the same time. To get the labor cost of course is simple. The difficulty is with the material.

The predominating idea of the engineering department being naturally to get the work done as well and expeditiously as possible, any system of records for this class of work, to be effective, must be simple and work automatically, and be of a nature easily understood by the outside staff of the construction department. One of the difficulties experienced by the accounting department when material is requisitioned out of stores for a designated piece of work is that when the occasion arises that the material in question is diverted to another piece of work, the system must be such that it will detect this, should those immediately concerned in the transaction fail to see that the requisition is properly altered. Again, where two pieces of work are under way on streets in close proximity to one another and the foreman of one job finds he has run short of, or has not received certain material that he needs at once, and the foreman of the other has more than he requires for immediate use, more or less borrowing would likely result, and in a great many cases, material would not be returned. This means that one job would be overcharged and the other shortcharged, with the value of the material not returned. I am not sure whether this is entirely overcome yet, but the system introduced took into consideration these points among others when it was put into force.

When it has been decided by the management that a piece of track is to be renewed or a new line constructed, the engineering department issues a request to the Comptroller for a work order number on forms 1 or 1A, according to the nature of the work. An estimate of what the work should cost is given in detail on these forms. When making up his estimate the engineer fills in also form 2, which gives the total quantities of the different classes of material required for the work, and forwards same to the storekeeper, as his authorization to deliver material in such quantities as are requisitioned for from time to time, as the work progresses, up to the amount advised. The storekeeper keeps this form on file and as each requisition is filled, marks the quantity supplied opposite the quantity authorized. This keeps him always advised as to what further quantities he can deliver. Should it so happen that the quantity of material estimated is short of actual requirements, the engineering department is notified by the storekeeper as soon as he receives a requisition for any class of material in excess of the amount authorized, and he must receive a written order from the Chief Engineer before the requisition can be filled. As the engineer is called upon to explain the reason when estimates and actual costs do not bear a fair relation to one another, this system gives him an opportunity to look into matters while the work is in progress, and ascertain if the fault is with his estimates, if any material has been supplied and transferred to another job, or just what the reason may be. Of course, if the costs are much under the estimates, his attention would probably not be drawn to the fact until the work was completed, when a detailed statement of the material charged, compared with the estimate, would be put before him.

I do not think it is necessary to describe at any length the form of requisition for material or the method of keeping time. The requisition form reproduced herewith is self-explanatory. These forms are signed by the Superintendent of Construction and forwarded to stores as material is required.

We have also in use a system of transfer slips covering the transfer of charged out material from one job to another, which are made out in triplicate by the foreman or checker, as the case may be, the carbon copy remains in the book and the other two copies go with the material, and are signed by the foreman or checker receiving same, and forwarded to the Superintendent of Construction, who initials same, keeping one copy and forwarding the other to the stores department. The storekeeper prices and extends same and forwards a summary to the accounting office at stated intervals when adjusting entries are made.

The time is taken by timekeepers, who visit each gang twice daily, and check up the men. They also make up a daily report showing the amount expended on each job, a copy of which is forwarded to the Construction Department.

About the 15th of each month a letter is sent to the Chief Engineer advising the amount spent on each work order up to the end of the previous month, together with the estimated cost of the work. This keeps him in touch monthly with the amount he has spent, and by comparing with his estimates shows him how much margin he has left.

◆

The electric freight locomotive which the Windsor, Essex and Lake Shore Rapid Ry. is having built by the Preston Car and Coach Co., Preston, Ont., will be mounted on Baldwin trucks, and fitted with two baggage doors on each side and motorman's cab at each end. The interior will be fitted with ash, and the exterior painted. The car will be 54 ft. long over all, 9 ft. wide, and the bottom framing will be of structural steel throughout, the side sills being 10 ins. channels, and centre and intermediate sills 8 ins. I beams.

BLAUGAS

Blaugas is bottled gas shipped in steel cylinders, sold by the pound.

It has 1800 B.T.U. and by this enormous heating power can do things which no other gas can. Blaugas is used, not only for house lighting, cooking, and water-heating, but for lighting of railway cars, buoys, railway stations, lighthouses. It is extensively used for all industrial purposes, as

Soldering
Brazing
Heating Appliances

of all kinds, and with oxygen, for

Welding

aluminum, bronze, copper, cast iron, etc.,

Cutting

of any kind of metal.

Blaugas is the safest gas ever invented. Explosion limits only within 96 to 92 per cent. of air and 4 to 8 per cent. of gas.

OTTAWA - - CANADA

Projects, Construction, Betterments, Etc.

Alberta Electric Ry.—A press report from Calgary, Alta., May 12, states that the first portion of the line to be built will extend from Calgary to Banff, about 70 miles, and that it is expected to have it in operation by the end of 1912. (May, pg. 453.)

Brandon, Man.—The report of Mr. Farquharson with reference to the construction of a street railway in Brandon is under consideration by the city council. The report suggests the building of three lines at once, aggregating 7.7 miles, at a cost of $140,000, exclusive of overhead work, rolling stock and power. The lay-out of the line would permit of extensions as the needs arose. (May, pg. 453.)

British Columbia Electric Ry.—A letter was received by the Vancouver city council, from the General Manager, May 8, stating that the directors in London, Eng., had decided to withdraw from all negotiations for a new agreement, and to work on present franchises until their expiry. A tentative agreement had been drawn up, but on Feb. 13, the council put forward additional conditions which the directors could not agree to, hence the withdrawal. The company, added the General Manager, had invested in actual cash in their various undertakings in the province $21,826,086, on which there was paid last year 3.7% dividends. In connection with this matter the Vancouver Board of Trade has appointed a special committee to investigate the various franchises and agreements with the company, and report thereon.

The engineer of the South Vancouver municipality has been instructed to prepare profiles of certain streets in order that the company may prepare plans for the car line extensions. A deputation has been appointed by the ratepayers to urge upon the company the desirability of extending the lines along the Westminster road.

The Richmond municipal council was informed May 9, that plans were being prepared for building a second track on the line to Eburne, and that the work would be undertaken in a short time. The traffic would not warrant the building of a second track on the line from Eburne to Brighouse. The Point Grey municipal council has under consideration an application to the company to build a line from Trafalgar St. west to Alma road and to connect with Tenth Ave., for which purpose the council had widened the street to 86 ft. The question of the validity of the company's franchise in Burnaby tp. is being raised, and the council has been notified that the company will defend its status in the courts if necessary. The company's officials are considering the desirability of extending the Chilliwack line through to the Steamboat Mountain goldfields. The extension would be 60 miles, and would open up a large area of fertile land.

The company has purchased over six acres of land on the Burnside road, Victoria, for the purpose of providing a storage yard to be used in connection with the suburban line to the Saanich district. The route for this line has been cleared for the first 12 miles, and two grading gangs are at work. It is expected that the line from Victoria to Deep Cove will be in operation by the end of 1912. (May, pg. 453.)

Buffalo, Niagara and Toronto Ry.—The Dominion Parliament has revived and confirmed the powers conferred by the company's act of incorporation, chap. 67 of the statutes of 1906; extending the time fixed for the construction of the lines authorized to be built, and making a slight change in the location of the starting point of the line, near Niagara-on-the-Lake. (Mar., pg. 257.)

Calgary Municipal St. Ry.—Progress is being made with the extension of the municipally owned electric railway in Calgary, Alta., and it was expected to have the one to the general hospital ready for traffic by May 30. Work has been started on the suburban extensions, and a proposition is under consideration for the building of a six mile line to connect with the municipal lines. This line will probably be built by the council for the landowners interested. (May, pg. 453.)

Coteau Power Co.—A press report states that arrangements have been completed for the building of an electric railway from Vernon to Lumby, B.C. A. E. Ashcroft, C.E., Vernon, B.C., is one of the leading men in the company. This is a 20 mile line and the power house will be located at Shuswap Falls. Power will also be furnished for lighting purposes.

We are advised that matters in connection with the arrangements for starting work on the company's proposed power scheme, which includes an electric railway at Vernon, B.C., are progressing favorably. It is believed that a start will be made this summer on the power plant. (Apr., pg. 399.)

Chatham, Wallaceburg and Lake Erie Ry.—The Dominion Parliament has granted the company authority to build the following additional lines of railway: From a point on the main line to Blenheim and Rondeau Harbor; from Wallaceburg to Dresden, Ridgetown and Erie Eau Park; from North Dresden to Petrolia and Sarnia; to issue bonds for $20,000 a mile in respect of such lines, and granting an extension of time for the construction of previously authorized lines.

A press report states that it is expected to let contracts at an early date for building a spur line and freight sheds and the making of connections with the G.T.R. at Chatham, Ont. (Mar., pg. 257.)

Dartmouth and Cow Bay Electric Ry.—The Nova Scotia Legislature has incorporated a company with this title to build an electric railway from Dartmouth to Cow Bay, N.S. A. C. Pyke and R. Stanford, are among the provisional directors.

Development Co. of Canada.—The Quebec Legislature has incorporated a company with this title for the purposes named in the application. (April, pg. 365.)

Greenway-Phoenix Tramways Co.—The British Columbia Legislature has incorporated a company with this title to take over the franchises, etc., of the Greenway-Phoenix Tramway Co., incorporated under the Tramway Company Act, and to build and operate tramway lines. The provisional directors are:—T. A. Woodruff, Chicago, Ill.; D. McIntosh, I. H. Hallett, Greenwood, B.C. (Mar., pg. 257.)

Grouse Mountain Scenic Incline Ry.—It is said that construction will be started early in June on this projected railway, and that the work will be done in three sections, the first consisting of 1.5 miles of track leaving Capilano View, and extending easterly to the incline or cable section, which will go up the side of the mountain for 1.5 mies, with a rise of 2,000 ft., to a power house situated in D.L. 1526. The third section of the line will skirt the crest of the mountain to the summit, where there will be gardens and an hotel. The general plan is to construct a two-car, three-rail line from end to end. The timbers on which the line will be built are to be anchored to solid rock and safety will be assured by the employment of the most modern devices. Section one of the line will be provided with the ordinary type of electric car. Section two, the incline, will be a cable line, provided with two observation cars, each of which will seat about 60 passengers. Section three will be operated with the ordinary electric cars. According to present plans the power will be obtained from the British Columbia Electric Ry. It is expected that the line will be completed and in operation next year. (Apr., pg. 319.)

Hamilton to Galt, Ont.—Surveys were being made, it was reported May 17, for the Dominion Power and Transmission Co., which owns all the electric railways centreing in Hamilton, for the building of an electric railway to Galt. It is stated that the Hamilton and Brantford Ry. will be used as far as Langford, the new line branching off thence to Rockton and Galt. General Manager Hawkins is quoted as stating that the company had this line surveyed and was considering its construction. Local reports state that no portion of the right of way has been purchased, and that the line may be extended so as to be connected with the projected Hamilton, Waterloo and Guelph Ry., thus making it possible to give a long round trip.

Other press reports state that a Toronto syndicate has prepared plans for a line to serve Hamilton, Galt and Guelph, and that F. L. Sommerville, formerly G.T.R. Resident Engineer at Toronto, was negotiating with interested companies with a view of securing a right of way into Hamilton.

Huron and Ontario Ry.—The Dominion Parliament has extended the time within which the company may build its projected lines. (Jan., pg. 71.)

Imperial Traction Co.—The Dominion Parliament has incorporated a company with this title, to build an extensive system of electric railways from Hamilton, westerly to Guelph, Stratford, London and other points in Western Ontario. (Feb., pg. 167.)

International Traction Railways—International Ry.—The Dominion Parliament has passed an act respecting the taking over of the lines, etc., of the International Ry. in Canada, by the International Traction Railways. (May, pg. 453.)

Lake Erie and Northern Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Port Dover to Galt, and Ayr, Ont. (Mar., pg. 257.)

London and Lake Erie Ry. and Transportation Co.—Application is being made to build a spur to connect the St. Thomas Street Ry. near Balaclava St. with the Michigan Central Rd., and is under the consideration of a special committee. The company has running rights over the municipally owned street railway, but proposes to build the spur itself. (Jan., pg. 71.)

London and Northwestern Ry. of Canada.—The Dominion Parliament has passed an act extending the time within which the line, authorized to be constructed by chap. 100 of the statutes of 1909, may be built, and adding the words "of Canada," to the title, so that when bonds are being placed on the British market, the company may not be confused with a similarly named British steam railway. (April, pg. 365.)

London Street Ry.—New switches and diamonds were put in at the corner of Richmond and Dundas streets, April 30. (May, pg. 453.)

Lunenburg Electric Ry.—The Nova Scotia Legislature has incorporated a company to build an electric railway within the municipality of Lunenburg, N.S. The municipality has been authorized to contribute towards the payment of damages for right of way required by the L.E. Ry., within the municipality.

Manitoba Radial Ry.—The Dominion Parliament has extended the time within which the company may construct the lines authorized to be built by chap. 105 of the statutes of 1907.

CANADIAN NORTHERN

The Great Advantage

of reaching Muskoka by way of the Canadian Northern Ontario Railway lies in the fact that it skirts the Lakes right to the head of Lake Joseph, with boat-side stations at Bala Park and Lake Joseph, thus giving direct access to the most important summering places.

The Lake Shore Express

with its excellent parlor-observation and dining cars, is the best appointed and most popular train in the Muskoka service. It provides the quickest, most comfortable way to reach Lake Simcoe, Sparrow Lake, Parry Sound District, the Georgian Bay, the Maganetawan Country, and

The Muskoka Lakes

A new and improved service will be inaugurated on the Canadian Northern Ontario this season from Toronto to Point-au-Baril on the Georgian Bay.

C. A. MINER, Manager.

Moncton Tramways, Electricity and Gas Co.—The transfer of the electric light plant to the company, as a part of the contract with the city for the building of an electric street railway, was made by the Moncton, N.B., city council, Mar. 26. (April, pg. 365.)

Montreal and South Western Ry. and Power Co.—The Quebec Legislature has incorporated a company with this title, to build a steam or electric railway from Caughnawaga southwesterly to the International boundary at St. Francis, Que., with authority to develop water powers, to generate and distribute electrical energy. The title in the original application was Montreal and Southern Ry., and Power Co., but the Legislature made the change so as to prevent confusion with existing companies having somewhat similar titles. (See Montreal and Southern Ry. and Power Co., Feb., pg. 113.)

Elevated Railway for Montreal.—At a meeting of the Montreal city council, May 15, the Board of Control was asked to submit a report on the advisability of having an elevated railway from one end of Craig St. to the other. It is estimated that such a line can be built for $200,000 a mile, while an underground line such as the Montreal St. Ry. had power to build would cost at least $1,000,000 a mile.

Montreal Park and Island Ry.—In passing through the House of Commons the company's bill was amended so that the consent of municipalities will have to be obtained to its lines being carried along or across any hghway, and by authorizing its amalgamation with the Montreal St. Ry. and the other electric railways owned by the same interests on Montreal Island. (Mar, pg. 259. See also Montreal Tramways Co., May, pg. 455)

Montreal Street Ry.—As the result of a meeting with the Board of Control, May 4, the company will submit a statement showing the terms upon which it will grant reduced fares, and do certain works, and the controllers will prepare a report showing what the city will expect the company to do. Upon the exchange of these papers, and consideration thereof, a further meeting will be held in order to arrive at an agreement. (May, pg. 455.)

Niagara Frontier Ry.—Application is being made to the municipal authorities interested by G. H. Pettit and Wm. C. Perkins in behalf of the company, for franchises for an electric railway from Niagara-on-the-Lake to Fort Erie, along the Niagara River. (May, pg. 455.)

Niagara, St. Catharines and Toronto Ry.—Negotiations have been in progress for some time between the company and the town council of Thorold, Ont., as to an extension of the franchise. The town offers a 10 year franchise, on condition that the company gives a five cent fare, paves between the tracks and pays $1,000 a year. The company declined to agree, and desired a conference, but the council has refused to consider any alteration of terms. (April, pg. 365.)

Niagara, Welland and Lake Erie Ry.—At a meeting of the shareholders the following were elected officers for the current year:—President, C. J. Laughlin, Welland, Ont.; Vice President, F. C. Carlson, Los Angeles, Cal.; Secretary, A. P. Laughlin, Welland; Treasurer, D. L. Stafford, Dunkirk, N.Y. A contract is said to have been let to H. H. Leach & Co. for the construction of the line. The first section of the line to be built will be between the G.T.R. and the Michigan Central Rd. stations in Welland, and it is expected to have this in operation within three months. (Mar., pg. 259.)

Nipissing Central Ry.—The Commissioners of the Temiskaming and Northern Ontario Ry., who have bought this line, for $250,000, went over it early in May. Up to May 25 the property had not been transferred to the Commission, some details remaining to be settled.

At a public meeting in Cobalt, May 16, a resolution was passed asking the Commissioners to arrange for the building of the line through the town, and recommending the council to grant the necessary franchise. (May, pg. 459.)

Ontario West Shore Ry.—Arrangements are reported to have been made by J. W. Moyes, President, May 5, for the resumption of construction work at the Goderich end of the line. The question of what streets the line will be built on in Goderich is still before the council. (May, pg. 455.)

Ottawa Electric Ry.—The question of building of extensions to the street railway system are under consideration by the city council. In this connection, notice of motion has been given by Alderman Stroad for the appointment of a commission to report on the best way of meeting the situation about to arise through the expiration of certain of the franchises held by the company. The company has notified the city council that it prefers the Montreal road to the St. Patrick St. route for the new line to the cemetery, and the matter is under discussion. (April, pg. 385.)

Ottawa, Smith's Falls and Kingston Ry. Co.—The Ontario Legislature has incorporated a company with this title. (See Ottawa, Smith's Falls and Kingston Electric Ry., April, pg. 365.)

Peoples Ry.—A special meeting of the shareholders was held in Berlin, Ont., May 8, for the purpose of authorizing an issue of bonds at the rate of $25,000 a mile, and the execution of a mortgage to secure the same. A resolution was also submitted authorizing an increase in the capitalization of the company to the extent of $40,000 a mile. S. Wanless, Berlin, nt., is secretary of the company.

The company has secured an act from the Dominion Parliament declaring that its undertaking is a work for the general advantage of Canada, and authorizing it to extend its lines in many directions. It is stated that a contract was signed in Toronto, May 17, with the Acme Construction Co., for building the line. Some construction work has been done between Guelph and Berlin, Ont., and W. A. Bugg, President, is reported as stating that the line between these two places would be in operation by the fall, and that when work had been thoroughly started, more than a mile of track a day would be laid. He is further reported to have said:— "We shall make the trip between Toronto and Windsor in less time than the steam roads take. Our rolling stock will include sleepers, parlor car and buffet cars of the most modern type." The company's plans include a through line from Toronto to Windsor, with a net work of local lines extending from Collingwood and Owen Sound, to Goderich, Sarnia, and Port Stanley. Preferred stock amounting to $29,500 has been subscribed by various townships, and over $150,000 of common stock has been privately subscribed. The bond issue of $25,000 a mile is reported to have been underwritten by New York and Detroit financial houses. It is intended to use Hydro-Electric power. (May, pg. 455.)

Pincher Creek to Pincher Station.—At a meeting of the Pincher Creek, Alta., town council, May 12, it was decided to take into consideration the question of building an electric railway from Pincher Creek to the C.P.R. staton at Pincher. With a view of providing power for such a railway, as well as for the increasing demands for lighting, the council ordered an additional engine of 215 h.p. for its power plant.

Port Arthur and Fort William Electric Railway.—The Port Arthur, Ont., city council has authorized the extension of the Arthur St. car line to Algonquin Ave., in the Carrick extension. (May, pg. 455.)

Quebec Ry., Light and Power Co.—We are officially advised that a contract has been let to M. Lonergin, Quebec, for the building of the upper level line from Beauport to Kent House, Que. The line is expected to be completed and ready for operation by June 20.

The through service to Sillery was inaugurated April 30, the route followed being from Sillery to the Chateau and back by St. John St. The track to Montmorency Falls is being relaid with new and heavier steel rails. A new siding is being built just below Limoilou on the river side of the line.

We are officially advised that the company has under consideration the abolition of steam motive power on the Montmorency Division, and the operation of the entire line by electricity. At present both electric and steam motive power are used. (April, pg. 365.)

Regina Electric Ry.—Rapid progress is being made with the building of the municipal electric railway in Regina, Sask., and it is expected to have the line to the Exhibition grounds opened for the fair. Track was also reported to have been laid May 15, from Albert St. to Cornwall St. on Eleventh Avenue; the right of way on Dewdney St. was ready for tracklaying, and the preparatory work was being gone on with on Albert St. The overhead work is being put at a good rate. The materials for all the work have been delivered in Regina, or are on the way. The car bodies were purchased in England, while the trucks, etc., have been purchased in the U.S. We are advised that the Regina City Council let contracts totalling $266,476.57 for work and materials in connection with the railway. These contracts include construction on paved and unpaved streets, pavements between tracks, gravel, cement, ties, poles, steel rails, rail fastenings, spikes, bonds for steel rails, special intersection work, and overhead materials. It has been decided to erect the car barns on Albert St., between Fifth and Sixth Avenues. (April, pg. 365.)

Revelstoke, B.C.—Press reports state that a company is being organized in Revelstoke, B.C., to build an electric railway there.

Rural Ry. of Manitoba.—The Manitoba Legislature has amended the company's powers in certain particulars. The amendments affect a number of details as to the payment of fee, etc., for the procuring of the act, the advertising of plans for construction, and other matters, and authorize the building of a line from St. Vital, to Winnipeg, St. Boniface, Transcona, Birds Hill, Portage la Prairie, East Selkirk, Stonewall, Morris, Emerson and other points. A second act authorizes the municipality of St. Vital to enter into a contract with the company to build a line from Winnipeg to the site of the new provincial Agricultural College. C. E. Lewis, Minneapolis, Minn., is President of the company.

Several meetings have been held with a view of promoting the building of an electric railway to connect up Oak Bluff, Sanford and La Salle, in Macdonald municipality, Man. It was proposed to negotiate with the Rural Ry. of Manitoba, in respect of the projected line. (April, pg. 365, and Dec., 1910, pg. 1069.)

Simcoe Ry. and Power Co.—As a result of a vote of the ratepayers of Midland, Ont., to arrange with the Hydro-Electric Power Commission for the supply of power, a contract has been made with this company for the supply of current. (Sept., 1910, pg. 783.)

Stratford Ry. Co.—The Ontario Legislature has incorporated a company with this title to build the lines named. The company is asking the Stratford, Ont.,

New York Office - - - 50 Church St

city council for permission to separate the city and the radial portions of the project to enable the company to finance the undertaking, and to grant an extension until the end of June for making a start. J. W. Graham, and several of the directors waited on the committee of the council which has the matter in hand, May 10, and discussed the matter. The company, Mr. Graham said, had the money to proceed with the construction in the city as soon as the amendment was made in the agreement. The committee recommends that this be done at the next meeting of the council. (Mar., pg. 261.)

Sydney, East Bay and New Waterford Monorail Co.—The Cape Breton county council has granted the company a bonus of $1,000 a mile and exemption from taxation for five years in aid of its projected railway. The company is inviting subscriptions to its capital stock, of which 25% must be paid up prior to organization. J. P. Joy, 127 Pitt St., Sydney, N.S., is acting as the representative of the promoters

Toronto and York Radial Ry.—The plan of the private right of way which the company desires to use in order to take its line off Yonge St., from Balmoral Ave., to the C.P.R. crossing, will cross Farnham and Woodlawn avenues once, and Walker, Wickson, and Birch avenues twice, with the loop. The station will front on Cottingham St. The city is opposing the adoption of the route.

The building of a double track line on the Lake Shore Division near Mimico Creek is well advanced, and the connections are expected to be made early in June. A private right of way has been secured for other portions of the line, and construction is expected to be gone on with at an early date. (May., pg. 455.)

Toronto Civic Street Railway.—The Ontario Railway and Municipal Board is desirous of obtaining considerable informaton from the city before it approves of the bylaws for the proposed civic car lines. The information asked for is specified in an order made May 9, and the city's legal department started in at once to prepare it. The question of the operation of the lines when constructed is being considered and the Board of Control, May 17, decided to enter into negotiations with the Toronto Ry. for an interchange of traffic at certain points.

It is estimated that the proposed line on St. Clair Ave., which will extend from Avenue Road to the G.T.R. tracks, 2.65 miles, will cost $280,928, and that the line on Gerrard St. east, which will extend from Greenwoods Ave., to Main St., 1.85 miles, will cost $225,780. The cost of operating a 24 hour service on the St. Clair Ave. line is estimated at $201.61 a day, and on the Gerrard St. line at $140.74 a day. (May, pg. 455.)

Toronto Ry.—The Ontario Railway and Municipal Board has authorized the company to build a loop on Louisa St., and to extend its lines in various parts of the city. Work was re-started April 14, on the extensions commenced during 1910, of which about two miles were built.

Work has been in progress since the beginning of May on the Wilton Ave. line, on the Adelaide St. line, and on the new Front St. line. The new car barns on the corner of Lansdowne Ave. and Paton St., have been completed, and were put in use May 15. (Feb., pg. 169.)

Toronto Suburban Ry.—Application is being made for permission to lay a turnout on Dundas St., near St. John's road, but the site is objected to.

No definite action has been taken in the way of the construction of the extensions of the line for which the Ontario Legislature recently gave the company a year to go on with. (May, pg. 455.)

Tsimpsian Light and Power Co.—The terms of an agreement have been submitted by the company to the city council of Prince Rupert, B.C., providing among other things for the building of an electric railway. The line, which would be first built would extend from one end of the city to the other, and additional lines would be built as required; the company would look after the roadway between the tracks and for a certain distance on either side, and pay to the city a percentage on the gross earnings, starting at 3 % and rising to 10 %. R. Brutinel is Manager of the company.

Vancouver,-Stanley Park.—Three proposals have been submitted before the Vancouver Park Commissioners, with the object of providing trnasportation in Stanley Park. One plan is submitted by the Electric Railways Construction Co., of which G. A. Ashwood is Managing Director. This company desires to build a double track electric railway from the southerly end of the proposed causeway across Coal Harbor, across the park to a convenient point east of Prospect Point, andd then along the seafront to near Siwash Rock. A second proposal is for the building of a miniature electric railway through the unimproved portions of the park, but touching at Brockton, Prospect Point, Siwash Rock and other points; and the third proposal is to provide gasoline motor cars, or electric cars operated on rails or by the trackless trolley system. The first plan is rather favored, but the Commissioners have taken the other three into consideration.

Western Central Ry.—A meeting of shareholders has been called to be held in the offices of T. Drummond, Toronto, June 5, to authorize the issue of first mortgage bonds to an amount of $35,000 a mile for single track, and $55,000 a mile for double track lines. J. S. MacDiarmid, is interim Secretary of the company. (Mar., pg. 261.)

Winnipeg Electric Ry.—A Winnipeg dispatch May 17, states that an issue of new capital stock is being arranged with a view of providing funds for present and future extensions of the lines and power plant.

Plans have been submitted to the city council for extensions on Mountain Ave. Work has been started on a line on Donald and Princess St., to connect the Broadway and Higgins Ave. lines; and on the construction on a line on Garry, Ethel, Kennedy and Sargent Streets. (May, pg. 453.)

Electric Railway Dictionary.—With the approval of the American Electric Railway Association, the McGraw Publishing Co., has issued an Electric Railway Dictionary, which gives definitions and illustrations of the parts and equipment of railway cars and trucks, and of everything else connected with electric railway tracks, equipment, rolling stock etc. The plan adopted in the work is to give a concise and exact definition and refer to an illustration. The definitions are arranged alphabetically, and extend to 63 closely printed pages of standard technical magazine size The close on to 2,000 illustrations, are well drawn and printed. The volume is an interesting one, and will be found useful in every electric railway office and shop. The price of the book is $5. It can be obtained through the Railway and Marine World's book department.

The Dominion Power and Transmission Co., Hamilton, Ont., has received three interurban cars from the Preston Car and Coach Co., Preston, Ont.

The Montreal and Southern Counties Ry. flat car, which is being built at the G.T.R. shops, Montreal, as mentioned in our last issue, will be a converted frame of a G.T.R. flat car, 381 ft. long, and 8 ft. 1½ ins. wide over side sills. with 5 by 5 ft. cab at one end of the car for motorman.

Electric Railway Notes.

The Montreal St. Ry. recently received two trailer cars from the Preston Car and Coach Co., Preston, Ont.

The Calgary Municipal St. Ry. has received four single truck cars from the Preston Car and Coach Co., Preston, Ont.

The Guelph Radial Ry. has ordered two double end pay-as-you-enter cars from the Preston Car and Coach Co., Preston, Ont.

The Ottawa Electric Ry. has ordered one heavy double broom electric steel frame snow sweeper from the Ottawa Car Co., Ottawa.

The Moose Jaw Electric Ry. has received four 21 ft. car bodies, 31½ ft. over all, mounted on 21-E trucks, from the Ottawa Car Co., Ottawa.

The Windsor, Essex and Lake Shore Rapid Ry., Kingsville, Ont., has ordered one baggage car from the Preston Car and Coach Co., Preston, Ont.

The British Columbia Electric Ry. has ordered 16 Hart-Otis dump cars, 60,000 lbs. capacity, from the Hart-Otis Car Co., Ltd., Montreal. These will be built by the Canadian Car and Foundry Co., Montreal.

The Ottawa Electric Ry. has been notified that the Dominion Government will not renew the contract for the carriage of mails to and from the trains, as it is proposed to use automobiles. The contract expires Sept 1. The amount paid the company under the present contract is $8,000 a year and it is said to have asked for an advance to $15,000.

The Toronto and York Radial Ry. has ordered three double ended pay-as-you-enter cars, mounted on trucks with G.E. 80 motors, quadruple equipment, double end control, with 12 walk-over and four longitudinal seats, upholstered in rattan, from the Preston Car and Coach Co., Ltd., Preston, Ont. They will be finished in cherry, inside and out, and fitted with sliding door on one side of vestibule and automatic folding doors on the opposite side. The car bodies will be 33½ ft. long, and the cars will be 48½ ft. long over all.

The two double ended pay-as-you-enter cars, which the Guelph Radial Ry. is having built by the Preston Car and Coach Co., Preston, Ont., will be mounted on 27-G-1 trucks, equipped with Westinghouse 108-B-2 motors, quadruple equipment, double end control. They will be finished in cherry on the inside and painted outside, and fitted with 10 walkover and four longitudinal seats, with spring seats and backs, upholstered in rattan. The heating system will consist of 14 heaters, supplied by the Consolidated Car Heating Co., system 192-W. The vestibules at each end will be extra long, being 7½ ft. over all, with sliding door at one side and a double folding automatic door on the opposite side.

The Montreal and Southern Counties Ry. (G.T.R.), has ordered one electric motor combination passenger and baggage car, to be built in the G.T.R. shops, Montreal, in addition to the one previously ordered, as mentioned in our last issue. Following are the chief details:—

Length over buffers	49 ft. 4 ins.
Length over end sills	38 ft. 0 ins.
Width over side sheathing	8 ft. 1½ ins.
Width inside, clear	7 ft. 4¾ ins.
Inside length of passenger compartment	18 ft. 6 ins.
Inside length of smoking compartment	10 ft. 6 ins.
Seating capacity, passenger compartment	28
Seating capacity, smoking compartment	16
Approximate length, baggage compartment and motorman's cab	13 ft. 5 ins.
Baggage doors width	3 ft. 6 ins.
Motors	Westinghouse

S. W. & A. Railway Cars.

The diagrams on this page show the elevation and floor plan of the six cars which the Sandwich, Windsor and Amherstburg Ry. has ordered from the Preston Car and Coach Co. They will be omnibus body, single truck cars, mounted on 21-E trucks, 7½ ft. wheel base, 33 in. wheels. They are for single end operation. The width over sills will be 7 ft. The width over posts above the belt rail 8 ft. 1¾ in. The front vestibule will be 4½ ft. long, the rear vestibule 6⅓ ft. long. There will be one pair of automatic folding doors in the front vestibule, and two pairs of automatic folding doors in the rear vestibule. The doors in the rear vestibule may be operated independently of one another by the conductor, who will have the controlling mechanism located where he stands inside of the P.A.Y.E. railing. The steps in both the front and rear end will operate along with the door, so that when the door is closed the steps are folded up. The same handle that controls the door will control the steps also. The same thing occurs in the front. There will be no bulkhead in either end of the car body. The lower panels of both front and rear vestibule doors will be ⅜ in. plate glass. These are said to be the first cars in Canada equipped in this way. The interior of the cars will be finished in cherry, as also the interior of vestibules. The upholstering will be leather, with spring cushions and backs. Each car will be equipped with two sand boxes, register rods, electric bells and hand brakes.

Canadian Lake Protective Association.

The English underwriters were the first to give the Canadian Lake Protective Association full recognition, and announced in good time a rate of 5¾% as a basis rate for vessels belonging either to this association or to the Great Lakes Protective Association of Cleveland, Ohio Both associations were thus placed exactly on the same basis and at a rate which was ¼% better than the basis rate of last year. On the other hand, underwriters in New York, under considerable pressure from those interested in the Great Lakes Protective Association, which organization through its representatives was much opposed to the formation of the Canadian Association, hesitated in coming to a conclusion, taking a little time to make up their minds regarding the various objections which were raised against us. Ultimately they announced for the Canadian Association the same rate quoted in the English market, but as a concession to the U.S. organization at Cleveland, announced a rate for its vessels of 5½% or ¼% less than that which they quoted to the Canadian Association's members.

The result, of course, is that members of the Canadian Association are placing insurance so far as possible in the English market, where they receive equal recognition with the Great Lakes Protective Association. Some fleets, however, have a good deal of their insurance covered in New York, and these at present suffer the discrimination of ¼ of 1% mentioned to the extent to which they cover their risks there. There is no doubt whatever that the Canadian Association would have had fair recognition in New York just as it had in London, but for the opposition of parties opposed to its organization. As it is the discrimination is probably only temporary, and prominent underwriters in New York announce that full recognition is withheld only until the association gets in full working order, and shows that it can carry out its present intentions. It is to be noted that its membership is pretty well comprehensive of the Canadian fleet of steamers of the class it was intended to cover, and that it is receiving the hearty support of vessel owners enrolled in it. Its success seems to be assured, and doubtless it will shortly receive the full recognition it deserves.

In the meantime it has made arrangements with the Dominion Department of Railways and Canals to co-operate for the benefit of the service. It has been arranged that the various canal superintendents shall keep the association's office posted regarding water conditions, and shall make prompt report to the association of any vessels being overloaded. Casualty report forms are in the hands of the masters of all the steamers enrolled in the association, and full records are being kept by the association of the various accidents, slight or serious, which may occur. Correspondence has taken place with owners of the vessels outside as well as in the association, and United States as well as Canadian, whose masters appear to have violated the regulations or sailing rules.

It is not apparent why the Great Lakes Protective Association of the U.S. and the Canadian Lake Protective Association cannot both become effective organizations, working together for the good of the whole system of navigation on the lakes, receiving equal recognition from underwriters, and altogether managing to control conditions in such a way that underwriting can be managed with profit to the underwriters and without unreasonable expense to owners. It is to be regretted that any opposition was put in the way of the Canadian organization at the very outset. At present that association aims to do more than the other by exercising direct control over the masters of the enrolled vessels. It is hoped that it will have a fair chance to prove its efficiency in this respect.

Wireless Telegraphy on The Great Lakes.

The following item appeared in our April issue:—

"In connection with recent press reports to the effect that the Northern Navigation Co. intended to equip its vessels with wireless telegraph apparatus this year, we are officially advised that as there are no receiving stations on the Canadian side of the lakes, it would be useless to so equip the vessels at present."

N. G. Neill, Industrial Commissioner, Port Arthur, Ont., has written us in reference to the above as follows:—

"A wireless telegraph station was erected at Port Arthur in the fall of 1910, and established communication with the other stations on Lake Superior, namely, at Isle Royal, Grand Marias, Duluth and Calumet. It was very shortly after the station was in operation that the advantages of the wireless telegraph were demonstrated. The steamer Dunelm of the Inland Lines went ashore on Isle Royal, and although she was not equipped with the apparatus, a freighter which had the wireless telegraph apparatus strung between her masts was within sight of her distress rockets, and immediately flashed the distress signals to the wireless station at Port Arthur. The powerful tug, James Whalen, was immediately sent to her assistance. The advantages of this invention were further shown when the wrecking outfit was working along side of the Dunelm. By a constant exchange of messages being kept up between the wreck and Port Arthur, the boats were warned of approaching storms and enabled to seek shelter in the neighboring bays during operations. The hazardous work of towing the wreck to the dry docks at Port Arthur were only undertaken after the Meteorological Station there had given out a report that fine weather might be expected for the next 24 hours, and this message was conveyed to the scene of the wreck 60 miles out in Lake Superior.

"The Northern Navigation Company has recognized the advantage which the installation of wireless telegraphy is to any steamer, and the additional feeling of security which it gives her passengers, and placed an order on April 19 for the equipment of the Hamonic and the Huronic. It is the company's intention to equip all its boats, both freight and passenger, during the summer. A wireless station is to be erected at Sault Ste. Marie, Ont., as soon as they can get the apparatus on the ground, and it is understood that arrangements will also be made for the establishment of stations at Sarnia, Owen Sound and Midland on the Georgian Bay. Boats will therefore never be out of communication with land on Lakes Huron and Superior, where probably the heaviest traffic on the Great Lakes is concentrated."

The paragraph in our April issue to which Mr. Neill refers was based on official information written us by the Northern Navigation Co.'s management and was undoubtedly correct so far as the management's intentions at that time were concerned. We are now officially advised by the management that it has been decided to equip the three Lake Superior boats, Hamonic, Huronic and Saronic, but that the other boats of the fleet will not be equipped at present.

Arrangements have been completed for the installation of wireless telegraph equipment on three barges of the Canadian Towing and Wrecking Co., Port Arthur, these being the Empire, Imperial and Luddington, and it is also said that, in the near future, the C.P.R. five Upper Lake boats, will also be similarly equipped. It is claimed that the apparatus installed on lake vessels is capable of transmitting and receiving messages up to 250 miles.

The wireless telegraph station at Port Arthur was built and is being operated by the Marconi Wireless Telegraph Co. of Canada, but we are advised that it may be transferred to the Dominion Government as soon as the Government's policy in this connection is defined. It is reported that wireless stations are to be established at Sault Ste. Marie, Sarnia, Owen Sound and Midland. On May 15 we were officially advised that the matter was still under the Government's consideration, but that no decision had been arrived at as to whether the stations would be built by the Government or by private enterprise. It is to be hoped that a prompt decision will be arrived at, as there does not appear to be any reason why it should be delayed.

Lake Grain Shipments.

The following statement, prepared by F. E. Gibbs, Grain Inspector, Fort William, Ont., shows the bushels of grain shipped by vessels from Fort William and Port Arthur, of the 1910 crop, from the close of navigation, 1910, to Apr. 30. The last two figures in each column represent lbs.

The New Steamboat Dalhousie.

The Niagara, St. Catharines and Toronto Navigation Co.'s new steamboat which has been named Dalhousie, is nearing completion. She has a length of 193 ft. between perpendictulars, and a total length over all of 200 ft. 7 in., with a breadth of 38½ ft., and is designed to have an extreme draft of 9 ft., without freight or passengers. She has exceptionally fine, clean lines, the hull being of steel throughout, and is very heavily built for a vessel engaged in inland waters. The frames and beams are of 6 in. channel steel spaced 24 in. centres. The shell plating is above rule requirements for a vessel of this size, and is fitted with heavy doublings in the vicinity of the water line. The main and lower decks will be plated entirely over with steel, and steel pillars and girders support all decks. Four watertight bulkheads subdivide the vessel transversely into five compartments.

On the lower deck forward accommodation is provided for the crew, including officers and crew's mess, as well as sleeping apartments for the crew. Lockers for clothing are provided in the rooms and steel stairways are provided for access to main deck. Abaft of the engines is the luncheon room, with ample accommodation for the serving of quick meals. This room is furnished with tables and leather covered settees. The stairway from the lunch room lands in the entrance on the main deck.

The passenger gangway, 4 ft. wide, leads into a 9 ft. entrance hall. On the left are the stairways leading up to the observation deck and down to the lunch room. On either side of the stairways are the entrances to the ladies' saloon, off which are the purser's and stewardess' rooms. The saloon is upholstered in leather with ample seating accommodation. Back of this cabin will be located the ladies' lavatory and retiring rooms. The decoration of the ladies' saloon will be of red oak panelled wainscoting, and red oak pilasters with compo board panels. The floor is to be covered with interlocking rubber tiling. To the right of the entrance hall is the engine room, also men's lavatory and purser's office. The entire space forward and alongside the engine room is devoted to freight space large enough to take care of about 300 tons.

The main stairway to the upper cabin is constructed of red oak. Entering the cabin something novel in marine equipment will be noticed. Besides the usual lounges, easy chairs, etc., there are reversible trolley car seats capable of seating 70 people. This cabin is about 120 by 24 ft., a portion of which is occupied by six comfortable staterooms. The whole is tastefully decorated in white enamel and natural wood to harmonize with the other appointments of the vessel. Heavy plain brown linoleum covers the floor. The windows are of the drop style of double plate glass. From the centre of observation cabin a stair leads to the sun parlor on the gallery deck above. The stairway is of same design as the main staircase on main deck. The parlor is of the same general design as the observation cabin, settees, etc., being upholstered in close woven cane. Forward of the sun parlor is the smoking room, which is panelled in oak, the seats upholstered in leather of a color to harmonize with the room. The floor is of interlocking rubber tiling cemented to the floor. The windows are of the same type as those of the other cabins. Adjoining the smoking room forward are the officers' quarters and pilot house. These rooms are furnished with metal fittings and decorated in white enamel. Outside the observation cabin are cabin slatted wood seats 21 ins. wide and 18 ins. high.

The boat will be driven by a single solid cast iron propeller 9 ft. in diameter, having four blades right hand; fitted on to a tail shaft of 9¾in. diameter, the crank and thrust shafts being 9¼ in. The propelling power consists of a triple expansion three crank engine, with cylinders 18 in., 29 in. and 48 in. diameter, and 31 in. stroke, to which steam will be supplied by two Scotch boilers for 180 lbs. working steam pressure, which will propel her about 19 miles an hour. The boilers are 13 ft. 7 5-16 in. by 11 ft. over all, with tubes of 3¼ in. outside diameter, having a total heating surface of about 4,200 sq. ft. and a grate area of 120 sq. ft. There are three corrugated furnaces in each boiler with grates 6 ft. long. They are fitted with duplex marine type boiler safety valves, all attachments being of best welded steel. The smoke stack is of the double type, the outer one about 7½ ft. in diameter and 53 ft. long. The enclosure around the smoke stack, engine opening, etc., are of steel insulated to insure safety from fire, and all upper wood work is supported by steel girders and stiffened by web frames.

There will be ample provision made for the safety of the passengers. These

include two 22 ft. life boats, two 16½ ft. life rafts, one 16 ft. working boat, suspended on davits, and fitted with quick launching apparatus; two seat rafts each provided with three large galvanized steel tanks for buoyancy; and 1,050 solid cork life jackets. Four cork ring buoys are also provided, and will be hung along the rail of the vessel for immediate use in case any one falls overboard.

The usual complement of fire fighting appliances is supplied and in addition a fire main led from steam pumps to all decks is provided, so arranged that any part of the boat can be reached by a 50 ft. hose length. The pilot house, as stated is located on the upper or gallery deck, and has communication with engine room by telegraph system, which is arranged to work from the gallery deck also. There is in addition, a speaking tube from the pilot house to the engine cabin.

The boat is equipped with steam heating apparatus, with radiators fitted in smoking room, sun parlor, observation cabin and main deck. She is supplied with steam steering gear, and will be operated by telemotor from the pilot house. Light will be supplied from an electric generator from the engine room of 15 kilowatt capacity, the boat being wired for 200 lights, with a 13 in. searchlight on the pilot house operated from within. All cabins are fitted with lacquered brass electric fixtures. Drinking fountains are located at convenient places throughout the vessel for ice water.

The steamer will be painted to harmonize with the present colors used on the Garden City, viz., above guard, light buff, rail, dark green, hull below waterline, red, and waterline to guard, light slate.

A comparison as to the size of the boat with other well known boats will give our readers a better idea of her dimensions:

Name.	Length.	Beam.
Corona	270.0 ft.	32.0 ft.
City of Montreal	220.0 ft.	32.5 ft.
City of Ottawa	220.0 ft.	32.5 ft.
Dalhousie	200.0 ft.	38.0 ft.
Dundurn	190.0 ft.	30.2 ft.
Macassa	178.4 ft.	24.1 ft.
Modjeska	178.0 ft.	31.1 ft.
Garden City	177.9 ft.	26.1 ft.
Lakeside	121.0 ft.	26.0 ft.

It is expected the Dalhousie will be completed in time to go on the route by June 26.

Notices to Mariners.

The Department of Marine has issued the following: —

42. Apr. 21. 107. Nova Scotia, north coast, Northumberland strait, entrance to Pictou, Skinner reef, gas buoy established. 108. Nova Scotia, north coast, Northumberland strait, Caribou reef, buoy established.

43. Apr. 26. 109. Nova Scotia, Cape Breton island, Money point, marine signal station established, Cape St. Lawrence, marine signal station discontinued. 110. Quebec, entrance to the St. Lawrence, survey steamer, engaged in the survey of currents, to be avoided. 111. Quebec, River St. Lawrence, chart, Razade islands to White island, issued. 112. Quebec, River St. Lawrence, chart of Quebec harbors issued.

44. May 5. 113. Quebec and Newfoundland, Gulf of St. Lawrence, north shore, information respecting tides.

45. May 5, 114. Ontario, Lake Ontario, Bay of Quinte, Telegraph narrows, dredging completed, buoyage.

46. May 6. 115. Ontario, Lake Ontario, Presqu'ile bay, buoyage.

47. May 9. 116. Nova Scotia, southwest coast, off western entrance to Cockerwitt passage, bell buoy established. 117. New Brunswick, east coast, Northumberland strait, Buctouche harbor, change of color of Indian point range lights.

48. May 10. 118. New Brunswick, south coast, Bay of Fundy, St. John harbor, Partridge island, temporary light.

49. May 10. 119. British Columbia, Vancouver island, east coast, Haro strait, Little Zero rock, buoy established. 120. British Columbia, Finlayson channel, Jorkins point, gaslighted beacon established. 121. British Columbia, Nepean sound, Otter channel, rock reported. 122. British Columbia, Chatham sound, Prince Rupert harbor, Fairview, beacon established, buoy discontinued.

50. May 18. 123. Quebec, Gulf of St. Lawrence, Gaspe Bay, Gaspe basin, Paddy shoal and Janvrin shoal, lighthouses established. 124. Quebec, River St. Lawrence, channel between Hare Island and Hare island south reef, buoy established.

51. May 20. 125. British Columbia, Portland canal, Lion point, Eagle point, and Stewart, buoys established. 126. New Zealand, Three King islands, incorrectly charted.

The R. & O. N. Co's Steamboat Saguenay.

The Richelieu and Ontario Navigation Co.'s steamboat Saguenay was launched at Glasgow, Scotland, Apr. 22. She is of the Canadian lake and river type, of which few have been built in Great Britain. She has five decks, orlop, main, promenade, gallery and hurricane, with observation cabins and turrets. Her dimensions are as follows:— Length 275 ft., breadth 56½ ft. depth to hurricane deck 40 ft. There is berth accommodation for 240 first class passengers and 76 of a crew, and she will be registered to carry 1,700 passengers. The cabins are on the gallery and promenade decks, with observation turrets at the forward and after ends. The hurricane deck is used chiefly for the officers' accommodation, at the forward end, with an observation cabin amidships. The dining saloon, situated at the after end of the main deck, is panelled in mahogany, and has accommodation for 100 persons. The machinery consists of two sets of four crank triple expansion engines, balanced on the Yarrow, Schlick and Tweedy system, with propellers of the built type, with blades of bronze. The engines are of the high speed type, and special care has been taken in the design of the valve gear in order to eliminate vibration. The starting platform is situated at the level of the main deck, within the engine room casing, and the gear is so arranged that both sets of machinery can be conveniently manipulated by the engineer. Steam will be supplied by three single-ended multitubular boilers, at a pressure of 175 lbs. under forced draught. There will be a complete installation of auxiliary machinery, including two electric light engines and refrigerating plant. She is expected to sail for Canada, early in June, and will be placed on her route as soon after arrival as she can be prepared.

Vessels Removed from the Register.

The following vessels were removed from the register during April, for the reasons assigned:— Steam.—Mizpah, Lindsay, Ont., 2 tons, broken up; Saucy Jim, Collingwood, Ont., 63 tons, burnt; Spray, Vancouver, B.C., 5 tons, foundered. Sailing.— A. K. McLean, Lunenburg, N.S., 176 tons, abandoned at sea; Emma R. Smith, Windsor, N.S., 371 tons, transferred to Newfoundland; H. J. Hogan, Parrsboro, N.S., 772 tons, abandoned at sea; Helen Shafner, Annapolis Royal, N.S., 180 tons, abandoned at sea; Jessie Gertrude, Lunenburg, N.S., 17 tons, sold to foreigners; John J. Barlum, Sault Ste. Marie, Ont., 1,213 tons, sold to foreigners; La Galiotte, Quebec, Que., 18 tons, broken up; La Marine, Quebec, Que., 18 tons, broken up; Lottie E., Lunenburg, N.S., 12 tons, foundered; St. Pierre, Quebec, Que., 44 tons, broken up; Trade Wind, Whitby, N.S., 181 tons, burnt; Umbrina, Shelburne, N.S., 99 tons, sunk; Zephyr, Halifax, N.S., 16 tons, broken up.

Atlantic and Pacific Ocean Marine.

The White Star Line's annual report shows gross profit of £1,070,274, and a net profit of £540,661. Dividends paid during the year, amounted to 30%.

Capt. A. H. Vipond, formerly commodore of the Allan Line, died at Bootle, Eng., Apr. 26, aged 65. He retired from active service about a year ago.

Capt. Wm. Wallace, formerly of the Allan Line, s.s. Sicilian, which command he resigned in Oct., 1910, after 25 years in the service, died at Hudson, Que., Apr. 30.

The Elder Dempster Co.'s balance sheet for the past year shows a profit of £228,619. A dividend of 8% for the year has been declared, together with a bonus of 2%.

Capt. Henderson was presented with a gold headed cane by the Harbor Commissioners.

The Allan Line s.s. Scotia, formerly Staatendam, arrived at Montreal, May 18, on her first trip to that port, and a number of those engaged in the passenger traffic there were entertained to luncheon on board, May 20.

The Cunard Line s.s. Ascania, formerly the Thomson Line s.s. Tortona, which will sail from Montreal, June 9, for England, has been chartered by the British Admiralty, in connection with the Coronation naval review, off Spithead.

The White Star-Dominion Line s.s. Teutonic arrived at Montreal, May 21, on her maiden trip on the St. Lawrence route. She is said to be the longest vessel using the St. Lawrence route, being 582 ft. long over all. A number of passenger agents and others were entertained to luncheon on board, May 25.

P. A. S. Franklin, Vice President, International Mercantile Marine Co., who was in Montreal, May 13, stated that the White Star-Dominion Line, would, this season, operate the s.s. Majestic on the St. Lawrence route, in addition to the s.s. Teutonic, in a two class service, while the Laurentic and Megantic would be run with a three class service, as last season.

The Bermuda Atlantic Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000 and office at Toronto, to build, purchase or otherwise acquire and operate steam and other vessels, and to carry on a general business as ship owners, brokers, warehousemen and forwarding agents. The incorporators are, S. Johnston, R. H. Parmenter, A. J. Thomson, W. S. Morlock, G. O. Merson, Toronto.

The Dominion Government has been notified by the British Government that the latter will not renew its share of the subsidy for the contract for a steamship service between Halifax and St. John and the British West Indies, when it expires at the end of June. The respective Governments have hitherto each subscribed $67,500 a year. The present contract is with Pickford and Black, who engaged to employ only vessels of British register, in the service.

T. and J. Harrison, Liverpool, Eng., operating the Harrison Line, announce that they have established a service to Pacific ports, including Vancouver and Victoria, B.C., the round trip to be accomplished in four months. Balfour, Guthrie and Co., are acting as agents for the line, and it is reported that they are negotiating with the Great Northern Ry. for a lease of waterfront lots along Burrard Inlet, for the erection of wharves and warehouses, in connection with this service.

The Dominion Government has signed a contract with the New Zealand Government and the Union Steamship Co., of New Zealand, for a direct monthly steamship service, commencing in August, between Vancouver, Victoria and Auckland, calling at Honolulu and Suva, for five years, for an annual subsidy of £37,090 18s. 2d. It is expected that the New Zealand Government will also contribute to the service. It is stated that the question of the renewal of the contract for an Australian service was to be taken up by the Canadian and Australian Premiers at the Imperial Conference, in England, in May.

The Steamship Cheronea Co.'s s.s. Cheronea, managed by Wm. Thomson and Co., St. John, N.B., is reported to have been sold to a Greek company. She was built at Port Glasgow, Scotland, in 1897, and was transferred from the British register to the Canadian register, in 1909, together with other vessels managed by the same firm. She is equipped with triple expansion engines with cylinders 25, 41 and 66 ins. diar., by 42 ins. stroke, 294 n.h.p. Her dimensions are, length, 324.7 ft.; breadth 47.9 ft.; depth, 22.6 ft.; tonnage, 3,189 gross, 2,060 register.

The winter navigation season at St. John, N.B., closed May 10, with the departure of the s.s. Kwarra, for South Africa. The total number of steamships arriving at the port during the season was 135, of which 112 loaded outward cargoes. The total shipments outward were valued at $23,669,073, of which $15,322,437 represented Canadian goods. In addition to this amount, silver ore and furs valued at $1,800,000 were also shipped. There was a falling off in the shipment of live stock, grain and flour, as compared with the previous year. There was a considerable increase in the imports and inward passengers.

Press reports from Montreal, May 10, stated that announcement would be made shortly, of the awarding of the mail contract between Great Britain and China, to the Imperial Steamship Co., in conjunction with the Canadian Northern Ry. The Imperial Steamship Co., was recently incorporated, to operate a line of steamships across the Atlantic, with the United Kingdom port at Blacksod Bay, Ireland, and the Canadian port at Halifax, N.S. In connection with this it is proposed to build a railway across Ireland, and connect with England, by special car ferries, or quick passenger steamship service. It is stated that Mackenzie, Mann and Co., have considerable interest in the project.

The Dominion Premier, in response to questions in the House of Commons, May 10, stated that the mail contract, for which a subsidy of $500,000 a year was paid, was with the Allan Line, and that it would not be renewed. He continued, "We have decided that so far as freight and passenger service is concerned the service should be self-supporting to the St. Lawrence, though for the winter service to St. John and Halifax, it may be necessary to continue the subsidy for some time longer. For the St. Lawrence, instead of this subsidy, we will pay for the carriage of mails, by the pound. We do not want to discontinue too suddenly, and will renew the contract for one year. We believe that for the Atlantic Canada should have a faster service than 18 knots."

Maritime Provinces and Newfoundland.

The Department of Public Works received tenders, May 31, for the construction of a landing wharf at Cape Rouge, N.S.

The Dominion Atlantic Ry. Co.'s steamships Prince Arthur and Prince George have been equipped with wireless telegraph apparatus.

The ferry boat, operating across the St. John River, between Edmundston, N.B., and Madawosky, Me., upset, May 1, and five of the occupants were drowned.

The Eureka Lumber Co., Ltd., has been incorporated under the New Brunswick Companies Act, with a capital of $80,000, and office at Bathurst, to carry on a gen-

SAVINGS DEPARTMENT—Interest allowed on deposits from date of deposit.

eral lumbering business, and in connection therewith to own and operate steam and other vessels.

The ferry service at Chatham, N.B., which, it was feared, would be suspended, owing to the financial loss incurred, has been continued with increased rates for ferriage. The Provincial Government provides a subsidy of $500 a year for the service, which amount is stated to be inadequate.

The following steamboats, owned by Burnham, Morrill and Co., for whom I. H. Mathers and Son, Halifax, N.S., act as agents, will be operated during the season, with captains and engineers, respectively, as given:— Robie M., R. J. Gilbert, G. E. Scott; Mary Jane, R. A. Hines, J. McCanell.

The deputation from Halifax, N.S., which recently waited on the Government at Ottawa, returned May 5, and reported that it was probable that the work of enlarging pier 2 would be proceeded with immediately, making it 800 ft. long and 300 ft. wide. Other work, which would probably be undertaken shortly, includes a temporary shed on pier 9, and the construction of a new pier on the Cunard property.

The British Canadian Shipbuilding and Dock Co., Ltd., the incorporation of which was announced in our last issue, is reported to have under consideration the establishment of a shipbuilding plant and dry dock at Sydney, N.S. It is reported that a site has been selected in Sydney harbor, and that tenders for the construction of the proposed vessels for the Canadian Navy will be submitted to the Government on behalf of the company, in which the Fairfield Shipbuilding Co., of Glasgow, Scotland, is interested.

The St. John River Steamship Co., has issued a writ against the Crystal Stream Steamship Co., asking damages for the placing of the steamboat Majestic on the Fredericton route in violation of an agreement made between the two companies, that it would not operate a vessel on that route, nor on the Washademoak route, nor interfere with any wharves or terminals held by the former company. The same company has also issued a writ against M. D. Austin to restrain him from giving a lease of the Star Line wharf and warehouse at Indiantown, N.B., to the Crystal Stream Steamship Co., and to compel him to lease it to the St. John River Steamship Co.

The Dominion Parliament has voted $150,000 for the construction of a new canal at St. Peters, N.S. The details of the proposal have not been worked out. It is estimated that the cost of the work will be about $300,000. Whether the existing canal will be abandoned or not has not been decided. The matter is under consideration, but the main difficulty in the way of enlarging the present canal is the fact that to do so would necessitate its being closed for a year, which would be a serious matter.

Province of Quebec Marine.

At a recent meeting of the Quebec city council, the question arose as to the construction of the Levis Ferry Ltd., summer boats, and as to whether they were to be built in accordance with the contract, the mayor stating that he had received no reply from the company on the subject.

Revillon Freres Trading Co., Ltd., has recently been incorporated with a capital of $2,000,000, and office in Montreal, to take over all the assets and liabilities of Revillon Bros., Ltd., and to carry on the business as heretofore, including the owning and operating of steam and other vessels, etc.

The Campbellton and Gaspe Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000, and office at Fraserville, Que., to navigate the inland waters and other waters outside of Canada, and especially on the St. Lawrence River and its tributaries, and in the Baie de Chaleur, and in connection therewith to own and operate steam and other vessels. The incorporators are G. A. Binet, N. Dion, A. Stein, A. Benoit, E. Charrette, and A. Binet, Fraserville, Que.

In the case of the Quebec and Levis Ferry Co., against the Levis Ferries Ltd., the respondent's motion to dismiss the appeal, was rejected with costs recently. This case, which relates to the fining of the Q. & L. F. Co.'s manager, for contempt of court last year, will now be heard by the Appeal Court. In another case, connected with the Levis Ferries Ltd., A. Gourdeau, petitioner for a writ of mandamus, the city of Quebec, defendant, and A. Bernier, intervening, the motions of the defendant and the intervener, to dismiss the appeal, were both granted, May 8, with costs against the appellant.

We are officially advised that the floating dry dock, which is to be installed at Montreal by Vickers Sons and Maxim, Ltd., will be of the first class, with a lifting capacity of 25,000 tons, built of steel in three detachable sections, and will be of the following dimensions:— total length, 600 ft.; width over all 135 ft.; length on keel blocks, 550 ft.; clear inside width, 100½ ft.; depth of hull from bottom to top of keel blocks deck, 17 ft.; height of keel blocks, 4 ft. The cost is estimated at $4,228,710, and the Government will pay a subsidy of 3½% a year for 35 years, on $3,000,000.

The Fairhaven Transportation and Coal Co., Montreal, the incorporation of which, we announced in our last issue, will operate the steamboat Rock Ferry, during the season, in the coal trade, between Fairhaven, N.Y., and Montreal and Quebec, and she will probably take wood pulp as return cargoes. The vessel, which was formerly known as Merrimac, was recently purchased from the Gilchrist Transportation Co., Cleveland, O. She was built in 1882, and is equipped with fore and aft compound engines, with cylinders 21 and 48 ins. diar., by 40 ins. stroke, of 485 i.h.p., supplied with steam by a fire box boiler 9 by 15½ ft., at a pressure of 90 lbs. Her dimensions are, length, 235 ft.; breadth, 41 ft.; depth 21 ft.; tonnage 1399 gross, 1202 register.

The Montreal Harbor Commissioners' steam tug Sir Hugh Allan, which was built at Barrow-in-Furness, Eng., has has been specially designed for use as a tug, but in addition, she has been specially strengthened forward and fitted with suitable ballast tank arrangement, so that she may be utilized as an ice breaker, and as a cruiser for inspection purposes. She will be rated at the highest class at Lloyds', and is equipped with two sets of triple expansion engines having an i.h.p. of 1,300. The bridge deck, which extends the full width of the vessel, has chart and wheel houses at the forward end, and four staterooms, aft. The dining saloon, with accommodation for 16 persons, is on the deck below. There is a complete electric light installation with powerful searchlight. Her dimensions are, length, 130 ft.; breadth, 26 ft.; depth, 13 ft.

Ontario and the Great Lakes.

The Dominion Parliament has voted $50,000 for improvements in Kingston harbor.

The Department of Railways and Canals received tenders, May 31, for dredging the Murray canal.

The Department of Railways and Canals received tenders, May 31, for improvements at Port Colborne.

The name of the steamboat Stranger, no. 103878, registered at Kingston, has been changed by order in council to Lamonde.

The name of the steamboat Calumet, no 103921, registered at Peterboro, has been changed by order in council to Winnett.

The Public Works Department has awarded the contract for dredging at Toronto, to R. Weddell and Co., Trenton, Ont.

Capt. Frank Duetta, a well known navigator of Lake Ontario and the River St. Lawrence, died at Picton, May 15, aged 65.

The Nipissing-Pontiac Steamboat Co., New Liskeard, has placed the steamboat Aileen in service on Lake Timiskaming, with G. Miller, as captain.

The Merchants Mutual Line, Ltd., is building an addition to its shed on the Simcoe St. wharf, Toronto, making it approximately 300 by 150 ft. wide.

The Hamilton Ferry Co., Hamilton, has appointed J. Gillem, captain, and A.

The Inland Revenue Department received tenders, May 29, for the privilege of ferrying across the Ottawa River between St. Thomas d'Alfred, Ont., and Fassett, Que.

The Montreal Transportation Co.'s Stormount, which grounded between Longue Pointe and Pointe aux Trembles May 6, was released, with practically no damage, the same day.

The Keystone Transportation Co.'s steamboat Keystone, ran aground on the Vidal shoals, near Sault Ste. Marie, May 5. She was released by tugs and proceeded on her trip.

The Department of Railways and Canals has awarded the contract for the work of improving the lower entrance to the Farrens Point canal, to the Randolph Macdonald Co., Toronto.

The Department of Railways and Canals will receive to June 6, tenders for the construction of an extension to the north mooring pier at the upper entrance to the Sault Ste. Marie canal.

The Dominion Parliament has voted $500,000 for further harbor and river improvements at Fort William and Port Arthur, and $15,000 for an addition to the Customs House at Port Arthur.

The Ontario and Quebec Navigation Co.'s steamboat Aletha, which was driven ashore in Navy Bay, Kingston, May 1, after being released, May 7, was dry docked at Kingston for repairs.

An order in council has been passed changing the name of the steamboat Waubaushene, no. 85,415, registered at Midland, to D. J. Burke. The register gives the port of registry as St. Catharines.

The Inland Lines steamboat Emperor, which has been built at Collingwood, left there on her first trip, May 3. On May 19, she broke her shaft and was towed to Detour, whence she was taken to Port Arthur for repairs.

The Niagara Navigation Co. is building a structural steel shed, 250 ft. long, on pier 22, at Toronto, to replace the shed destroyed by fire last summer. It will be used for freight purposes, and will cover a waiting room, ticket offices, etc.

During the past winter the Inland Lines steamboats Donnacona and Strathcona were completely overhauled, to enable them to enter the package freight trade this season, instead of the ore trade, for which they were originally built.

The Turbine Steamship Co.'s s.s. Turbinia, which was entirely overhauled during the winter, had a trial trip, May 17, and was placed on her route between Toronto and Hamilton, May 20. The repairs and improvements cost about $10,000.

The Buffalo, Lockport and Rochester Ry. steamboat Olcott, has been placed on the route between Toronto and Olcott Beach, this summer. It is said that this vessel was formerly known as Lakeside, and built at Toledo, Ohio, about six years ago.

The underwriters are offering a reward of $1,500 for information indicating the exact location of the car ferry Marquette and Bessemer No. 2, which sunk, during a storm, in Lake Erie, in Dec. 1909. A further $3,500 will be paid to the same informants, if, and when, the car ferry is successfully raised.

The Inland Lines steamboat Donnacona, with a full cargo of grain from Fort William, struck the bank in the Welland canal, near Port Colborne, May 8, and returned to Port Colborne, where her cargo was discharged. She subsequently proceeded to Buffalo for examination and repairs.

Press reports state that arrangements are being made for the operation of a line of steamboats, between Kingston and Clayton, and Kingston and Cape Vincent, one trip being made daily on the first route and two trips daily on the second. B. W. Folger, Kingston, is said to be interested in the project.

The following is a list of the steamboats operated by the Upper Ontario Steamboat Co., New Liskeard, with their respective captains and chief engineers: Champion, A. L. Casselman, G. Willis; Gipsy, L. Bethune, R. T. McCaw; S. & Y., R. Hansen, J. McCaw; St. Antoine, G. Miller, T. Arbin; Wenona, J. S. Inkster.

The steamboat Geneva, which is reported to have been purchased recently by the Peterboro and Lake Simcoe Navigation Co., for operation between Peterboro and Rice Lake ports, was built at Orillia in 1905. She is screw driven, and is equipped with engine of 10 n.h.p. Her dimensions are, length, 80.7 ft., breadth 16.3 ft., depth 5.3 ft.; tonnage, 92 gross, 58 register.

A deputation representing the municipalities between St. Catharines and Port Dalhousie, waited on the Minister of Railways and Canals, May 10, to ask that the Grenville route for the proposed new Welland canal be chosen. The Minister in reply, stated that surveys were being made, with the object of deciding the best route, and in reaching a final decision, the representations of the deputation would not be lost sight of.

The U.S. Lake Survey reports the levels of the Great Lakes, for April, in feet above tidewater, as follows:— Superior, 600.61; Michigan and Huron, 579.44; Erie, 571.45; Ontario, 245.44. Compared with the average April levels for the past ten years, Superior was 1.33 ft. lower; Michigan and Huron, 1.11 ft. lower; Erie, 0.86 ft. lower, and Ontario, 0.94 ft. lower. It was anticipated that each of the lakes would rise 0.3 ft. during May.

The Dalhousie Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and office at Toronto, to purchase, lease, charter or otherwise acquire and operate steamships, orother vessels propelled by any other motive power or device; to own piers, wharves, docks, dry docks, terminals, warehouses, etc. The incorporators are G. F. Macdonnell, R. H. M. Temple, A. J. Mitchell and J. B. Robertson, all of whom are connected with the Canadian Northern Ry., Toronto.

The Engineer Office of the U.S. War Department, will receive tenders to June 29, for the construction of lock masonry at the Sault Ste. Marie canal, Mich. The work to be done includes the furnishing of all necessary plant, labor and supplies, and the building of a masonry lock and a portion of the approaches, with pump well, tunnels, etc., and the furnishing of cement and certain re-inforcement and metal parts to be built into the masonry. The estimated quantities, include 2,000 cubic yards of excavation, 138,000 cubic yards of concrete in lock and canal walls, 35,000 cubic yards of concrete elsewhere than in walls, 26,000 lineal feet of drilling for anchor rods, 215,000 barrels of Portland cement. 385 tons of square cold-twisted steel bars, 215 tons of anchor rods in rock with nuts and square plate washers, 150 tons of wire cloth 35 tons miscellaneous steel, iron and castings, 30 tons sheet lead stop waters. Forbs, chief engineer of the ferry steamboat Ivan R. for the current season.

Manitoba, Saskatchewan and Alberta.

The Dominion Public Works Department has accepted the plans for the construction of a wharf on the south side of the Saskatchewan River, at Prince Albert, Sask., and tenders are being called for. The wharf will be 225 ft. long.

The Dominion Government is having built, at Prairie Creek, Alta., a fire patrol boat, to run on the Athabasca River, as far north as Mirror Landing, at the mouth of the Lesser Slave River. It will be equipped with a powerful engine on account of the strong currents encountered.

A press report from Athabasca Landing, Alta., states that in addition to two steamboats at present under construction there, for operation on the Athabasca River, a contract has been placed for the building of 80 flat boats, making 150 flat boats in all, to be built there this season.

The House of Commons has voted for harbor and river works in Manitoba, Saskatchewan and Alberta, as follows: Manitoba, Fairford River, to pay for extra work thereon, with interest accrued, $6,709.12; Gimli wharf extensions, $7,000; Red River, St. Andrews locks and dam, additional amount to complete payments, $19,385; Red River, St. Andrews dam, construction of approaches, $63,000; St. Andrews rapids, raising road, etc., $1,000; St. Andrews Rapids, archway, $5,060; Victoria Beach bay, harbor, breakwater and wharf, $12,000. Saskatchewan and Alberta, surveys of rapids, etc., on North and South Saskatchewan Rivers and other navigable streams, further amount required, $10,000.

B.C. and Pacific Coast Marine

The Royal City Navigation Co.'s steamboat Paystreak's officers for the current season are, captain, R. C. Menten, chief engineer, A. McLeod.

The C.P.R. British Columbia Coast Service s.s. Joan after being thoroughly overhauled and repaired, has been replaced on her route between Vancouver and Naniamo.

The official enquiry into the wreck of the s.s. Sechelt, off Church Point, on Mar. 24, was opened at Victoria, May 16, before Justice Martin, and Captains Neurostos and Reid.

The C.P.R. has filed with the Minister of Public Works, at Ottawa, plans of a wharf to be built on water lots 8 to 12, inclusive, on the Fraser River at New Westminster.

Capt. A. A. Sears, master of the s.s. Iroquois, which was wrecked, with considerable loss of life off Sydney, Apr. 10, was recently committed for trial on a charge of manslaughter.

J. H. Bonser and W. Alexander have been appointed, respectively, captain and chief engineer of the Prince Rupert-Skeena Transportation Co.'s steamboat Inlander, for the current season.

The Dominion Parliament has made provision for harbor and river improvements in the province, as follows:—Arrow Lakes, improvements at narrows, $25,000; Boswell, wharf, $7,500; Columbia and Kootenay Rivers, wharves, further amount required, $19,500.

The C.P.R. British Columbia Coast Service s.s. Princess Alice, which is under construction at Walisend, Eng., is being pushed forward, and it is expected that she will be completed before the end of the year. Her dimensions are, length, 210 ft., breadth 40 ft., depth of hold 16 ft.

The steamboat Roche Point, recently built at Vancouver, for the Imperial Car, Shipbuilding and Drydock Corporation, and leased for a year to the North Arm Steamship Co., had a trial trip to Indian River Park, May 6. She is 76 ft. long, with 17 ft. beam, and a capacity for 150 pasengers.

The C. P. R. British Columbia Lake and River Service steamboat Bonnington, had a trial trip on the Arrow Lake, May 10. She was built by the Polson

Iron Works, Toronto, and shipped to British Columbia in sections, where she was assembled and re-constructed. A full description of this vessel was given in our Nov. 1910 issue.

The British steamship Georgia, which was formerly under charter to the Canadian Mexican Pacific Steamship Co., for the service between Vancouver and Salina Cruz, and which has been lying idle since the charter expired, last June, is reported to have been sold to a Japanese firm. She was built at Newcastle, Eng., in 1889. Her dimensions are, length, 335 ft.; beam, 40 ft.; depth, 25 ft.

With reference to the vessel, which we mentioned in our last issue, that the C.P.R. is to build, for its Kootenay Lakes service, we have been officially advised that her exact character has not been decided upon. The hull will be of steel, and she will be a sternwheeler, drawing not more than two feet of water. The general dimensions will be, length 200 ft., beam, moulded, 38 ft., or 44 ft. over guards; depth 7½ ft.

The Dominion Government has entered into an agreement with the Esquimalt Graving Dock and Shipbuilding Co., to pay a subsidy of 3½% on an expenditure of $2,637,801.26, for 35 years, in aid of the construction of a dry dock and ship building and repairing plant at Esquimalt. The dimensions of the proposed dock are as follows:—along keelson, from gate seat to head of dock, 900 ft.,; width at coping, 128 ft., width at bottom, 100 ft.; depth below top of coping, 41 ft., or at ordinary water spring tide, 35 ft. Bullen Bros., Esquimalt, and Denny Bros., Dumbarton, Scotland, are chiefly interested in the project.

The C.P.R. has awarded a contract to Bow & Maclachlan, Paisley, Scotland, for the construction of a steamship, for its B.C. and Pacific Coast Service. It will be operated on the Skagway and Northern British Columbia route, as well as in the Queen Charlotte Islands trade. She will be fitted with very large hatches and gear for handling heavy weights, and will be comfortably fitted up for passengers. She will have a larger cargo capacity than any of the other Coast passenger vessels, approximately 1,200 tons, and accommodation for about 200 first class passengers. The machinery will include triple expansion engines of 2,000 i.h.p., driving a single screw, supplied with steam by three Scotch marine boilers, and in addition she will be equipped with tanks, all arranged for generating steam with oil fuel. Her dimensions will be, length 245 ft., beam 44 ft., depth of hold 18 ft. It is anticipated that she will be finished in time to sail from the Clyde by Nov. 1.

A number of changes have been made in the harbor regulations generally, and in addition, some special regulations have been made, applying to Vancouver, Victoria and Esquimalt, respecting anchorage, towing of logs, etc.

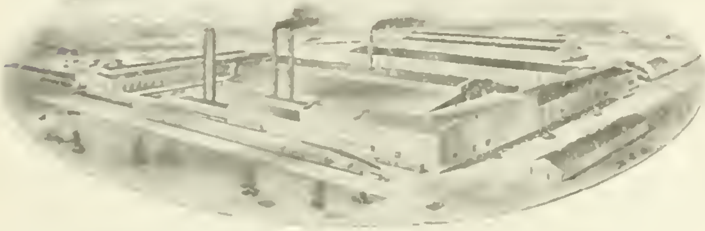
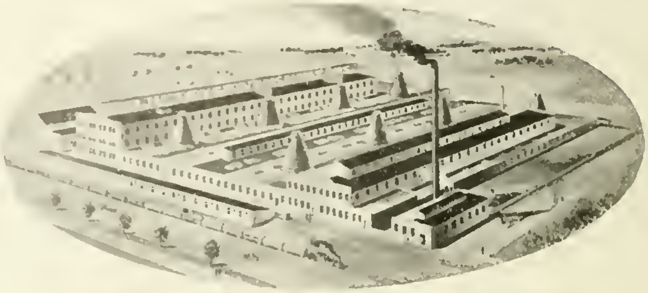
IMPORTANT ANNOUNCEMENT



Main Office and Works of The Ohio Brass Company.



The Ohio Brass Co.'s High Tension Insulator Plant.

¶ The exclusive sales arrangement under which our Canadian Sales Agents have sold our materials in Canada during the last few years has been terminated and the entire Dominion of Canada has been assigned to our own personal representatives.

¶ The remarkable progress of Electric Railway and Power Transmission projects in Canada and the many recent extensions and additions to our large line of materials, has made this step necessary in order to properly maintain our trade relations.

¶ The great advantage, both to the trade and to ourselves, of coming into direct personal contact with each other through the medium of our trained representatives (men who through years of association with us are familiar with all the details and uses of our entire line) will be instantly appreciated.

¶ For the present our representatives will have no permanent Canadian addresses as they will devote their time to calling upon the entire trade and for this reason all correspondence should be addressed direct to our Main Offices at Mansfield, Ohio, where every provision has been made to handle it with the utmost dispatch.

¶ Our sole aim is to produce materials which will render the greatest amount of efficient service and this is borne out by the fact that a very considerable number of the most important Electric Roads and Transmission Companies in the U.S., and a constantly increasing number in Canada regard O-B Railway Materials and Hi-Tension Insulators as the highest standard of excellence in design, material and workmanship.

Some of the Materials we Manufacture

O-B Trolley Material

Dirigo Insulation,
Pole Brackets,
Hangers, Ears, Clamps,
Frogs and Cross-overs,
Catenary Material,
Section and Strain Insulators,
Trolley Wire Splicers, etc.

O-B Bonding Devices

All Wire Rail Bonds,
Bonding Tools,
Channel Pins,
Bonding Clamps,
Third Rail Insulators.

O-B Car Equipment Specialties

Tomlinson Car Couplers,
Electric Car Signal System,
Air Sander Valve and Trap,
Fire Hose Bridge, etc.

O-B Transmission Material

O-B High Tension Porcelain,
Insulators, Wall Tubes and Bushings, Pins, etc.

Books for Railway Engineers

BRIDGE AND STRUCTURAL DESIGN.

By W. C. Thomson. Second edition, entirely rewritten. This book has been developed from lectures given by the author, the object of which has been to teach the elements of bridge and structural design in a simple and practical manner. Both analytical and graphical methods have been employed for obtaining stresses, and the one which seemed best suited for any particular subject has been adopted. Price $2.15, Postpaid.

THE DESIGN OF TYPICAL STEEL RAILWAY BRIDGES.

By W. C. Thomson. This work is a sequel to the author's "Bridges and Structural Design," and, like it, has been developed from a series of lectures given by him. The structures chosen for treatment represent the types of railway bridges most generally in use, and have been selected because they are best suited to illustrate the problems which present themselves most frequently to the bridge designer. Price $2.00 Postpaid.

FIELD PRACTICE OF RAILWAY LOCATION.

By W. Beahan, B.C.E. The object of this book is to record the methods commonly used by engineers in the West in the location of railroads. The author was for some years chief of locating party in Gould's Southwestern series of railroads, and he has written for the use of others what he has learned through these years of experience and study. Price $3.15 Postpaid.

SPECIFICATIONS AND CONTRACTS.

By J. A. L. Waddell. Including examples for practice in specification and contract writing, together with notes on the law of contracts, by J. C. Wait. Price $1.15 Postpaid.

REINFORCED CONCRETE.

Part 1 by A. W. Buel, C.E., and parts 2 and 3 by C. S. Hill. This book is a treatise for designing and constructing engineers following American practice and governed by the conditions which prevail in America. Theoretical discussions have been omitted, and in their place have been supplied practical working formulas, examples of representative structures and records of actual practice in the selection of materials and methods of workmanship and construction. Price $5.15 Postpaid.

AMERICAN CIVIL ENGINEERS' POCKET BOOK.

By M. Merriman, Editor-in-Chief and twelve associate editors. The thirteen sections of the book contain 75 chapters, 620 articles, 495 tables, and 914 numbered figures which are equivalent to about 1,200 ordinary cuts since in many cases several similar figures are grouped together. The number of tables is so large that it is impracticable to mention them here, for the mere list of their titles would occupy over eight pages of fine type. The thirteen sections fill 1114 pages and they are followed by a detailed alphabetical index which occupies 66 pages. Price $5.25 Postpaid.

THE RAILWAY TRANSITION SPIRAL.

By Prof. A. N. Talbot. The railway transition spiral here presented is a flexible easement curve of general applicability and comparatively easy analysis. The spiral is easily applied to a variety of field problems and to a wide range of location and old track conditions. Price $1.60 Postpaid.

TREATISE ON WOODEN TRESTLE BRIDGES.

According to the present practice on American railroads. By W. C. Foster. Third revised and enlarged edition. Price $5.15 Postpaid.

RAILROAD CURVE TABLES.

By R. S. Henderson. Containing a comprehensive table of functions of a one-degree curve, with correction quantities giving exact values for any degree of curve; also trigonometric tables and formulas, and a method of finding any function of a curve, of any degree or radius, without a field book. Price, $1.60 Postpaid.

RAILWAY RIGHT-OF-WAY SURVEYING.

By A. T. Frye. Fifth edition, revised. Price $1.60 Postpaid.

ECOMOMIC THEORY OF RAILWAY LOCATION.

By A. M. Wellington, C.E. An analysis of the conditions controlling the laying out of railways to effect the most judicious expenditure of capital. Price $5.00 Postpaid.

TYPES AND DETAILS OF BRIDGE CONSTRUCTION.

By F. W. Skinner, C.E. A manual of bridge design in three volumes. Each volume is complete and entirely independent from the others. Vol. I., Arch Spans. Examples of constructed wooden, combination, wrought iron and steel arches for highway and roalroad bridges. Price $3.00 Postpaid. Vol. II. Plate Girders. Examples of constructed railroad and highway bridges, describing and illustrating the essential features of calculation, design and manufacture of plate girders in the United States, with analytical and practical discussions by prominent bridge, consulting and manufacturing engineers. Price $4.00 Postpaid. Vol. III. Specifications and Standards for Short Railroad Spans. Recent practice of great railroads, leading bridge shops and eminent bridge engineers is exemplified by abstracts, tabulation and comparisons of many notable specifications, with discussions by eminent railroad bridge engineers. Price, $3.00, Postpaid.

RAILROAD ENGINEERS' FIELD BOOK AND EXPLORERS' GUIDE.

By H. C. Godwin. Especially adapted to the use of railway engineers on location and construction, and to the needs of the explorer in making exploratory surveys, 357 pages, 100 figures. Price, $2.65, Postpaid.

The prices of books must in all cases accompany the order. Cheques must be payable at par in Toronto.

We can supply you with any Technical Book published.

THE JUNE RAILWAY MECHANICAL CONVENTIONS.

The two great railway conventions of the year, the American Railway Master Mechanics' Association and the Master Car Builders' Association, were held at Atlantic City, the former on June 14, 15 and 16, and the latter on June 19, 20 and 21. The most important features of these annual conventions are the reports of the standing and special committees, the principal ones of which are given on this and following pages, either in full or in abstract.

SMOKE PREVENTING DEVICES.

The Master Mechanics committee on smoke preventing devices for firing up locomotives at terminals, E. W. Pratt, Assistant Superintendent of Motive Power, C. and N.W. R., Chicago, Chairman, reported as follows:

On account of the laws and regulations of large cities, relative to the prevention of smoke, your executive committee appointed this committee to collect from the various members such information as might be obtainable with reference to the prevention of smoke during the critical period of time when locomotives are being fired up at terminals. That smoke prevention is extremely difficult at this time is evidenced by the fact that most large cities specifically exempt from violations the smoke emitted from boilers while being fired up. Although only 33 roads replied to your committee's circular of enquiry, among these were included many of the largest companies, and especially those having terminals located within the large cities where the restrictions are most severe; hence we believe this subject has been more thoroughly canvassed than might otherwise appear. The various reports and the experience of the individual members of your committee would lead to the following recommendations:

Boiler Conditions Before Firing Up.—The best results are obtained by filling up locomotive boilers with hot water previous to firing up; the temperatures reported varying from 110° F. to over 200° F., the higher being preferred on account of aiding combustion and lessening the time required to raise steam in the boiler. Where hot water is not available, the temperature of water in the boiler may be raised by injecting live steam below the water line; but on account of the loss of time, the heating of the water, either before or while the boiler is being filled is recommended.

Induced Draft.—Two roads reported the use of large fans, connected with the smoke jacks above the roundhouse roof, as a means for producing draft. One of these roads advises that this device was used and tested for a considerable length of time, but was found unsatisfactory and abandoned. The other road is still experimenting along this plan in connection with a "smoke-washer," and is not yet ready to report upon its results, except as to its difficulty in the maintenance of the plant—the metal parts having been eaten out several times during the year's experiments. All other roads report the use of a roundhouse steam blower and the locomotive blower used exclusively.

Methods of Firing Up.—From the reports it would appear that almost every combination of wood, fuel, oil, shavings, cobs, coke and bituminous coal had been used, with more serious objections to some than others. Several roads reported extensive trials of coke, but its use has been almost entirely abandoned because the ashes and gases emitted from the smoke jacks are much more objectionable than smoke when roundhouses are located near viaducts or high buildings; furthermore, it is almost impossible for employes to work in the roundhouse when engines have to be moved from under the smoke jacks to do necessary work, and also the cost of coke is greatly in excess of other fuels in most sections of this country. While the smoke from wood varies considerably in accordance with the size, quality and amount used, still it is more generally employed for kindling fires than any other fuel where the greatest effort is being made to prevent smoke at such times.

James Anderson,
General Manager, Sandwich, Windsor and Amherstburg Railway, and President, Canadian Street Railway Association.

Apply Bituminous Coal Carefully.—The plan of raising steam to nearly working pressure by means of wood or coke alone has been tried by many roads, but abandoned when it was found that the same results could be obtained by adding bituminous coal carefully to wood fire after the temperature in the fire-box had been somewhat raised.

In general the conclusion is that although there are many devices for reducing the amount of smoke from locomotives after steam is raised and engines are working, and while it is possible by great care and attention on the part of the roundhouse force to ted during this period, at the same time we find no practical way to reduce the amount of smoke emit- entirely eliminate all smoke while firing up locomotives at terminals.

BEST CONSTRUCTION OF LOCOMOTIVE FRAMES.

Following is an abstract of the Master Mechanics Committee, H. T. Bentley, Assistant Superintendent Motive Power, C. and N.W.R., Chicago, Chairman.

At the convention of 1904 this subject was very ably handled by a strong committee, and in reading over the reports we find we are traveling over much the same road as they did, and notwithstanding the great increase in size of locomotives, the committee's recommendations still hold good and the frames still break. Cast steel, made to a rational specification, careful foundry manipulation, adequate and suitable annealing, was spoken of as one of the remedies for frame breakages at that time, and it still is the favorite material, if properly designed, made and annealed. The clip binder was then, and is now, more used than probably any other type, the bolt and thimble style having been discarded in modern practice, owing to stretch of bolts. The specifications suggested by the committee of steel-casting manufacturers, and submitted to the Association in 1904, are as follows:

Material, Acid open-hearth steel, .28 carbon, .05 phosphorus, .05 sulphur, .60 manganese.

Frames will be rejected that show: Less than .20 or over .35 carbon; over .06 phosphorus; over .06 sulphur; over .70 manganese.

Tensile strength per square inch, not less than 55,000 lbs.

Elongation in 2 inches, not less than 15%.

All frames to be annealed.

After seven years it would be interesting to learn from the members if these specifications are entirely satisfactory, or, if not, what changes should be made to make them so.

While the breakage of a frame is a serious handicap, especially during busy

seasons, yet the work of repairing has been simplified so that it is now possible to weld them in place with Thermit, oil, etc., and what used to be a two weeks' job, when all wheels had to be removed and frame taken to blacksmith shop, can now be repaired in place by dropping one pair of wheels and using oil, etc., and engine returned to service in a few days.

Following are the committee's conclusions and recommendations:—

That frame breakage is even more general and serious than we were at first led to believe, very few roads being free from this trouble. The longer the wheel base of engine, ordinarily, in combination with a roadbed having comparatively short curves, and with frames poorly designed or of inferior metal, or engines not properly kept up, the greater the trouble will be with frames breaking. This latter factor may not be reflected until after the engine has been put in good condition, and then a frame may finally break as a result of the previous poor condition of the engine.

We believe that with frames properly designed, if made of a good quality of cast steel, thoroughly annealed, with suitable cross bracing and engines kept up in reasonably good shape, breakage will practically be overcome.

That a cast-steel, one-piece frame, properly designed, of good material and thoroughly annealed, is better than a wrought-iron frame, because of the difficulty in welding up the large section in a perfectly satisfactory manner, and also because, in a casting, bosses, lugs, etc., can be added without the necessity of bolts and studs.

That a bar frame is better than a plate frame, this being the opinion of people who have used both; the plate frame causing about as much trouble with breakage in Europe as bar frames do in America.

The strap binder appears to be the favorite form of tying frame jaws together, although the cast-steel box binder, with adjustable wedges, has a number of friends, on account of its simplicity and ease with which it can be handled. The toes at base of jaws should be of sufficient depth and size to give plenty of metal to anchor to, whichever binder is used.

Cases have been reported where frame breakage was directly traceable to expansion of boiler not being properly taken care of by the use of sliding shoes; these shoes, if too tightly fitted or cramped in bolting, or if not lubricated, may prove unsatisfactory. Supporting boiler by means of vertical plates, if of sufficient strength, provides a satisfactory means of taking care of expansion without imposing undue strains upon the frames.

Mechanical Editor Wanted

An Associate Editor wanted, to take charge of the Railway and Marine World's Mechanical Department, dealing with railway rolling stock, machinery, shop practice, etc. A graduate in mechanical engineering preferred.

Applicants should give full particulars of educational qualifications, mechanical experience, etc., and state age and salary expected.

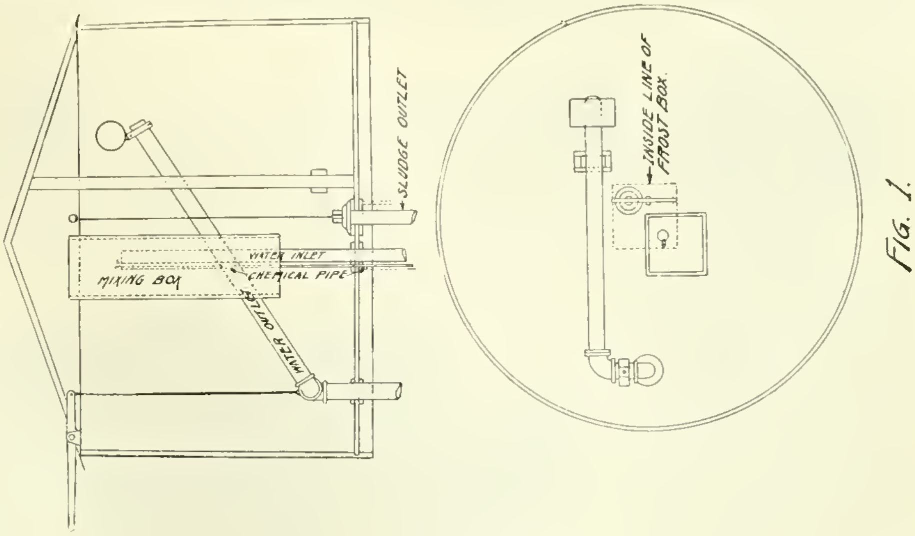
Applications will be treated as confidential if so desired.

Address the Secretary,

The RAILWAY AND MARINE WORLD
70 Bond Street, Toronto

We should recommend to steel manufacturers the necessity of making a study of locomotive-frame casting, and the proper annealing of same, as a number of roads are using wrought iron, but would prefer steel if they could secure reliable castings.

As a general proposition, frame breakage does not ordinarily occur until engine has been in service two years or more, the older the engine the greater the trouble; we have come across cases, however, where they have broken earlier than this on account of flaws, poor welds, or other defects.



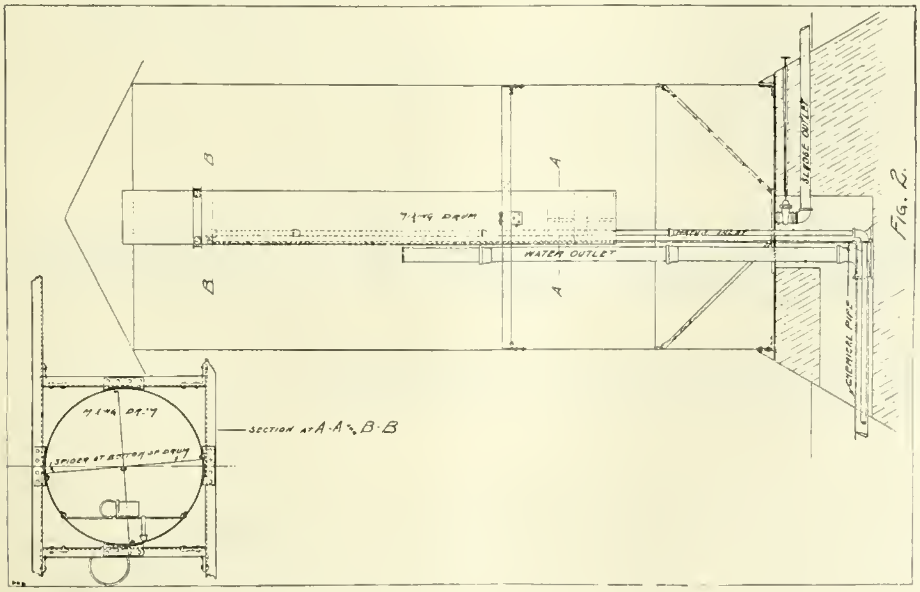
Treating Water for Locomotives. Fig. 1.

Treating Water for Locomotives.

The Master Mechanics Committee on the best method of treating water for locomotive use, when the density of traffic does not warrant water treating plants, H. E. Smith, Chemist, L.S. and M.S. Ry., Collinwood, Ohio, reported as follows:—Until within a few years, only two methods for the prevention of incrustation in steam boilers have been prominent, namely, boiler compounds and water-softening plants. The former, which include the familiar soda ash, aims to keep the incrusting substances in a soft, pulverulent condition until they can be blown or washed out of the boiler.

In locomotive service one of the difficulties connected with the use of boiler compounds is in applying them proportionally and regularly to all of the water. The plan of putting the matter in the hands of the engine crew was early found to be failure. The next step was to put the dose for a whole trip into the tender tank at the beginning of the run. This method involves a considerable and possibly harmful excess of compound at the beginning, and a corresponding deficiency near the end of the run. The obvious remedy is to transfer the base of operations from the locomotive to the wayside tank. To secure this, as well as some other advantages, separate softening plants have been adopted and have easily proved their usefulness. For small stations their use involves the difficulty of high fixed charges per unit of water treated. The small station must be able to respond to occasional heavy consumption for short periods and a softening plant having sufficient capacity for this purpose becomes expensive during normal times.

A very useful compromise between the two systems of treatment is an apparatus of simple construction which will mix the water uniformly with the proper proportion of some chemical solution which, although it will not actually remove incrusting solids, will act as



Treating Water for Locomotives. Fig. 2.

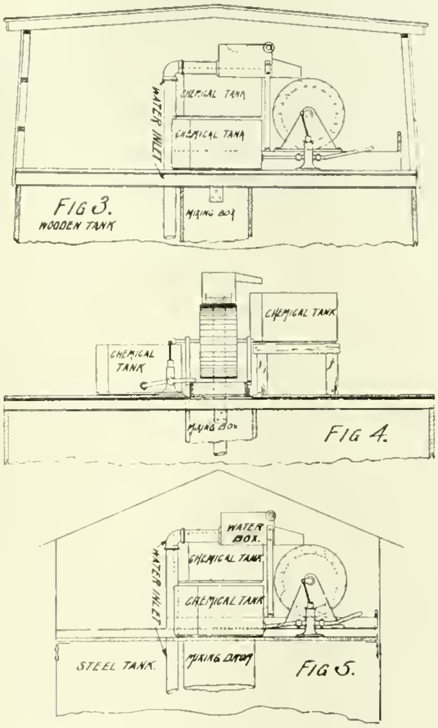
a boiler compound in keeping them in a soft condition in the boiler. If a fair storage capacity is provided, partial removal of incrusting matter may also be effected. The work of the committee indicates that few railroad officers realize the importance of this idea or the benefits to be derived from its systematic and intelligent application.

At track-trough stations soda ash (or other material) may be thrown directly into the trough, in regulated quantity, after each train passes. This crude but fairly effective method is used on one road at four stations, pending the installation of automatic devices. Much more systematic is the plan of pumping the solution with the water. This plan is used by seven roads. A small branch may be run from the water-pump suction to a tank of solution and the flow of the latter be regulated by a valve. This method has the advantage of producing a thorough mixture during the passage through the pump, but also sometimes causes deposits on the valves of the pump which interfere with their action. It is found preferable to pump the soda with a small power pump actuated by direct connection with some moving part of the water pump, thus insuring a correct proportional feed of solution. The discharge of the chemical pump should be carried to the large water tank independently of the water. In the water tank the chemical pipe should discharge close to the main water inlet in order to produce satisfactory mixture. As it is not practicable to run the small chemical delivery pipe for long distances, this system is not desirable when the tank is more than 100 feet from the pump house. When distances are greater the chemical apparatus should be separated from the pump house and transferred to a point close to the water-storage tank or to the top of the tank itself. In such cases, the chemical pump may be actuated by a positive displacement motor or water wheel through which passes all, or a definite aliquot, of the water to be treated. While such a device has long been used in full softening plants, it is not used for the simpler treatment, so far as the committee has learned, except on one road (the L.S. and M.S.). The same arrangement is suitable when water is taken from city supplies where the railway company has no water pumps.

For pumping chemical solutions, simple single-acting outside packed plunger pumps with outside check valves are much to be preferred. Plungers one to two inches in diameter and of six to 10 inches stroke are sufficient. Their attachment to any convenient moving part of a water pump is very simple. The essentials of the arrangement recommended for the usual wooden tub, when it is located near the pumping station, are shown in fig. 1. The water and chemicals mix in the central compartment, which may be merely a wooden box, and pass down and out at its bottom, rising gradually in the main part of the tank. The water is drawn off through the floating pipe and a sludge valve is also provided. Fig. 2 shows a similar arrangement for a steel tower. Owing to the larger settling space in the tower, a floating outlet is not necessary. If the water wheel or motor combination is required, it can be arranged as shown in fig. 3, 4 and 5.

The choice of suitable chemicals for the treatment of water under the conditions covered by this report is limited. It is very important to avoid the production of any sediment whatever, or else to provide both time and space in which to separate the sediment entirely. The separation of sediment in the pipes must obviously be avoided. When sediment must be avoided, as in ordinary wooden tanks when the water is used within two to four hours, soda ash, or possibly bicarbonate of soda, is the only reagent available. The latter is least apt to produce sediment. Neither reduces the total amount of incrusting matter, but both change it all to carbonate, or bicarbonates, so that the hard scale is largely avoided. This treatment has been found very beneficial on a number of roads. It is applicable to waters of moderate hardness. With very, very hard waters the amount of soda required to decompose the incrusting matter is liable to cause deposits. In this use of soda ash, as well as with soda ash placed directly in the tender tank, blowing and washing out must be done thoroughly at regular and sufficiently frequent intervals.

In the opinion of the committee the case well merits the small further elaboration of process and apparatus, sufficient to separate a considerable amount of sediment. For this purpose a steel tower, as shown, and the use of caustic soda are recommended. With correctly proportioned apparatus and proper adjustment of the soda, a water of 20 or more grains of incrusting solids, of which 25 to 50% is "permanent hardness," may be reduced to 10 grains, of which all is carbonate. In this manner a very troublesome water is reduced to one which will give very successful service, with reasonable care of boilers. So far as the committee is aware, this process is in use only on the Lake Shore and Michigan Southern, although after this report was practically complete it was learned that the Philadelphia and Reading used it some years ago.



Treating Water for Locomotives.
Figs. 3, 4 and 5.

One other reagent deserves mention, and that is barium hydrate. It has the great advantage of treating sulphates without introducing foam-producing alkali. When sulphate of lime is treated with barium hydrate, the lime ultimately finds its way to the sediment as carbonate of lime and the barium goes the same way as sulphate, insoluble in the water, which is then left entirely free from all the compounds concerned in the reaction. It should be borne in mind that barium hydrate is poisonous. The principal objection to its use is its cost. Not only is its price per pound higher than that of soda ash, but more pounds are required. It has, however, been used by a few roads on very high sulphate waters which could not be treated satisfactorily with soda. Theoretically, three pounds are required to do the work of one pound of soda ash in treating sulphates. In actual work, one road reports that five engines were treated one month with 4,290 lbs. of soda ash, costing $42.90, but, although this was all that could be used on account of foaming, the boilers were not clean. It was estimated that about twice as much, costing about $85, would have kept the boilers clean if it could have been used. For the same engines 13,000 pounds of barium hydrate, costing $390, was sufficient to keep the boilers clean. It must be borne in mind that these waters are very much worse than the average boiler water of the country.

Finally, it is urged that water purification of any kind should always be supervised by a competent chemist. The raw water should be analyzed occasionally and the chemical solutions, as well as the treated water, should be tested frequently.

Repair Equipment for Engine Houses.

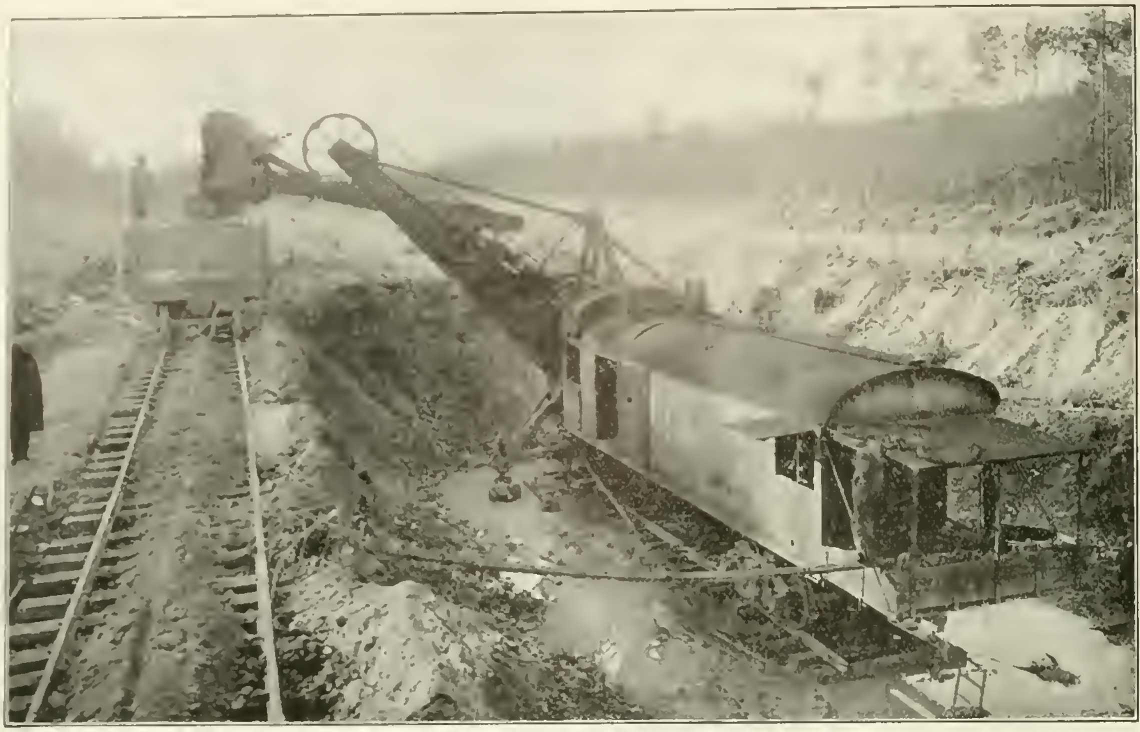
The Master Mechanics Committee, C. H. Quereau, Superintendent Electrical Equipment, New York Central Rd., New York, Chairman, reported as follows:—Your committee is impressed that this is a most important problem, worthy of careful study, and that on its correct solution efficient railroad operation depends as much as on any other single item in connection with train operation. We realize that no one solution will fit all conditions, and that each engine house should have special study. At the same time, we believe there are a few general principles which should be kept in mind in the design, personnel, equipment and management of all engine-houses.

Originally the word "roundhouse" was undoubtedly descriptive, but for a number of years it has not been. In short, there are at present few modern roundhouses which are round. Though there probably has been no confusion or uncertainty arising from the use of the word, for the sake of accuracy we venture to suggest the advisability of substituting the word "engine-house."

It seems axiomatic that locomotives should be worn out in legitimate service as soon as possible. The capital invested in a locomotive represents a certain total of earning capacity, and the sooner this total earning capacity is realized the greater will be the yearly returns on the capital invested. In other words, a locomotive should be in service, earning as large a percentage of the time, and in the engine-house or shop, spending as small a percentage of time and money, as possible. It also seems self-evident that the greater the efficiency of a locomotive, both in hauling capacity and fuel consumption, the greater the earnings of the capital invested in it, so that the conclusion that it should be kept as possible at one hundred per cent efficiency seems reasonable.

If it is a sound business proposition to wear out locomotives in service in as short a time as this can be done legitimately and to keep them as near one hundred per cent. efficiency as possible, these principles should be kept in mind in determining the extent to which repairs should be made at engine-houses, and this policy, once settled, in turn largely determines the repair equipment needed. In this connection we should not overlook the fact that any repairs made at engine-houses, more than light running repairs, increase the main shop capacity to a corresponding extent.

In order to obtain an approximate estimate of the net daily earnings of a freight locomotive, the following calcu-



BUILT BY MONTREAL LOCOMOTIVE WORKS, LIMITED

Atlantic Steam Shovels are built by the Montreal Locomotive Works, Limited, at Montreal, Canada. They are not built as steam shovels have always been built, but are designed to do more work for less cost. Every feature is established by experience and every improvement known to be correct in principle has been applied after demonstrating its value in actual practice.

Atlantic steam shovels have direct wire rope hoist. Rope is as strong as chain and wears nearly as long, sometimes longer. It is far safer and does not break without giving warning. It is replaced in one-third the time required for renewing or repairing a chain. Furthermore, having warning of wear, it may be replaced out of regular working hours before breakage, and therefore without interrupting the work. Direct wire rope hoist requires one sheave, and that a large one, instead of the five to seven small sheaves chain shovels require. Every sheave means additional friction and additional parts to maintain.

WE HAVE FIGURES TO PROVE

that the direct wire rope hoist saves in cost of maintenance, in cost of fuel and in increased yardage The Montreal Locomotive Works, Ltd., cannot afford to use any but the best materials We keep our engineers and our laboratories busy testing everything we use.

Our resources, knowledge and experience in engineering stand back of the product.

You cannot afford to purchase a steam shovel without investigating the Atlantic. Remember that even a fraction of a cent per yard means increased net earnings on a contract. Write us.

Atlantic steam shovels are built on the interchangeable plan. Every part is made in jigs or to gauges, and every part is sure to fit. Stocks are always available at our works at Longue Point, Montreal, Canada.

MONTREAL LOCOMOTIVE WORKS, LTD.

OTTAWA BANK BUILDING, MONTREAL, CANADA

lations have been made. The gross freight earnings of a trunk line for the year 1910 were divided by 365 to get the average daily gross freight earnings. This result was divided by the total number of freight engines owned, plus nine-tenths of the switch engines owned. It was assumed the operating ratio for freight service was 60%, leaving 40% net operating income. The result was that $45 was found to be the approximate daily net operating income from each locomotive engaged in freight service. This computation assumes each freight locomotive was in service every day. This means that we could afford to invest $900 capital at 5% in engine-house repair equipment for each extra day in service we could obtain for each freight engine owned, by making the repairs at the engine-house instead of at the main shop. Expressed more concretely, it means that, if the engine-house repair equipment kept each of 100 freight engines in service two extra days a year, the extra net operating income would be 5% on a capital of $180,000. This does not necessarily mean an increased net operating income, as it may, and in the end probably would, mean a smaller capital invested in freight locomotives.

While the fixed charges at main repair shops do not appear in reports showing the cost of locomotive repairs, it is evident they enter into costs and should therefore not be ignored. With a view to determining approximately the importance of this item, the figures for a shop at which no car repairs are made, repairing about 600 engines during 1910, have been taken. The average cost of repairs per engine, including labor and material, was found to be about $1,200, so there must have been a considerable proportion of the engines which received only medium and light repairs. This plant, including land, buildings, machinery and tracks, has a book value of about $1,000,000. Assuming that 10% of this value represents the fixed charges, these amount to $100,000 a year, or slightly less than $170 per year per engine receiving repairs at that point. It it interesting to note that the fixed charges amount to between 15 and 20% of the total amount charged at this shop to engine repairs for 1910.

The cost of fixed charges for another shop, at which, with the exception of some miscellaneous work, only locomotives are repaired, amount to $234.94 per year for each engine repaired, and are 13.2% of the total value of the plant.

In all probability it will be conceded it would be a waste of time and money to run a locomotive to the main shop to have a driving-box cellar repacked or the flues cleaned. Why? Because it would involve time lost from revenue service getting the engine to, through and from the shop, reducing the yearly earnings of the engine; necessitate the use of main shop space, increasing the capital invested in shops, or reducing the main shop output; congest the shop-track movements and disarrange the shop routine, thus delaying other more important shop work. At the main shop, though the item does not appear in the statistics showing the cost of repairs, there are the shop fixed charges, including interest on the investment, repairs, taxes and insurance, a no inconsiderable item. At the engine-house the fixed charges would be very much less, as they would not include those of the engine-house proper, the tracks, turntables, ash pits, coal chutes and other facilities necessarily provided, and would cover only the comparatively small investment in the shop building and machinery provided for repair work.

There can be little room for doubt that when there is a great demand for motive power, engine-house foremen and master mechanics, rather than send engines to the main shop, though this is near at hand, will take chances, resulting in breakdowns and delays; which would not be taken if they had repair equipment of their own. In other words, with tools and men under their immediate control and responsible for results, engine-house men will, in all probability, keep the motive power in better condition, more efficient and less liable to breakdown, and take a greater pride in making repairs quickly than when repairs must be made by an independent organization.

It is, we believe, common experience that the qualifications of engine-house employes should be quite different from those of repair-shop men. The work of the repair-shop man is steady and should be accurate, thorough and first-class in every respect, with the aim that a locomotive shall remain out of the repair shop as long as possible, and there is no pressing necessity that his job be finished by a certain minute. In contrast to this, the work of the engine-house man is spasmodic; at certain hours he is extremely busy, working under high pressure, and again has little to do. His chief care is to have the engines ready for their next run and in such condition that they will make at least a round trip successfully. If he accomplishes this, he is not criticized if his work is not exactly to blue-print or standard and rather coarse. His training makes him fertile in make-shifts to "get the engines over the road" without a breakdown or delay, which the shop man would, and should, refuse to countenance.

Probably because of this difference in ideals, viewpoint and methods of the shop man and engine-house man, when an engine goes to the main shop from the engine-house to have a certain part repaired it usually happens that a considerable amount of other work is done which would not have been done at the engine-house and could just as well have waited till a general overhauling was needed. In other words, when repairs, other than general, are made at the main shop, more work is usually done than is necessary. It is very likely the further fact that the shop man's experience is not such as to educate his judgment as to what work he can with safety let go, prompts and impels him to do more than necessary. Whatever the cause, there can be little doubt as to the fact. To those lacking the experience, it no doubt seems that this practice could be stopped by the issue of proper instructions and supervision, but proper instructions do not change human nature or life-long habits, nor does a reasonable amount of supervision seem to work the miracle.

It is commonly the case at engine-houses that tools are frequently missing or inefficient for lack of repairs, resulting in considerable useless expense not only for tools, but in time lost in hunting them and exasperating delays in making repairs. We believe the remedy for this is a tool room with some one in charge whose duty should include not only the issuing of tools on checks, but as well keeping the tools in good condition and a proper supply on hand.

If a locomotive must lay in the engine-house a day for lack of the material necessary to repair it, there follows a loss of earning power which, if expressed in dollars, would pay a good interest on a considerable investment in storeroom stock. It requires no labored argument to convince a motive-power official that a storeroom in connection with an engine-house is an essential, but not all of them appreciate its relation to the earning power of the equipment for which they are responsible. It is the opinion of your committee that a reasonable business basis on which to determine the most economical amount of stock to carry at engine-houses, assuming, of course, that stock carried is only that needed for engine-house repairs, is its effect in increasing the earnings of the locomotives.

We believe there should be kept at all important engine-houses an ample supply of spare parts, such as air pumps, lubricators, injectors and bell ringers, which should be used to replace defective apparatus whenever it will take less time to exchange than to repair, and as a general proposition, that important repairs to such accessories can be made to the best advantage at the main shops, where special tools and machinist specialists are available. It seems evident that the interest on the investment in spare parts must be less than the loss in earnings resulting from not having them.

The conditions under which engine-house work is of necessity done are much dirtier and more inconvenient than in the repair shop, and the rates of pay usually not so attractive. It follows that to get and keep a desirable class of men, engine-house conditions should be made as attractive and convenient for them personally as possible, including good ventilation and heat, lockers, toilet and washroom accommodations kept in first-class condition. It seems to us particularly important to have a system of ventilation which will quickly and thoroughly carry off the steam and smoke, which are necessary in an engine-house, that work may be done more rapidly and efficiently than would otherwise be the case.

It is not an unusual policy in equipping important engine-houses to use worn-out and obsolete tools. We believe this is short-sighted, not only because a big shop is better able to find profitable use for such tools and better able to keep them in repair, but engine-house conditions warrant the best of tools. If a tool is not efficient enough for repair-shop work it will generally pay to scrap it.

We should, therefore, when studying the requirements of round-houses, determining the kind of work to prepare for and the repair equipment needed, have in mind the following points:

Locomotives should be held out of service for repairs as short a time as possible and should be kept as near 100% efficiency as possible.

The effect on earnings of time saved by repairs made at engine-houses.

The effect on engine efficiency of repairs made at engine-houses.

The smaller fixed charges for repairs made at the engine-house, compared with those at the main shop.

The effect of storeroom stocks on engine earnings.

Engine-house men should have ideals and methods quite different from those of shop men.

It is important that engine-house conditions and facilities should be attractive and convenient to get and keep good men and increase their efficiency.

These conclusions can be generalized in the statement that locomotive repairs and repair facilities at engine-houses are warranted when they will result in increased earnings either because of more or better engine service obtained from a given number of locomotives.

Engine-houses may conveniently be classified under three heads: Those at minor division terminals, or the outlying ends of branch lines, where only very light repairs are made; those at important division terminals, and not in connection with important repair shops, and those in connection with repair shops.

At outlying engine-houses we assume there would be no power-driven machines and suggest the following list of tools, the number and sizes to be determined by local requirements: Twist drills; drill sockets, taps—including machinists' steam-chest, pipe, wash-out,

Russel Heavy Duty Dump Cars

RUSSEL LOGGING CARS

Superior in design. Built to accommodate any length of logs and of any capacity desired. ∴ ∴

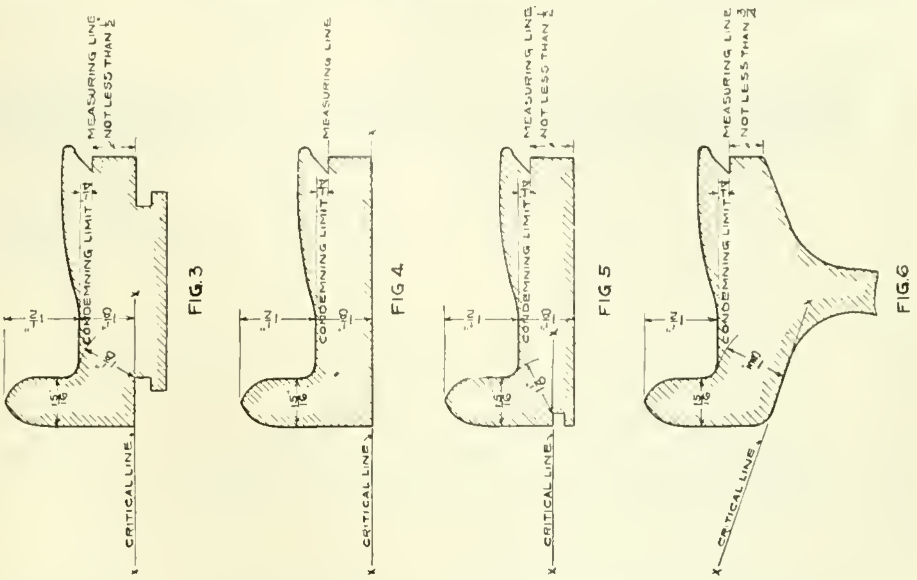
RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

straight and taper, stay bolt; dies to correspond; pipe stock and dies; hacksaws; straight edge; flue tools—caulking, rolls, expanders, beading; pipe cutters; jacks, sledges, drifts, crowbars, saws, brace and bits; twist drills, extra long; drill chucks, ratchets and braces; surfacer plates; tinners' bench shears; reamers, rod and taper; wrenches, socket, crowfoot, hexagon.

In considering equipment for engine-houses at important division terminals not connected with repair shops, it is assumed there will be no dissent to the opinion these should be equipped with all such tools and appliances as will expedite the movement of locomotives through the house and keep them in first-class repair as far as this can be done without a backshop overhauling. It will take but little thought to convince the inquirer that the returns on capital wisely invested in such tools will make big returns when the resulting increased earnings of the capital invested in locomotives is considered, not only because of the time otherwise lost in going to, through and from the main shop, but, as well, the fact that locomotives sent to the main shop for specific repairs almost invariably receive more than these, the additional repairs not postponing the date of the final shopping and being almost inevitably made because of the training and point of view of the repair-shop forces—men and foremen—as mentioned in a preceding paragraph. Nor should it be forgotten that engine-house repairs will reduce the delays due to breakdowns and increase engine efficiency.

As local conditions vary and as conditions should largely determine facilities, it follows that your committee's recommendations can be only general. With this understanding, we submit the following suggestions. In general, we believe an engine-house should be equipped with driving and truck wheel drop pits and tools to take care of all necessary rod work, driving-boxes, ordinary valve-gear work and the replacing of flues needed between general overhaulings. In most cases it will be found that work of the nature indicated above can be done with but a very small addition to the engine-house force, because of the fact that, without this work, the men are, from the nature of the conditions idle an appreciable part of the time. In line with this, some roads have found it economical to have always at the engine-house for general repairs an engine not needing heavy boiler work.

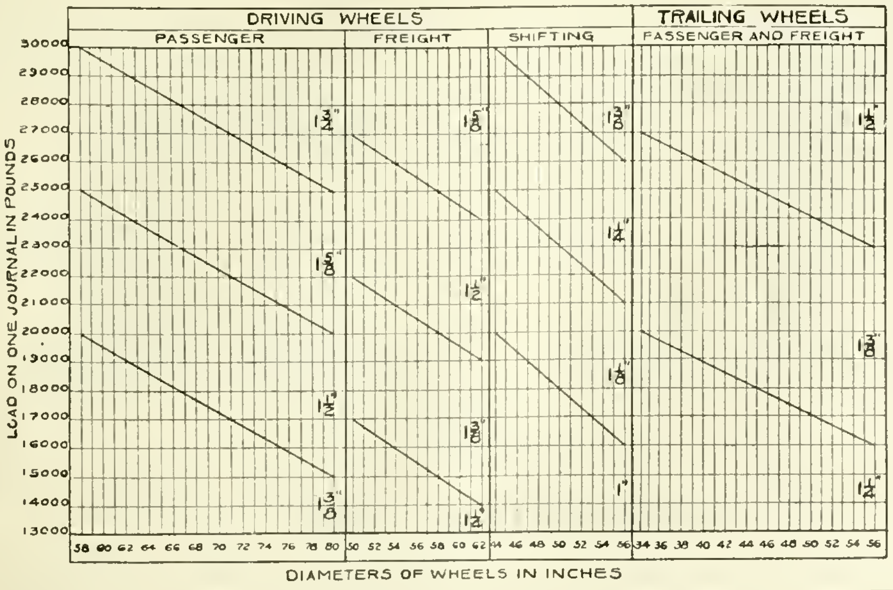


Contour of Tires. Figs. 3, 4, 5 and 6.

The list of tools suggested for outlying engine-houses, to be expanded to meet the requirements of a larger terminal: Ample storeroom stock; drop pit for driving-wheels; double blacksmith forge, face plate and tools; 72-inch boring mill; driving-wheel lathe; 38-inch tire turning-lathe; planer; slotter; sensitive drill; bolt cutter; 50-ton hydraulic press; power-driven valve-setting machine; air hammers; hot-water washout facilities; drop pit for engine truck and tender wheels; portable blacksmith forges; 36-inch boring mill; 24-inch lathe; 16-inch lathe; shaper; 36-inch vertical drill; emery grinder; pipe-bending machine; punch and shear; air compressor; air motors.

For engine-houses in connection with repair shops, the committee has not been able to agree. Several of the members feel that it is economical to depend on the main shop for considerable machine work. On the other hand, the other members believe that, except for tire turning, the equipment should be practically the same as for an independent engine-house, because of the saving of time and cost of repairs and the different training of engine-house and shop men.

ROAD LIMITS OF TIRE WEAR FOR DRIVING AND TRAILING WHEELS
VARIOUS CLASSES OF SERVICE – HELD BY SHRINKAGE ONLY.
FIG 2



Contour of Tires.

The Master Mechanics Committee on the contour of tires, W. C. A. Henry, Superintendent Motive Power, Pennsylvania Lines, Columbus, Ohio, reported as follows:—Your committee has been instructed to give consideration to the following and make recommendations:—The desirability of adopting the M.C.B. standard contour for engine truck, tender truck wheels, driving and trailing wheels, also limit of wear of tread, shop and road limit of last turning, maximum height of flange, thickness of flange and gauges. As the present standard contour for cast-iron wheels of the American Railway Master Mechanics' Association is identical with the 1909 standard of the Master Car Builders' Association, we are assuming that our instructions as to contour refer to steel and steel-tired wheels only.

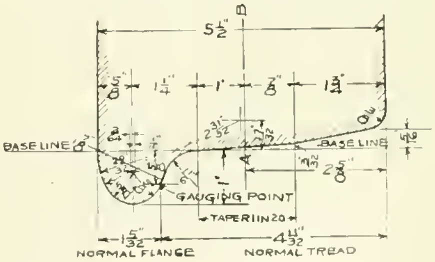


FIG 1

Replies to our circular of inquiry indicate that the M.C.B. 1909 contour is being very generally used for engine-truck and tender-truck wheels. Some roads have already adopted this contour for flanged driving-wheel tires as well. We feel that this contour is desirable for all flanged wheels under locomotives and tenders for the same reason that it is desirable for car wheels, in addition to which is the feature of uniformity.

The present A.R.M.M.A. standards call for six widths of flanged tires, and five widths of plain tires, as follows:—

	In.	In.	In.	In.	In.	In
Flanged tires	5	5 1/4	5 1/2	5 3/4	6	6 1/4
Plain tires	6	6 1/4	6 1/2	6 3/4	7

Replies from the manufacturers of steel tires indicate that of the flanged tires manufactured by them, there are practically but two widths, namely, 5½ and 5¾ inches, the large majority being the former. In the case of plain tires the prevailing widths manufactured are 6, 6½ and 7½ inches, there being little demand for the 6¼ and 6¾ inch widths. It is the opinion of your committee that one standard for cast-iron and one for steel and steel-tired flanged wheels, namely, the M.C.B. 1909 standards, and three widths of the present A.R.M.M.A. contour for plain tires will meet all requirements and be to the advantage of all concerned, due to the fewer number of standards. Fig. 1 shows the contour which we recommend for steel and steel-tired wheels.

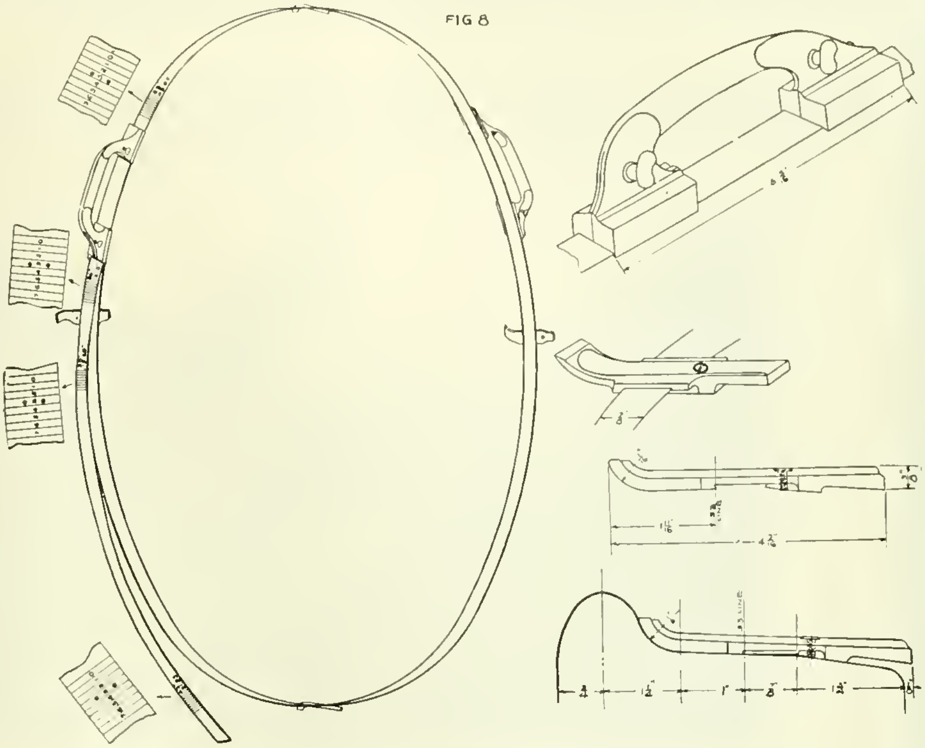
The prevailing limit of wear of tread or channeling for all wheels under locomotives and tenders is ¼ inch for locomotives in road service, and 5-16 inch for locomotives in shifting service, which we feel is good practice.

In investigating the subject of limits of wear of driving-wheel tires we have found the greatest variation. After full consideration, it does not seem possible, or advisable, to establish a minimum road limit to be followed by all roads. Where long, steep grades necessitate heavy braking, or severe weather conditions result in frozen roadbed for long periods of time, tires cannot be worn to the same degree of thinness as where these conditions do not prevail. Also, the use of retaining rings, which practice, however, is not universal, has a bearing on tire thickness. After consideration of all the data available, we feel that the limits prescribed on the chart submitted as a portion of our recommendations will be suitable for roads not having severe grades, or extremely cold weather, and not using retaining rings. Where these conditions prevail, or retaining devices are used, such deviations will have to be made as experience indicates are desirable.

The prevailing practice is to establish the shop limit of thickness of tires ¼ inch above the road limit. This limit is strictly one of economy and not safety, and will vary with the facilities for doing the work. We, therefore, hesitate to recommend a definite shop limit.

The M.C.B. limit for thickness of tire or rim for steel and steel-tired wheels is being generally followed in the case of engine truck and tender truck wheels with satisfactory results, and your committee recommends the same limits be adopted. See figs. 3, 4, 5 and 6.

The M.C.B. Association has already adopted a maximum height for flanges, of 1½ inches. This was considered the maximum height flange that would not, in service, damage track bolts, filler blocks, etc. There is no reason why this maximum height should be deviated from.



Contour of Tires. Fig. 8.

The question of gauges is one in which there is practically no uniformity, each road apparently having gotten up a gauge to suit its individual views. We are submitting recommendations for a shop or round-house gauge on which can be read direct the important dimensions, namely, channeling of tire, height of flange, and thickness of tire.

It has been suggested that the number of brackets on standard wheel circumference measure be increased from three to four, and the length of the brackets increased so as to project ⅛ inch beyond the rim when brackets are in proper position. The present method of graduating the circumference measure does not provide a definite boundary for each tape size, as the tape sizes are indicated by lines.

It is, therefore, recommended that instead of defining tape sizes by lines they be defined by spaces. Your committee is of the opinion that these changes in the size and number of brackets, as well the markings of the circumference measure, all of which are shown in fig. 8, are desirable. As a matter of information, we wish to add that these same changes are among the recommendations of the standing committee on car wheels to be made to the M.C.B. Association at the 1911 meeting.

We recommend the M.C.B. 1909 contour as shown in fig. 1 herewith, for all flanges, steel or steel-tired wheels, as follows:—(a), engine truck; (b), tender truck; (c), driving wheels; (d), trailing wheels.

Plain tires to be of three widths, namely, 6, 6½ and 7 ins., the contour to be the same as the present standards; the widths of 6¼ and 6¾ ins. to be eliminated.

Limit of wear of tread or channeling to be as follows:—¼ in. for all locomotive and tender wheels in road service; 5-16 in. for all locomotive and tender wheels in shifting service.

Road limit for driving and trailing wheels to be as specified in chart, fig. 2.

Road limit for steel and steel-tired wheels for engine and tender trucks to be as per figs. 3, 4, 5 and 6, which is the 1909 recommended practice of the M.C.B. Association.

Maximum flange height to be 1½ inches.

Gauge to be as per fig. 7.

Wheel circumference measure to be modified, as per fig. 8.

Lubrication of Locomotive Cylinders.

The Master Mechanics' Committee, C. H. Rae, General Master Mechanic, L. & N.R., Louisville, Ky., Chairman, reported as follows:—

Your committee on the subject, "Lubrication of Locomotive Cylinders by up-to-date sight-feed lubricators, which operate by condensation of steam, adjustable feed, etc.; also to investigate the subject of mechanical lubricators," respectfully submits as follows:

1. Have you experienced difficulty in lubricating modern passenger and freight locomotives, with steam pressures from 180 to 230 lbs., with the up-to-date lubricators which operate by condensation of steam, adjustable feed, etc., and, if so, state experience and causes for same?

2. What recent improvements have been made in the hydrostatic-feed lubricators, to add to their efficiency and economical operation? Give explanation, experience and results.

3. If familiar with any device, independent of the hydrostatic-feed lubricators as furnished by the manufacturers, which increases their efficiency or economical use, give description, principle of operation, etc.

4. For the lubrication of valves and cylinders on modern locomotives, state your objections, if any, to the up-to-date hydrostatic-feed lubricator.

5. What types of mechanically operated lubricators have you used? State method of application, principle of operation, control and regulation of feed, location of device on the locomotive, with experience and results.

6. For the lubrication of modern locomotives, valves and cylinders, state your objections, if any, to the mechanically operated lubricator.

7. Are you familiar with any method, or device, for admitting the oil into the steam before it reaches the saddle casting? If so, state details, experience and results.

8. Have you had any experience with the oil-delivery pipe attached to deliver the oil into the steam-way in the saddle casting, instead of at the steam chest or valve chamber? State results.

9. What has been your experience in the lubrication of locomotive cylinders where superheated steam has been used? In this connection, state the degrees of temperature acquired, if hydrostatic or mechanically operated lubricators were used, and the results from both, where both have been used.

10. Do you consider it necessary to lubricate cylinders of locomotives using superheated steam, independently of the valves, using any type of lubricator?

11. What is your experience with the lubrication of cylinders on Mallet compound locomotives, using superheated steam with the hydrostatic-feed lubricator? With the mechanically operated lubricator?

12. Do you consider it necessary to lubricate the valves and cylinders on the high and low pressure cylinders of Mallet compound locomotive (by lubricators of whatever type) piped independently to each valve chamber and cylinder?

The replies to question 1 were universal in expression, that there is no serious difficulty now experienced in lubricating modern passenger and freight locomotives with the "up-to-date" lubricators of the hydrostatic-feed type.

Several of the members, in reply to question 2, have referred to a recent improvement in the hydrostatic lubricator, whereby it is made possible to close or shut off feeds without interference with the feed-valve adjustments. This is an economical feature, but of such recent date that no comparative data have been submitted as to the results obtained.

The replies to question 3 were limited. One member replies as follows: "The automatic steam-chest choke plugs, which feed against a constant boiler pressure in the oil pipe, and not against a pressure that fluctuates with pressure in steam chest, will result in a high degree of efficiency in the lubricator."

All replies to question 4 indicated there were no objections.

The replies to questions 5 and 6 embody the same general information, but were limited in number.

a. "Have used several types of mechanically operated forced-feed lubricators. Three of those experimented with were driven from a moving part of the engine. This was unsatisfactory, since the feed is required that does not vary with the speed of the engine. More oil is required per minute while the engine is worked hard at low speeds than when running fast with light throttle. To overcome this we used some forced-feed lubricators with independent air motor. None of them, however, have been satisfactory. It is difficult to apply to the filling holes screens that are fine enough to keep out dirt, without restricting the speed at which the oil can be put in, and the enginemen pull them out. The consequence is that the plungers wear rapidly, and after a time the feed becomes irregular. They are troublesome to maintain, and under conditions specified, in answer to question 1, gave no better results than the hydrostatic lubricator.

b. "We have experimented with two or three makes of mechanical-feed lubricators, but have been unsuccessful in getting as good results as we do with the hydrostatic-feed lubricators. The trouble with the mechanical-feed lubricator seems to be due to the difference in temperature; in warm weather, or during the warm part of the day, they would feed sufficient oil, but in cold weather, or at night when the weather is colder, they do not feed as well as when it is warmer."

c. "We have used two mechanical lubricating devices, which received their motion from a connection made to the valve stem and oil chamber, and regulating devices were located in the cab. Our test record shows that after considerable experimenting the device operated fairly well, but after a time gave considerable trouble and was finally removed on account of not giving satisfactory results. Mechanical means are objectionable, in that the device is so complex, and consists of so many parts, it is difficult to keep joints from leaking. To be properly installed, all pipes must be kept constantly filled and under pressure, with return valves at distributing points. On account of mechanical movements, parts will wear, and it will be more expensive to maintain, and in making repairs more oil is lost than with hydrostatic lubricators. Devices of this sort do not appear to have as yet been perfected to such an extent as to make them thoroughly reliable."

d. "Have used a force-feed lubricator with pipe connections to all driving boxes and to steam chest. Operated by mechanism deriving its motion from connection to Walschaert link. Lubricator located in the cab. While reducing friction on journal bearings, and delivering oil to steam chest, I do not consider it entirely satisfactory, for the reason that there is nothing to indicate that the pumps are working properly and delivering the oil until the valves become dry."

e. "Our objections to mechanically operated lubricators is that they are necessarily more complicated than the hydrostatic lubricator, without showing any beneficial results."

f. "Have tried some, but have not obtained satisfactory results."

g. "We have in the past used on some of our two-cylinder compound engines mechanically operated lubricators. Our objection to it was the rapid wear of the parts, leakages and annoyances."

h. "Using displacement plunger force feed. Secured in suitable location in cab, and operated by a series of rods and bell cranks, which are connected, either to eccentric blades and independent eccentric on rear, or other convenient axle, or by reducing-arm or back crank pin. Device subject to varying control, and fed by increasing or decreasing stroke of plungers by means of adjustment thumbnut.

"Results as to economy and distribution very satisfactory. Slight trouble experienced in experimental stage, due to method of operating lubricator."

There was but one reply to question 7, citing experience which is herewith submitted: "Present method in use with mechanically operated lubricator is to tap direct through dome into steam pipe, or throttle box. This method has proven to be superior to the old method of admitting to steam chest direct."

In this connection, and pertinent to the question, a member refers to a test: "Delivering the oil from the right side of the lubricator into the left cylinder, passing it through the smoke box, and from the left side of lubricator into the right cylinder in the same manner. The gases in the front end superheating the oil, and evaporating the water of condensation, putting the oil into the cylinders superheated."

The substance of the replies to question 8 from those who have had experience was in accord with the report from a member who has tried this method extensively: "On slide-valve engines consider results distinctly superior; on piston-valve engines reports vary, but general experience is that better results are obtained by putting oil into the steam passage."

Questions 9 and 10 have been considered jointly by the members. In the information submitted, the important features of this phase of the subject are well expressed in the quotation, as follows:

a. "Superheat varies from 550 to 580 degrees. Our regular practice is to use one feed pipe to valve chest, applying it to go to each end of valve in centre of the valve bushing. This lubricates valve very well, but it is questionable whether delivering oil to steam passage is not preferable. We also use one feed to each side of cylinder, at top in centre. This is not used unless required. When working with full throttle and long cut-offs, over considerable distances, find cylinder feed necessary. There is no difficulty whatever in obtaining satisfactory lubrication in superheater engines with hydrostatic lubricators, on account of difference of pressure between steam chest and boiler, previously mentioned. In fact, there is considerably less difficulty than on engines using saturated steam. In spite of this the piston-ring wear is far more rapid."

b. "On our superheaters we carry 170 lbs. boiler pressure; the maximum degree of superheat is 225. On a number of superheater engines we introduced oil both at the steam cavity and into the cylinder direct; found the latter connection unnecessary. The only trouble which we had with superheater engines was to get our men to use the drifting valve when the engine was shut off. If this is not done, have experienced trouble with the bushings cutting out, but on districts where the drifting valve is put on we are having very good success."

All replies to question 11 pertain to the satisfactory use of the hydrostatic lubricator. No information furnished concerning use of mechanically operated lubricators on Mallet compound locomotives using superheated steam.

Replies to question 12 were at variance as to the location of the oil pipes, but it was the consensus of opinion that piping to the high-pressure valves and cylinders only was insufficient for satisfactory lubrication.

The subject of lubrication of locomotive cylinders, though a familiar one, requires frequent consideration, to the end that the best possible results may be attained. The conditions of service are constantly changing; areas and steam pressure are increasing, and with the introduction of superheated steam and the Mallet compound locomotives, new problems, all tending toward an advanced standard of efficiency, while the demand of the hour is a decreased cost per unit of service.

The method of lubricating valves and cylinders of the heavy power in use on railways has not been materially changed since the introduction of the hydrostatic-feed lubricator, and the use of this device has become so general, that its principle of operation, and the necessary attention for its maintenance, are familiar to all who have to do with its care and operation.

The experience of your committee, supplemented by the information received from the members of the Association, warrants the assertion that these is no serious difficulty now experienced with the use of that device.

The recent addition of a stop-feed feature is an improvement, rather tending to economical operation than to efficiency, and it behooves the manufacturers of this device to keep pace with, or in advance of, the constantly increasing demands.

The information obtained from the members, and cited in the foregoing, confirms the experience and opinion of your committee, that a properly constructed hydrostatic lubricator meets the locomotive requirements better than a mechanically operated lubricator, for the several reasons:

Familiarity with care and operation by the different classes of labor whose duties are in connection with its use.

Simplicity of design and substantial in construction; the operating parts being better protected from disarrangement or breakage.

A more accurate regulation of the amount of oil applied to the valves and cylinders under the varying conditions of service performed by the locomotive at different speeds and points of cut-off.

Because of less complication in construction and attachments, a corresponding less expense of maintenance.

The more general custom of delivering the oil to the steam chest or valve chamber is open to question, and there has been some very conclusive evidence submitted favoring the delivery of the oil into the steam at a point where it may become highly attenuated and intermingled with the steam.

The presumed effect of extreme temperatures, due to high pressure and superheat upon the oil, has been an objection to delivering the oil in the steam before it reaches the cylinder saddle. Information has been furnished and confirmed by the experience of some of the members, that the efficiency of a properly compounded mineral cylinder oil is not seriously impaired when protected by the steam. As the reports on the particular feature of the subject are indefinite, your committee recommends further consideration and experimentation.

The information obtained from the members who have had the most general and extended experience with locomotives using superheated steam confirms the experience and opinion of your committee, i.e., that the same reason advanced for the endorsement of the hydrostatic-feed lubricator on locomotives using saturated steam apply to locomotives using superheated steam.

The information submitted and quoted in the replies, pertaining to the proper location and number of oil pipes on superheated locomotives, is of much value. The experience thus far is not sufficiently conclusive to justify a decisive recommendation at this time. We would, however, particularly recommend that liberal openings be given to drifting valves, and attention to their proper manipulation, that the temperature of the cylinders may be promptly reduced within the lubricating possibilities of the oil when exposed to the atmosphere.

The problem of satisfactorily lubricating the Mallet compound locomotive is still in process of solution. At present it seems essential to pipe independently to the high and low pressure cylinders. however, your committee has been advised that there has been some experience, with satisfactory results by eliminating the pipes to the low-pressure valves and cylinder, substituting an auxiliary oil pipe to the receiver with the high-pressure steam connection. This carries sufficient oil over to the low-pressure cylinders to insure good service.

Increased efficiency and reduced expense of operation confronts the mechanical departments of our railways to a greater extent than ever before.

The final and most important recommendation of your committee is a continued live interest in the lubrication of locomotive cylinders."

Piston Rods and Cross Heads.

The Master Mechanics Committee on formulæ for diameter of piston rods and size of cross heads of locomotives, J. A. McRae, Mechanical Engineer, Michigan Central Rd., Detroit, Mich., reports as follows:—We have obtained data from a number of the largest railways and from locomotive builders. We find several different formulæ and designs in use which are giving satisfaction, therefore representative groups of the data obtained are presented, instead of recommending only one set of formulæ for each part.

GROUP I.—PISTON RODS.—Let

P equal area of piston × boiler pressure.

S equal fibre stress.

A equal least area of piston rod through key-way.

Allowable working fibre stress in tension, 9,500 lbs. per square inch for steel.

Then (1)

$$A = \frac{P}{S}$$

Piston rods to have enlarged fit in piston and in crosshead; ends to be approximately ¼ inch greater in diameter than body of rod.

CROSSHEAD KEY.—Allowable working fibre stress, 17,000 lbs. per square inch for spring steel.

The diameter of body of piston rods, based on 9,500 lbs. fibre stress in tension at least area through key-way, with nominal diameter of cylinder and full boiler pressure for simple engines, are shown in Table I. The sizes vary by even ¼ inches.

TABLE I.—DIAMETER OF BODY FOR PISTON RODS.

Cylinder Diameter.	Boiler Pressure.				
	180	190	200	210	220
16"	2¾"	2¾"	3 "

The dimensions of piston-rod end for piston rods with body diameter as shown in table I. are given in table II. and fig. 1.

The dimensions of the crosshead end are given in table III. and fig. II.

CROSSHEADS.—The formulæ for figuring crossheads to be used with the above designs of piston rods were not obtained, but drawings of the crossheads were furnished. A standard formula in terms of the diameter of the rod could not be derived to cover all the sizes. The dimensions of the crosshead hubs for cast-steel crossheads of the "alligator" type are given in table IV. and fig. 3, and will probably answer in lieu of formula.

The limiting bearing pressure for crosshead pins is 4,800 lbs. per square inch. The bearing area of crosshead shoes, designed to be used with the above, are: Top shoes, 7 by 24 inches, and bottom shoes, 5½ by 24 inches, for piston rods 3¼ inches, 3½ inches and 3¾ inches diameter; top shoe, 8 by 24 inches, and bottom shoe, 6 by 24 inches, for piston rods 4¼ inches and 4½ inches diameter.

TO THE USERS OF

VANADIUM STEEL

Vanadium as a commercial metal is but a few years old, but in these few years it has revolutionized the possibilities of steel along many lines. The time has been too short, however, to enable all makers and all users of Vanadium Steel to arrive at uniform results; differences in the process of manufacture and variations in the methods of heat treatment have produced a diversity of results. Another cause for this diversity has been the opinion that Vanadium acts simply as a scavenger, and that steel in which no Vanadium is found on analysis may have been purified by just enough Vanadium to remove oxides and nitrides.

As the largest manufacturers of Vanadium Alloys in the world, and in possession of carefully verified data on all points concerning the proper way to make Vanadium Alloys, the correct processes of adding them to metals, and the methods of subsequent heat treatment, we feel obliged to call the attention of users of Vanadium Alloys and Vanadized metals to these important points:—

1. Alloys of Vanadium must be very carefully made in order to insure freedom from harmful ingredients and to secure a suitable melting point. All products of the American Vanadium Company are rigorously controlled during their manufacture; they are guaranteed correct in analysis and free from impurities known to be injurious in the metal for which they are designed.

2. Metals that are sold as Vanadized metals *must contain Vanadium on analysis*, otherwise the advantages contributed by residual Vanadium cannot be expected.

3. Vanadium Steels respond readily to heat treatment. Properly made and properly heat treated, Vanadium Steels in their various types surpass every other known steel for similar purposes.

4. While the methods of adding Vanadium to the various metals and combinations of metals are simple and easily followed, the user must realize that these methods must be exactly observed, and that a departure from the rules determined scientifically will necessarily produce wide variations in the properties of the finished product.

5. If you fail to get superior results from metals supposed to contain Vanadium, send us small samples for chemical analysis and physical examination. Complete reports will be made free with full instructions for heat treatment. State where the material was purchased, how it was treated, where it was to be used and any other essential details to enable us to communicate with you fully.

AMERICAN VANADIUM COMPANY

Miners of Vanadium Ores

LARGEST PRODUCERS OF VANADIUM ALLOYS IN THE WORLD.

324 Frick Building, - Pittsburgh, Pa.

(2) d equals $D\sqrt{\frac{P}{d}}$

(3) P equals $\frac{d^2 f}{D^2}$

Under repeated alternate strains allow the compressive stresses given in table V. (From Pencoyd experiments.)

TABLE V.

$\frac{1}{r}$	$\frac{4^1}{d}$	Steel (70,000 lbs.)	
20	13,360	70	6,520
30	9,540	80	5,940
40	8,380	90	5,300
50	7,760	100	4,680
60	7,120	110	4,220

CROSSHEADS.—The formulæ for cast-steel crosshead hubs used in connection with the above piston rods are shown in diagram fig. 4.

The allowable working fibre stresses are as follows:—

Rod at key-way.....12,500 lbs. per sq. in.

Key = $\frac{d}{4}$ bearing value..40,000 lbs. per sq. in.

Key = 1.4d shear ...13,400 lbs. per sq. in.

Hub diameter = 1.6d..28,000 lbs. per sq. in.

X = .6d shear hub.12,000 lbs. per sq. in.

Y = .5d shear rod.. 9,400 lbs. per sq. in.

GROUP III.—PISTON RODS.—The following formulæ for piston rods are expressed in terms of the diameter of rod at root of thread on piston end. Let

P = area of piston × boiler pressure.
A = area of piston rod at root of thread.
d = minimum diameter of piston rod at root of thread.
S = working fibre stress equals 10,000 lbs. per square inch.

Then

(1) $A = \frac{S}{P} = \frac{P}{10,000}$

(2) $d = \sqrt{\frac{A}{.7854}}$

Width of key to be less than d × 1.275.

The dimension for the piston rod in terms of diameter at root of thread on piston end is shown in fig. 5.

The centre part of crosshead fit is reduced 1-32-inch diameter so as to insure having bearing at ends of fit only.

CROSSHEADS. — The crossheads used with the above piston rods have following dimensions of hubs:—

$\frac{2}{d}$ = distance from end of hub to key-way

Piston pressure × .00003 = thickness of metal in outer end of crosshead hub for cast steel.

Bearing area in crosshead for crosshead pin = piston pressure divided by 12,000.

The three groups of formulæ are presented as representative of the data obtained.

◆

Rules for Loading Material.

The Master Car Builders' Committee, A. Kearney, Asst. Supt. Motive Power, N. & W. R., Roanoke, Na., reported as follows:

Your committee begs to report it has no recommendations for changes in the present rules for loading material to present to this convention, except to correct some errors, for the most part typographical, that were made in the last issue of the rules. This conclusion has been reached as the result of the few subjects for change that have been presented during the current year, and more especially in order to give every one handling the rules more time and better opportunity to make up their minds what changes are really necessary.

First of all, we would direct your attention to rule 26 of the 1910 revision of the rules for loading material. In the 1910 issue rule 26 provides for the exclusive use of metal spacing blocks. Probably everybody will recall the discussion of this point on the floor of the convention last year, and the action taken at that time, to eliminate that modification requiring metal blocks exclusively. It was decided then to continue the use of rule 26 in its old form, that is, making the use of metal or wooden blocks optional. It was a mistake allowing rule 26 to go into the new issue of the rules in its modified form. The rule should read: "The cars must be jacked apart by placing one jack on each side of the coupler, separating the cars until the couplers are pulled out to the fullest extent, inserting hardwood or metal blocks (latter preferred) to completely fill the space between the horns of coupler and end of sill, and coupler release-rod chain disconnected, as shown in figs. 2 and 3."

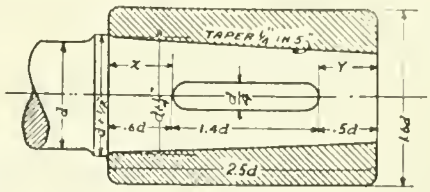

FIG. 4
Piston Rods and Cross Heads.

There is one subject or group of rules, however, we have been asked to consider, and they are the rules governing the loading of rolled material of small sectional area, rules 98 to 103, inclusive. The suggestion has been made that there seems to be the necessity for distinction in the use of centre binders on loads of flexible material, pointing out those loads requiring centre binders and those which do not. In fact, it has been intimated that it might be more advisable to confine the use of centre binders only to the loading of small angles, channels and I-beams, and possibly setting a limit for sizes of this material which would require centre binders. While we are free to confess we have not been adverse to securing conclusive information on this subject, it would seem, in the absence of same, that in the practical handling of such loads we have not had sufficient experience to definitely specify the size of material to which centre binders should or should not be applied. Hence, it is the opinion of your committee, that for the coming year, definitely specifying the application of centre binders to flexible loads is a question on which our experience is too limited to distinguish, and for that reason the rules governing the handling of this material remain unchanged in this respect. As a matter of information, inasmuch as the question has already arisen, and is one in which we are all interested, we would earnestly request the members of this Association to advise us during the coming year, what, based upon their experience, they would recommend for limits of size and shape of parts for twin or triple loads of flexible material which would require centre binders. There is one suggestion, however, to more clearly bring out the grouping of the rules governing the loading of material of small sectional area, by inserting the subheading, "Single loads," before the rules governing single loads, and the subheading, "Twin or triple loads," before the rules governing loads on two or more cars. This would seem to make the entire group of rules a little clearer, and as this is always advisable, and it does not in any way change the last issue, we have made use of the suggestions as follows: The subheading, "Single loads," comes immediately below the general heading and takes care of rules 98, 98-A and 99, while the subheading, "Twin or triple loads," comes immediately before rule 100, which is the first one in this series or group which refers to double loading. Such an arrangement certainly tends to clarify the ideas of some who interpret the general heading of rules governing the loading of rolled material of small sectional area as wrongly placed between rules 97 and 98, and think it should come between rule 99 and 100. It, however, remains a fact that rules 98 to 99, inclusive, cover the loading of the same kind of material on single cars as is spoken of in rules 100 to 103, inclusive, on two or more cars.

Again, it has been suggested that possibly rule No. 121, governing the loading of cylindrical boiler shells and tanks, be studied with a view of reducing the height of side blocking to a minimum consistent with safety. To do this, we feel, would require more information than our experience and advice from the various roads at the present time afford; therefore, we will have to let the rule remain unchanged for the present, and any modification will depend upon such advice and experience in handling that the various railroads may submit.

The only remaining topic we would call to your attention is the correction of several typographical errors in the last issue of the rules. They appeared principally in the rules for handling pipe, chiefly with respect to the cuts showing a greater number of strands of wire binders than is called for by the last revision, and viewing them as typographical errors, your committee has taken it upon itself to ask the Secretary of the Association to make such changes when it becomes necessary to print additional copies of the book of rules.

Before concluding, your committee feels constrained to again point out a disadvantage under which it is oftentimes laboring in its endeavor to put the rules for loading material in the best

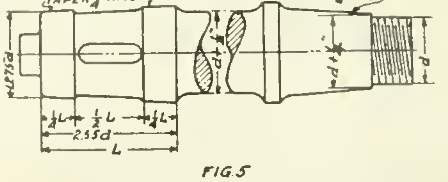

FIG. 5
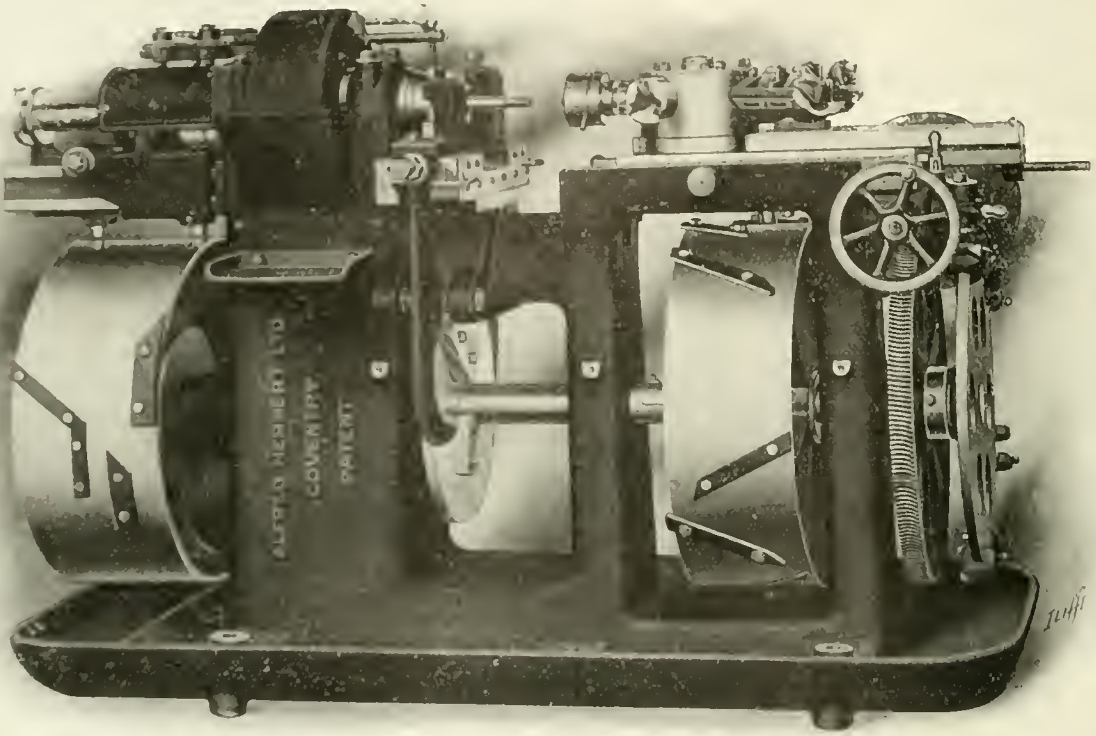
Piston Rods and Cross Heads.

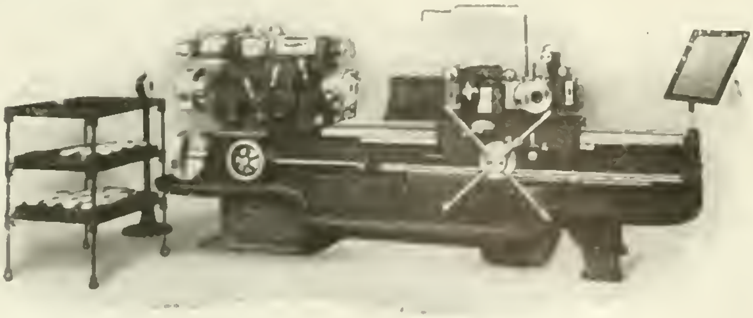
AUTOMATIC SCREW MACHINE

Made by Alfred Herbert Ltd., Coventry, England



These machines are made in 11 different sizes, dealing with bars from ¾ to 3½, and are amongst the new machines installed in the Intercolonial Railway Shops at Moncton, N.B. They are also installed in the C.P.R. Angus Shops, C.P.R. Shops, Winnipeg, Canadian Northern Shops, Winnipeg, Transcontinental Shops, Winnipeg, and other factories.

The main frame is a rigid hollow casting which carries all the working parts of the machine.



Capstan Lathes, Hexagon Turret Lathes, and Combination Turret Lathes, manufactured in practically all sizes and to take bars from 9-16 in. to 5¾ in. These machines are especially suitable for locomotive building and repair shops, and are in use all over the world.

The 1911 design incorporates many new and valuable features which greatly increase the quantity and quality of the work produced. Descriptive matter free upon request

We also carry a complete line of machine tools of every description and can give prompt shipment on any class of machinery required.

We also carry a complete line of HIGH SPEED STEEL and steel for all purposes. Likewise a special HIGH SPEED TWISTED DRILL, which is made from special registered section steel of new composition, which we guarantee to give equal if not better results than any drill on the market to-day Enquiries solicited.

MUSSENS LIMITED

MONTREAL	TORONTO	COBALT	WINNIPEG	CALGARY	VANCOUVER

and most desirable shape for all concerned. This matter was brought to your attention at the last convention, but it is of such primary importance and presents so many possibilities for stimulating and increasing the efficiency of the rules, that we are sure it will do no harm to once more direct your attention to it; we refer to the great possibility for increasing the efficiency of the rules, if the committee were kept informed of practices made use of to meet local requirements in loading. It is reasonable to suppose that physical conditions and requirements bring up problems locally which are met by excellent suggestions for changes in the rules. Some may be of minor importance, while again others are of considerable moment. These oftentimes valuable remedies seldom reach us, hence we refer to the disadvantage, because the committee, less posted, perhaps, in some local situations, is endeavoring to make general and specific rules for the guidance of all.

Occasionally the Secretary will forward your committee a communication—sometimes for the interpretation of the rules covering a particular point, and again for the method of loading a particular commodity—but we are not reaping the benefit of the many good ideas arising in handling commodities under the local conditions, which knowledge would greatly tend to increase the efficiency of the committee. we are only endeavoring to bring about a plan by which your committee can derive the benefit of the broader experience, so that the rules will be still further increased in their efficiency and integrity.

◆

Prices of Labor and Material for Steel Cars.

The Master Car Builders Committee, F. H. Clark, General Superintendent Motive Power, C.B. and Q.R., Chicago, Chairman, reported as follows:—

Your special committee has considered the subject on prices for labor and material, in connection with all-steel and composite cars for the M.C.B. Rules of Interchange, and at this time we do not think it advisable to make any radical changes in the way of submitting prices for repairs to individual parts, on account of it being impracticable to designate the extent of damage to the individual part on the various classes of cars, and establish a stipulated amount to make necessary repairs, for the reason that there are various parts of cars slightly damaged, which do not interfere with the safety for service or impair the strength of the car. On this account, we considered, where it is found necessary to make extensive repairs, the rules as now recommended to be changed on the rivet basis, hourly labor charges and material prices will cover all requirements in making necessary repairs to this class of equipment for the present. In considering this subject, it was found that the parts of steel cars not included on the rivet basis are already covered by the present rules established for repairs to wooden-car equipment and which will govern.

The recommendations of the committee are as follows:—

Eliminate all present rules on pg. 58 of the 1910 Code of Rules with reference to repairs to steel cars and substitute the following:—

"All rivets ½-inch diameter or over, 12c. net per rivet, which covers removal and replacing of rivets, including removal, fitting, punching or drilling holes when applying patches or splicing and replacing damaged parts, not to include straightening.

"All rivets ¼-inch diameter and less than ½-inch diameter, 7c. net per rivet, which covers removal and replacing of rivets, including removing, fitting, punching or drilling holes when applying patches or splicing and replacing damaged parts, not to include straightening.

"Straightening or repairing parts removed from damaged car, 60c. per 100 lbs.

"Straightening or repairing parts in place on damaged car; also any part that requires straightening, repairing or renewing, not included on rivet basis, 24c. per hour."

Paragraph showing steel-scrap credits to be eliminated from rule 111, on pg. 58; also rule 107, on pg. 51, to be eliminated, and charges and scrap credits shown in rule 104, on pg. 51, change to read as follows:—

	Charge.	Credit.
"Steel, plate and structural, per pound	.03	.00½
"Steel, pressed and flanged, per pound	.04½	.00½"

In making repairs to cars on a rivet basis, the cost of removing and replacing fixtures not secured by rivets, but necessarily removed in order to repair or renew adjacent defective parts, should be in addition to the rivet basis; rules covering wood-car repairs to govern.

Paint applied, one-quarter-hour labor to be allowed per pound of paint applied and on the basis of rule 105.

◆

Refrigerator Cars.

The Master Car Builders Committee, M. K. Barnum, General Superintendent of Motive Power, Illinois Central Rd., Chicago, Chairman, reported as follows:—This committee was instructed to investigate and report on three separate questions, as follows:—(1) The uniform height of refrigerator cars from the rail to the floor. (2) Adoption of standard drip cup for refrigerators. (3) Relatively small ice tanks.

(1) Uniform Height of Cars.—Our investigation of this subject shows that a large majority of the refrigerators built within the last 10 years or more have the height of floor varying between 48 and 50 ins. above the rail, but the Santa Fe Refrigerator Dispatch has some 6,000 cars with floors approximately 46½ ins. above the rail. We have not been able to learn of any cars which have the floor at 42 ins. above the rail. as stated in the Railroad Refrigerator Service Association circular 84, dated June 26, 1909.

We also find that all freight-house platforms of the largest roads and packing-houses vary in height from 42 to 46 ins. above the rail, and understand that the American Railway Engineering and Maintenance of Way Association has not yet adopted any standard height for freight-house platforms; we therefore suggest that the Master Car Builders' Association adopt a minimum of 48 ins. as the recommended practice for refrigerator-car floors. and that the matter be taken up with the American Railway Engineering and Maintenance of Way Association with the view of having them adopt 46 ins. as the maximum height of freight-house platforms, as we believe that this will make ample allowance between the bottom of refrigerator doors and top of platforms, so as to avoid trouble about opening the doors at freight houses.

(2) Standard Drip Cup.—In circular no. 73 the Railroad Refrigerator Service Association specifies the following requirements for an ideal drip cup:—(A) It must keep the lower end of drain pipe submerged in water when tanks contain ice during summer or winter. (B) It must prevent water in drip cup from freezing in winter when cars are iced without salt. (C) It must prevent cold air from entering car in winter when cars are not iced. Your committee has not yet been able to find any drip cup which will meet all of these requirements, which now seem impossible to meet in full, but the committee will continue to investigate the subject and make supplementary report at the convention.

(3) Relatively Small Ice Tanks.—Refrigerator cars may be divided into two general classes: (1) Fresh meat cars. (2) Fruit and dairy cars. (1) The best and most modern refrigerators are used for shipping fresh meats, and these are provided with ice tanks which experience has proven to be amply large. Fresh meat cars use crushed ice and salt, and a total capacity of 5,000 lbs. per car has been found ample for all ordinary service conditions; the committee, therefore, recommends that tanks of 5,000 lbs. ice capacity be adopted as the minimum for such cars.

(2) For fruit and dairy refrigerators a minimum of 3,000 lbs. per tank, or 6,000 lbs. per car, is recommended. Our investigation leads us to believe that the complaints mentioned by the Railroad Refrigerator Service Association have been caused by old cars that had ice tanks much smaller than the present practice, which are rapidly disappearing from service, and we believe tanks of the size above recommended are amply large to protect shipments under all ordinary conditions.

The Traffic Department will be the first to object to encroaching any further than necessary on the loading space of the car, and there seems to be no present necessity for increasing the outside length of the car beyond about 40 feet, the present size of the largest refrigerator.

◆

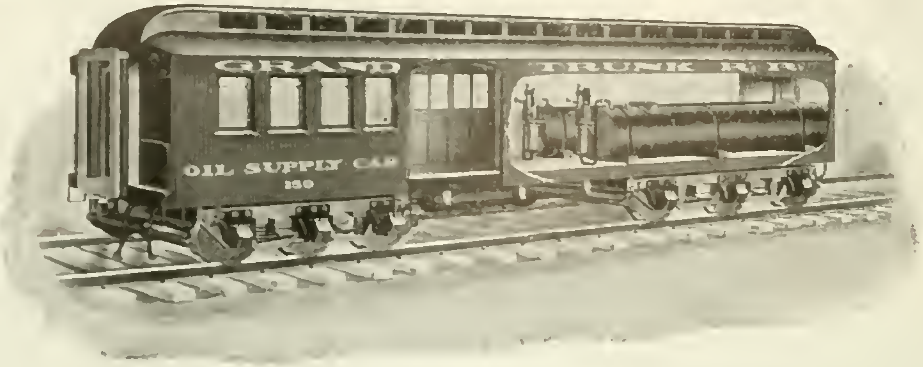
Flange Lubrication.

The Master Mechanics' Committee on flange lubrication, M. H. Haig, Mechanical Engineer, Atchison, Topeka and Santa Fe Ry., chairman, reported as follows:

It has been the purpose of your committee to obtain sufficient information to determine, (1) to what extent trouble from flange wear is experienced, (2) the lubricants and means of applying them which are in use, and (3) the effectiveness of lubrication in overcoming flange wear and its attendant evils. A circular of inquiry was issued and the committee's report is based upon the replies received from motive-power officials of about 30 railroads representing widely different grade, curvature and weather conditions of operation. The committee, therefore, feels justified in looking upon a synopsis of these replies as indicative of the flange-wear situation and, in general, the effectiveness of lubrication.

Among the detailed replies to the committee's circular, two only indicate that the officials represented are not having trouble in their territory from flange wear. In addition, five replies state that lubricators are being used or experimented with, which indicates trouble from this source. Eight answers on the other hand state that the railroads represented have no lubricators in use, and, unfortunately, no statements are made as to flange wear conditions. Among these are the Erie, in the east, and the Great Northern, in the west, both of which pass through a mountainous territory, and, therefore, have a large number of curves to contend with. The Erie, however, is investigating with a view to adopting flange lubrication, a fact which would indicate that it is experiencing some trouble due to flange wear.

The Lake Shore & Michigan Southern Ry. reports having no trouble with road engines, but in some yards the wear on driving-wheel flanges of six and 10 wheel switch engines becomes a very serious matter. The Santa Fe has had the same



Railroad Expenses

are great enough even when minimized. We can't tell you how to economize in all departments, but we can show you how the oil department can be placed on a practical basis, because we have specialized in that line for twenty-six years.

Realizing the marvelous advancement railroads have made in practically every department, it is curious to note that so little has been done to facilitate and economize the storage and handling of oils.

The Bowser Oil Storage System

has reduced the railroad oil storage and distribution problem to a scientific basis.

The storage tanks can be filled from barrels or direct from supply cars. The tanks can be connected with hand or power driven self-measuring pumps for discharging the oil in any quantity. The meters on the pumps automatically record all the oil passing through the pump. Where desired rotary pumps with automatic registering measures in the pipe line can be furnished. These can be electrically driven and controlled. Oils can thus be transferred rapidly, avoiding any per diem charges on foreign tank cars. The rotary pumps are especially useful in storing and distributing fuel oils.

In addition to these the Bowser equipped oil supply car is decidedly practical and economical in distributing oil to way stations.

Every requirement in the oil storage field is fulfilled with a Bowser. Over one hundred and fifty railroads are using Bowser Systems NOW.

Ask for Book No. 9 I, illustrating the different systems and listing the railroads using them.

S. F. BOWSER & CO., Limited

TORONTO, ONTARIO - 66-68 FRAZER AVENUE

experience with six-wheel switch engines where a large percentage of the total mileage is made on curved track.

The railroads reporting flange wear are shown in table I., together with maximum curvature and grade conditions and the locomotive types most affected. This table presents a review of the flange-wear situation as complete as the data at hand will permit. It will be noticed that with one exception the curvature reaches a maximum of six degrees or more. It would seem, however, that the mileage of curved track relative to total mileage would produce more effect on flanges than the degree of curvature alone. There are a number of other conditions affecting flange wear; among them are length of rigid wheel base, speed, lateral movement and tire spacing, and the degree of stiffness of engine truck.

Table II presents a list of railroads reporting, the locomotive types employed on these railroads and the locomotive types having greatest flange wear. The locomotive types reported in service on each railroad are designated by crosses (X), marked in the lines opposite the initials of the railroad and in the columns headed by the locomotive types.

Pacific in passenger service and consolidation in freight service are the types on which flange wear is most prevalent. However, where types are employed with longer wheel base than the consolidation, these are reported as being subject to greatest flange wear. In general, if other conditions are equal, it is the type with longest rigid wheel base on which flange wear is greatest. There are some notable exceptions to this rule in passenger service. One division of the Pennsylvania Rd. with engines of the Pacific type in service reports greatest flange wear on those of the Atlantic type. This is also the case on the eastern lines of the Santa Fe. While there is no statement to this effect, this condition may be due to the Atlantic type operating on a section of the road more severe on flanges because of excessive curvature.

The figures covering metal loss have been presented according to different standards and it is, therefore, difficult to compare them. In some instances, the loss has been measured in radial thickness of tires, in others by weight per turning, and in still other cases by the value of metal turned off. Where stated in radial thickness, the amount varies between ¼ and ¾-in. Loss in weight is stated as varying between 55 and 1,150 lbs. per engine per turning, depending upon the number of wheels and the extent of flange wear. The loss of metal expressed in terms of money value for engines of various types is given as follows: Four-wheel switch, $45; six-wheel switch, $50; standard, $50; ten-wheel, $50; consolidation, $60; mallet, $90.

The total mileage obtained during the life of a set of tires appears to be the most satisfactory measure of tire service. On this measure as a basis, the estimate presented in table III. has been prepared to show the loss due to turning tires on account of flange wear, compared with the total mileage during the life of tires when turned for tread wear. It represents the service obtained from Atlantic type locomotives operating on the Missouri Division of the Santa Fe. The mileage between tire turnings is computed from the average mileage per locomotive per month and the time between turnings; the average mileage per locomotive per month was obtained from records of 20 locomotives over a period of eight months. Before lubricators were applied, these locomotives averaged 18,600 miles between tire turnings before reaching the limit of 6 in. vertical flange wear. Since the adoption of flange lubrication, the same locomotives average 60,400 miles between tire turnings for tread wear. Figs. 1 and 2 graphically illustrate the method of arriving at the aggregate loss given in table III. In fig. 2 is shown the condition of tires with 5-16-in. tread wear after making 60,400 miles. To facilitate proper turning, ⅛-in. is usually removed in the lathe. The total reduction in radial thickness between successive tire turnings will, therefore, amount to 7-16-in. Fig. 1 illustrates the condition of tires when the locomotive is shopped because of sharp flanges after making only 18,600 miles.

*Tread wear mileage is obtained between shopping by shifting tires from one pair of wheels to another thus providing new flanges at the point of severest wear.

†Tread wear mileage has been obtained between shoppings since the application of lubricators.

Two railroads report very little flange wear. Five railroads report flange lubricators in use; no other data. Eight railroads report no flange lubricators in use; no other data.

TABLE III.—LOSS OF TIRE MILEAGE DUE TO EXCESSIVE FLANGE WEAR.

4-4-2 Type, operating on Missouri Division, A. T. & S.F. Ry.:

Mileage between turnings—Flange wear (⅞″ to 1″ vertical)	18,600
Mileage between turnings—Tread wear (5/16″ maximum)	60,400
Flange Worn: Metal removed to build up standard flange	⅜″
Flange Worn: Tread wear (rate 5/16″ per 60,400 mi.)	3/32″
Total reduction in radial thickness between turnings	15/32″
Tread Worn: Metal removed (To facilitate turning)	⅛″
Tread Worn: Tread wear	5/16″
Total reduction in radial thickness between turnings	7/16″

Flange Worn Tires

Thickness of Tire	Average Mileage

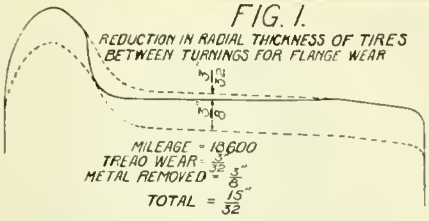
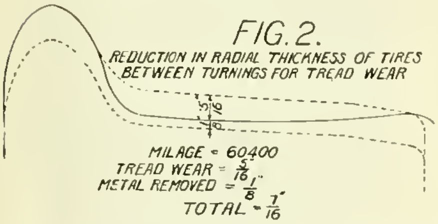
FIG. 1.



REDUCTION IN RADIAL THICKNESS OF TIRES BETWEEN TURNINGS FOR FLANGE WEAR

FIG. 2.



REDUCTION IN RADIAL THICKNESS OF TIRES BETWEEN TURNINGS FOR TREAD WEAR

That this estimate may be conservative, a very liberal curve has been assumed at the throat of the worn flange. In order to reproduce the standard tire contour it is necessary to turn off ⅜-in. of metal from the tread. The total reduction in radial thickness between tire turnings is 15-32-in., which is 1-32-in. greater than the total shown in fig. 2. Assuming a minimum thickness at the last turning of 2 inches, the difference in total mileage during the life of tires under the two sets of conditions is 167,200, a loss in tire service of 69 per cent. due to flange wear.

TABLE VI-A.

Estimated saving by use of driver flange lubricators on forward drivers of mountain engines, Southern Pacific:

Total mileage of 10 selected engines before application of flange lubricators; from Jan. 1, 1906, to date of application	629,703
Total cost of tire attention, from Jan. 1, 1906, to date of application of flange lubricators	$6,108.00
Cost of tire attention per mile run, before application of flange lubricators	$.0097
Number of times tires were changed from Jan. 1, 1906, to date of application of lubricators, including tire turning	71
Average mileage per change of tire, before application of lubricators	8,869
Total actual mileage of 10 selected engines since application of flange lubricators	421,513
Average mileage per change of tire since application of flange lubricators	42,151
Cost of tire attention per mile run after application of flange lubricators	$.002041
Per cent. of increase in mileage per change of tire	375
Per cent. of decrease in cost of tire attention per mile run	79

SIXTY CONSOLIDATION ENGINES.

	Before application.	After application.
Average mileage per engine per month	2491	2635
Total mileage per year	2,062,548	2,181,780
Cost per mile run	$.0097	$.002041
Total cost of tire attention one year's service	$20,006.72	$4,453.01

The loss of revenue and the expense of turning and changing tires when locomotives are taken out of service because of worn flanges is shown by table IV. The experience of several different railroads is given and the data presented are as complete as it has been possible to obtain. In some instances, where flange wear is excessive, when the front pair of tires becomes badly flange worn, it is removed and exchanged with another pair from the same locomotive. On locomotives with four pairs of drivers, two shifts may be made. But under severe conditions, it is impossible by this means alone to keep locomotives in service until the tires become tread worn. In table VI.-A, showing the estimated saving due to the use of flange lubricators on the Southern Pacific, the average mileage per change of tires necessitated by flange wear is given as 8,869. The practice was to make two shifts of tires before turning. Computed on this basis, the mileage between successive turnings for flange wear is only 26,607, while tread-wear mileage obtained since the application of lubricators is 42,151.

Since the increasing prevalence of flange wear has been forcing it to the attention of motive-power officials, many methods of lubrication have been applied in the effort to overcome this evil. Fourteen different forms of lubricators are now in use or have been tried by the railroads reporting to the committee. These may be grouped according to the kind of lubricant used into the following classes: (1) crude oil; (2) engine and car oil; (3) solid lubricant; (4) water; (5) exhaust steam.

There are four types of lubricators designed to use asphaltum base crude oil. These are the Chicago, the Southern Pacific, the Canadian Pacific and the Rock Island. Where no other name is known that of the railroad upon which the lubricator has been developed is used.

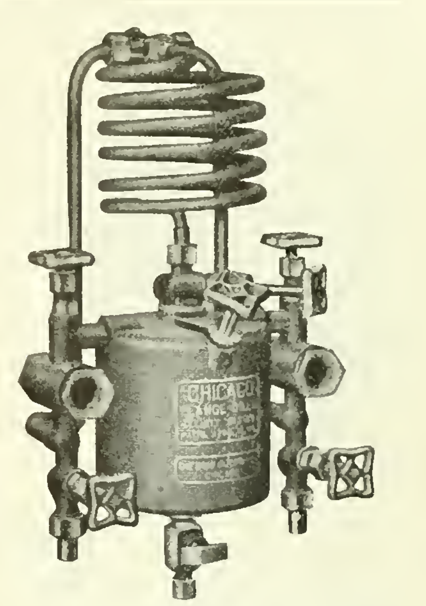

Fig. 3. Hydrostatic Flange Oiler.

The Chicago flange oiler is designed to meet the requirements of the Elliott system of lubrication, which embodies a sight-feed oiler located on the back boiler head and a delivery pipe on each side of the engine leading to the flange nozzles. The oiler is similar in general appearance and principle of operation to the sight-feed valve-chamber lubricators in general use in America and is illustrated in figs. 3 and 4. The manufacturers recommend that the nozzles be located 15 ins. above the rail, 2 ins. from the flange toward the outside of the tire and close in toward the tread. (See fig. 5.) Where two pairs of nozzles are used, each delivery pipe is branched through a T pipe connection. Where more than two pairs are used either two two-feed oilers or one four-feed oiler should be provided. The manufacturer's practice is to apply one pair of nozzles in front of forward driving wheels on road engines; one pair in front of forward drivers and one pair back of rear drivers on switch engines; on Mallet engines in road service, one pair in front of forward drivers on both engines, and in pusher service one pair in front of forward drivers of both engines and a third pair back of rear drivers on high-pressure engine.

The Wabash Pittsburg Terminal Ry. applies nozzles to all drivers on standard type; to front and main drivers on ten-wheel type; to front and back drivers on consolidation type; to main and back drivers on six-wheel switch engines; and to front and back drivers of both engines on the Mallet type. A few consolidation engine trucks are also equipped.

The Lake Shore and Michigan Southern Ry. applies lubricator nozzles to all drivers on switch engines. The practice adopted by the Santa Fe is to apply nozzles to the rear of forward drivers where trouble is experienced from frozen sand pipes with nozzles placed in front of the drivers.

The lubricator illustrated in fig. 6 has been developed by the Southern Pacific Co. after experiments covering the use of a number of other methods of delivering oil to the flanges. This device consists of a steam-jacketed receptacle holding about 1½ pints of crude oil, which is fed by gravity through a needle valve into the ½ in. delivery pipe. A clamp bracket gripping the pipe just below the oil cup secures the oiler to the engine frame in front of the forward drivers. Loosely sliding upon the delivery pipe is a piece of one-inch pipe over the lower end of which is slipped a short section of one-inch rubber hose. The projecting end of the hose is shaped to fit the throat of the flange and acts as a shoe to distribute the oil. A weight rigidly attached to the upper end of the one-inch pipe holds the shoe against the flange at all times. The oil-cup jacket is supplied

with steam from the air-pump exhaust pipe, which serves to keep the oil in a fluid state during cold weather. The drip from the jacket runs along the delivery tube tending to prevent congealing of the oil before reaching the flange.

The Canadian Pacific Ry. having tried hard grease and engine oil without success is about to try crude oil in the lubricator shown in fig. 7. This is similar to the Southern Pacific type in principle. Oil is fed through a regulating valve from the cup to the feed pipe and flange shoe, which consists of a piece of rubber hose. Steam from the air-pump exhaust pipe passing through a coil placed within the oil cup maintains the oil in a fluid state.

The Chicago, Rock Island & Pacific Ry. is using a lubricator shown in fig. 8 on two Pacific type locomotives. The oil receptacle stands upon the running board over the right cylinder. Exhaust steam passes through a pipe leading from the exhaust cavity in the cylinder casting to the oil cup. The accumulation of condensation in the oil cup lifts the lubricant into the delivery pipe, exhaust steam carrying it to the flange. The flow of oil is controlled by the engineer through a globe valve operated by a rod extending back to the cab. A check valve placed in the pipe leading from the cylinder exhaust cavity prevents a back flow of oil through this pipe.

There are two lubricators in use employing lubricant in solid forms: the Collins and the Turnbull. The Collins is illustrated in figs. 9, 10 and 11. A bracket attached to the frame supports the lubricator in position before the driver. The angle of the lubricator is adjustable to suit conditions imposed by the location of the bracket, on which it is laterally adjustable. The angle should be as nearly as possible twenty-five degrees from a line parallel to the axle and it should be placed on the horizontal centre line of the wheel. The location recommended by the manufacturers is shown in fig. 9. The lubricator itself is a tube of rectangular cross-section through which slides the lubricator block of hard grease. Below this tube is a spring-feeding device designed to keep the lubricator block pressed against the flange. Pressure from a coil spring acts through a dog engaged in one of a series of notches on the under side of the lubricator block. As the lubricant becomes worn, the spring is recompressed by means of a downward projecting trigger D, shown in fig. 10. At the same time the dog is moved back into engagement with the next notch in the lubricator block. This periodical readjustment is the only attention required to operate the lubricator.

The Turnbull lubricator embodies the same principle, spring pressure holding a cake of hard grease against the flange. The committee is informed by the manufacturer that this device is no longer marketed and a more detailed description will, therefore, be unnecessary.

Great economy in the use of lubricant is claimed for hard-grease lubricators. When the flange has become once coated there is no further deposit of lubricant until this coating is removed by contact with the rail.

The feed is automatically regulated to suit the varying needs of the flanges. On the Colorado & Southern Ry., however, it has been found that the grease used in the Turnbull lubricator absolutely loses its merit in either wet or cold weather and its use has been abandoned. On the Canadian Pacific western lines, hard-grease lubrication has been found unsatisfactory. The committee is unable to state what type of lubricator was used.

Several methods of delivering engine and car oil to the flange have been tried. The simplest is a piece of pipe or hose secured to the frame in front of the driver in such a manner as to cause the lower end to bear against the flange. The pipe or hose is filled with oil-saturated waste, which acts as a swab more oil being supplied from time to time. This type is sometimes varied by providing a graduated feed-oil cup to supply oil to the swab. Although this simple device has proved beneficial, it has usually been abandoned for some more efficient method of lubrication. Where the waste comes in contact with the tire, if packed hard, it will glaze and cease to be effective. If loosely packed, it will be drawn out and lost.

Crude oil is being used in this manner on the Illinois Central Ry. A piece of 2-in. tube is flattened at one end and shaped to the contour of the flange. It is clamped to a hinge bracket so that the weight of the pipe itself tends to keep it in contact with the flange. The tube is packed with waste saturated with fuel oil. The shape of the opening at the flange is such that the waste will not be in contact with the tire. This device is being used to a limited extent on Pacific type engines with very little apparent benefit. It is not reliable in cold weather.

The Canadian Pacific has experimented with a siphon lubricator using engine oil, but this has proved inefficient and has been abandoned for the fuel-oil lubricator shown in fig. 7.

Another simple device has been applied to six-wheel switch engines in the Chicago yard of the Santa Fe. This is shown in detail in fig. 12 and applied to engines in fig. 13. It is simply a block of wood resting up the tire and grooved to fit the flange. A waste-filled cavity contains engine oil which feeds through a ⅜-in. hole to the flange. The block is loosely anchored, as shown in fig 13, and is usually applied to forward and back drivers.

The Chicago, Rock Island & Pacific Ry. has 10 Pacific and three consolidation locomotives arranged with piping to carry water from the tank to nozzles spraying against the leading drivers. This means of lubrication is of very limited service. The pipes run horizontally along the engine frames and cause trouble by freezing during winter weather.

The Pennsylvania Rd. has made use of exhaust steam from the air pump in the manner shown in fig. 14, with what success we are not informed.

Of the lubricators described, all are in very limited use except those using crude oil. Table V. shows the extent of application of each lubricator named. It will be noted that every railroad is using crude oil—some exclusively.

TABLE V.—SHOWING TYPES OF LUBRICATORS AND EXTENT OF APPLICATION.

Types	Roads Specifying in Use.	Remarks
All types	21	
All types using crude oil	21	
Chicago	18	
Southern Pacific	2	
Rock Island	1	
Canadian Pacific	1

Collins	2	
Hard grease (‡)	1	Has been abandoned
Exhaust steam—air pump	1	
Water from tank	1	
Water from injector delivery	1	Has been abandoned

‡ Type not specified.

Flange lubrication on the Santa Fe has been developed to its present state after experiments covering the use of most of the simple devices, such as swabs of oil-saturated waste, water jets operated from the injectors and the block type shown in figs. 12 and 13. These have all proved to be in some manner unsatisfactory. In using the simple swab difficulty was found to keep it against the flange and the waste was frequently lost. When forced against the wheel with sufficient pressure to insure constant contact the pipe was rapidly worn away, sufficient heat often being generated to ignite the waste. The water jet caused clogging of the sand pipes. Water and engine oil have both proved too light to satisfactorily resist

the action of centrifugal force, being thrown away from the throat of the flange before reaching the rail. It has been found that the wood block lubricator spreads oil over the tire tread and, consequently, tends to cause slipping of the drivers.

Crude oil is now in general use for flange lubrication on the Santa Fe. Oil from the Kansas field has not been found heavy enough to properly adhere to the flange, but that from Bakersfield, California, which is now used, has proved very satisfactory.

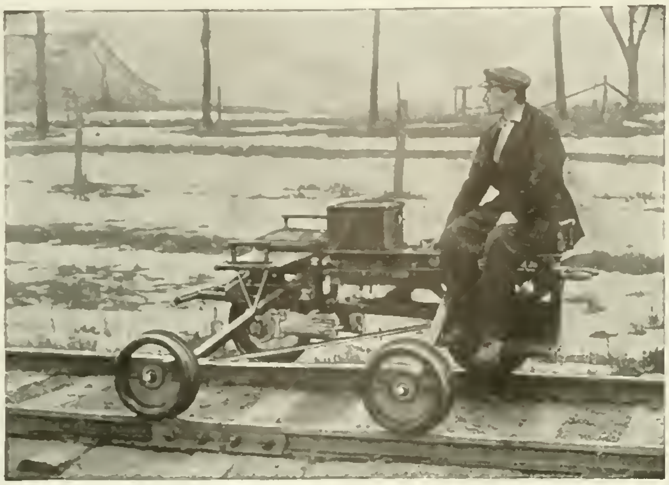
Experience indicates that the delivery of a proper lubricant to the flange will reduce the wear of both flange and rail. The committee's information is confined largely to the results obtained by lubrication with crude oil. California crude oil contains a high percentage of petroleum asphalt. When delivered to the rail by the driving-wheel flange, it forms a thin coating of paste on the inside of the ball of the rail which does not run or spread over the top. When all engines on a division are equipped with lubricators the rails on the outside of curves will become thus coated, and friction will be reduced on all wheels passing over the track. The resulting reduction in flange wear is noticeable on both passenger and freight car wheels, but data are available for locomotive driving wheels and tender truck wheels only. It necessarily follows that train resistance is much reduced on curves.

Reference has already been made to the losses due to flange wear in tables III. and IV. The record of Atlantic type locomotives referred to in table III. is a good illustration of the service of flange lubrication. These locomotives operating on the Santa Fe Ry. averaged four months with a mileage of 18,600 between tire turning due to worn flanges. The division to which they were assigned includes a large amount of curved track and to increase the mileage between tire-turning flange lubricators were applied. Since their adoption, tires on the same locomotives remain in service about 13 months, when it becomes necessary to turn them because of tread wear. During this period, the engines will average a total service of 60,400 miles. It must be added, however, that at about the time lubricators were applied, a grade revision commenced and the curvature has since been reduced on the division over which these engines were operated. But this was not completed soon enough to have any marked effect in the saving which was immediately apparent after applying lubrication.

The block lubricator previously described (figs. 12 and 13) applied to six-wheel switch engines has extended the period between turning for flange wear in some cases from two months to one year.

On the New Mexico Division, a 65-mile section, of which has 288 curves of 6, 8 and 10 degrees, it was found impossible to keep engines of the Santa Fe type in service for more than 18,000 to 20,000 miles. After one of these locomotives had made this mileage flanges were so badly worn that it was necessary to remove all wheels and turn the tires or shift them from one pair of wheels to another. At the present time with lubricators applied they are making as high as 35,000 to 40,000 miles between shoppings, with no evidence of flange cutting. On Pacific type locomotives operating through the same territory the difference is even greater. The mileage formerly obtained was about 25,000 to 30,000, which has been increased to 75,000 to 100,000 miles, with flanges still in good condition. The performance of lubricators has been closely watched in this territory. There are instances where lubrication has not entirely stopped flange wear because of the difficulty experienced in getting en-

ALL STEEL SECTION CAR



No. 28 Fairbanks Morse Gasoline Motor Car

SPECIFICATIONS

Gauge	Any gauge 24 inches and over.
Wheel Base	3 feet 10 inches.
Length of Car over all	7 feet 0 inches.
Width, without Guide Arms,	26 inches.
Wheels	17 inch wood centre and 14 inch wood centre guide wheels.
Axles	Rear Axle 1⅛ inches. Front Axle 1½ inches.
Axle Boxes	Rear Boxes are malleable iron with oil cellar. Front Boxes are full brasses and oiled by engine lubricating system, as well as grease cups for emergency use.
Frame	All pressed steel and steel guide arms.
Power	Two cylinder, 3¼ x 4 inches, two cycle air cooled engine, one cylinder direct connected to front axle on each side. Cranks entirely enclosed. Engine develops about 4 H.P.
Lubrication	Engine is entirely lubricated by oil mixed with the gasoline and reaches the engine with the gasoline, passing through the carburetor.
Control	Spark and Throttle are controlled by levers on the seat and the throttle lever also operates a switch and cylinder relief cocks.
Brake	On front and rear wheels. Can be operated from either front or rear seat.
Seating Capacity	Three persons.
Tank	Gasoline tank holds about 2¼ gallons, which operates the car about 80 miles.
Speed	Runs either way up to 30 miles per hour.
Weight	About 400 lbs.

gineers to give the lubricators proper attention.

There are no data on the Santa Fe to show the exact increase in the life of rails on curves effected by the flange oilers. On the New Mexico Division, with 100% of the locomotives equipped, it has been estimated that there has been an increase of about two months in the life of rails, that previously required changing about every 13 months. This is an increased life of 15%. In territories where no figures are available, it is, however, the opinion of all officials that the flange oilers have materially decreased rail wear.

The Southern Pacific has gathered data showing the saving in tire attention effected on consolidation locomotives in mountain service, which is presented in table VI-B. The average mileage per change of tires has been increased from 8,869 to 42,151, the cost of tire attention being thereby decreased 79%. The miles per change of tender-truck wheels has been decreased in still greater proportion. From 3,517 before the adoption of lubrication it has been extended to 18,837, with a decrease in cost of tire attention of 81.45%. Fig. 15 shows how completely flange wear has been overcome. Referring to the diagrams there presented, dotted lines show standard M.C.B. tire contour and full lines show contour of worn tire. In exhibits 2 and 4 is shown the metal which must be removed to bring tires back to the standard. In no case is it necessary to remove extra metal from the tread in order to build up the flange.

The effect on wear of rails on curves has been no less marked. Where rails on 8 and 10° curves would last only about eight or 10 months, conservative figures place the life since general application of flange oilers at about three years. In figs. 16 and 17 is graphically presented the reduction in rail wear effected on two 8° and two 10° curves.

It is a fact that any device not directly necessary to the operation of the locomotive must perform its function with very noticeable results before winning the approval of the engineer. Flange lubricators on the Southern Pacific have become a necessary part of the locomotive equipment in mountain territory. When not working properly engineers complain seriously until they are repaired. Locomotives ride easier and smoother around curves without the tendency to climb the rail which is evident when flanges run without lubrication.

TABLE VI-B.—TENDER TRUCK WHEELS.

Saving effected by use of driver flange lubricators on forward drivers of mountain engines, Southern Pacific:

Total mileage of 10 selected engines before application of flange lubricators, from Jan. 1, 1909, to date of application	629,703
Number of pairs of tender truck wheels changed from Jan. 1, 1909, to date of application of flange lubricators.	148
Mileage per change of tender truck wheels	3,517
Estimated cost to change one pair of tender truck wheels	$15.55
Cost of tender truck wheel tire attention per mile run	.00442
Number of pairs of tender truck wheels changed from date of application of flange lubricators to Dec. 31, 1908.	9
Total mileage of engines from date of application of flange lubricators to Dec. 31, 1908	169,529
Miles run per change of tender truck wheels	18,837
Per cent. of increase in mileage per change of tender truck wheels	435.59
Cost of tender truck wheel tire attention per mile run	.00082
Per cent. of decrease in cost of tire attention	81.45

SIXTY CONSOLIDATION ENGINES.

	Before application.	After application.
Average mileage per month per engine	2,491	2,559
Estimated total mileage per year	2,062,548	2,118,852
Cost per mile run	$.0042	$.00082
Estimated total cost of tire attention one year service	$9,116.46	$1,737.46

On the Wabash Pittsburg Terminal Ry. before the application of lubricators the average time between shopping for sharp flanges was eight months. A 10-wheel freight engine, working on a section having maximum curvature of 11° 28 minutes, would not run three months before developing flange wear to such an extent that tires had to be turned. Since applying the lubricator this engine working on the same section of the road was out 20 months before shopping, when tires were turned for tread wear. Since the application to all locomotives there has been no occasion to turn tires for flange wear. It has stopped almost entirely on wheels to which the oil is delivered, and oiling the drivers materially decreases the wear on engine-truck wheel flanges. In some cases, oil has been applied to the trucks where wear was unusually excessive. Mallet locomotives showed some signs of cutting the front flanges on the low pressure engine. By plugging the nozzles leading to the back drivers on this engine and delivering the same amount of oil that was previously used on both pairs to the front wheels, the cutting has been reduced and it has been found that the other wheels are sufficiently oiled. In addition to the direct benefit to the locomotive, there has been a decrease in the wear of switch points and rails on curves, as well as a decrease in the number of derailments. Flange wear has also been reduced on tender truck wheels.

The Atlanta, Birmingham and Atlantic Ry. has got as high as 50,000 miles out of locomotives that ran only 13,000 to 15,000 miles before lubrication was adopted. The average length of service for switch engines without lubricators was three or four months at 12 hours a day. Fig. 18 shows the conditions of flanges on a switch engine that ran 14 months, three months of this time at 24 hours per day, after applying the lubricator. At the time the record was taken this engine was still in ser-

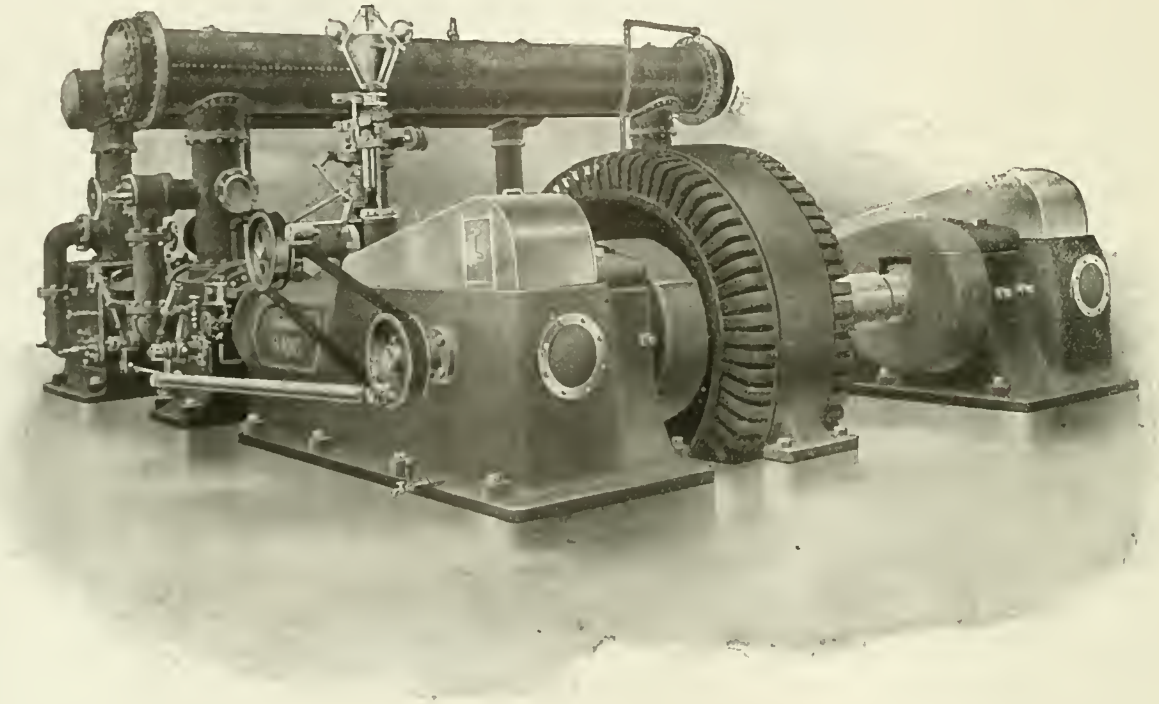
†Data apply to engines in pusher service. Increased life partly due to distribution of wear produced by turning the engines.

PNEUMATIC TOOLS **AIR HOISTS**

AIR COMPRESSORS



The design of Class "RRE-3" Air Compressor gives expression to the most advanced ideas in air compressor construction. It is in every sense a high duty machine, with every detail of construction designed for the highest efficiency.

The Class "RRE-3" is not built in small sizes and is only intended for permanent installations where operating economy is an important factor and where it will receive the consideration and attention which its refined construction deserves.

The purchaser of this type of machine is assured of the highest attainable pneumatic economy. The higher first cost is so easily outweighed by the great operating advantages that the difference in cost is soon made up in operation.

This type, with Compound Corliss Steam Cylinders, is equipped with a drop release Corliss Steam Valve Gear which is second to none. An electric motor is mounted directly on the main shaft, the rotor of which serves as a fly wheel when the machine is steam actuated, or the steam cylinders may be disconnected and the machine run by electricity. Our pamphlet, "K-91," describes this and many other interesting features.

Other features of this type are: an efficient flood lubricating system, enclosed dust proof construction, unusual intercooler capacity and efficiency, and easy accessibility of all working parts.

vice. Another individual case on this road shows forcibly the effect of lubrication. A 10-wheel locomotive, weighing 130,000 lbs. on drivers, in making 18,958 miles, had cut the front flanges very badly. Owing to the rush of work it was necessary to keep the engine in service if possible. A lubricator was applied and the engine again placed in service. After making 34,495 additional miles, the flanges showed no further wear. The tires were shifted and the engine again put into service. The condition of the front tires at the time the lubricator was applied and at the time tires were shifted is shown in fig. 19. The Elliott system is in use on this railroad. The cost of oil has been about 3c. per 100 engine miles.

The Norfolk and Western equipped four consolidation locomotives with lubricators and compared them in service with three others of the same type. The data obtained are presented in table VII., which shows for each engine, the wheel having maximum wear, the wheel having minimum wear and the average for all wheels, which is reduced to wear per 10,000 miles for the purpose of comparison. The average wear per 10,000 miles averaged for the three locomotives without lubricators is slightly less than the same quantity shown for three engines with lubricators.

Fig. 20 shows the method used to measure the degree of flange wear, the contour being obtained by a recording device. The diagrams there shown on front tires from engine 1,009, with a mileage of 35,628 without flange oiler, indicate that flange wear was not excessive in the territory where these locomotives were working.

A service test of a yard engine was made on the Kansas City Terminal Ry. The yard where this engine worked is so located that the front and back flanges on the left side of the engine became worn to such an extent that the engine began to climb the rail after being in service about three months. It was then necessary to change tires. The engine equipped with a flange oiler was put in service with a new set of tires, and remained in service under these conditions over 13 months, when it was shopped for other repairs. The flanges were still in good condition. The results obtained were made possible by the careful attention the lubricator is reported to have received from the engineer.

The foregoing instances indicate the service of flange lubrication under some of the worst conditions affecting flange wear reported to the committee. Further data are presented in table VIII. Opposite the initials of the railroad reporting is indicated the benefit derived from flange lubrication.

Master Mechanics Association.

The American Railway Master Mechanics Association met at Atlantic City June 14, 15 and 16. The President, C. E. Fuller, Assist. General Manager Union Pacific Rd., in his opening address, covered a wide field, including legislation respecting safety appliances, the necessity of adopting standards of practices, the importance of publicity to inform the public of the great advances in railway mechanical work and of the fact that of all the enterprises of the country no other approaches the railways in systematic and persistent study of efficiency and economy. He urged that the association should have as part of its recommended practices, mechanical plans for large and small terminals, units embodying the best practices, so that if conditions are such that these plans in their entirety are not feasible or practical it would be possible to take therefrom the best available features under which shop layouts can be designed. Many railways do not employ large expensive engineering forces and such plans would be of infinite value to them. In referring to apprentices, he said:—"A very pertinent subject in connection with the matter of increased efficiency, to my mind, is the education of our apprentices, in fact of all our employes. By what better method can we hope to increase our efficiency than by setting a high standard for the young men we are educating, from whom we must be able to draw our foremen and shop managers? Progress has been made by some of the individual lines not only in the way of educating apprentices, but also giving other employees similar advantages by instituting plans of broad scope with educational bureaus open to all employes. It is my opinion that in line with these ef-

forts our association should adopt a recommended apprentice system for apprentices to the various trades as well as for the technical graduates, commonly called 'special apprentices.'"

The reports of the various committees most of which are given in the earlier pages of this issue, were presented and discussed.

A number of members disagreed quite emphatically with the report of the committee on the diameter of piston rods and the size of crossheads. The title of the report required only formulae and tables giving proportions for such parts and those presented were found acceptable, but the designs for the piston rod fit in the crosshead was generally discredited. The breakage of piston rods is often due to the severe stress produced by driving in the key, and for this reason a nut fastening for the piston to the crosshead found considerable favor. But the chief objection to the design presented is the combination of end butting fit and taper fit which experience has shown is not good practice. If the rod has an end butting fit into the crosshead, the taper fit will soon become loose. There is a loss in the area of the bearing of the taper fit when the butting fit is used. It is best, therefore, to use such a taper that the rod can have a full bearing in the crosshead and to place no dependence upon the butting fit at the end of the piston rod or a shoulder fillet at the front end of the crosshead.

DISCUSSION BY CANADIAN OFFICIALS.

J. Christopher, Master Mechanic, Toronto, Hamilton & Buffalo Ry., asked the experience of those using mechanical stokers, as to the front end filling up, as compared with hand firing, and whether it was necessary to clean out the front end more frequently.

T. O. Secrest, C.N.O. and T. P. Ry., replied: We have been using the stoker for the past 14 months, and at first we did experience that trouble. We have had no trouble along that line lately. We have not had any occasion to inspect engines on account of the filling up or on account of coal being drawn through the tubes, and we have watched that matter pretty closely, thinking that perhaps the coal might bank up around superheated pipes.

J. Christopher, Master Mechanic, Toronto, Hamilton & Buffalo Ry., in the discussion on the best construction of locomotive frames, said:— It would appear that the question of the quality of the steel is the chief point. It occurred to me it would be a good idea for them to determine the radius of the gillets at the pedestals and consider those points, in making their recommendations, as well as the quality.

R. Patterson, Master Mechanic, G.T.R., Stratford, Ont., in the discussion on main and side rods, said:— We have had a great deal of experience in forged fluted rods for low power locomotives. We did that altogether in our Stratford shops, but since we adopted the heavy power we went back to fluting the rod by machinery. We had a great deal of trouble with fluted rods breaking, and we substituted the rectangular rod. Rods will break no matter whether rectangular or fluted if they are not kept up, but not nearly to the same extent as the fluted rod will.

J. Christopher, Master Mechanic, Toronto, Hamilton & Buffalo Ry., in the discussion on treating water without plants, said:—I have had a great deal of experience with bad water on our road. In dry seasons of the year the water analyzes as high as 70% sulphur and we have found that we were creating sulphuric acid in our boilers. I had difficulty in convincing the management of the road of the necessity of treating this water. We used a compound. This was dumped in the tank, and it was good for all the water in the tanks over a stretch of 180 miles or more. The only proper way to treat bad feed water is to treat it and then discharge it in the tank. We find that we have to vary our treatment of this water as close as 48 hours. Therefore, it is quite necessary that the operator shall have full knowledge of the variations that are taking place in the water that is flowing into these stations. In some of the creeks I have found as high as 20 streams of sulphur water. Through the wet season with soda and hydrates of lime we reduced that as much as 80%, and then we have to run it up again, in the dry season. We have had cracked flues on our consolidation engines every trip, but since the treatment of this water in this way, we only touch up the flues at every wash-out, which is about once in two weeks. The life of the fire-box is prolonged to the extent that the fire-box work alone will pay for the tank in a year. The operation of the tank is conducted at very little expense. We have a wheel connected with the discharge pipe and a

current of water flowing through this discharge pipe operates a wheel which provides power for the agitator, and also at the same time drives a pump for throwing the chemical into the top of the high tank. After we began to treat our water we had great difficulty with the foaming. We got our chemist after the difficulty, and he analyzed the water, but could not seem to understand why it foamed. Many of the engine crews supplied castor oil themselves to save them annoyance and trouble in getting up heavy grades.

H. H. **VAUGHAN**, Assistant to the Vice President, Canadian Pacific Railway, in discussing Prof. Benjamin's paper on superheated steam, said:—Those of you who have patiently listened to what I have said about superheating in the last few years must realize that this paper is quite a gratification to me. It explains very clearly several points that are experienced with superheated locomotives which we were induced to bring forward, but which we were unable to substantiate without any actual scientific experiments. For instance, one or two years ago I ventured to state that in my opinion it was a waste of money and time to worry about equipping locomotives with superheaters that only gave a superheat of 40 to 80 degrees. At that time such cost was advocated with the hope that trying the system in that way would avoid some condensation and that results would be very nearly as good as they would be with high superheat. Prof. Benjamin's paper shows us very distinctly how our experience was obtained, in practical service along these lines. The saving from low superheat is so small as not to make it worth while to maintain the apparatus. You will remember that I stated that our feeling was that until we got up to 150 to 160 deg., we hardly began to realize the benefits of superheating. From what I have heard in the last few months of the successful results obtained with locomotives equipped with still higher degrees of superheat, I think we would have gained very much more if we had followed the practice of the Schmidt people and got a really high superheat.

DIAGRAM OF TIRE WEAR: ENGINE 2722 WITH OILER.
SOUTHERN PACIFIC CO.

Flange Lubrication. Diagram of tire wear, locomotive 2722 with oiler, Southern Pacific Co.

A very interesting thing that strikes me in a cursory examination of this paper is a comparison of the diagrams. Fig. 7 shows how we obtain more and more economy as the superheat goes up. There is the explanation of the increased capacity that we get in actual surface upon superheater engines. We have always found that the harder you work them the more superheat you get, and the greater the saving, so that, while perhaps your coal figures will only show a 15 to 20% saving, yet, taking all the coal used, when you are working the engine hardest, you are getting the most saving per horse power. That is an increased advantage that we have always found in superheaters, and, while it has been frequently referred to, it has never been so clearly shown as in this paper.

Another thing, the last paper presented covering the results at Purdue University two years ago tried to make an explanation as to where we shall find greater economy in service than the results at Purdue indicated. The amount of superheat we were using was about 180 to 190 deg. There is quite a considerable drop in coal consumption between the amount of superheat obtained on the Cole locomotive at Schenectady and the one we were using, and it fairly well accounts for the results which we told you about.

I do not think that superheating needs any more advocacy on the part of the C.P.R. We think it is doing very well, and we have not changed our policy, except that we are going to follow the example set in the United States and equip our engines so that we will obtain a higher degree of superheat than has been obtained in the past.

R. **PATTERSON**, Master Mechanic, Grand Trunk Ry., Stratford, Ont., in the discussion on the contour of tires, said:—I am rather surprised that after the years of experience which we have had in turning the tread of tires straight that a recommendation like this should come in now. Before my time that design of turning tires was abandoned. The report does not say what benefit we are to get, from tapering, over our present practice. The only thing I can see is that it is going to make it more difficult to turn the tires; it will take longer to turn them, and they will not be turned as accurately. It will only be a short time after the engine is running on the road when the tires will come to the natural flat tread, the same as we turn them now. This practice was abandoned many years ago, and was abandoned because there was no good purpose served by having the tires turned in that

manner, and I would like to know why we should go back to this practice now.

The following officers were elected:—President, H. T. Bentley, Chicago and North Western Ry.; First Vice President, D. F. Crawford, Pennsylvania Lines; Second Vice President, T. Rumney, Erie Rd.; Third Vice President, D. R. McBain, Lake Shore and Michigan Southern Rd.; Treasurer, Angus Sinclair, Executive Committee, C. A. Selly (C.N.L. & P.), E. W. Pratt (C. and N.W.), and J. F. Walsh (C. and O.).

Master Car Builders' Association.

The Master Car Builders Association met at Atlantic City, June 19, 20 and 21. The President, T. H. Curtis, Supt. Mach., Louisville and Nashville Rd., in his opening address, referred to the following among other important matters:—

M.C.B. Standard Coupler.—A common standard in railway equipment, which is being interchanged, is a necessity—it is the need of today. To further profit by a common standard for equipment it is earnestly recommended that the Association speedily adopt a standard M.C.B. car coupler, and that this coupler must be standard in all of its parts, and every railway to use it only. The day of experimenting with car couplers is past, the state of the art has reached its maturity. A common standard for a car coupler will reduce the great number of repair parts that are now required to be kept in stock all over the country for repairs to the great number of different styles of the M.C.B. car coupler, which is now a standard only in its contour lines. In brief, the M.C.B. coupler of today is standard in service, but interchangeable only as a whole, as the various makes are widely different in details of construction. To facilitate the prompt movement of traffic and also raise the standard of efficiency and reduce the cost of operation, a standard M.C.B. coupler is a very present need. This subject of a standard car coupler was earnestly recommended by one of my worthy predecessors in his address to our Association.

Car Wheels.—The day for small or light capacity freight train cars, as well as passenger equipment cars, is about past. So-called heavy or large capacity cars are now being built extensively, and some have been in operation for a long time. In some cases the strains and stresses are possibly exceeding the limits of safety for certain kinds of material that have been heretofore commonly used. As a citation I will mention car wheels. The steel car wheel is now considered by some large railway companies to be a necessity. I will not comment on the steel car wheel or on the different kinds or makes and their mission in railway equipment of today, but will say that the time is at hand when something should be done by this Association in prescribing and requiring that under all heavy capacity cars an efficient and suitable car wheel must be used. The common cast iron car wheel of a grade used under light cars with good results needs to be materially increased in its strength and stability if it is to be used in service under heavy capacity cars of today.

TRACING MADE FROM PLASTER CASTS TAKEN FROM TIRES.

Flange Lubrication, Fig. 19.

Brake Shoes.—The increase in capacity of cars has necessarily increased the light weight of the car, and therefore made necessary the increase of the pressure on the brake shoe. For safety alone all brake shoes should have some kind of a wrought-iron or steel binding member constructed in the brake shoe to prevent the dropping of a piece of the brake shoe on the track should the shoe crack or break and a portion of the shoe fall to the roadbed. The all cast-iron brake shoe does break in pieces in service. It should be replaced by a modern up-to-date brake shoe, thereby increasing the safety of train operation, and I know it will not increase the cost of operation. This change to a modern brake shoe will effect economy and increased efficiency.

Brake Beam Safety Hangers.—For safety all brake beams should have efficient safety hangers, and these safety hangers or their equivalent should be required on all cars offered in interchange. The best design of brake hangers will break once in a while, and there should be a close second hanger or safety device to prevent the brake beam from falling on the track. When a brake beam falls on the track while the car is in motion the results are more or less disastrous.

Air Brake Hose.—Some contentions have arisen during the past two years or so regarding M.C.B. standard air brake hose, incident to the enforcement of the rule requiring the use of standard 1⅜ in. air brake hose properly labeled. After the adoption of the specification and label, the day for complying with the standard was set forward on three different occasions, and it was not until Sept. 1, 1910, that it became obligatory to have the standard hose on cars offered in interchange. As it was not until about three years after the adoption of the specification and label as a standard that it was obligatory to equip cars with this hose, or, in other words, as three years' time had been allowed in which to properly equip cars with suitable hose, the officers of our Association did not feel that it would impose any sudden hardship upon the railways. However, it was a great surprise to many to learn, after having become better acquainted with the situation, that many of the roads had paid little or no attention to the purchase of hose as required by the Master Car Builders' Association. Some of the roads were placed to a large expense to apply the proper hose, which could have been obviated by buying the standard M.C.B. hose. Since Sept. 1, 1910, practically all cars have been equipped with the standard hose, and this subject may now be considered as closed, but it is hoped that all will learn the lesson of the necessity for complying with the M.C.B. standards and avoid a recurrence of unnecessary expense due to deviating from the standards, even though the deviation may be slight.

LIMITING HEIGHT OF BOX CARS.

H. H. Vaughan, Assistant to the Vice President, Canadian Pacific Ry., brought up this question, which was discussed as follows:—

I wish to make a request that this association establish a standard or limiting the height for the running board of a standard dimension box car. I will put it in the form of a motion and move that the matter be referred to the committee on standards for its consideration. The standards of this association prescribe a height for the eaves of a box car with standard inside dimensions, but do not prescribe any standard height for the running board. The matter has been brought before the Canadian Railway Commission in connection with bridge and tunnel clearance, and, at the meeting at which it was presented to them, the question arose that this association had never established any standard height for the running board of box cars. I understand that the matter is to a certain extent already in the hands of the American Railway Association, but at the same time I see no objection to the committee on standards corresponding with that association and ascertaining if it would be satisfactory to them for us to take this matter up.

R. L. Kleine (Penna.): We now have a specified height for brake shaft—that is, 14 ft. 2 in., if I am not mistaken—and the safety appliance law requires 14-in. clearance underneath the brake wheel, and that would practically make the maximum height of the running board 13 ft. 10 in., according to present standards.

H. H. Vaughan: There is practically no difficulty, and I think I am correct in saying that almost no cars today exceed a height of 13 ft. 6 in., and the difference between that and 13 ft. 10 in. is worth having, as a matter of saving, if we can get it.

404 St. James St., MONTREAL

C. A. Schroyer (C. and N.W.): I think it is unnecessary that a committee should be appointed on that subject, because we are limited in the height of our cars by the brake wheel We must have a clearance between the brake wheel and top of the running board, and we can go to within these limits, so that a committee appointed on that subject would not be able to accomplish anything more than is now accomplished by the limits prescribed

C. A. Seley (C.R.I. & P.): I think what Mr. Vaughan seeks is merely a statement in the standards of the height, no matter how derived. I think that is within the province of the committee on standards to take that up and include it in their report.

R. L. Kleine: Do I understand, Mr. Vaughan, that it is the maximum height of running board that you want fixed, or is it a uniform height?

H. H. Vaughan: I think we should fix a maximum height in the standards. The height of the brake wheel does not affect this, It is the height of a man standing on the running board that we are after. In Canada there is a movement to fix the height of bridges at 22 ft. and we think they should be 20 ft., as we assume that we are not going to have brakemen who will be over 6½ ft. tall, standing on a running board 13½ ft. in height, so that everything we can get out of that is in value in grade crossing work if they are going to insist on clearances enough for a man to stand on top of an ordinary car

When the reports of the committee on rules for loading material came up for discussion, J. J. Tatum. B. and O. Rd., pointed out that under rule 26, as it formerly read, it was optional to use either metal or wood spacing blocks. This year the report reads "inserting hardwood or metal blocks (latter preferred." etc. He moved that the rule be the same as formerly, making it optional to use metal or wooden spacing blocks. The motion carried.

The report on coupler and draft equipment evoked a long discussion, which resulted in the committee being instructed to design an M.C.B. coupler and present it to the next convention, the committee being authorized to employ a mechanical engineer or such other assistance as they may deem best.

It was decided to submit to letter ballot the reports of the committees on coupler and draft equipment car wheels and code of tests.

The following officers were elected:—President, A. Stewart, Southern Rd.; First Vice President, D. F. Crawford, Pennsylvania Rd.; Second Vice President, C. E. Fuller, Union Pacific Rd.; Third Vice President, M. K. Barnum, Illinois Central Rd.; Executive Committee, F. W. Brasier, N.Y.C and H.R.R.; C. A. Schroyer, C. and N.W. Ry.; A. Kearney, N. and W.R.

Atlantic City Convention Notes.

The Railway Supply Manufacturers' Association, at its annual meeting at Atlantic City, June 17, elected B. E. D. Stafford, Flannery Bolt Co., Pittsburg, Pa., as President, and S. G. Allen, Franklin Railway Supply Co., New York, as Vice President. The bylaws were amended by adding Canada to district one, which hitherto consisted of the New England States only.

W. McWood, ex-Superintendent Car Department, G.T.R., who was President of the Master Car Builders' Association in 1888, 1889 and 1890, and who presided over its conventions at Alexandra Bay, Saratoga and Old Point Comfort, received a most enthusiastic greeting at the Association's recent convention at Atlantic City, when he was introduced as the oldest living ex-president.

W. E. Fowler, ex-Master Car Builder, C.P.R., and a past president of the Master Car Builders' Association, sent the following letter, which was read at the Association's recent convention at Atlantic City:—"For the first time in many years I shall not be at the convention. Continued bad health has compelled me to make my residence in California, where I hope to partially regain my health at least. This is a beautiful section of the country. There is everything here to please the eye, but I wish I could be at Atlantic City with you. I wish the Association at its convention all possible success."

Both conventions were preceeded on the opening day of each by a grand march of the members, and the ladies accompanying them, from the headquarters hotel to the convention room on the pier. Band concerts were given daily in the entrance hall of the pier. There was an afternoon concert and an afternoon monologue entertainment at the Brighton Casino; one evening was devoted to a large bridge and euchre party, and another to a vaudeville performance. The usual baseball game, East vs. West, was played, and there were two receptions and two balls, under the auspices of the two associations.

Among those in attendance from Canada were:—E. N. Bender, General Purchasing Agent; H. H. Vaughan, Assistant to the Vice President; L. R. Johnson, Assistant Superintendent Motive Power; F. B. Zercher, Superintendent Angus shops; H. Osborne, Superintendent Angus locomotive shops; G. I. Evans, Mechanical Engineer; C. Kyle, General Master Mechanic; H. G. Reid, J. H. Mills, A. W. Horsey, Master Mechanics; A. Plow, Mechanical Inspector; S. O. Robins, Chief Draughtsman Car Shops, Canadian Pacific Ry.; Robt. Patterson, Master Mechanic; Jno. Hendry, J. L. Hodgson and T. A. Treleaven, Master Car Builders; Jas. Powell, Chief Draughtsman, Grand Trunk Ry.; A. L. Graburn, Mechanical Engineer, Canadian Northern Ry.; G. R. Joughins, Superintendent Motive Power, Intercolonial Ry.; M. Goodrich, Master Mechanic, Ottawa and New York Ry.; G. Collins, General Manager, Central Ontario Ry.; J. Christopher, Master Mechanic, Toronto, Hamilton and Buffalo Ry.; W. McWood, ex-Superintendent Car Department, Grand Trunk Ry.; W. Mills, Master Car Builder, Algoma Central and Hudson Bay Ry.; Victor Curry, W. I. Atwood, Canadian Car and Foundry Co.; Arthur Allen, of the Holden Co., Thomas Arnold, of Taylor and Arnold, Ltd.; Wallace H. Noble, Anchor Packing Co. of Canada; Acton Burrows, Managing Director Railway and Marine World.

The Exhibits at Atlantic City.

A large portion of the space on Young's Million Dollar Pier was devoted to exhibits of railway supplies machinery, etc., there being about 260 exhibitors, occupying about 75,000 square feet of space. Among the principal exhibitors were the following::—

American Brake Shoe and Foundry Co., Mahwah, N.J.—Locomotive driver brake shoes, flanged brake shoes for steel tired and rolled steel wheels unflanged brake shoes for cast iron wheels, combination driver brake heads and reinforcing parts which go with these shoes.

American Locomotive Co., New York —Reception booth, with photographs of locomotives.

American Vanadium Co., Pittsburg Pa.—Vanadium ores and alloys, vanadium steels, both wrought and cast; and vanadium cast iron; specimens of vanadium steel and iron; locomotive parts such as side rods, piston rods, crank pins, axles, frames, springs, tires, wheels, tubes, safe ends, cylinders, bushings and piston rings; vanadium steel and iron automobile parts, such as crankshafts, gears, axles, frames, springs, steering arms, cylinders, etc.; vanadium machinery steels; vanadium high speed tool steels; a large vanadium cast steel yoke, tested by the government, several of which are to be used on the Panama canal.

Anchor Packing Co., Philadelphia, Pa. —Fibre packing and mechanical rubber goods, tauril sheet packing, throttle and air pump packing.

Baldwin Locomotive Works, Philadelphia, Pa.—Jointly occupying space nine with the Standard Steel Works Co., as office for pier headquarters.

Besly and Co., Charles H., Chicago, Ill.—New Besly pattern makers' disc grinder, helmet spiral circles, temper taps, oil and babbitt.

Bowser and Co., Inc., S. F., Ft. Wayne, Ind., and Toronto.—Oil storage systems complete long distance self-measuring pumps, power pumps, automatic registering oil meters, filtering systems for lubricating oils, oil storage tanks of all sizes and shapes, with pumps for handling and measuring all kinds of lubricating, paint and other oils, including gasolene, etc., suitable for storehouses, machine and paint shops, round houses, engine rooms, signal towers, automobile garages.

Buffalo Brake Beam Co., New York, and Brantford, Ont.—Brake beams for all classes of cars, locomotives and electric equipment, meeting M.C.B. standards and railway companies' requirements.

Chicago Railway Equipment Co., Chicago.—Brake beams of the "P.C." creco "E.L." creco, diamond special, diamond, national hollow, sterlingworth, ninety six; Monarch and special types monitor bolsters, creco roller side bearings, brake slack adjuster, journal box and lid; automatically adjustable brake heads, removable leg brake head; creco sliding third point brake beam support.

Commercial Acetylene Co., New York. — Acetylene car lighting equipment, acetylene locomotive headlight equipment, acetylene signal equipment, acetylene marine signal with sun valve, acetylene tanks for welding, tank cut open showing asbestos packing.

Consolidated Car Heating Co., Albany, N.Y.—Steam traps, end valves, inlet valves, thermostatic control of steam heat, steam couplers, electric heaters.

Dearborn Drug and Chemical Works, Chicago, Ill.—Booth arranged in the form of a very artistic lodge and garden.

Detroit Lubricator Co., Detroit, Mich.—No. 22 3-feed lubricator, no. 22 3-feed lubricator (sectional), no. 32 4-feed lubricator, no. 42 5-feed lubricator, no. 52 6-feed lubricator, no. 62 7-feed lubricator, no. 0 1-feed lubricator, no. 5 2-feed lubricator, no. 7 2-feed lubricator, no. 11 2-feed lubricator, Detroit transfer filler, 1-feed, 2-feed and 4-feed air cylinder lubricators, Detroit air pump lubricator, Detroit emergency valve, automatic steam chest plugs, boiler valve, guide cup, rod cup, Detroit force feed oilers.

Edison Storage Battery Co., Orange, N.J.—Storage batteries for car lighting, signaling and ignition. Details of manufacture of batteries fully shown.

Fairbanks, Morse and Co., Chicago.—One no. 28 all-steel gasoline motor car for one, two or three passengers, two-cycle two-cylinder direct connecting engine, one no. 26 section gasoline motor car with two-cycle two-cylinder gasoline engine. Track jacks, ball bearing jack and hydraulic jacks

Flannery Bolt Co., Pittsburg Pa.—Tate flexible staybolts, radial and crown staybolts, Tate installation tools for applying the Tate bolt, staybolt tests

Franklin Railway Supply Co, New York.—Booth fitted up for receiving visitors, with 300 daily newspapers on

tile from motive power centres throughout the United States, Canada and Mexico. Car equipped with Franklin flexible metallic car roof.

Galena Signal Oil Co.—Reception booth for guests.

Gold Car Heating and Lighting Co., New York.—Heating, lighting and ventilating apparatus for passenger and refrigerator cars.

Goldschmidt Thermit Co., New York and Toronto.—Complete appliances for making thermit welds. Appliances for butt welding and wrought iron and steel pipes. Specimen welds showing amalgamation of metal obtained. Metals and alloys produced free from carbon by the thermit process. Photographs of important repairs executed by the thermit process Samples of thermit, nickel thermit and chromium thermit.

Greene, Tweed and Co., New York.—Palmetto packing, round and square, for high steam pressures. Palmetto packing twist. Palmetto packing, in sets for railroad service, Manhattan packing, for low steam and hydraulic pressures. Favorite reversible ratchet wrench.

International Correspondence Schools, Scranton, Pa.—Demonstration by apprentices of apprentice class work in classes on various railways.

H. W. Johns-Manville Co., New York and Toronto.—Asbestos roofing, wool felt roofings, water-proofing materials, pipe covering felts, air-pump throttle, coil, spiral and sheet asbestos packings, high and low pressure pipe coverings and pipe covering felts, high temperature fire brick cements, pipe covering and boiler cements, electrical materials, boiler laggings and cements, vitribestos pipe coverings, transite asbestos shingles, asbestos wood, asbestos smoke jacks, sanitary seats and tanks, underground electrical conduit, steel car insulation, refrigerator car insulation, car roofings, locomotive cab roofing, underground sectional conduit for steam lines, air brake expander rings.

McConway and Torley Co., Pittsburg, Pa.—McConway steel tired wheel, Buhoup flexible truck, Buhoup 3-stem passenger coupler, Pitt passenger coupler, Janney "X" and Penn freight couplers, steel castings.

McCord and Co., Chicago.—Malleable iron, cast steel and vanadium grey iron journal boxes. Pinless lid and outside metal dust guard journal boxes, National equalizing wedges, draft gears, spring dampeners and operating locomotive force feed lubricator lubricating driving box.

Mudge and Co., Burton W., Chicago., Ill.—Garland System passenger car ventilation, full size models showing application Garland ventilators to monitor and arch roof cars. Ventilator registers and operating devices.

Nathan Manufacturing Co., New York.—Injectors, steam valves, boiler washer and tester, oil cups, whistles, engine and boiler fittings, lubricators, boiler checks, steam fire extinguisher, water gauges and safety valves.

Norton Inc., A. O., Boston, Mass., and Coaticook, Que.—High speed ball bearing jacks.

Pyle National Electric Headlight Co., Chicago.—Reception booth.

Safety Car Heating and Lighting Co., New York.—Car heating and lighting apparatus, car lighting by Pintsch gas, axle light and vapor light, latest designs of Pintsch mantle lamps and electric fixtures, car heating by thermo jet direct steam and hot water with thermo jet control.

Standard Coupler Co., New York.—Standard steel platforms and buffing mechanism. Sessions-Standard friction draft gears.

Standard Steel Works Co., Philadelphia, Pa.—Driving tire, steel tired wheels, rolled steel wheel driving wheel centers, driving axles, forgings, rings and springs.

Symington Co., The T. H., Baltimore, Md.—Farlow draft gear, Symington journal boxes, flexible dust guards.

United States Light and Heating Co., The, New York City, N.Y.—Axle electric car lighting apparatus. Axle driven generators, truck suspensions, generator regulators, lamp regulators, storage batteries for car lighting, signals, telephones and central stations.

Westinghouse Air Brake Co., Pittsburg, Pa.—Empty and load brake demonstration rack, PC equipment demonstration rack, centrifugal dirt collector demonstration rack, PC equipment illuminated chart, Westinghouse brake test truck, Westinghouse enameled main reservoirs, galvanized annealed steel hose clamp, centrifugal dirt collector for 9½-inch compressor.

Wood, Guilford S., Chicago, Ill.—Wood's flexible nipple end protector The monogram train pipe bracket.

◆

C.N.R. Revision at Rainy Lake.

The Canadian Northern is now making a revision of its line across the narrows of Rainy Lake, near Fort Frances, Ont., which is unusual in several respects. The present line between Winnipeg and Port Arthur was built in 1900. It crossed Rainy River on a pile trestle two miles long. The bottom of this lake is similar in many ways to the muskegs so common in that section, and in building the trestles in the soft bottom many piles 80 ft. long were used, even these frequently going down one foot at the last blow of the hammer. In spite of these unfavorable conditions very little difficulty has been experienced in maintaining the structure, but it was necessary to take precautions continually to guard against trouble.

The greatest difficulties resulted from the ice. In the fall when the lake froze over the water was usually considerably above the late winter stage, and as it gradually fell it was necessary to keep the ice cut away from the piles to avoid its carrying them down with it and throwing the track out of surface When the ice went out in the spring the side pressure was very great, although no actual damage from this source was met with until a year ago, when one section of the trestle was pushed quite badly out of line. While but comparatively little trouble had been met, there was always danger, and it was decided to build a new line on solid embankment when the trestle required renewal.

In making the location survey for this new line soundings were taken through the water and mud to rock, over a large area adjacent to the projected line This work was started during the winter, but only fair progress was made. Much difficulty was experienced in driving down the sounding rods, as they became quickly coated with ice. The following summer the sounding was continued, a scow 22 by 34 ft. by 2 ft. deep being used, on which a hand driver with 75-lb. hammer was erected. This scow had a well in centre, through which the sounding rod, composed of extra heavy 1¼ in. steel pipe in 10 ft. sections, was passed. Much more satisfactory results were obtained from this summer work than from soundings in the ice and better progress was made, a maximum of 28 soundings being secured in one day. The soundings were taken in water as much as 40 ft. in depth, while below these the mud extended to a maximum depth of 50 ft. over the rock. This mud varied from a soft ooze to a compact clay in which the sounding rod would penetrate but ⅛ in. with a 4 ft. drop of the hammer. Following the taking of the soundings a contour map of the lake bottom was made. By means of this map a new line was located over the summit of a submerged hill rising nearly to the surface of the water and at another place along a submerged side slope, very materially reducing the yardage. While introducing more curvature and lengthening the line about 900 ft., the new line was adopted because of the greatly decreased quantities of fill necessary as compared with any other line, and also to secure bridge openings at right angles.

The new line is 15,814 ft. long and provides two openings for logs and navigation; 800,000 cu. yds. of rock were required for a double track embankment, divided principally between three fills, 1,000 ft. long and requiring over 100,000 yds. each and one 3,000 ft. long requiring 400,000 yds. About 95% of this rock is secured from an 80-acre borrow pit on an adjacent island.

The contractors are using 25 tappet air drills for putting down the holes in the rock, these being drilled up to 30 ft. deep in the first lift and from 20 to 25 ft. in the second lift. Air is furnished by a pair of R. P. 2 type Canadian-Rand compound air compressors compressing 1,046 cu. ft. of free air per minute to 100 lbs. pressure. These compressors in turn are run by two 200 h.p. motors, securing power from the Rainy River Falls development at Fort Frances 2½ miles distant. The holes are heavily sprung and loaded with a combination of dynamite, virite and black powder, 300 shots being commonly fired at once. Two 95-ton Bucyrus shovels load the rock into 12-yd. standard gauge side dump cars, which are pulled by four-wheel, 35-ton switching engines.

The contractor has devised an unusual arrangement for building the fills. The first fill was made in the ordinary way, by side dumping from a trestle and raising the tracks. A great deal of difficulty was encountered owing to the many heavy settlements of the fill carrying the trestle down with it. This settlement was specially severe in the shallow water, where there was much mud. To escape from the necessity of a trestle he placed two 6-ft. plate girders 140 ft. long across a barge 32 by 112 ft. by 6 ft. deep, with one end of these girders resting on a 3-ft. plate girder 80 ft. long, which was supported in sliding braces on two smaller barges 12 by 24 ft. by 5ft. deep. The 6-ft. girders were placed 30 ft. centre to centre and were connected by seven floor beams 24 in. deep braced diagonally and spaced 20 to 23 ft., except at the two end panels, where they are spaced 26 ft. apart. On these floor beams two 20-in. stringers were placed spaced 6¼ ft. centre to centre and connected with double sway braces. On these stringers a standard gauge track was laid extending on to the adjacent bank over two log stringers which reached over the end of the bridge. Cars are pushed out on to this

THE B. GREENING WIRE CO., Limited

HAMILTON, ONT. - - MONTREAL, QUE.

bridge and dumped in the two shore panels. They are then pushed out on to the cantilever to allow others to be dumped, the cantilever acting as a tail track. As the two small barges at the shore end are placed at wide centres, the entire equipment can be pushed farther into the lake as the fill progresses. In completing the fill to grade it will be necessary to lengthen the cross girder, substitute larger barges for the 12 by 24 ft. barges, and raise the entire bridge.

This arrangement has proven entirely successful, the only objection being that the 12 by 24 ft. barges are not large enough and not far enough apart to enable the higher dump to be built at once. The barges are anchored to rock by steel cables and no difficulty has been experienced with the 3 or 4-ft. waves which are encountered. To show the advantage of this floating equipment and the impracticability of filling from a trestle on this work, on one end of the 3,000-ft. fill 1,200 cars were dumped without moving the barges, the top of the fill repeatedly reaching the level of the girders and suddenly settling, leaving the bridge stringers in mid-air and forcing the mud to within 20 ft. of the surface in front of the barges where there had previously been 40 ft. of water. A comparison of the excavation and fill quantities has shown that the rock has settled to the rock on the lake bottom.

The contractors for this work are Johnson & Carey, St. Paul, Minn., who are working under the direction of M. H. MacLeod, General Manager and Chief Engineer, C.N.R., W. L. Mackenzie, Bridge Engineer, and B. S. Remington, Assistant Engineer in charge of the work, to whom we are indebted for the foregoing information.—Railway Age Gazette.

◆

The Canadian Westinghouse Co., Ltd., has declared a quarterly dividend of 1½%, and a bonus of 1%, payable July 10 to shareholders of record June 30.

National Transcontinental Railway.

Negotiations are in progress between the G. T. Pacific Ry. and the N.T.R. Commissioners with a view of certain sections of the line being taken over and placed in operation. It is thought that the section through the St. Maurice Valley in Quebec and a section between Plaster Rock and Moncton, N.B., may be taken over this year.

According to an Ottawa press report, June 16, the Commissioners have decided not to enforce the penalty of $5,000 a month against contractors who have failed to complete the sections let to them within the time limit, on account of the difficulty experienced in getting labor since the contracts were let.

Tenders will be received to July 15 for the erection of two terminal stations, one at Reddit, Ont., and the othre at Transcona, Man.

The two mile approach of the line in St. Boniface connecting up the line from the east with the tracks of the joint terminals at Fort Garry, Winnipeg, is practically completed. The first mile of the approach is graded with sand and gravel without any trestle work; the next half mile comprises a network of trestle work, and the last half mile from Archibald St. to the river will be built on a series of concrete piers varying from 30 to 50 ft. apart. The highest point is just over Archibald St., being 30 ft above the street level. Steel bridges are erected over five streets and there is also a steel bridge over the Seine River. The J. D. McArthur Co. is carrying out the work.

GRAND TRUNK PACIFIC RAILWAY.

In a recent interview President Hays, referring to the branch lines, said it was hoped to complete some 645 miles of new lines this season. Reports from all the lines under construction show that rapid progress is being made with grading and track laying. It was stated before the Board of Railway Commissioners, July 6, that the company had 215 miles of track, ready for the operation of freight trains, but of which it was impossible to make any use, as the Commissioners had put a stop to the operation of any line for any purpose whatever until it had been inspected.

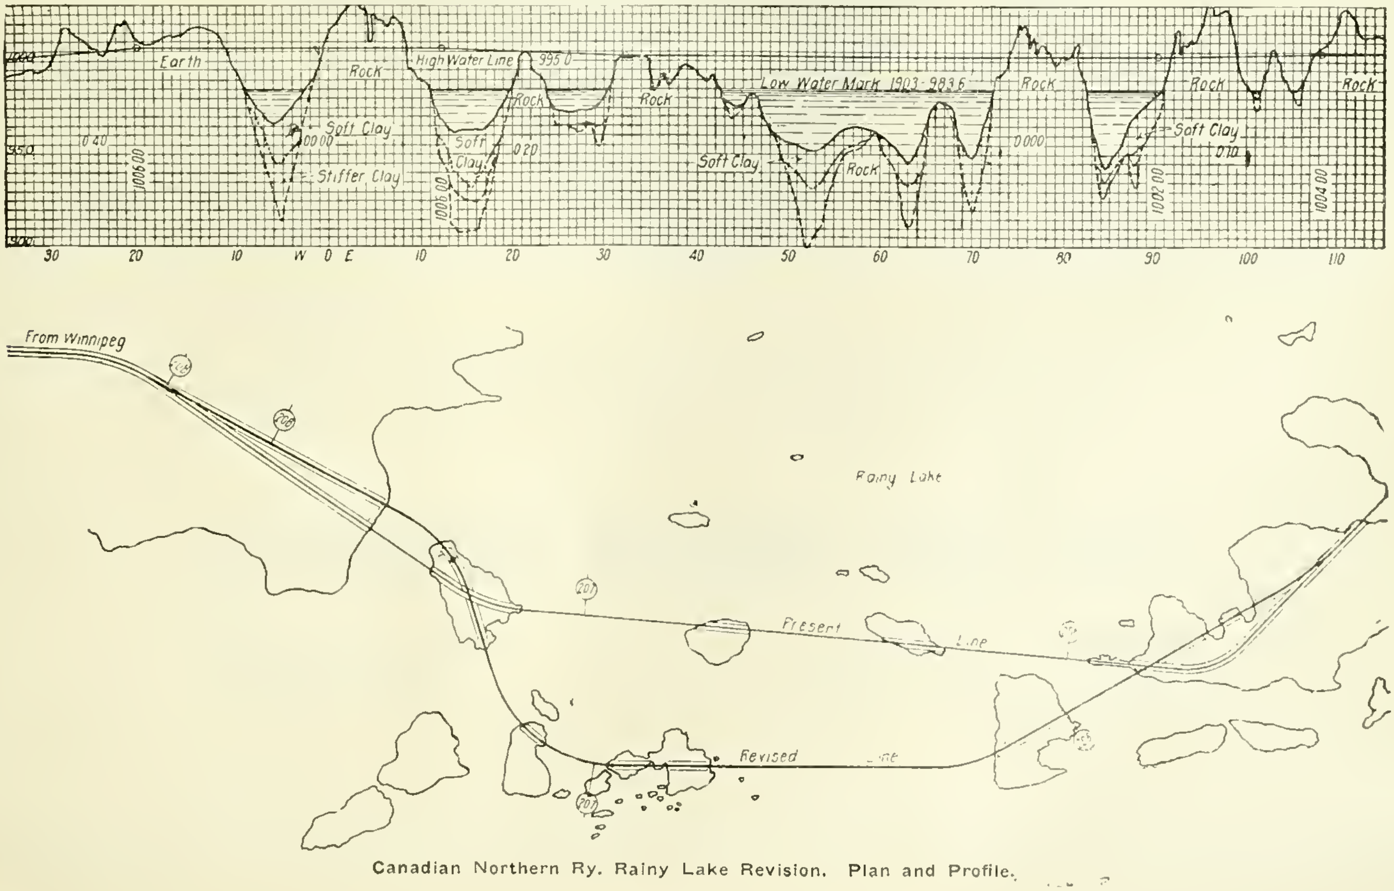
An order has been issued by the Board of Railway Commissioners approving of the location of the Melville-Regina branch from the west boundary of sec. tp. 18, range 19, west of the second meridian, at mileage 90.74 to Regina city limits, at mileage 92.62.

The revised location maps for the branch from Biggar, Sask., to the 4th meridian, 100 miles have been approved by the Minister of Railways, and the Board of Railway Commissioners has approved of location plans of the branch, from mileage 19.97 to 53.23, Sask.

The Minister of Railways has approved of the route map for three miles covering the entrance of the branch line from Tofield into Calgary, Alta. Construction on this branch was reported to have been stopped June 8, owing to an injunction having been obtained by the C.P.R. to keep the G.T.P.R. off all C.P.R. lands in the irrigation area. Construction has been stopped at Berseker, Alta., about 10 miles out of Calgary. The company's engineers are locating a line from Calgary southerly to the International boundary, just east of the Little Bow River.

The Department of Railways has approved of the route map of a line northerly from Edson, Alta., to the Pacific Northern and Omineca Ry., about 50 miles.

C. M. Hays, President, completed a trip of inspection over the line, in company with a number of other officials, June 9, when the party left Prince Rupert, B.C., on the return journey. In the course of an interview at Vancouver, Mr. Hays said better progress is being made east of the Rocky Mountains this year than in 1910. The party travelled on the company tracks for 200 miles west of Edmonton, or within 25 miles from



Canadian Northern Ry. Rainy Lake Revision. Plan and Profile.

Signal Protection

on a railroad must not restrict traffic or interfere with proper train movements in order to be effective, especially on single track lines. The only system of signals, with one exception, which does not restrict or interfere with traffic on a single track line **is the Automatic.**

The exception is the lock and block with intermediate automatic signals between sidings, which is much more expensive to install than an automatic system, and is considered practically prohibitive in operation expense.

THE AUTOMATIC SYSTEM

on single track, when properly installed, fully protects trains against head-on and rear-end collisions, allows following train movements between sidings, with the trains properly spaced, and thus facilitates as well as protects traffic.

A cheaper system either fails to afford proper protection, interferes with regular train movements or restricts traffic.

The Hall Signal Company

NEW YORK - CHICAGO

the summit of the Rocky Mountains at the Yellowhead Pass. The work is well under way to Tete Jaune Cache, B.C., to which point track should be laid in the fall. Tenders will be called for shortly, for the building of the 410 mile gap between Tete Jaune Cache, and Aldermere, B.C. "Possibly," added Mr. Hays, "Mr. Kelliher may be in a position to call for the tenders next week." It is expected to have the line completed by the end of 1913, and not until this work is done will the company take up, said Mr. Hays, the question of the building of a line from Fort George to Vancouver. On June 15, B. B. Kelliher, Chief Engineer, stated in Vancouver that contractors had been asked to send in tenders for this mileage, and he hoped to see work started on it this summer.

An agreement was approved by the Prince Rupert City Council June 8, under which the company is to give the city 100 feet of water front, and certain areas for park and cemetery purposes; build a dry dock to cost $2,500,000; build a station and other terminal buildings to cost $1,000,000, and a hotel to cost a similar amount, in return for a fixed payment of $15,000 a year as taxes, for 10 years.

The Board of Railway Commissioners has authorized the company to open for traffic its line from Prince Rupert, B.C., easterly for 100 miles, the speed of the trains to be limited to 12 miles an hour.

The route map of a branch line of 3.23 miles from the wharf at Prince Rupert, B.C., northeasterly to Shawatlan's Passage, has been approved by the Minister of Railways.

A contract has been let to Mr. Dow, Seattle, Wash., for the construction of a concrete wharf and warehouse at Vancouver, B.C., for the company's steamship business; and plans are under consideration for the building of a similar wharf and warehouse at Victoria, B.C. (June, pg. 519.)

MAINLY ABOUT PEOPLE.

S. Symons, formerly General Baggage Agent, G.T.R., Montreal, died there June 6, aged 77.

H. C. Stephens, through freight foreman, C.P.R., Owen Sound, Ont., died there, of pneumonia, June 11.

G. T. Bell, Assistant Passenger Traffic Manager, G.T.R., sailed from Montreal, June 10, on a trip to Great Britain.

J. B. Laliberte, Chairman Quebec Harbor Commission, sailed from Quebec, June 2, on his fifty-sixth trip to Europe.

Francis King, M.A., Counsel Dominion Marine Association, has been re-elected Lay Secretary of the Anglican diocese of Ontario.

Sir Thos., Lady and Miss Tait are staying at the Hotel Rembrandt, London, Eng., and hope to sail for Canada some time in July.

Lord Strathcona has given $100,000 towards the fund for the completion of the Medical Faculty building of McGill University, Montreal.

Miss M. L. Armstrong, daughter of L. O. Armstrong, Industrial Commissioner, C.P.R., Montreal, was married there, June 7, to R. L. Grigg.

E. W. DuVal, Superintendent, District 1, Saskatchewan Division, C.P.R., Moose Jaw, was married at Winnipeg, June 5, to Miss S. Campbell.

The engagement is announced of Miss Marion Creelman, daughter of A. R. Creelman, K.C., General Counsel, C.P.R., to E. B. Savage, of Montreal.

W. T. Payne, Manager, C.P.R. Pacific steamship service, Yokohama, who left Japan in Feb. for Great Britain, returned through Canada early in June.

T. McNabb, Master Mechanic, Alberta Ry. and Irrigation Co., Lethbridge, Alta., has been elected Grand Master of the Masonic Grand Lodge of Alberta.

J. J. Hill, Chairman, Great Northern Ry., St. Paul, Minn., who is a native of Rockwood, Ont., has given $1,000 to the Y.M.C.A. building fund at Guelph, Ont.

A. V. Redmond, of the National Transcontinental Railway engineering department, was married, June 28, to Miss E. A. Healy, of Smiths Falls, Ont.

Mrs. F. H. Phippen, wife of the General Counsel, Canadian Northern Ry., left Toronto for England early in June. Mr. Phippen will probably go there in June.

E. Dunn, chief clerk C.P.R. Freight Department, London, Ont., was presented with a suit case by the staff, June 5, on his transfer to Toronto, in a similar capacity.

W. R. Baker, Secretary, C.P.R., and Assistant to the President, has been created a Companion of the Victorian Order, on the occasion of the coronation of King George.

Miss Edna K. Phippen, daughter of F. H. Phippen, General Counsel, Canadian Northern Railway, was married in Toronto, June 1, to Dr. C. R. Gilmour, of Winnipeg.

Mrs. Crawford, who was killed in a runaway accident at Montreal, June 11, was the wife of Capt. A. Crawford, for several years Superintendent, Allan Line, Montreal.

Sir William Whyte,

Vice President, Canadian Pacific Railway.

Sir Henry M. Pellatt was appointed on the official military staff for duty, in London, Eng., on the occasion of the coronation of King George, June 22, and the following day.

F. W. Peters, Assistant to the Vice President, C.P.R., Winnipeg, and T. Harling, steamship agent, Montreal, have been elected fellows of the Royal Colonial Institute, London, Eng.

J. J. Hill, Chairman of the Board, Great Northern Railway, St. Paul, Minn., spent part of June on his yacht Wacouta and salmon fishing in the lower St. Lawrence and adjacent waters.

Miss Pansy Mills, youngest daughter of Jas. Mills, LL.D., member of the Board of Railway Commissioners, was married at Ottawa, June 21, to V. M. Drury, son of Brigadier General Drury, Halifax, N.S.

J. Irwin, who was recently transferred from Saskatoon, Sask., to Dauphin, Man., as Superintendent, District 3, Canadian Northern Ry., was presented with a travelling companion by the staff before leaving Saskatoon.

Miss M. A. Mayer, daughter of A. A. Mayer, Master Mechanic, G.T.R., Montreal, was married there, June 21, to F. G. Osborn, of Westmount. Owing to her mother's recent death, immediate relatives only were present.

C. H. Wilkinson, who died in London, Eng., recently, aged 57, was Managing Director of the British Columbia Development Association, and was interested in the organization and construction of the White Pass and Yukon Ry.

E. O. Reeder, formerly Assistant Chief Engineer of the Chicago, Milwaukee and St. Paul Ry., has been appointed Chief Engineer of the Chicago, Milwaukee and Puget Sound Ry., at Seattle, Wash., succeeding E. J. Pearson, who has resigned.

Jas. Stephenson, formerly Chief Superintendent, G.T.R., Montreal, who retired from active service some years ago, and who has been living at Clevedon, Somerset, Eng., arrived in Canada at the end of May to spend a short holiday in Muskoka.

Miss Alice Shaughnessy, eldest daughter of Sir Thos. G. Shaughnessy, was married to H. W. Beauclerk, at St. Andrews, N.B., June 3. The honeymoon is being spent at Fort Tipperary, Sir Thos. Shaughnessy's summer home at St. Andrews.

Hugh Mann, who died at Acton, Ont., June 15, aged 94, was father of Sir Donald D. Mann, Vice President, Canadian Northern Ry., and also of A. R. Mann, President, Northern Construction Co., which has a number of contracts for the construction of the Canadian Northern Ry.

W. F. Drysdale, who has been appointed Mechanical Engineer, Northern Ry. of Costa Rica, at Limon, is a graduate of McGill University, Montreal, and served his apprenticeship on the G.T.R. For the past seven years he has been in the service of the American Locomotive Co., Schenectady, N.Y.

I. M. Ross, who died recently at Winnipeg, was a locomotive engineer on the C.P.R. in the seventies. In partnership with D. Grant, he carried out a number of construction contracts for the C.P.R. and Great Northern Ry. (U.S.) He drove the first locomotive across the Red River, on a temporary track laid on the ice, on Dec. 23, 1879.

L. S. Berg, President of the New Orleans, Mobile and Chicago R.R., was seriously injured, and his wife was killed, in a railway wreck near Vergas, Minn., on the Minneapolis, St. Paul and Sault Ste. Marie Rd., on June 2. They were en route to Winnipeg in their private car. The train was derailed and three cars, including Mr. Berg's, were burned.

"There may be no basis of fact for the statement that Sir William Whyte is to succeed Lord Strathcona as Canada's High Commissioner in London, but there can be no doubt as to his fitness for such an office. Sir William was born a diplomat, and in the dark days of the C.P.R. in the West his conciliatory methods and manifest sincerity were the greatest assets the company had."—Toronto Globe.

E. H. McHenry, M. Am. Soc. C.E., Vice Presidents in charge of construction and maintenance of the New York, New Haven and Hartford Rd., has also been made Vice President in charge of the same departments of the Boston and Maine Rd. He was at one time Chief Engineer C.P.R.

M. Fennell, who died at Point St. Charles, Montreal, recently, aged 79, started work on the old Lachine Ry., when that was the only railway in

320 to 328 St. James St., - - MONTREAL

operation on the island of Montreal. He transferred to the G.T.R., when the first named line was merged in the latter system, and retired from his work as locomotive engineer, three years ago. He was in charge of the locomotive which conveyed the late King Edward to Montreal, about 50 years ago.

Capt. Jas. Bain, who died at Quebec, June 3, aged 75, was connected with the sea from early years, and after retirement from active connection therewith, was for some time superintendent of the ship yard and floating dock at Quebec, owned by the late J. Roche. On the close of this plant owing to the decline of the industry there, he resumed command of a sailing vessel. For some years he has acted as a surveyor and adjuster of claims as regards damaged vessels, and has also assisted at wreck investigations as nautical assessor.

R. W. Drew, who has been appointed Division Freight Agent, Kootenay and Boundary Divisions, C.P.R., Nelson, B.C., was born at Kingston, Ont., Feb. 17, 1874, and entered railway service, May, 1894, since when he has been, to May, 1896, clerk in general office, operator and agent at various points, Kingston and Pembroke Ry.; June, 1896, to Sept., 1898, clerk, C.P.R., Arrowhead, B.C.; Sept., 1898, to Apr., 1903, local agent, C.P.R., Nelson, B.C.; Apr., 1903, to Apr., 1908, chief clerk, General Freight Agent's office, C.P.R., Nelson, B.C.; Apr. to June, 1908, acting General Freight Agent, Kootenay and Boundary Divisions, C.P.R., Nelson, B.C.; June, 1908, to May 30, District and Travelling Freight Agent, Saskatoon, Sask.

F. J. Thompson, who has been appointed Marine Superintendent, Canadian Northern Steamships, Ltd., Montreal, was born in Cheshire, Eng., Aug. 20, 1876, and went to sea, Oct., 1893, serving an apprenticeship on the sailing ship Gracie Beazley, trading between England, Australia, India, Cape of Good Hope and South America. He served two years as second officer of the ship Andora, three years as second and chief officer with the Caledonia Steamship Co., and served 18 months in the Navy, under Admiral Lord Charles Beresford, as Lieutenant Royal Naval Reserve. He subsequently joined the Cunard Line, and served five years, being second officer on the R.M.S. Lusitania, on her maiden voyage, and was later in command of the Uranium Steamship Co.'s s.s. Uranium, running between Halifax and Rotterdam, and in 1910, was transferred to the command of the same company's s.s. Campanello.

D. R. McBain, who has been elected Third Vice President American Railway Master Mechanics Association, was born at Queenston Heights, Ont., Oct. 23, 1861. Entered railway service Oct. 9, 1876, as machinist's apprentice, Canada Southern Ry., later serving as locomotive fireman, locomotive engineer, and travelling engineer. In 1900 he was appointed Master Mechanic, Michigan Central Rd., at Michigan City, Ind. In 1901 he was transferred to St. Thomas, Ont., and afterwards to Jackson, Mich. He was appointed Assistant Superintendent of Motive Power in July, 1906, and in April, 1908, was transferred to the same position on the New York Central and Hudson River Rd., at Albany, N.Y. In the spring of 1910 he was appointed Superintendent of Motive Power of the Lake Erie and Michigan Southern, the Chicago, Indiana and Southern, and the Indiana Harbor Belt lines, which position he still holds.

J. W. Kendrick, M. Am. Soc. C.E., Vice President in charge of operation of the Atchison, Topeka and Santa Fe Ry., has resigned. He is a graduate in civil engineering of the Worcester Polytechnic Institute and entered railway service in 1879 as a rodman on the Yellowstone Division of the Northern Pacific Ry. Since that time he has followed railway work continuously. For five years he was Chief Engineer of the Northern Pacific Ry., after which he entered the operating department as General Manager for the receivers of the same road and of the reorganized road, later becoming Vice President in charge of operation. In 1901 he took charge of the operating department of the Atchison, Topeka and Santa Fe Ry. as Third Vice President, and has remained in charge of that department as Second Vice President and as First Vice President. In December last he was granted six months' leave of absence to regain his health.

James Anderson, who has been elected President, Canadian Street Railway Association, for the current year, and whose portrait appears on the first page of this issue, was born near Ayr, Ont., June 20, 1851. At the age of 19 he entered the old Great Western Ry. Co.'s service, and after serving a few years was appointed a conductor, which position he held until Nov., 1883, when he resigned and went into the grocery business as a member of the firm of Robinson and Anderson, which partnership was continued for 10 years. In June, 1893, he sold his interest to his partner, and associated with John Davis, W. J. Tucker, Dr. Coventry, W. J. Pulling, of Windsor, and the late Robt. Thomson and Wm. Hendrie, of Hamilton, purchased the Sandwich, Windsor and Amherstburg Ry., which was operated under that ownership for eight years. When it passed into the hands of the present owners, the Detroit United Ry. Co., in 1901, he was appointed General Manager, and the road has since been extended to Amherstburg and Tecumseh, and now operates 35 miles of line.

R. R. Jamieson, who died May 30, at New Westminster, B.C., where he had been taken owing to a complete mental and physical breakdown, was born at Westover, Ont., Dec. 12, 1856. He entered railway service in 1873, since when he was, from 1873 to 1874, telegraph operator, Great Western Ry.; 1874 to 1878, telegraph operator, G.T.R.; 1878 to 1880, on construction in Indiana with the Delphi and Chicago Ry.; 1880 to 1883, agent and train dispatcher, Credit Valley Ry.; 1883 to 1884, on construction C.P.R. in North West Territories; 1884 to 1890, train dispatcher, C.P.R., Toronto; 1890 to 1892, Assistant Superintendent, C.P.R., Toronto; 1892 to 1896, Assistant Superintendent, C.P.R., Smiths Falls, Ont.; 1896 to 1902, Superintendent, C.P.R., Farnham, Que.; 1902 to 1903, Superintendent, C.P.R., Cranbrook, B.C.; 1903 to Dec., 1907, General Superintendent, C.P.R., Calgary, Alta.; Dec., 1907, to Oct. 5, 1908, General Superintendent, Central Division, C.P.R., Winnipeg. On retiring from railway service he removed to Calgary and entered private business, being connected with several insurance companies. He served two terms as mayor of the city, during which period he was mainly responsible for the construction and organization of the Municipal St. Ry. there, which was operated by a commission, of which he was Chairman.

Sir William Whyte, who received the honor of knighthood, on the coronation of King George, was born at Charlestown, Fifeshire, Scotland, Sept. 15, 1843. He commenced his railway career with the North British Ry. in 1861, and after two years' service, came to Canada, but it was not until 1865 that he entered railway service here. For a few months he was freight brakesman on the G.T.R. at Cobourg, Ont., being transferred to Toronto in the same year. Since then he has been, to 1867, freight clerk, G.T.R., Toronto; 1867 to 1870, yardmaster, same road, Toronto; 1870 to 1871, night station agent, same road, Toronto; 1871 to 1874, freight and station agent, same road, Stratford, Ont.; 1874 to 1881, in charge of G.T.R. business, London, Ont.; 1881, in charge of freight offices and sheds, same road, Toronto; Nov., 1881, to Sept., 1883, Assistant Superintendent, Central Division, same road; Sept., 1883, to Aug., 1884, General Superintendent, Toronto, Grey and Bruce Ry., and Aug., 1884, on the amalgamation of the T.G. and B. Ry. with the C.P.R., to May, 1885, General Superintendent, Ontario Division, C.P.R.; May, 1885, to 1886, General Superintendent, Eastern and Ontario Divisions, same road; 1886 to May, 1887, General Superintendent, Western Division, same road, Winnipeg; May, 1887, to Apr., 1901. Manager, C.P.R. lines west of Fort William to the Pacific coast; Apr., 1901, to Dec., 1903, Assistant to the President, same road. In Dec., 1903, he was appointed Second Vice President, C.P.R., in general charge of the maintenance and operation of the western lines, and, under the President's direction, of the administration of the company's affairs in the territory between Lake Superior and the Pacific Coast, and in June, 1910, on the abolition of the numerical designations to the titles of Vice President, he became Vice President, with the same duties.

Canadian Northern Pacific Ry. Contracts.

The contract for the building of the 163 mile portion of the line extending from Hope to Kamloops B.C., for which tenders were recently asked, has been let to the Northern Construction Co. and Welch. This is a combination of the N. C. Co., of which A. R. Mann is President and A. C. Mackenzie Vice President, and of Foley, Welch and Stewart. The mileage covers the line from Hope to Boston Bar, about 40 miles; Boston Bar to Lytton, about 28 miles; Lytton to Ashcroft, about 44 miles; and Ashcroft to Kamloops, about 51 miles; and includes the heaviest work on the whole line. It comprises about 20,000 feet of tunnelling and a large number of bridges across the Fraser and the Thompson rivers. The gradient is 0.4%, and the sharpest curvature is 8 degrees.

J. T. Burns, agent, Canadian Northern Ry., at Stratton, Ont., was arrested at Winnipeg, recently, for embezzlement of about $300.

Members of the Canadian Society of Civil Engineers were asked by circular recently if they would participate in a summer excursion, either from Montreal to the Maritime Provinces, or from Montreal to Niagara Falls. Owing to the small number who expressed a willingness to go, the idea has been abandoned.

The C.P.R. has announced a number of prizes in money for farm boys in Saskatchewan, for the best collections of 25 plants of any wheat grown in the province, and later for the best plants grown from seed of the prize lots. The scheme is in connection with the C.P.R. Land Department and the provincial seed fair at Saskatoon.

During April, 11 employes were killed and 14 injured in the course of their work in the operation and construction of Canadian railways. Of the fatalities, three were due to being struck by trains, five to being run over, two to being crushed between cars, and one to scalding, while of the other accidents, two each were due to falls and to collisions, one to coupling cars, four to being run over, and one each to being crushed between cars, struck by crowbar, struck by falling material, to being burned and to being scalded.

125 Railroads in America

—USE—

DEARBORN TREATMENT

FOR BOILER TROUBLES

The Dearborn Company makes complete mineral analyses of the waters in the district under consideration for treatment, and furnishes preparations containing the proper corrective agents for all of the harmful elements in the water.

It costs but a trifle per thousand gallons of water evaporated—less than by any other method—to keep boilers in proper condition with Dearborn Treatment. Old scale is loosened up so that it is easily washed out, and new formation prevented. Leaking troubles are done away with, and expense for boiler work practically eliminated. The average life of a set of locomotive boiler tubes in bad water districts has been increased from 20,000 to 100,000 miles. Greater mileage between washouts is accomplished, and large saving in fuel effected.

It can be arranged so that the Treatment is applied at terminals only, when the trouble is scale and leaks. In alkali or foaming waters, the treatment is applied to the engine tank each time water is taken. In this way the people who benefit by the use of the Treatment are directly responsible for its application, which insures proper handling.

Send us gallon samples of water from the districts where your worst water supplies are found. We will analyze free of charge, and recommend the most economical remedy.

Transition Curves.

By J. Leslie, Roadmaster, National Transcontinental Railway, La Tuque, Que.

I read with much interest the very valuable article in your April issue by Mr. H. J. Wicksteed, C.E., on transition curves. I am not an engineer, but a trackman of wide experience, and I fully concur with all Mr. Wicksteed has said in regard to this very important problem. Having had wide experience in track work, and subsequently further experience as roadmaster on a line pretty well interspersed with curves varying from a 1° up to 6°, and although I was under the impression that I knew all about track work before becoming a roadmaster, I found by riding on fast trains that my knowledge was far from what I had believed it to be. The disagreeable riding of curves induced me to go deeper into this matter, consequently I went to work to make improvements in the alignment of curves. I got the section foremen started to line them with a 62 ft. cord, a very simple method of lining when an engineer is not available. This cord is stretched along the inner side of the outer rail and measurements taken from the centre of the cord to the rail. This measurement in inches means the degree of the curve pretty closely. We succeeded in getting them into fairly good line, but had not got on to the method of easing the points, which was the most important part of all. I had a reverse curve, a 3° and a 4°, but I should not call it a reverse, as there was something like 160 ft. of tangent between. This was at a point where trains ran particularly fast, sometimes as high as 60 miles an hour, and I must say the riding was anything but agreeable. I frequently sent foremen to line this, but all their efforts proved ineffectual; no perceptible improvement was made. I then decided to try my hand at it, and if possible make the condition of the track conform to the speed of the trains, in which I succeeded beyond expectation. With two gangs of section men I started to line it at the point of reverse. I had not proceeded far with the work when I was struck with the idea that I might possibly ease the points with the aid of the 62 ft. cord. If I could line these two curves all round with the cord, why not ease the points with it as well? So I started easing the points, starting at 0 and increasing half an inch on each measurement until the full curvature was reached. The same process was gone through with both curves. The work when completed was highly satisfactory. In making transition curves it simply means lengthening the curve and shortening the tangent, at least it appears so to me. With reference to the two curves here referred to, I may say I took all the tangent out with the exception of a few feet. As previously stated, commencing at 0 and gradually bringing it into full curvature. The elevation was put in accordingly, and at every point was suited to the degree of curvature, or, in other words, was adapted to the degree of curvature. These two curves were lined throughout, the extreme ends as well as the point of reverse. The elevation given was one inch per degree, and I can state emphatically, that a more agreeable and pleasant riding track would be very difficult to find. I rode over it for years afterwards, and it continued to be the same, with some attention of course. This piece of track, fortunately, was better situated than some others I have known in the way of heaving and being thrown about by the action of the frost; it was good at all seasons of the year.

I think this method of lining is much on the same principle as illustrated by Mr. Wicksteed, but of course necessitates much more work when the lining is done in the manner described. The lining can be done more cheaply and quickly when the centres are given by a practical engineer, but an engineer is not always available when it is necessary to do a bit of lining, and the centres given last year cannot be relied upon as being accurate enough to line to this year. As a rule the whole track is surfaced and lined every season, and we cannot expect to get engineers' centre stakes every time we disturb the track. Although the curves may have been lined as near perfection as possible at one time, there are different agencies at work which all combine to get them somewhat out of place. The section foreman, with nothing but his eye to guide him, is one contributory cause. This is a strange assertion to make, but nevertheless it is true. I once knew an experienced foreman who had charge of a big yard, together with two miles of section, and on the section was a 3° curve. He surfaced and lined his curve as well as he knew how, and when it was completed he felt much elated, thinking it was the best piece of track on the system. To make sure that it was all it appeared to be, he went down the line to the first station and boarded a passenger train for the purpose of satisfying himself that the curve in question was all right. The train when reaching this curve had attained a high rate of speed, the descending grade begreat surprise, that the curve in a couple of spots was not anything like the track he thought it was. Judging from the way it rode he thought the defective spots must be very conspicuous or easily detected, but when making an effort at improvement he could not detect the spots which were so very pronounced when riding on the train at a high speed. Now, in this case the defect was certainly in the alignment, and yet his experienced eye could not detect the slight variation. If he had tried the 62 ft. cord it would have pointed out the invisible spots, but this was in the days long before lining with a cord was thought of. Section foremen as a rule take great pains with their surfacing and lining, and what appears to them to be good track may be full of little imperfections. Their knowledge in gening in its favor. He discovered, to his eral of how a train rides over their newly surfaced and lined track is very limited. Even a roadmaster might be deceived in this way, but his position gives him the advantage in knowing where the defective spot is located, and just what is wrong with it.

From the President of the Canadian Pacific Railway.

The following letter from Sir Thomas G. Shaughnessy, K.C.V.O., President of the Canadian Pacific Railway, to our Managing Director, is highly valued by us, as the expression of the opinion of a master mind in the transportation field:—

"THE CANADIAN PACIFIC RAILWAY COMPANY.

**"Office of the President,
Montreal, May 10, 1911.**

"Dear Burrows.—The number of railway officials and employes, and others, who take a keen interest in railway and shipping affairs in our country, has now become so large that the usefulness of your journal is beyond question.

"While I am only able to read it from time to time, I am impressed by the accuracy of your statements and your excellent judgment in the selection of material that is interesting as well as instructive.

"I trust that the Railway and Marine World will continue to prosper.

**"Yours sincerely,
"T. G. SHAUGHNESSY."**

This curve question is a very difficult one to get section foremen educated in in a way which they will understand, and another drawback is the frequent changing of foremen. One foreman may have his curves in good shape, and the man who succeeds him, although taught and watched, is very apt to get them distorted in a short time, and thus it goes on year after year. It happened to be my lot last fall to line some curves in the northern country. They were principally 6° and had rather abrupt points. The centres were given by an engineer who made nice transition curves, and who, in my opinion, thoroughly understood his business (I cannot recall his name just now.) In all my experience I never lined curves with as good satisfaction. He set up a permanent stake 2 x 6 ins. at zero, indicating the point of compound curve, and another stake of the same dimension at the point of regular curve, or the point where the compound curve ceased, indicating the point of regular curve, together with degree of curve and elevation required. The distance from the p.c.c. to the regular curve for a 6° was something like 300 ft. They termed this spiralling, but call it what you like, it all amounts to the same thing when properly done.

I feel grateful to Mr. Wicksteed for explaining matters in the way he did, and every effort should be made to carry out what he has explained, and all the attention possible should be given to it. Speed demands this.

◆

C.P.R. Mechanical Officials' Meeting.

The annual meeting of C.P.R. mechanical officials was held in Winnipeg recently, H. H. Vaughan, Assistant to the Vice President, Montreal, presiding. There were also present: Grant Hall, Superintendent of Motive Power and Car Department, Western Lines; R. W. Burnett, General Master Car Builder, Montreal; C. H. Temple, Assistant Superintendent Motive Power, Western Lines; C. Kyle, General Master Mechanic, Eastern Lines; H. Osborne, Superintendent Angus locomotive shops; W. E. Woodhouse, Superintendent Winnipeg locomotive shops; G. I. Evans, Mechanical Engineer; Allan Dixon, General Foreman, West Toronto shops, and Master Mechanics Ord, Mills, Reid, Preston, Short, Pyne and Phipps.

The meeting occupied three days, one of these being devoted to the inspection of the company's Winnipeg shops and a visit to the Canadian Northern Ry.'s new shops at Winnipeg. The subjects taken up were connected with the rules and regulations of the maintenance of cars and locomotives, and discussions as to the methods of locomotive and shop practice.

◆

The G.T.R. offered for competition among its junior employes, or the sons of employed under 21, four free scholarships in the Faculty of Applied Science at McGill University, Montreal, at the June matriculation examinations.

The Board of Railway Commissioners has issued a circular stating that the requirements of circular 64, Apr. 3, 1911, respecting the filing of applications covering all highway and railway crossings before approval of locations or diversions under secs. 159 and 167 of the Railway Act have been modified to the extent that unopened road allowances are exempted, but the applicants must furnish a declaration that the highways shown in their applications cover all those opened or used.

Railway Route Plans Approved.

The Minister of Railways has approved of the following railway route plans since Aug. 6, 1910:—

ALBERTA CENTRAL RY., Oct. 6, 1910.—From Moose Jaw to sec 24, tp. 35, range 23 west of 3rd meridian; about 500 miles.

Jan. 14, 1911.—Rocky Mountain House to Yellowhead Pass, about 180 miles;

ALGOMA CENTRAL AND HUDSON BAY RY., Apr. 11, 1911.—Hawk Lake to Hobon, about 30 miles.

May 10, 1911.—Magpie Branch, about 9 miles.

BRITISH COLUMBIA SOUTHERN RY., Jan. 14, 1911.—Waldo branch. About 12 miles.

BURRARD INLET TUNNEL & BRIDGE CO.—Oct., 18, 1910.—From Eburne northerly across the Second Narrows, thence easterly to Deep Cove and westerly to Horse Shoe Bay, and from a point in Vancouver under the First Narrows to the north shore connecting with the westerly part of said railway. 32 miles.

CALGARY AND EDMONTON RY., Dec. 7, 1910,—Lacombe easterly branch. From tp. 36, r. 12, west of 4th mer., to tp. 34, range 23, west of 3rd mer. 121.9 miles.

CANADIAN NORTHERN ALBERTA RY., Nov. 8, 1910.—Revised line from sec. 26, tp. 53, r, 7, west of 5th meridian to sec. 18, tp. 45, r. 3, west of 6th meridian, (Yellowhead Pass), about 200 miles.

CANADIAN NORTHERN BRANCH LINES CO., May 10, 1911.—From Grosse Isle, on the Oak Point branch, northerly, 36 miles.

CANADIAN NORTHERN ONTARIO RY., Oct. 6, 1910.—Ottawa-Toronto line. Two small revisions between Shannonville and Portland, about 10 and 35 miles.

Nov. 21, 1910.—Entrance to Toronto, Dec. 7, 1910.—Revision between Sydenham and Perth Road, about 8 miles. about four miles.

Jan. 30, 1911. — Revision between Perth Road and Portland; about 25 miles.

Oct. 6, 1910.—Udney and Matchedash Bay line. Revision between Orillia and point near Sparrow Lake; about 16 miles.

Jan. 14, 1911.—Sudbury-Port Arthur. Revised location from Nipigon northerly, 98 miles.

Apr. 19, 1911.—Through counties of York, Peel and Halton, about 35 miles.

May 5, 1911.—Two small revisions between Deseronto and Sydenham, about 5 and 1½ miles.

May 23, 1911.—Revision between Nipigon and Port Arthur, 73.9 miles.

May 10, 1911.—Line through counties of Wentworth and Halton, including Hamilton city, about 30 miles.

CANADIAN NORTHERN RY., Aug. 9, 1910. —Stewartwyn to Rocky Mountain House, from Stewartwyn westerly to between ranges 24 and 25, tps, 39, west of 4th meridian, about 36 miles.

Oct. 6, 1910.—Springfield to sec. 35, tp. 13, range 6, east of principal meridian, Man., about 25 miles.

Oct. 6, 1910.—Prince Albert Battleford extension. Revision between sec. 23, tp. 46, r. 6, and sec. 9, tp. 44, r. 8; about 25 miles.

Oct. 13, 1910.—Regina to Moose Jaw, about 45 miles.

Nov. 8, 1910.—Oak Point extension, Man. Revision between sec.. 13, tp. 29, r. 8, and sec. 35, tp. 32, r. 9, west of principal meridian; about 25 miles.

Nov. 8, 1910.—Saskatoon-Calgary line, revision of route through tps. 26-25, ranges 23-25, .west of 4th meridian, about 12 miles.

Nov. 8, 1910.—Davidson westerly. From east line of tp. 26, r. 7, to tp. 30, r. 9, west of 3rd mer. About 34 miles.

Jan. 14. 1911.—Revision of route through tp. 28 and ranges 4-6, west of 4th mer., about 12 miles.

Jan. 30, 1911.—Battleford westerly, about 60 miles.

Jan. 14, 1911.—From sec. 8, tp. 15, r. 12, to sec. 18, tp. 13, r. 23, west of 2nd mer., about 70 miles.

Jan. 14, 1911.—Moose Jaw south-easterly. Revision between Moose Jaw and sec. 36, tp. 13. range 24, west of 2nd mer., about 30 miles.

Jan. 30. 1911.—From sec. 18, tp. 13, r. 23, west of 2nd mer., to sec. 1, tp. 11, r. 5, west of 3rd mer., about 70 miles.

Apr. 11, 1911.—Gravelburg to tp. 22, range 17, west of 3rd meridian, about 150 miles.

Apr. 11, 1911.—Stewartwyn southeasterly to tp. 31, range 13, west of 4th meridian, about 50 miles.

Apr. 11, 1911.—Conquest, Sask., southwesterly, about 65 miles.

May 10, 1911.—Revision of part of Davidson, Sask., westerly line, about 20 miles.

May 10, 1911.—Wassewa to Deloraine, Man., about 15 miles.

May 10, 1911.—Revision of line from Vonda, Sask., northeasterly, about 35 miles.

May 19, 1911.—Revision of Prince Albert-Battleford line between tp. 44, range 8, and Donhulm, in tp. 42, range 14, west of 3rd meridian, about 40 miles.

May 31, 1911.—Entrance to union station, Winnipeg, about 0.305 miles.

CANADIAN PACIFIC RY., Oct. 6, 1910.—Hamiota to Birtle, Man., 32.7 miles.

Oct. 6, 1910.—Regina, Saskatoon and North Saskatchewan branch. Revision at Prince Albert; about 12 miles.

Dec. 7, 1911.—Brooks to Kirkcaldy, Alta., 63 miles.

Dec. 7, 1911.—Suffield to Kipp, Alberta; 91 miles.

Dec. 17, 1910.—Moose Jaw southwesterly, from Moose Jaw to sec. 25, tp. 8, r. 6, west of 3rd meridian; about 80 miles.

Jan. 14.—1911.—Stonewall branch. Revision of extension from Arbourg to Fisher Bay, 38 miles.

Jan. 14, 1911.—Swift Current to Brooks, from sec. 32, tp. 19, range 19, west of 3rd meridian to Brooks, 150 miles.

Jan. 14, 1911.—Weyburn-Lethbridge branch. Revision between sec. 3, tp. 5, range 6, and sec. 19, tp. 6, r. 8, west of 4th meridian, 24.4 miles.

Jan. 14. 1911.—Main line grade reduction between Austin and Melbourne, Man., 14 miles.

Jan. 14. 1911.—Moose Jaw northwesterly. From Outlook to sec. 12, tp. 33, range 22, west of 3rd meridian; about 92 miles.

Apr. 11, 1911.—Revision of line from Suffield to Kipp, Alta., 94.2 miles.

Apr. 11, 1911.—Swift Current to Brooks, 78.38 miles.

Apr. 11, 1911.—From Swift Current southeasterly to tp. 11, range 8, west 3rd meridian, about 50 miles.

Apr. 12, 1911.—From latter point to Gravelburg, about 20 miles.

May 10, 1911.—Revision of Swift Current southeasterly line, 45 miles.

May 10, 1911.—Revision of Langdon northerly branch, 62.1 miles.

See also Calgary and Edmonton Ry., Georgian Bay and Seaboard Ry., Kootenay Central Ry., South Ontario Pacific Ry.

GEORGIAN BAY AND SEABOARD RY., Nov. 8, 1910.—Lindsay to Bethany Village, about 18 miles.

Apr. 11, 1911.—From Bethany Village to connection with Ontario and Quebec Ry., about 1½ miles.

G.T. PACIFIC BRANCH LINES CO., Oct. 6, 1910.—Regina-Boundary branch. Revision of line from Regina southerly for about 12 miles.

Jan. 14, 1911.—Revision of line from sec. 21, tp. 7, range 10, west of 2nd meridian, to the boundary, about 65 miles.

Oct. 6, 1910.—Biggar westerly to sec. 30, tp. 36, r. 21, west of 3rd meridian; about 45 miles.

Jan. 14. 1911.—Revision and extension of same from sec. 34, tp. 36, r. 21, to sec. 1, tp. 37, r. 1, 4th meridian, about 46 miles.

Oct. 13, 1910.—Regina to Moose Jaw, about 45 miles.

Nov. 8, 1910.—Amended general location of entrance to Prince Albert, about 10 miles.

Jan. 14, 1911.—Calgary branch. Revision from sec. 2, tp. 28, r. 26, to sec. 8, tp. 26, r. 27, west of 4th mer., about 15 miles.

March 3, 1911.—Crossing of Bow River at Calgary.

Jan. 30, 1911.—Battleford westerly, about 80 miles.

Apr. 11, 1911.—Revision of Regina-Boundary branch between Frobisher and the Boundary, about 12 miles.

Apr. 12, 1911.—From Moose Jaw, northwesterly to tp. 21, range 4, west of 3rd meridian, 50 miles.

May 10, 1911.—Revision of line from Biggar to 4th meridian, about 100 miles.

May 10, 1911.—Edson northerly to the Pacific Northern and Omenica Ry., about 50 miles.

May 10, 1911.—Entrance to Calgary, about 3 miles.

GRAND TRUNK PACIFIC RAILWAY, May 13, 1911.—From G.T.P. wharf at Prince Rupert, northeasterly to Shawatlan's Passage, 3.23 miles.

GRAND TRUNK RY., Nov. 8, 1910.—Lindsay and Port Hope line. Deviations between Reaboro and Rice Lake summit, about 28 miles.

HUDSON BAY AND PACIFIC RY., Jan. 14, 1911.—Prince Albert north-easterly, 74 miles.

INTERNATIONAL BRIDGE AND TERMINAL CO., May 16, 1911.—Proposed connection between Canadian Northern Ry., Fort Frances, Ont., and International Bridge and Terminal Co., International Falls, Minn., about 800 ft.

KOOTENAY AND ALBERTA RY., Feb. 1, 1911.—Pincher to Beaver Creek, about 15 miles.

KOOTENAY CENTRAL RY., Dec. 7, 1910. —Revision between mileage 62.5 and 93.9.

LACHINE, JACQUES CARTIER AND MAISONNEUVE RAILWAY, May 10, 1911.—St. Catharine St., Montreal, to Jacques Cartier Jct., about 7 miles.

MANITOULIN AND NORTH SHORE RY. Jan. 14, 1911.—Sudbury to Little Current, 85.89 miles.

NAKUSP AND SLOCAN RY., Apr. 11, 1911, —Three Forks to Whitewater, B.C., 7.6 miles.

NIAGARA, WELLAND AND LAKE ERIE RY., Apr. 21, 1911.—Line on East Main St. and South Main St., Welland, Ont., about 5,000 feet.

QUEBEC AND SAGUENAY RY., Oct. 6, 1910.—Saguenay River to St. Margaret's Bay, River St. Lawrence, about 300 miles.

SOUTH ONTARIO PACIFIC RY., Feb. 28, 1911.—Guelph Jct. to Hamilton, 16 miles.

Apr. 6, 1911.—Guelph Junction to Hamilton, 16 miles.

SOUTHERN CENTRAL PACIFIC RY., Feb. 17, 1911,—For 20 miles from Burmis, Alta.

SOUTHERN CENTRAL PACIFIC RY., Apr. 11, 1911.—From 1,000 ft. north of the junction of Racehorse Creek with the North Fork of the Old Man River to near ¼ corner on the east side of sec. 17, tp. 10, range 2, west of 5th meridian, 10 miles.

TORONTO EASTERN RY., Oct. 6, 1910.—Oshawa to Lindsay, Ont., about 36 miles, and Port Hope to Peterborough, about 30 miles.

Oct. 13, 1910.—From west boundary of Pickering tp. to Cobourg, Ont., about 55 miles.

July Birthdays.

Many happy returns of the day to—

J. H. Black, Superintendent, Temiskaming and Northern Ontario Ry., North Bay, Ont., born near Smiths Falls, Ont., July 8, 1874.

M. S. Blaiklock, Engineer Maintenance of Way, G.T.R., Montreal, born at Quebec, July 19, 1859.

D. E. Blair, Superintendent of Rolling Stock, Montreal St. Ry., Montreal, born at St. Thomas de Montmagny, Que., July 25, 1877.

D. C. Coleman, Superintendent Car Service, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

Geo. Collins, General Manager, Central Ontario Ry., Trenton, Ont., born at Kingston, Ont., July 20, 1860.

D. D'E. Cooper, Canadian Freight Agent, Lehigh Valley Rd., Toronto, born at Buffalo, N.Y., July 8, 1862.

John Corbett, General Foreign Freight Agent, C.P.R., Montreal, born in Lanarkshire, Scotland, July 19, 1863.

E. J. Coyle, ex-Assistant General Passenger Agent, C.P.R., Vancouver, B.C., born at Stayner, Ont., July 23, 1870.

S. E. Dewey, Travelling Freight Agent, G.T.R., New York City, born at Beckenham, Kent, Eng., July 4, 1879.

J. F. Dolan, City Passenger and Ticket Agent, Richelieu and Ontario Navigation Co., Montreal, and President Canadian Ticket Agents' Association, born at Kingston, Ont., July 1, 1868.

F. C. Foy, Canadian Passenger Agent, New York Central Lines, Toronto, born there, July 5, 1881.

J. H. Gordon, Travelling Freight Agent, C.P.R., Winnipeg, born there, July 21, 1883.

W. R. Haldane, ex-Division Freight Agent, Kootenay and Boundary District, C.P.R., Nelson, B.C., born at Galashiels, Scotland, July 6, 1867.

J. H. Hanna, ex-Division Freight Agent, G.T.R. at Hamilton, Ont., now at Calgary, Alta., born at London, Ont., July 27, 1867.

R. K. Harris, Resident Engineer, C.P.R. Orford Branch, Kingsbury, Que., born at Maitland, Ont., July 20, 1866.

A. D. Huff, Division Freight Agent, G.T.R., Ottawa, born at Chatham, Ont., July 17, 1866.

C. A. Jaques, General Manager, Merchants Montreal Steamship Line, Montreal and Lake Erie Steamship Co., and Montreal and Great Lakes Steamship Co., Montreal, born there July 15, 1849.

J. P. Kavanagh, Local Manager, Ogdensburg Coal and Towing Co., Montreal, born at Plattsburg, N.Y., July 17, 1862.

R. G. McNeillie, District Passenger Agent, C.P.R., Calgary, Alta., born at Lindsay, Ont., July 1, 1883.

T. J. Maguire, Accountant, Quebec Central Ry., Sherbrooke, Que., born at Quebec, July 31, 1860.

R. E. Perry, Assistant General Freight Agent and Chief of Tariff Bureau, Intercolonial Ry., Montreal, born at Drayton, Ont., July 5, 1876.

W. S. Poole, Mechanical Superintendent, Prince Edward Island Ry., Charlottetown, P.E.I., born at Burslem, Eng., July 20, 1844.

R. Preston, Master Mechanic, Manitoba Division, C.P.R., Winnipeg, born at Toronto, July 28, 1863.

J. E. Quick, General Baggage Agent, G.T.R. and G.T.P.R., Toronto, born at Richmond, Ontario Co., N.Y., July 10, 1851.

G. G. Ruel, Chief Solicitor, Canadian Northern Ry., Toronto, born at St. John, N.B., July 5, 1866.

P. E. Ryan, Secretary, National Transcontinental Railway Commission, Ottawa, born there July 26, 1876.

Geo. Stephen, General Freight Agent, Canadian Northern Ry., Winnipeg, born at Montreal, July 5, 1876.

R. F. Struthers, Chief Inspector of Time Service, C.P.R., Winnipeg, born at Stratford, Ont., July 31, 1879.

Sir Thos. Tait, ex-Chairman, Board of Railway Commissioners for Victoria, Australia, born at Melbourne, Que., July 24, 1864.

H. T. Wilgress, Agent C.P.R. Pacific Steamship Service, Yokohama, Japan, born at Lachine, Que., July 29, 1857.

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses and net profits from July 1,, 1910, with increases over, or decreases from, those of 1909-10:

	Earnings.	Expenses.	Net. Earnings	Net Increase.
July	$1,225,100	$876,900	$348,200	118,600
Aug.	1,093,000	830,000	263,000	58,600
Sept.	1,279,000	898,700	381,200	69,700
Oct.	1,627,800	1,047,300	580,500	99,800
Nov.	1,565,400	1,006,500	558,900	11,500
Dec.	1,255,400	896,200	359,200	24,800
Jan.	822,600	720,900	101,700	20,800
Feb.	803,100	667,300	135,800	4,300
Mar.	1,270,600	915,800	354,800	82,500
Apr.	1,345,400	984,300	361,100	29,900
	$12,288,300	$8,843,900	$3.444,400	$478,900
Inc.	$1,920,600	$1,441,700	$478,900	....

Approximate gross earnings for May $1,445,600, and for two weeks ended June 14, $634,100, against $1,224,900, and $556,600, for same periods 1910.

C.P.R. Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases over 1909-10, from July 1, 1910:

	Earnings.	Expenses.	Net Profits.	Net Increase or Decrease
July	$8,869,214.32	5,384,594.73	3,484,619.50	1,004,748.86+
Aug.	9,255,331.67	5,563,659.34	3,691,672.33	727,614.46+
Sept.	9,315,213.67	5,403,614.03	3,911,599.64	479,710.47+

Approximate gross earnings for May, $60,758, and for two weeks ended June 14, $27,638, against $62,390, and $29 283 for same periods 1910.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Operating revenue for April, $986,613.31; expenses and taxes, $775,742.22; operating income, $210,871.09, against $1,091,150.95 operating revenue; $745,477.11 expenses and taxes; $345,673.84 operating income for Apr., 1910. Aggregate operating revenue for 10 months ended Apr. 30 $10,958,589.52; expenses and taxes, $7,606,763.36; operating income, $3,351,826.16, against $12 872,762.68 aggregate operating revenue; $7 381 065.99 expenses and taxes; $5,491,696.69 operating income for same period 1909-10. Approximate earnings for May, $1 670,942, and for two weeks ended June 14, $846,756, against $1,814,356 and $906,616 for same periods 1910.

Chicago Division.—Operating revenue for Apr., $662,124.89; expenses and taxes, $586,623.99; operating income, $75 500.90, against $812 423 13 operating revenue; $559,611.19 expenses and taxes; $252 811.94 operating income for Apr., 1910. Aggregate operating revenue for 10 months ended Apr. 30, $7,442,248.24; expenses and taxes, $5,865,912.01; operating income, $1,576,336.23, against $7,334,602.02 aggregate operating revenue; $5,114,061.09 expenses and taxes; $2,220,540.93 operating income for same period 1909 10.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry. and D.G.H. and M. Ry. separately, for Apr., as compared with Apr., 1910:—

Grand Trunk Railway.

	1911.	1910.
Earnings	$2,864,400	$2,684,600
Expenses	1,973,900	1,891,300
Net earnings	$ 890,500	$ 793,300

Canada Atlantic Railway.

	1911.	1910.
Earnings	$ 164,300	$ 158,400
Expenses	153,600	138,300
Net earnings	$ 10,700	$ 20,100

Grand Trunk Western Railway.

	1911.	1910.
Earnings	$ 558,300	$ 569,600
Expenses	461,000	438,600
Net earnings	$ 97,300	$ 131,000

Detroit, Grand Haven and Milwaukee Ry.

	1911.	1910.
Earnings	$ 160,300	$ 154,700
Expenses	149,700	136,600
Net earnings	$ 10,600	$ 18,100

Approximate gross earnings for May, $3,942,055, against $3,731,820 for May, 1910.

Traffic Receipts of the System.

	1911.	1910.	Increase.
Grand Trunk Ry.	£2,831.630	£2,683.966	£147.664
Can. Atlantic Ry.	163.740	156.003	7.737

Totals	£3,715.802	£3,536,540	£179.262

Accidents at Highway Crossings.

The Board of Railway Commissioners passed order 13847, May 30, as follows: —Re sec. 275 of the Railway Act, and the amending acts 8-9 Edward VII., chap. 32, sec. 13, and 9-10 Edward VII., chap. 50, sec. 15; and re sec. 292 of the Railway, and circular 60, dated Mar. 7, 1911, regarding reports of accidents at highway crossings, issued under the Board's direction. Upon the application of the Michigan Central Rd., and to more clearly define the meaning of the said circular, it is ordered that where an accident has happened subsequent to Jan. 1, 1905, or hereafter happens, at a highway crossing, by a moving train causing bodily injury or death to a person using such crossing, and the company immediately protects such crossing by a watchman, such protection will be regarded as satisfactory to the Board until the company is able to make report and the Board has the accident investigated and the crossing inspected, or until further order.

Rapid Transportation of Silk.—The C.P.R. steamship Empress of India brought to Vancouver on its last voyage from Yokohama, a cargo of silk valued at over $700,000, consigned to firms in New York, and the long journey across the Pacific Ocean and the North American continent was made in the record time of 17 days 1 hour. The Empress of India left Yokohama May 9, and arrived at Vancouver on the afternoon of May 20. There a special train was in waiting, and as soon as the silk could be unloaded from the boat it was reloaded on the train and rushed eastward. No more stops than were absolutely necessary were made, with the result that the train arrived at New York in five hours better time than the best previous time made by silk shipments from Yokohama. The silk weighed 340 tons, and it took nine cars to transport it.

The C.P.R. has opened emigration offices at Dalny and Harbin, in Manchuria, for the purpose of securing settlers from Russian Siberia for Canada.

USE "DUNTLEY" ELECTRIC TOOLS

For drilling, grinding, and blowing. Our electrical drills, grinders and blowers are supplied arranged for standard voltages, indirect and alternating current. We have recently gotten out a new line of Universal Drills, which have the unique property of being capable of running interchangeably on direct or alternating current of 60 cycles or less. We have also a new line of electric drills for heavy duty, being heavier in weight than the light duty tools, but the increased weight has been distributed to the utmost advantage, and represents increased capacity, higher efficiency, longer life, etc.

Telephone Dispatching on C. P. R.

Figures supplied by W. J. Camp, Electrical Engineer, C.P.R. Telegraph Department, shows that the C.P.R. leads all the railways in America in point of the number of miles of its lines equipped with telephone train dispatching circuits. The C.P.R. has 3,955 miles of its lines equipped with the new system, which is 71 miles more than its nearest competitor—the Atchison, Topeka and Santa Fe Ry. If the C.P.R.'s subsidiary lines are taken into consideration, the Canadian road has an even greater lead on its United States rivals, as the Minneapolis, St. Paul and Sault Ste. Marie Ry. has 190 miles of its lines equipped with the system, which, added to the figures of the C.P.R. proper, gives a total of 4,140 miles.

The C.P.R.'s showing is a gratifying one when it is remembered that on the two sides of the border there are over 150 railways which are using the system on a part at least of their lines. Of course the greater part of these lines have not displayed the same aggressiveness as the C.P.R. in extending the system, but that is not to be wondered at when the huge expenditures involved in changing from the telegraph to the telephone are considered. As can be readily understood, the cost of making the change varies with different roads, but, commonly speaking, the telephone system of train dispatching is between seven and eight times more expensive to install and operate than the old system of dispatching trains by telegraph. However, the extra expense is fully justified by the greater efficiency of the telephone service.

The physical differences in the two systems are the use of two copper wires for the telephone system in place of one iron wire, and selective calling apparatus in place of the telegraph key. The operating differences are that orders are transmitted by speech instead of by Morse code, and stations are called selectively and distinctly by an electric bell in lieu of the telegraph signal. The orders are issued by the dispatchers orally, word by word, names of places and numbers being spelled letter by letter to insure accuracy. The dispatcher writes the order in his book and he dictates it to the operators, thus regulating his speed to such a rate as to enable the order to be readily copied by the receiving operators. The sending of the proper calling combination from the dispatcher's office is accomplished by an individual calling key, and each station as called by the selector gives an automatic answer back. This gives the official making the call positive assurance that the call has been received at the desired station, the distinctive combination of the station being repeated to the dispatcher.

A telephone train dispatcher on the C.P.R.

At present 20 gangs are stringing wires, etc., in connection with this system on the C.P.R., and within the last few weeks orders for 260 selectors have been placed for use on new circuits. Of these new selectors, 192 will be placed in the company's eastern lines, and the remainder on its western lines.

Altogether in Canada and the United States there are 46,077 miles of the system in use, of which the C.P.R. and the other Canadian roads operate 4,360. The leading railways in this respect are as given in the next column.

	Miles.
Canadian Pacific	3,955
Atchison, Topeka and Santa Fe	3,884

Wire Crossing Over Railways.

The Board of Railway Commissioners passed order 13732, May 26, as follows: —Whereas, by sec. 7 of the act to amend the Railway Act, assented to May 19, 1911, sec. 4 of chap. 50 of the statutes of 1910, is repealed, and the following is enacted as sub-section 5 of sec. 246 of the principal Act:—

"5. An order of the Board shall not be required in cases in which wires or other conductors for the transmission of electrical energy are to be erected or maintained over or under a railway, or over or under wires or other conductors, for the transmission of electrical energy with the consent of the railway company or the company owning or controlling such last mentioned wires or conductors, in accordance with any general regulations, plans or specifications adopted or approved by the Board for such purposes."

Therefore it is ordered that the "Standard Conditions and Specifications for Wire Crossings," approved by order 8392, Oct. 7, 1909, be adopted and approved pursuant to the said amendment. And it is further ordered that order 10637, dated May 17, 1910, be rescinded.

◆

The following circular has been issued to C.P.R. employes concerned, by C. Murphy, Superintendent of Transportation:— "Engines and cars when being attached to trains carrying passengers must be brought to a dead stop 6 to 10 ft. from the train to which they are to be coupled, and then, upon proper signal, the coupling made carefully, to avoid shock."

Intercolonial Railway Roundhouse at Campbellton

In the disastrous fire which destroyed practically the whole of Campbellton, N.B., in July, 1910, the I.C.R. roundhouse was wiped out. Steps were immediately taken to restore the engine house facilities at this point, the actual work of construction being commenced on Sept. 13, 1910, and finished complete, as shown in the accompanying illustrations, early in January of this year. The building is laid out for 28 engine stalls, although the actual capacity is reduced to 25 engines because of the space of one stall being allotted to an entrance from the west, and the space equivalent to two stalls at the end of the building being devoted to the foreman's office, locker rooms and a machine and forge shop.

The radius of the inner circle is 89 ft. 25⅝ ins. to the centre of the inside wall columns, and the distance between the inside and the outside walls is 85 ft. 6 ins. The roof is straight with a slope outwardly of ½ in. to the foot and is supported between walls by three concentric rows of 10 by 10 in. wooden columns set in cast iron shoes on concrete footings. The foundations of both walls and the linings of the engine pits are likewise of concrete.

The machine shop occupies the space in one corner of the building, is approximately 42 by 48 ft. in size, and is equipped with such forge and machine shop tools as are necessary to properly handle running repairs at isolated points. The space adjacent to the machine shop is divided into a locker room, the foreman's office and a larger room well adapted for use as a stock and tool room. On the second floor, above these quarters, are stored heavy repair parts, these being handled by means of a hand-operated elevator. An industrial track runs around the building just inside the outer wall, greatly facilitating the handling of materials and parts between the pits and the shop and store room. The engine wheel drop-pits are located adjacent to the shop. The car and tender wheel drop-pit is to be changed from the location shown in the plan, next to the engine wheel pits, to pit 28 at the opposite end of the building. A turntable in the industrial track is provided opposite this pit, so as to allow of a closer approach with the industrial trucks.

The power house is a 40 by 51 ft. structure connected to the roundhouse proper by an enclosed passageway which is under the same roof with the general lavatory. The boiler room occupies a space 24 by 27 ft. in size, opposite which is the coal storage, 10 by 26 ft. in size. A chimney 4½ by 4½ ft. inside and 100 ft. high is erected on its own foundation, convenient to the boiler room, to which it is connected by means of an underground passage. The engine room is 38 by 22 ft. in size. The power house equipment consists of three one-hundred h.p. Robb-Mumford boilers, one 10 by 16 by 9 by 12 in. compound duplex steam pump for the main water supply and for fire protection, one 12 by 7 by 12 in. duplex end packed plunger pump for the boiler washout system, one 8 by 4 by 6 in. duplex end packed boiler feed pump, one air compressor unit supplemented by a small emergency compressor, and one 60 k.w. 250-volt Crocker Wheeler d.c. generator directly driven by a Robb Engineering Co.'s engine, for general lighting purposes.

Lighting is effected by means of incandescent tungsten and arc lamps, the circuits for which are arranged in four divisions and are placed in conduits. Each of the four groups may be controlled from junction boxes located on the walls, so that, in case of derangement in any one group, repairs may be made without shutting off the entire system. Each line of columns carries three drop lights in addition to a hand lamp on an extension cord to be taken at will into and around the engines standing on the pits.

A hot-air heating system is provided, the main distributing duct being of concrete and located just inside the inner wall of the building, the foundation of the wall, in fact, forming one side of the duct. The fan room is about 30 ft. square and is located in a lean-to outside the building opposite pit 18. A main air duct, of concrete, 5½ by 6½ ft. in size, joins the fan room with the distributing duct previously mentioned. The branches from the distributing duct to the pits are made of 20 and 12 in. terra cotta pipe, each pit having two air outlets. Manholes are provided at intervals to permit access to the main duct for cleaning purposes. Drainage is provided for by means of a sewer laid just outside the building, into which a 6 in. connection from the end of each of the pits is made. An independent 10 in. drain is provided for the lavatories, both systems discharging into lower ground some distance away.

Ventilation is had through the smoke jacks and through four 4 by 4 ft. louvre ventilators on the roof near the inside wall. The smoke jacks are of cast iron. A 75 ft. turntable operated by a compressed air tractor is installed.

A boiler washout system has been installed involving the use of a 12 by 7 by

THE RAIL JOINT COMPANY OF CANADA, LIMITED
OFFICES: BOARD OF TRADE BLDG., MONTREAL, CAN.

Makers of Base Supported Rail Joints for Standard and Special Rail Sections, also Girder, Step or Compromise, Frog and Switch, and Insulating Rail Joints, protected by Patents.

12 duplex steam pump controlled by a pressure regulator, a piping system with outlets between each pair of pits, and a blowoff pipe system with similar outlets. The pump and blowoff pipe are connected to a hot well located at the rear of the building, to which all exhausts and other drips are taken from all parts of the plant. When a boiler is washed out the water it contains is blown into the hot well through the blowoff tank pipe, the pump is started, and being controlled by the aforementioned regulator, is stopped when the pressure in the system reaches 90 lbs., and immediately starts up as the pressure decreases, due to opening any of the outlets throughout the building. In this way a boiler can be washed out and refilled with warm water. The blowoff pipe is laid in a 10 by 10 in. spruce conduit passing around the house between the ends of the pits and the industrial track. The hot and cold water, the steam and the air pipes are suspended from the roof timbers.

For the foregoing information and the illustrations we are indebted to T. C. Burpee, Engineer of Maintenance of Way, I.C.R., under whose direction the work was devised and carried out.—Railway and Engineering Review.

◆

Railway Lands Patented.—Letters patent were issued during April, covering railway lands in Manitoba, Saskatchewan. Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	198.20
Canadian Pacific Ry.	94.794
Grand Trunk Pacific Ry.	900.32
Manitoba and North-Western Ry.	12.27
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	4,001.66
Total	5,207.244

J. F. Philp, City Passenger Agent, Grand Trunk Pacific Railway, Edmonton, Alberta, in remitting his subscription, writes:—"The Railway and Marine World is always a welcome visitor and keeps one in touch with the railway happenings that are of most interest."

Toronto Hamilton and Buffalo Ry.

The report of the directors as to the operations of the line for the year ended Dec. 31, 1910, as presented to the shareholders at the annual meeting in Toronto, June 6, shows that the company operates 79.88 miles of main line and 3.79 miles of branches. The capital stock outstanding consists of 25,000 shares of the par value of $2,500,000, and there is also outstanding $4,280,000 of bonds. During the financial year there was expended for additions and betterments, on account of cost of road and equipment, $180,460.11, of which a net sum of $92,700.49 was for new rolling stock.

The revenue from rail operation was $1,145,769.10, against $883,356.36 in 1909, while the expenses were $631,285.18, against $523,609.64. Taxes accrued amounted to $4,700, against $5,363.08; the income from other sources amounted to $42,869.23, against $36,149.25, making the gross corporate income $552,653.15. against $390,532.89. The total deductions from this, including the interest on funded and other indebtedness, was $292,297.42, against $230,805.45, leaving a surplus for the year of $260,355.73, against $159,722.44 for 1909. The increase of $262,412.74 in operating revenue was largely due to an increase in tonnage of nearly all commodities handled. the largest increase being in manufactured articles. The increase of $107,675.54 in operating expenses was mainly due to the increased volume of traffic handled. The deductions from corporate income show an increase of $61,491.97, mainly due to the line of equipment.

The condensed balance sheet shows liabilities of $8,384,784.54, including $2,500,000 of common stock, $3,280,000 of first mortgage bonds, $1,000,000 of second mortgage bonds, $323,100 Government and municipal aid received, $535,195.58 working liabilities, $17,650.87 of accrued but not due interest, etc., $219,202.42 of appropriated surplus, and $509,635.67 of balance of profit and loss. The total assets include, in addition to cash in hand, etc., $7,291,712.41 value of road and equipment June 30, 1907, and $497,433.83 road and equipment since that date.

The statistics show:—Locomotive mileage: revenue 752,520, non revenue 20,887; train mileage: revenue 469,969, non-revenue 9,291; car mileage: freight, 4,581,219; passenger, 1,111,449; special, 4,035; total, 5,696,703; non-revenue, 129,053. Revenue freight carried, 1,829,356 tons, against 1,319,663 tons; company's freight carried, 10,998 tons; tons of freight carried one mile, 71,617,255; tons of freight carried per mile of line, 855,949; average distance of haul; average number of tons per train mile, 380; average number of tons per loaded car mile, 23.74; average number of loaded cars per train mile, 15.31; average number of empty cars per train mile, 7.99; average amount received for each ton of freight, $0.42; average revenue per ton per mile, 1.080 cents; average revenue per mile of road, $9,214.30; average revenue per train mile. Interline passengers carried, 334,251; local passengers carried, 94,016; commodation passengers carried, 91,255; total revenue passengers carried, 519,522; passengers carried one mile, 15,232,249; average distance carried, 29.32 miles; average per train mile, 54.23 miles; average per car mile, 16.50; average amount received from each passenger, $0.58; average revenue per passenger per mile, 1.989 cents.

The following directors were re-elected for the current year:—W. C. Brown, W. H. Newman, C. F. Fox, New York; H. B. Ledyard, Detroit, Mich.; Sir Thos G. Shaughnessy, D. McNicoll, Montreal; E. B. Osler, N. Kingsmill, W. P. Torrance, W. L. Scott, Toronto.

Intercolonial Railway Roundhouse at Campbellton, N.B., Cross Sections and Details.

Why the C. P. R. North Toronto Route to Ottawa and Montreal is the Logical One

The train leaves as follows:

Leave North Parkdale - - -	9.15 p.m.
Leave West Toronto - - -	9.30 p.m.
Arrive North Toronto - - -	9.40 p.m.
Leave North Toronto - - -	10.00 p.m.

Arrive Ottawa, 6.50 a.m.
Arrive Montreal 7.00 a.m.
Daily except Sunday.
Will Stop at Westmount.

¶ The residents of Toronto are adjacent to either North Parkdale, West Toronto or North Toronto stations, same being easily accessible and closer to residential districts.

¶ The North Toronto route is over an hour faster and overcomes a long hill climb for the train out of Toronto, obviating any inconvenience and ensuring early arrival at Montreal and Ottawa.

¶ The roadbed has been improved till it is unexcelled in Canada.

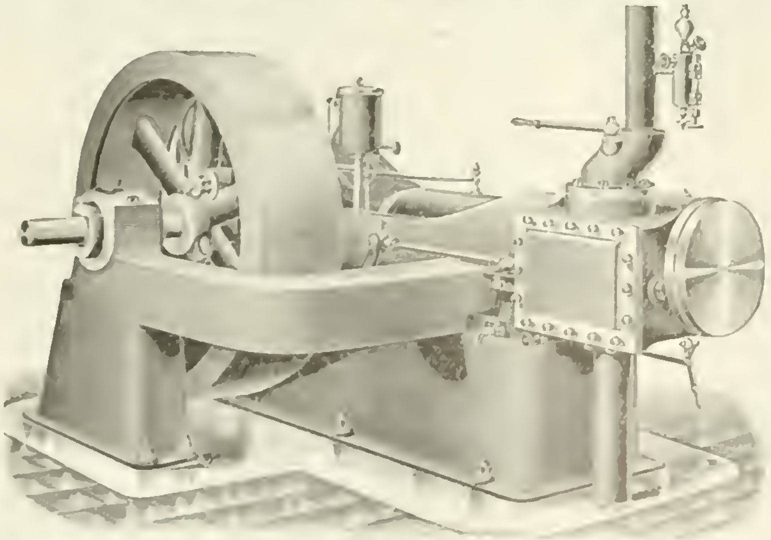
¶ The equipment is "Canadian Pacific Standard," a synonym for the "best" and attentive porters, non-obsequious, ensure efficient service. .

SLEEPING CAR SPACE HELD

Toronto City Office, 16 King St. East

North Toronto Station King Edward Hotel West Toronto Station

BEARINGS IN LINE



In sizes up to 125 horse power, the outboard bearing of our side crank engines is connected to the frame by a wing, keeping the bearings perfectly in line.

These engines are built on the interchangeable system and duplicate parts are kept in stock, ready for shipment on receipt of order.

They have our latest improved governor and oiling system and are strictly high class in every respect.

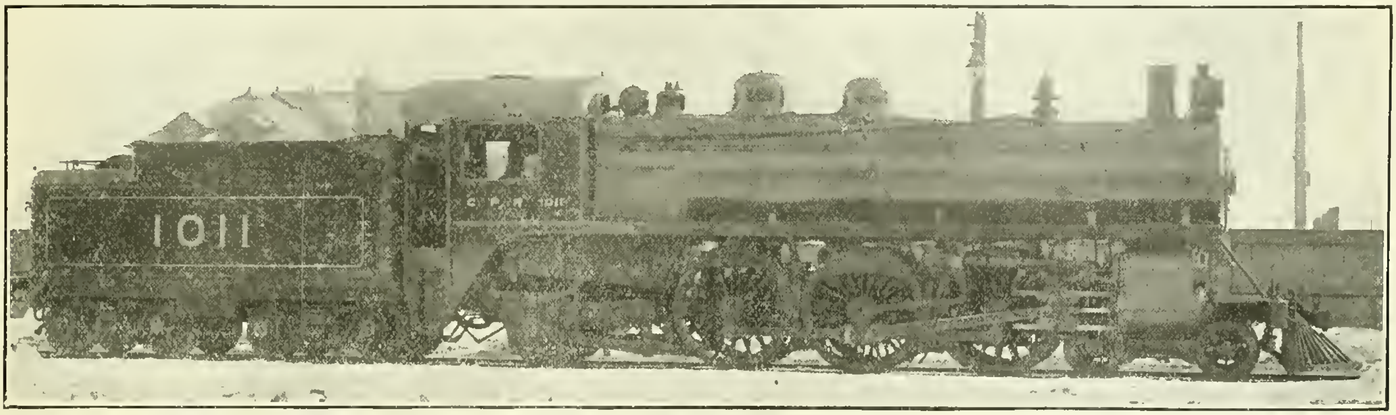
Improved Cabs and Diaphragms for C. P. R. Locomotives.

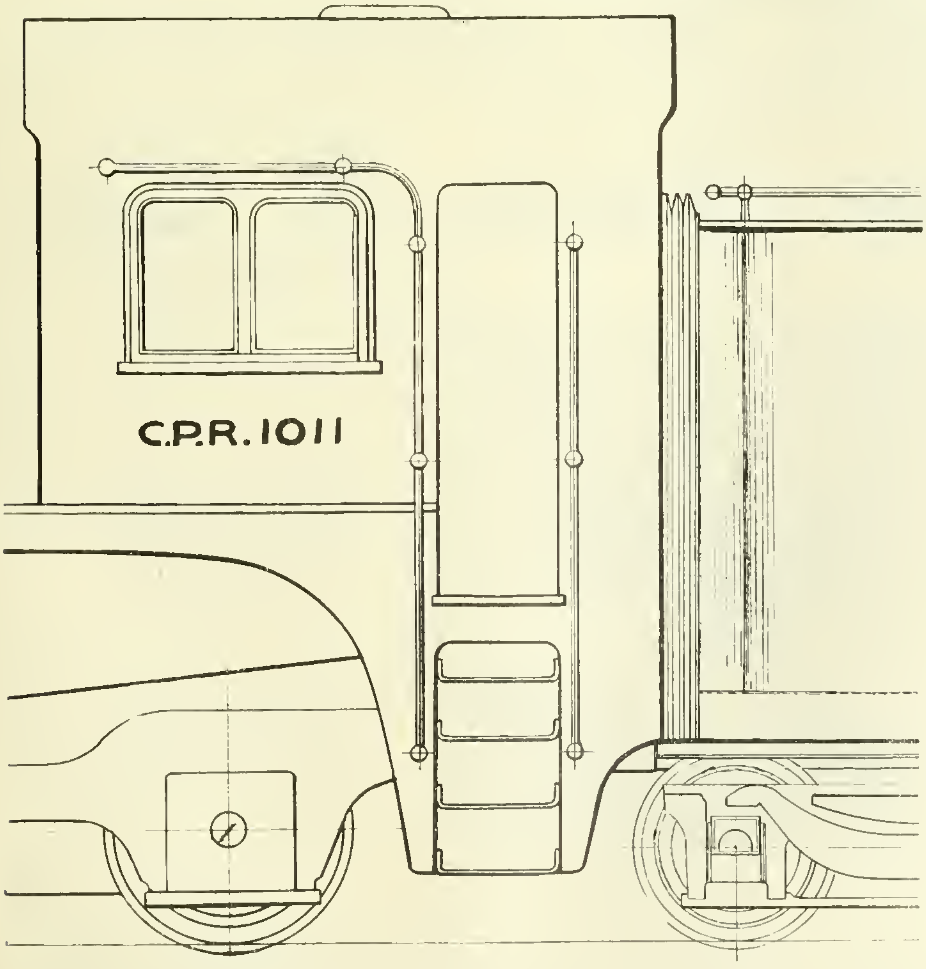
An innovation which will be much appreciated by locomotive firemen is being tested by the C.P.R. on some of its new locomotives. Hitherto the locomotives and tenders have been separated, with only canvas curtains between to protect the men from stormy weather. In the change which is being tested the principal change from the standard type of cab is that the back has been extended to within eight inches of the front of the tender tank. The tender step has been moved forward and placed on the engine directly underneath the cab door. A wall has been run across the back of the cab, and a diaphragm connects it to the front of the tender in a similar manner to a passenger car. This allows of an entirely closed cab, as with the old type, dust and snow could be drawn in through the back curtains. The new form of cab and the diaphragm were applied experimentally to locomotive 1011, which was turned out at Angus shops, Montreal, in March. The driver, who is running this locomotive, likes the arrangement very much. The innovation is also being tried on four more passenger locomotives of the same type, and if the experiment proves satisfactory it is likely to be generally adopted by the company.

The accompanying half tone illustration gives the general appearance of the cab, but does not clearly show the diaphragm, which is, however, shown in the accompanying line reproduction of the preliminary drawing. We are indebted to G. I. Evans, Mechanical Engineer C.P.R., for the particulars and for the photograph and drawing.

Lacey R. Johnson, Assistant Superintendent of Motive Power, C.P.R., Montreal, writes in reference to the improved cab and a coal pusher arrangement on the tender:—The cab was converted from an ordinary cab with a peak extending over the tender, and is so arranged that the peak of the cab extends a sufficient distance from the front of the tender to allow of the diaphragm being applied to take up the movement of the engine and tender. The diaphragm is of the standard passenger car type, one end of which is bolted to the tender, and the other end to the friction plate, which is kept up by means of coil springs and slide on cab. Above the diaphragm is a deflector which extends from cab to coal space to prevent the coal getting into the folds of the diaphragm. This design of cab affords much more room and is more accessible from the side of the engine, owing to the door opening directly into the cab.



Improvel Cab for Canadian Pacific Railway Locomotives.



Diaphragm Between C.P.R Locomotive and Tender.

The engine is equipped with deeply flanged running boards made of ¼ in. plate rivetted to the running boards by means of angle irons, which gives three beneficial results. First, it makes the running board rigid; second, it gives a better hold for the piping, which is hidden from view; third, it conforms to the general design of the tender.

The coal pusher is located at the rear section of coal space on top of the tank, being hinged at the front, and is operated by means of air cylinder which is located in centre of tank. A piston rod is connected to the rear end of the pusher, the object of which is to force the coal close up to the coal gate. This is very beneficial, especially in going up heavy inclines, where the coal would not otherwise slide down to where it can be easily got at by the fireman.

◆

Zinc Electro for Boiler Scale.—The C.P.R. is experimenting with a process on two or three feed water heaters to see if it will avoid the corrosion which has been experienced from this class of apparatus, and it is also being tried on a boiler to see if it has any effect on the formation of scale. The process comprises a zinc-electro carried on the inside of the boiler, but in place of depending on the action of the zinc alone, a very small current is passed between the zinc-electro and the boiler in order to maintain the desired parity. We are advised that the process has not been in use long enough to furnish any definite results, but that it appears to give considerable promise.

PROFESSIONAL CARDS.

THE RAILWAY AND MARINE WORLD is especially adapted for the publication of professional cards of engineers, inspectors, analysts, electrical experts, naval, grain elevator and other architects, solicitors, etc., who desire to bring themselves under the notice of the managements and officials of the various steam and electric railway, steamship, grain elevator, telegraph, telephone and power companies throughout Canada, as well as the locomotive, car and ship-builders, contractors and promoters of railway enterprises. THE RAILWAY AND MARINE WORLD is the only medium through which all these important classes can be reached.

Rates will be quoted on application.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Albert and Moncton Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Hillsboro, via Albert Lines to Moncton, N.B. (April, pg. 319.)

Alberta Central Ry.—Reports from Red Deer, Alta., June 1, stated that nothing was being done in the way of construction on the line from that town towards the Brazeau River coal field, and that nothing would be done until the return of the Chief Engineer, J. Grant McGregor, from the east.

J. Grant McGregor, Chief Engineer, on his return to Red Deer, June 9, is quoted as having said that work will be resumed at once on the line westerly towards the Brazeau River.

The construction plans have been modified by the directors, and new tenders for the building of the line from Red Deer to Rocky Mountain House have been asked for, to be in by June 24. It is proposed to abandon all work on the eastern end of the line, and to concentrate all efforts towards getting the line through to Rocky Mountain House this year. (June, pg. 505.)

Alberta Pacific Ry.—Calgary, Alta., press dispatches, June 5, stated that the charter of the A. P. Ry. had been acquired by interests associated with the G.N.R., and this is apparently confirmed in Winnipeg papers of June 9. The charter is reported to have been held by Calgary and Winnipeg interests, and the Winnipeg dispatch stated that the company's legal representative here had stated that the charter had been sold to the Hill interests, and that construction would be started at once.

This company was formerly known as the Pincher Creek, Cardston and Montana Ry., the present title being authorized by the Alberta Legislature in Jan.

Dispatches from Pincher Creek, Alta., June 11, stated it is expected construction work will be started at an early date. J. A. Taylor, who has been prominently connected with the company for some time, always stated that the line would be built as a connecting link with the Great Northern Ry. system in Montana. A site for a station at the east end of Pincher Creek was approved by the ratepayers some time ago, but it is understood that the G.N.R. desire a more central location. (June, pg. 505.)

Alberta Ry. and Irrigation Co.—The Dominion Parliament has extended the time for building certain branch lines authorized by the act of incorporation. (Mar., pg. 205.)

Algoma Central and Hudson Bay Ry.—The Dominion Parliament has authorized the company to build a branch line from the Michipicoten line northerly for 9.5 miles, and has extended the time for the building of its projected line from the C.P.R. transcontinental line to Hudson Bay.

The Department of Railways has approved the route map of the Magpie branch, about nine miles. This is a branch of the Hyde Park Jct.-Michipicoten section, and was built in 1910. The Board of Railway Commissioners has authorized a connection with the C.P.R. at Hobon, Ont., by means of a transfer track. (June, pg. 505.)

Algoma Eastern Ry.—The Dominion Parliament has changed the name of the Manitoulin and North Shore Ry. Co. to the Algoma Eastern Ry. Co., and has extended the time for the building of its projected lines.

Plans of the revised location, connection and Y between mileage 43.64 and mileage 46.44, have been approved by the Board of Railway Commissioners. The Board of Railway Commissioners has authorized the company to carry its line across the C.P.R. Sault Ste. Marie branch by an overhead bridge. (See Manitoulin and North Shore Ry., May, pg. 411.)

Alsek and Yukon Ry.—The Dominion Parliament has granted an extension of time within which the company may build its projected railway from the B.C.-International boundary at Klihini River to the Yukon-Alaska boundary, between latitude 63 and 64. (Feb., pg. 155.)

Atlantic, Quebec and Western Ry.—In the course of the investigation in London, Eng., into the affairs of the Charing Cross Bank, June 14, it was stated that this railway was the most important asset. It was hoped that it would be completed this year, but the trustees would have to find the money for the work. (Mar., pg. 409.)

Brandon Transfer Ry.—An order was made by the Board of Railway Commissioners, June 14, directing that the line shall be built over the route mentioned in our last issue as having been accepted by the city council. The line is to be built by the Great Northern Ry. (Brandon, Saskatchewan and Hudson Bay Ry.), which company will also have charge of its maintenance and operation. The line is to be put in operation by July 15, and the several companies using it are to pay the cost of maintenance on a wheelage basis. (June, pg. 505.)

British Columbia and Dawson Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Lytton to Fort George, B.C. and from Telegraph Creek, B.C., to Dawson, Yukon, with a branch from Ashcroft to Vancouver, B.C. (Mar., pg. 205.)

British Columbia and White River Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Bear Creek, B.C., to the Chilkut River, and on to the Yukon-Alaska boundary. (Mar., pg. 205.)

Bruce Mines and Algoma Ry.—It was stated in Sault Ste. Marie, Ont., June 5, that G. P. McCallum and H. Appleton of that place, had acquired this railway on behalf of a syndicate. The line was built in 1901-02, and was put in the hands of a receiver in 1904. It extends from Bruce Mines to Bruce Jct. and Rock Lake, Ont., 17 miles, and has been operated irregularly for both freight and passenger traffic, but no returns have been made to the Department of Railways and Canals for several years.

We are advised that the line has been taken over by the interests named above, and that when the reorganization is completed G. P. McCallum will be President, and H. Appleton Vice President and General Manager. The new company intends to complete the line through to the National Transcontinental Ry., and to make connection with the C.P.R. and Canadian Northern Ry., on the north, and to connect on the south with the C.P.R. Sudbury-Sault Ste. Marie line. It is also expected that a branch will be built into the Porcupine country. It has not been decided whether the company will do the construction work itself or will ask for tenders.

Press reports state that plans have been prepared for the extension of the line from the present terminus at Rock Lake, Ont., to the C.P.R. transcontinental line at Ridout, and on to the National Transcontinental Ry., about 100 miles west of Cochrane, with a branch line into the Porcupine country. It is reported that preliminary surveys have been made, that it is expected to have everything ready to start construction by Aug. 1, and that it is hoped to have 15 or 20 miles of the extension completed by the end of the year.

Burrard Inlet Tunnel and Bridge Co.—An announcement was made in Vancouver, June 8, that a tentative agreement had been made between the company and the Vancouver, Westminster and Yukon Ry., respecting the construction of the combined railway and general traffic bridge over the Second Narrows of Burrard Inlet. The terms, it is understood, were arranged at Ottawa, in consultation with the Minister of Railways, but these terms have not been made public. An arrangement has been made for a discussion of the matter between the V., W. and Y. Ry. and the municipalities composing the B.L.T. and B. Co., and a statement has been made that work will be started within 60 days after the agreement is approved.

Cariboo, Barkerville and Willow River Ry.—The Dominion Parliament has declared the line authorized to be built under the company's act of incorporation from the British Columbia Legislature, to be a work for the general advantage of Canada (April, pg. 319.)

Chicago, Milwaukee and Puget Sound Ry.—Press reports state that preliminary surveys have been made for a line from Moncton, Wash., direct to Vancouver, B.C., and that it was the company's intention to build the line at as early a date as possible. (June, pg. 505.)

Dominion Pacific Ry.—Press reports from Pincher Creek, Alta., state that local interests behind the application to the Dominion Parliament for the incorporation of this company are the same as were behind the application for the Alberta, Peace River and Eastern Ry. There is a slight difference in the route of the line which the D.P. Ry. desires power to build. (June, pg. 543.)

Essex Terminal Ry.—The Board of Railway Commissioners has authorized the company to cross the Canada Southern Ry., and the Detroit River Tunnel Co.'s line in Windsor, Ont. (June, pg. 505.)

Great Northern Mining and Ry. Co.—Following the annual meeting held at Eastern Harbor, N.S., June 6, an extraordinary meeting of the shareholders was held to authorize the directors to obtain a special act to remove the company's head office from Eastern Harbor to Quebec. P. Leclerk is secretary. (Sept., 1910, pg. 725.)

Grouse Mountain Scenic Incline Ry.—A start was made with the building of the first section of this short line, at North Vancouver, B.C., June 1, when the first sod was turned by the mayor. The starting point is at the terminal of a proposed extension of the B.C. Electric Ry The directors are: L. C. Mills, W. H. R Colliser, W. Manson, W. F. McGuigan, W. May. (April, pg. 319.)

Hudson Bay, Peace River and Pacific Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Fort Churchill to the Pacific Coast, and from Winnipeg to Fort Churchill.

The survey party referred to in our last issue as working from Edmonton, Alta., is in charge of D. B. McDonnell. (June, pg. 505.)

Intercolonial Ry.—We are advised that the improvements at the terminals at Halifax, N.S., for which Parliament recently voted $600,000, will consist of the construction of three new piers, each 800 by 255 ft. They will be built throughout of cement concrete. A fourth pier will be built at a later date, according to a press dispatch. Sheds are to be built on the piers, two of them to be single story structures of reinforced concrete, and the other a two story building.

OFFICE AND WORK

ESPLANADE STREET EAST, TORONTO

Plans and specifications for the proposed line in Guysboro county are being prepared, and it is reported from Ottawa that tenders will be called for the building of the lines within a few weeks.

Tenders were received to June 10 for the erection of a brick and stone passenger station at Mulgrave, N.S.

The projected line on Cape Breton Island, for which Parliament has voted $200,000, will start from Alba, on the line to Sydney, 34.2 miles from Point Tupper on the Strait of Canso, and will cross the Grand Narrows by the Bras d'Or Lakes to Baddeck, a distance of about five miles. For some years an endeavor has been made to secure the building of a line from Orangedale, which is 4.9 miles nearer the Strait of Canso than Alba, into the coal areas of Inverness county, and subsidies were voted by the Dominion Parliament, as well as by the Nova Scotia Legislature, but nothing was done. It is expected that tenders will be asked for the building of the line at an early date.

A contract has been let to Rhodes, Curry and Co., Amherst, for the erection of an addition to the general offices at Moncton, N.B. The cost of the addition, which will double the capacity of the building, will, it is said, be about $100,000.

The culverts between St. John and Coldbrook, N.B., a distance of three miles, are being strengthened and widened, preparatory to the laying of a second track.

We are officially advised that nothing has been decided in connection with the building of the proposed spur from Hampton station to Hampton village, N.B., for which Parliament has voted $15,000.

A deputation of Newcastle, N.S., residents waited on the Government Railways Managing Board, June 14, and urged the extension of the Indiantown branch to Doaktown.

We were advised, June 16, that the following second track construction is being done by day labor, under the direction of the Engineer of Maintenance: between Coldbrook station and Jardine's Bridge, N.B., 1.25 miles; between New Glasgow station and the Pictou Landing branch, through a portion of New Glasgow, N.S., 0.5 mile.

Tenders are under consideration for the building of a six-stall addition to the engine-house at Stellarton, N.S.; and a passenger station at Fredericton, N.B.

Tenders will be received to July 20, for the construction of a reinforced concrete pier and sheds at the deep water terminus of the Intercolonial Ry. at Halifax.

The Managing Board informed a Moncton, N.B., deputation, June 10, that the cut-off from the new shops to Humphrey's will be built this summer, and that a new bridge would be built on St. George St. at once. A proposal to tunnel the railway crossing of Main St. is under consideration, and the deputation was informed that it was probable an order would be given at an early date for the work. (June, pg. 507.)

Joliette and Lake Manuan Colonization Ry.—The Dominion Parliament has extended the time within which the original line authorized to be built may be constructed, and has granted permission for extending the same from Joliette to Montreal.

Kaslo and Slocan Ry.—Press reports state that the local people who have secured control of the line have everything ready to start work on the repairs and reconstruction work, and are only waiting the handing over of the line by the Great Northern Ry.

The purchase of the line by the local syndicate from the Great Northern Ry. is reported to have been completed June 9. The syndicate was prepared to go on with the reconstruction of the line, but was hampered by the reports that the C.P.R. proposed to build a line through a portion of the territory served. A deputation representing certain mining interests was endeavoring to make an arrangement with the C.P.R. as to the matter. J. L. Retallack, representing the syndicate, stated in an interview, June 9, that on all stages of the negotiations for the purchase of the line the C.P.R. officials had been consulted. (June, pg. 507.)

Kettle Valley Lines.—Location plans for the extension of the line from mileage 29 to 29.63 have been approved by the Board of Railway Commissioners. (June, pg. 507.)

The ratepayers of Penticton passed a by-law, June 2, granting municipal aid to the company in connection with the proposed wharf, etc., in the town.

Reports from Merritt, B.C., state that the first 30 miles of the extension at this end is expected to be completed early in July, and that work will be begun on the second section at once. At the Midway end good progress is being made. It was expected that a contract for the first 15 miles out of Penticton would be let by June 30. Some difficulty is being experienced in obtaining a suitable location from Trout Creek towards the Coldwater summit with the gradient required, and some new surveys are being made. It is expected that the work will be completed so that a contract may be let for a second section west of Penticton before the end of the year. The plans for the wharf at Penticton have been completed. The wharf will be 630 ft. long, and will end with an apron for landing scows carrying cars. A track will be laid along the wharf, and two spur lines will connect it with the main line. (June, pg. 507.)

Klondike Mines Ry.—A steel bridge has been built across the Klondike River, at Klondike City, Yukon, in place of the wooden trestle built when the line was constructed. (Oct., 1910, pg. 827.)

Kootenay and Alberta Ry.—A deed of mortgage securing an issue of $600,000 of bonds upon the company's line, from the C.P.R., one mile east of Pincher station, to the Western Coal and Coke Co.'s property at Beaver Collieries, Alta., has been filed in the office of the Secretary of State, Ottawa.

Steel rails have been delivered at Pincher station, and are being hauled on to the right of way. The contractors have started additional plant on the work, and everything is going ahead rapidly. (June, pg. 507.)

Manitoulin and North Shore Ry.—See Algoma Eastern Ry.

Michigan Central Rd.—The issue of $1,600,000 of bonds recently made in New York was for providing funds for building the new station and terminal in Detroit, Mich. The building will be 14 stories high and is estimated to cost $2,000,000. (May, pg. 411.)

Montreal Central Terminal Co.—Resolutions were submitted to the shareholders at the annual meeting held in the C.P.R. Telegraph Building, Hospital St., Montreal, June 6, increasing the capital stock to $20,000,000, and authorizing the directors to issue mortgage bonds. (June, pg. 507.)

New Brunswick and Prince Edward Island Ry.—The Board of Railway Commissioners has ordered the ballasting of the line from Sackville to Tormentine, N.B.; repairing of certain bridges, and the renewing of the draw span of Port Elgin bridge.

The mile spur line built by the Fawcett Manufacturing Co., Sackville, N.B., has been completed, and a connection made with the Intercolonial Ry. The extension from the factory to the quarry is nearly completed. (June, pg. 507.)

North Arm Bridge and Ry. Co.—The Dominion Parliament is being asked to incorporate a company with this title to build a bridge across the North Arm of Burrard Inlet, Vancouver, B.C., from the Turtle's Head to the west shore on lot 575, north of White Rock Island. The bridge is to be for general traffic as well as steam and electric railways, and there are to be connected with it one or more lines not to exceed ten miles, and a line from lot 256 at the end of the C.P.R. from Port Moody, following the north shore of Burrard Inlet to Vancouver, or to connect with any other railway constructed on the north shore of Burrard Inlet. W. H. Langley, Victoria, B.C., is solicitor for applicants.

Ontario and Abitibi Ry.—The Dominion Parliament has incorporated a company with this title to build a line to connect the National Transcontinental Ry with the Temiskaming and Northern Ontario Ry., in the vicinity of Abitibi Lake, in the provinces of Ontario and Quebec. (See New Ontario and Quebec Ry., May, pg. 409.)

Ontario-Michigan Ry.—The Dominion Parliament has incorporated a company with this title to build a line from Sarnia to Windsor, Ont., with branches, and to connect the same by car ferries with lines in the United States. (May, pg. 413.)

Pacific and Hudson Bay Ry.—Assent was given May 19 to the act passed by the Dominion Parliament for the incorporation of a company with this title to build a railway from Dean's Channel, on the Pacific Coast, easterly to Port Nelson or Fort Churchill, on Hudson Bay. (April, pg. 321.)

Pacific and Peace River Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Bella Coola, B.C., to Fort McLeod, thence through the Pine Pass to the Peace River at Dunvegan, Alta., about 480 miles. The members of the provisional directorate are Frenchmen, resident in Edmonton, Alta., and in France. The Corporations Agency, Montreal, is making investigations into the prospects of the country through which the line will pass on behalf of the company. (Mar., pg. 207.)

Quebec and New Brunswick Ry.—Application for an extension of time for the building of this projected railway was granted by the Dominion Parliament, May 18. (Feb., pg. 113.)

Quebec and Saguenay Ry.—We are advised that the contract let to O'Brien and Doheny, for the building of the first section of this line, is really a continuation of the Quebec Ry., Light and Power Co.'s line, which is built for 30 miles from Quebec to the vicinity of Cape Tourmente. The chainage for the Q. and S.R. is continued from this point. The village of St. Joachim is at about mileage 25 on the Q. Ry., L. and P. Co.'s line, but as the road had to be built 30 miles for subsidy purposes it was continued to near Cape Tourmente. The Quebec and Saguenay Ry. is one of the subsidiary companies of the Quebec Ry., Light, Heat and Power Co., of which the Quebec Railway, Light and Power Co. is also a subsidiary. The Q. and S.R. trains will be run through between Quebec and Cape Tourmente, both ways, over the Q.R.L. and P. Co.'s line, which at present is operated partly by steam and partly by electricity. It is proposed, though not definitely settled, to entirely electrify the Montmorency division between Quebec and Ste. Anne de Beaupre, with a divisional point at the latter place, and to operate from there to Murray Bay by steam motive power.

The point to which it is at present proposed to build the line is Pointe a Pic, 85.5 miles from Quebec.

A subcontract covering three miles of heavy work has been let to A. and W. D. Wheaton, and another section has

BALLAST AND SWITCH ROPES

We manufacture Ballast and Switch Ropes—in all sizes and length. Our many years of experience in manufacturing wire ropes of all kinds enables us to offer the best to be had anywhere. Our Switch and Ballast Ropes are serviceable and dependable.

Let us figure on your special requirements.

THE DOMINION WIRE ROPE COMPANY., LIMITED
MONTREAL

been sublet to Walton and Tentes, Salisbury, N.B.

Plans have been filed with the Minister of Public Works, Quebec, showing the location of the line from mileage 85.6 to mileage 92.8 in Charlevoix county.

The contract with the Bishop Construction Co., Montreal and Toronto, calls for the building of 7.5 miles of line from the end of the O'Brien and Doheny contract, to the site of the East Canada Power and Pulp Company's works at Keeler. (June, pg. 507.)

Quinze River and Ottawa Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Kippawa, connecting with the C.P.R. Kippawa branch, northwesterly to the Quinze River, Que. Smith and Johnston, Ottawa, are solicitors for applicants.

Reid Newfoundland Ry.—Additional cargoes of steel rails have been received and the laying of track on the remaining 20 miles of the Bonaventure branch is being proceeded with. The work was expected to be finished by June 30. Work on the Waterford bridge is proceeding, and grading has been started at Bay Bulls on South Shore branch.

In the course of an interview, June 12, W. D. Reid, President, stated that of the four new branches under construction, that from Shoal Harbor to Bonavista, 92 miles, will be completed this year. Trading has been started on the line from near St. John's to Trepassey, about 100 miles. Surveys are in progress on the other three branches, in preparation for construction next year.

St. John and Quebec Ry.—According to recent statements in St. John, N.B., there is behind the project for the building of St. John Valley Ry., a plan for the utilization of it in connection with the St. John and Quebec Ry., which is being promoted by a company for which A. R. Gould has secured a charter in the State of Maine. The plan, which was being discussed with the Minister of Public Works and representatives of the New Brunswick Government, June 12, is to utilize the St. John Valley Ry. to a point near the Maine boundary, make a connection with a branch of the C.P.R., running into Maine, which the St. J. and Q. Ry. has power to acquire, extend this to the Maine-Quebec boundary, and there connect with the projected Quebec and New Brunswick Ry., which has power to swing its line southerly to the Maine boundary. It is claimed that this plan shows a route of 374 miles from Quebec to St. John, and that Centreville, Woodstock and the St. John Valley will obtain railway accommodation. (See St. John Valley Ry., June, pg. 541, and Aroostook Valley Electric Ry., May, pg. 453.)

Press dispatches state that as a result of the conference it was arranged that a line is to be built from St. John to Grand Falls, N.B., and that it is to be operated by the Intercolonial Ry. The arrangement is subject to the approval of the Dominion and Provincial Governments.

Saskatoon and Hudson Bay Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Saskatoon via Melfort to Pas Mission, Sask. (Mar., pg. 207.)

Simcoe, Grey and Bruce Ry.—The Dominion Parliament has incorporated a company with this title, with the provisional directors named, and for the purposes set out in our Mar. issue, pg. 209. (May, pg. 413.)

Temiskaming and Northern Ontario Ry.—The final location surveys for the proposed diversion of the line for 40 miles northerly from North Bay, have been completed. The route selected shows a gradient of 0.75% as compared with 1.50% on the present line. It is expected that a decision will be reached at an early date as to construction.

It is understood that new station buildings are to be erected at Iroquois Falls, Matheson, Thornloe, Golden City and Swastika.

A survey party in charge of Prof. Ellis left Cochrane, June 10, to examine the country between that point and Hudson Bay, with a view to determine its possibilities from an agricultural standpoint; and to look for a suitable harbor on James Bay.

Track was laid to Porcupine Lake on the new branch June 7, and the ballasting was completed from Iroquois Falls for 16 miles, and it is expected that the whole length of the branch will be completed ready for traffic by July 1. An arrangement has been made between the Commissioners and the owners of the Hollinger mine, according to a statement made May 30, by J. L. Englehart, Chairman, for the extension of the new Porcupine branch from Lakeview station, mileage 28.5, to Campbell veteran lot, mile post 33.5, just west of the Hollinger mine. Grading was started on the extension June 7. (June, pg. 507.)

Terminal Station for Toronto.—A. P. Gillies is reported to be engaged in working out plans for a terminal station building in Toronto, with tunnels under King and Queen streets from the Don River to Sunnyside, at an estimated cost of $100,000,000. The city papers quote Mr. Gillies as stating that some of the persons interested in the Hudson terminal in New York City are joined with him in the present enterprise, for the carrying out of which authority will be asked from the Dominion Parliament. The statements made should be accepted with considerable reserve.

Toronto, Hamilton and Buffalo Ry.—Local press reports stated, June 14, that the company is acquiring 16 acres from the New England Co. at Brantford, Ont., for the purpose of increasing its yard and switching facilities. (June, pg. 509.)

Vancouver to Peace River.—The Vancouver, B.C. board of trade has had under discussion the necessity of building a line to the Peace River country, and favors a guarantee of the company's bonds being given by the Government. It was stated at one of the meetings recently that European capitalists were prepared to invest $30,000,000 upon the construction of such a line if suitable arrangements could be made.

There are several charters available under which a line may be built, but neither of them are at present identified with the movement made by the board of trade.

Victoria, B.C.—Proposals are under consideration for the building of a line along the water front, from near the Outer Wharf by way of the harbor shore to Bridge St., and thence easterly to connect with the Victoria and Sidney Ry.; westerly across the Indian Reserve to connect with the railways there, and on to Esquimalt. It was stated, June 4, that the promoters expected to be in a position very shortly to place a proposition before the city council

A proposal was submitted to the Victoria city council, June 9, by Barnard, Robertson and Heisterman, solicitors for the promoters, and it was decided to arrange for a full discussion of the matter.

Western Alberta Ry.—The Dominion Parliament has granted a further extension of time within which the company may build the lines authorized by chap 90 of the statutes of 1898. (Feb., pg. 115.)

THE T. H. SYMINGTON CO.

BALTIMORE ROCHESTER NEW YORK CHICAGO

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them

13686. May 17.—Approving standard tariffs of maximum merchandise tolls of 10 express companies, on application made through W. H. Burr, Chairman, Express Traffic Association, Toronto.

13687 to 13697. May 19, 22.—Authorizing Georgian Bay and Seaboard Ry. (C.P.R.) to cross highways in Mara, Eldon, Ops, Mariposa and Thorah tps., and to divert a highway in Thorah tp., Ont.

13698. May 19.—Authorizing C.P.R. to build second track across Pincher-McLeod trail in sec. 3, tp. 9, r. 26, w. 4 m., Alta.

13699 to 13701. May 20. — Authorizing C.N.O.R. to cross three highways and divert one in Nepean tp.

13702. May 22.—Authorizing C.N.O.R. to cross public road overhead in Portland tp.

13703. May 22.—Authorizing G.T.P. Branch Lines Co. to divert two highways on its Melville-Regina branch, Yorkton District, Sask.

13704. May 20.—Authorizing G.T.R. to build siding into Strathroy Furniture Co.'s premises, Strathroy, Ont.

13705. May 17.—Dismissing Chatham, Wallaceburg and Lake Erie Ry. application for extension of time in which to file joint tariff covering carriage of sugar beets, as required by order 12435, Oct. 14, 1910.

13706. May 16.—Approving Algoma Central and Hudson Bay Ry. bylaw authorizing H. J. Herrold, General Agent, to prepare and issue tariffs of tolls.

13707. May 22.—Authorizing Georgian Bay and Seaboard Ry. (C.P.R.) to cross highway between Ops and Fenelon tps., Ont.

13708. May 22.—Approving revised table of graduated charges for shipments weighing less than 100 lbs. contained in Supplement 1 to Express Classification for Canada 2.

13709, 13710. May 22.—Authorizing G.T.R. to build sidings to premises of William Clark, on lot 166, St. Remi, Que., and R. F. Firth and Sons, and A. Keith, Etobicoke tp., Ont.

13711. May 22.—Approving location of G.T.P. Branch Lines Co.'s Melville-Regina branch, from mileage 90.74 to Regina city limit, mileage 92.62, Sask.

13712. May 22.—Approving G.T.R. standard floor for bridges.

13713. May 22. — Authorizing Hamilton Bridge Co. to lay water pipe under G.T.R. near Trolley St., Hamilton Ont.

13714. May 22.—Authorizing C.P.R. to build 15 bridges on its Atlantic, Eastern, Ontario, Lake Superior, Manitoba and Saskatchewan Divisions.

13715. May 22. Authorizing C.N.O.R. to build bridge over creek at station 316-17, Haldimand tp.

13716 to 13718. May 22. — Authorizing C.N.O.R. to cross three public roads in Nepean tp.

13719. May 22.—Authorizing C.P.R. to build spur for Brackman-Ker Milling Co., Bengal, Alta.

13720. May 22.—Authorizing C.N.O.R. to build bridge over creek at station 1376-38, Brighton tp.

13721. May 22.—Authorizing Georgian Bay and Seaboard Ry. (C.P.R.) to cross town line between Marinosa and Fenelon tps., Ont.

13722. May 23.—Extending to Aug. 1. time for completion by G.T.P.R. of farm crossing for W. Smith, Huxley, Alta.

13723. May 23.—Ordering C.P.R. to carry out terms of order 13460, Apr. 19, re providing farm crossing for J. Gevart, Young, Sask. within 30 days, under penalty of $25 a day.

13809. Feb. 24.—Authorizing Georgian Bay & Seaboard Ry. (C.P.R.) to operate from mileage 71.68 in Ops tp. to connection with Lindsay, Bobcaygeon and Pontypool (C.P.R.) in Lindsay, Ont., mileage 72.91, and approving revised location.

13810. May 30.—Ordering M.C.R. to install improved type electric bell at crossing of Diltz Road, Moulton tp., Ont., and allowing

The Automatic System of Signals is the Standard of America

Automatic Signals prevent collisions, increase track capacity and delay double tracking single track lines. They are not only a good insurance, but a good investment.

The Hall Signal Company manufactures exclusively automatic signal apparatus, and its reputation is based on the quality of the apparatus produced. The Company is prepared to furnish plans and estimates for signaling any section of track, however simple or complicated, and takes this opportunity to offer the services of its engineers to the Railroads of Canada.

13903, 13904. June 7, 9.—Authorizing Toronto and Eastern Ry. to cross five highways in Whitby, and public road at mileage 14.2, Oshawa, Ont.

13905 to 13909. June 6.—Authorizing C.P.R. to build additional track in connection with its double tracking from Montreal to Quebec Jct., across streets and public roads, St. Martin, St. Laurent and Sault aux Recollets parishes, Montreal.

13910. June 10.—Extending to July 1, time for installation of gates by C.P.R. at Westminster Ave., Montreal West, Que.

13911, 13912. June 6, 10.—Authorizing Toronto and Eastern Ry. to cross G.T.R. Port Perry Branch in Whitby; interlocking plant to be installed, and to cross public road between lots 14 and 15, con. 2, at mileage 13.7, in Whitby East tp., Ont.

13913. June 6. Authorizing C.P.R. to build additional track, in connection with its Montreal-Quebec Jct. double track, across public road in St. Martin parish, Montreal.

13914. June 10. Authorizing Essex Terminal Ry. to cross Canada Southern Ry. and Detroit River Tunnel Co.'s tracks, Windsor, Ont.

13915. June 7.—Authorizing city of Edmonton, Alta., to extend sewer under C.N.R. near Riverview Ave.

13916. June 8.—Authorizing Ottawa Electric Co. to maintain wires across C.P.R. at Main St., Westboro, Ont.

13917. June 10.—Authorizing town of Montreal East to build St. Jean and St. Cyr Aves. across Montreal Terminal Ry. and C.N.O.R.

13918. June 13. Authorizing C.P.R. to build spur to Wylie Ballast Pit across Government Road, Wylie tp., Ont.

13919 to 13921. June 13.—Authorizing Toronto and Eastern Ry. to cross 11 highways in Darlington and Whitby East tps., Ont.

13922 to 13927. June 13.—Authorizing C.N.O.R. to cross four highways in Bastard

Electric Headlight Saves Train

(From Daily Papers)

"Wednesday night B——— forgot to deliver an order to hold Eastbound Passenger Train No. 6, and only the fact that the Electric Headlight of the oncoming Passenger train was seen at a great distance by the Engineer of the Westbound Freight prevented a head end collision in the ——— Canyon near ———. The warning light was seen in time to enable the freight to get back on to the siding at ———."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

CHICAGO

tp.; eight highways in South Crosby and Loughborough tps.; public road in Goulbourn tp., and two public roads in Tyendinaga tp.

13928. June 13.—Approving location of 15 G.T.P.R. stations in Western Provinces.

13929. June 13.—Authorizing G.T.R. to use five bridges on its Southern Division.

13930. June 13.—Approving G.T.P.R. Standard Freight Mileage Tariff C.R.C. 7, between stations in Alberta, Thornton and Prairie Creek, inclusive.

13931. May 19.—Authorizing G.T.P. Branch Lines Co. to cross three highways on its Prince Albert Branch, Sask.

13932. June 13.—Approving location of G.T.P. Branch Lines Co.'s station at Brewer, on its Yorkton Branch, Sask.

13933. June 13.—Approving location of G.T.P. Branch Lines Co.'s Biggar-Calgary Branch, mileage 19.97 to 50.23, Sask.

13934. June 13.—Authorizing G.T.P. Branch Lines Co. to cross 27 highways on its Regina-Boundary Branch, mileage 1.3 to 31, Sask.

13935. June 13.—Authorizing C.P.R. to open for traffic its double track from Mile End to Quebec Jct., 7.5 miles.

13936. June 13.—Authorizing C.N.O.R. to build across Opinicon Lake Road, lot 21, con. 10, Loughborough tp.

13937. June 14.—Authorizing G.T.P.R. to build four stations in Western Provinces, and approving plans for same.

13938 to 13946. June 14.—Approving C.P.R. standard plans for grain loading platforms, mail crane and clearances at and through elevator, pump house and dock track at Victoria Harbor, Ont.; standard no. 2 stock pen, double deck stock chutes, single deck stock yards, clearance of proposed verandah roof at warehouse, Toronto, and clearances standard two track coaling plant, and clearances standard sand house.

13947. June 6.—Approving location of C.P.R. double track, Mile End to Quebec Jct., mileage 5.18 to 12.68, Que.

G.T.R. Betterments, Construction, Etc

New England Lines Proposals.—Press reports state that in connection with the plans for the extension of the Central Vermont Ry. in Rhode Island, and Massachusetts, a proposal is being prepared by Boston business men with a view to securing the Central Massachusetts Rd., so as to provide an entrance into that city.

Lachine, Jacques Cartier and Maisonneuve Ry.—The route maps of the projected line from St. Catharine St., Montreal, to Jacques Cartier Jct., about seven miles, have been approved by the Department of Railways. They show a line from near Jacques Cartier Jct., northeasterly, crossing the C.P.R. and the Montreal Park and Island Ry., and thence southerly and easterly to a terminal and station on St. Catharine St., between Frontenac and Harbor St. This will give the G.T.R. a belt line round the city. It is reported that practically all the land necessary for the line has been acquired, and that construction will be started as soon as certain matters are arranged between the company and the city to the satisfaction of the Board of Railway Commissioners.

Montreal Track Elevation.—At a meeting of the Montreal city council, June 5, objection was made to the plans submitted for the elevation of the tracks on the ground that they involved the closing of certain streets and the construction of an earthen bank instead of stone or concrete. The city asks for plans showing an elevated embankment with retaining walls of stone or concrete, and that no streets now crossing the tracks shall be closed. The city will oppose the approval of the plans before the Board of Railway Commissioners.

Ottawa Station, Etc. — Considerable progress has been made towards the completion of the station building at Ottawa, and it is expected it will be ready for occupation by the traffic staffs in Sept. The three top floors are to be occupied by the Board of Railway Commissioners and it is expected that these will be ready early in July.

Ottawa to Brockville or Kingston.—In an interview at Toronto, June 16, W. Wainwright, Second Vice President, is quoted as having stated that the company would, in the near future, build a line from Ottawa to Brockville or Kingston, Ont. The management had the matter under consideration, and a decision as to the point of junction with the main line would be made almost immediately. "Possibly," added he, "the short line between the Toronto-Montreal line and Ottawa will be double-tracked."

The company has the control of two charters for lines out of Ottawa—one the Ottawa, Smith's Falls and Kingston Ry., and the other the Ottawa, Rideau Valley and Brockville Ry.

Mallorytown Crossing.—The Board of Railway Commissioners has ordered the company to file plans for the erection of a steel overhead bridge at the highway crossing west of Mallorytown station, the cost to be apportioned between the company, the township, and the Dominion grade crossing fund.

Powassan, Ont.—The Board of Railway Commissioners has ordered the company to build a station and make changes in the yards at Powassan, Ont., by Nov. 1, under penalty of $25 a day.

Toronto Viaduct, Etc.—E. H. Fitzhugh, First Vice President, is quoted as stating in an interview, June 1, that the company would have its plans for the Esplanade improvements and elevation of tracks in Toronto ready for submission to the Board of Railway Commissioners by Aug. 1. The plans for the Union Station would not be finally prepared until the Esplanade plans had been approved and accepted by all the parties interested.

Brock Ave. Subway.—The subway to be built under the tracks at Brock Ave., Toronto, is to be 56 ft. wide, with two 21 ft. roadway, and two sidewalks. The cost has been apportioned by the Board of Railway Commissioners as follows: G.T.R., 48%; C.P.R., 32%; $5,000 from the Dominion grade crossing fund, and the balance by the city of Toronto.

New Station at Guelph.—The new passenger station at Guelph, Ont., was opened for business, June 2. The grounds surrounding the building are now being laid out.

Branch in Sarnia.—The Board of Railway Commissioners has authorized the operation of a branch line south of Tunnel and North Sts., Sarnia, Ont. (June, pg. 521.)

A Railway to Hudson Bay.

The Department of Railways will receive to Aug. 1 tenders for the construction of a section of about 185 miles of the projected railway to Hudson Bay, from Pas Mission to Thicket Portage. The plans and specifications were completed June 1. The work is to be done under the immediate supervision of the Department of Railways, with J. Armstrong, who has had charge of the surveys, as Chief Engineer. The amount available for work at present is $2,000,000, that being the sum recently voted by Parliament on account of construction. It is expected that the contract will be awarded sufficiently early to enable contractors to take in supplies and plant in the fall. The section is expected to be completed by 1912.

Three survey parties are in the field working towards Hudson Bay, with a view of locating the balance of the line, and two parties are engaged in locating harbors at Fort Churchill and Port Nelson, to enable a decision to be made as to what should be chosen as the terminus. It is expected that this will be decided by the end of the year, and that tenders will be asked early in 1912 for the construction of the balance of the line. (June, pg. 513.)

Great Northern Ry. Lines in Canada.

Emerson to Winnipeg.—L. W. Hill, President, G.N.R., is quoted, June 11, as saying that the company would built its own line into Winnipeg. For some time negotiations have been in progress with the Canadian Northern Ry. for running powers over its line from the International boundary, near Emerson, to Winnipeg, but some hitch has occurred, and it is understood that even if an arrangement is made it will be only temporary.

Midland Great Northern Ry.—Under the agreement recently made with the city, the company must build a line into Winnipeg from a few miles south of the Assiniboine River. The total length is about five miles, and it will connect the C.N.R., over which the company is running its St. Paul-Winnipeg traffic, with the company's own freight station on Paulin St. The building of this line, including several subways, has to be completed by Dec. 31. A contract has been let to I. E. Guthrie and Co., St. Paul, Minn., and work was started June 9.

A pile driver was towed up the river to about 200 ft. below the C.P.R. bridge, and work started in driving piles for the bridge to be built across the river, which is to be completed by Dec. 1.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Survey parties are in the field completing location plans for the line westerly from the present end of steel to near Hope, B.C. J. H. Kennedy, Chief Engineer, is quoted as having stated that the company had definitely abandoned the idea of building a line between Sumas Landing and Hope, but would use, under an agreement, the Canadian Northern Pacific Ry. for 38 miles between these points. This suggests that the V. V. and E. Ry. surveys will link up with the C.N.P.R. near Hope, and that its trains will run on to Sumas Landing, and there be switched off again to the V. V. and E. Ry. now under construction. Tenders have been asked for the construction of 13 wooden bridges between Sumas Landing and Abbotsford, in the building of which some 5,000,000 ft. of timber will be used. These bridges are to be built over the small low lying ravines into which the Sumas River overflows. More than half of the grading between Sumas Landing and Abbotsford has been completed, and it is expected to go on with track laying at an early date.

The Board of Railway Commissioners has ordered the company to build a proper sewer through its fill from Front St. to False Creek, near George St., Vancouver. This portion of the foreshore was filled in a couple of years ago.

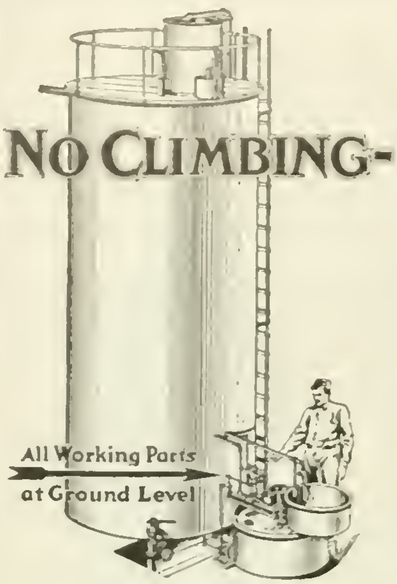
J. M. Gruber, General Manager, G.N.R., and other officials, visited Vancouver, recently, and inspected the work in progress. It was decided to put concrete under the tracks on Main St., and plans for other work were discussed with the city authorities.

Other officials were in Vancouver, June 7, in connection with the proposal to take over an additional 700 ft. of frontage west of the sugar refinery. This will give the company an aggregate of 1,700 ft.

Waterfront on Burrard Inlet.—It is proposed to expend a large sum upon the building of docks, piers and warehouses, the plans for which, it is expected, will be submitted to the city early in July. (June, pg. 503.)

The G. T. Pacific Ry. inaugurated a daily service between Winnipeg and Edmonton, in 26 hours running time, June 18, a week later than it was originally announced the service would be started. On June 15, a regular passenger train service was started from Prince Rupert eastwards for 150 miles.

NO CLIMBING-



Careful investigation will convince you that when you buy a Booth Water Softener your money becomes worth more than if invested in some other machine.

Our claim of greater efficiency, greater simplicity, and greater economy of operation is fully demonstrated by results being obtained.

If you investigate thoroughly and are looking for simplicity—efficiency—and a machine that can be relied upon at all times to produce—the right results—at the right cost a Booth Water Softener will be your first choice.

C.P.R. Betterments, Construction, Etc.

New Brunswick Southern Ry.—The Board of Railway Commissioners has authorized the C.P.R. to use bridges 30.5, 50.54, and 19.32 on the N.B.S. section of its Atlantic Division.

Orford Mountain Ry.—The Board of Railway Commissioners has authorized the operation of trains over the extension of the line from Mansonville, Que., to the International boundary, 3.77 miles.

St. Lawrence Boulevard.—The Board of Railway Commissioners has authorized the operation of trains over the subway at St. Lawrence Boulevard crossing, St. Louis, Montreal.

Windsor St. Station.—The erection of the steel framework of the extensions at the Windsor St. Station, Montreal, has been practically completed by the Dominion Bridge Co. Good progress has also been made with the stone, concrete and other work on the structure.

Place Viger Station, Etc.—Satisfactory progress is being made with the building of the new station at Place Viger, Montreal. The work of getting in the foundations presented considerable difficulty, as the river is only a couple of blocks away, and the floor of the boiler room is only 6 ft. above low water. The building is two stories high, and the walls are strong enough to carry a higher building should it be desired to add to it at any time.

New Montreal Branch.—Application is being made to the Board of Railway Commissioners for approval of location plan from the main line west of Moreau St., easterly to lot 396, Longue Pointe, about 4.5 miles. The branch line is to serve an important manufacturing district.

Montreal to Quebec Jct. Second Track.—The Board of Railway Commissioners has authorized the building of additional tracks across various streets and highways in Montreal, St. Martin, St. Laurent, and Sault au Recollet, Que., in connection with the second track work between Montreal and Quebec Jct., 7.5 miles, and the opening of same for traffic.

Ottawa Improvements.—The Ottawa city council will, July 3, hear any persons interested in opposing the sale to the C.P.R. of the road allowance between concessions A and I, Ottawa Front, Nepean tp., and portions of Alongo and Richmond streets, for which a by-law has been under discussion.

Smith's Falls—Bathurst Second Track.—A sub-contract has been let to A. and W. D. Wheaton, for grading a section of second track work between Smith's Falls, and mileage 9, near Perth, Ont.

Georgian Bay and Seaboard Ry.—The Board of Railway Commissioners has approved the line being built across a number of highways, and location plan of the line from lot 23, con. 9, near Bethany, at mileage 87.41 south-easterly to connect with the Ontario and Quebec Ry. in lot 2, con. 7, at mileage 91.13; has authorized the operation of the line from lot 24, station 2030, con. 6, Ops tp., mileage 71.68, to a connection with the Lindsay, Bobcaygeon and Pontypool Ry., in Lindsay, at mileage 72.91, and authorized the building of an overhead crossing for three lines at Colborne St., Lindsay.

South Ontario Pacific Ry.—The Board of Railway Commissioners has approved location plans from lot 5, con. 2, Nassagaweya tp., to lot 15, con. 1, Nelson tp., Ont.

Toronto.—While in Toronto, June 1, D. McNicoll, Vice President, is quoted as having stated that the viaduct and Union Station could both be built at the same time, and there were many reasons why they should be constructed together.

The question of the plans for the new office building at the corner of King and Yonge Sts. was still unsettled, June 20. The city council desires to round off the corner, but the company is unwilling to give up the land. Expropriation was threatened, but on June 13, a suggestion was made that additional land could be secured in the rear so as to permit the widening of the street. The company is calling for tenders for the erection of the building, to enable the work to be started as soon as the plans are passed by the city authorities.

West Toronto Yards, Etc.—Considerable progress has been made with the building of the new passenger station, and the bridge over the tracks at West Toronto, and something like order is beginning to appear round about the old station. At Jane St. and adjoining streets a good deal of work is being done, getting ready for the construction of the subways and levelling up for the yard extensions. The first subway to be built will be that under Jane St., and tenders were received to June 30, for building the concrete abutments.

Tillsonburg, Lake Erie and Pacific Ry.—St. Mary's and Western Ontario Ry.—The piece of line which connects these two lines, and enables a through service to be given between Ingersoll, and Embro, St. Mary's, and other points, was opened for traffic, June 6. It connects Ingersoll Jct. and Ingersoll North.

London Improvements.—A permit for roundhouse and other buildings, value $60,000, was issued to the C.P.R., in London, Ont., May 31. Considerable progress is reported to have been made with the work.

Stratford, Ont.—D. McNicoll, Vice President, accompanied by other officials, was in Stratford, June 1, looking over routes for the projected line from St. Mary's, through the city to connect with a branch of the Guelph and Goderich Ry.

North Bay Shops.—We are advised that there is nothing in the report that plans and estimates have been prepared for extensive additions to the company's shops at North Bay, Ont.

Lake Superior Division.—Roadmaster Coughlin reports that six extra gangs and some work trains are engaged in ballasting and other work along the division.

Port Arthur.—G. J. Bury, General Manager, Western Lines, is quoted as saying that the building of the new dock east of the C.P.R. dock, will be commenced right away. An agreement has been made with the city council by which it will be built, and it is understood that the C.P.R. will handle the Grand Trunk Pacific terminal passenger business over it.

Press reports state that it is expected contracts will be let at an early date for the erection of water tanks at Port Arthur. The supply is to be drawn from small lakes in the vicinity, and brought in by gravity.

Port Arthur—Fort William Second Track.—The grading for the second track between these two points was practically completed June 1, and track laying is proceeding. It is expected that it will be completed early in July.

Shop Enlargement at Winnipeg.—A contract is reported let to Carter-Halls-Aldinger Co., Ltd., Winnipeg, for the building of an addition to the tender and wheel shops at Western, Man. The addition will be 220 ft. by 54 ft. 8 in.

Brandon Station.—Tenders are under consideration for the erection of a new station at Brandon, Man.

Buffalo Lake Bridge.—On the petition of residents of Rosenfeld, Man., and vicinity, the Board of Railway Commissioners has ordered the company to build a bridge, with a 40 ft. clear span, across Buffalo Lake, by Mar. 1, 1912.

Boissevain to Lauder.—It is reported that it has been decided to proceed, this season, with the construction of a line from Boissevain, on the Deloraine branch, to Lauder, on the Souris branch.

Bredenbury, Sask.—Large gangs of men are engaged in completing the new yards, terminal buildings and waterworks plants at Bredenbury, Sask., on the old Manitoba and North-Western Ry.

Regina Union Station.—A contract has been let to the James McDiarmid Co., Winnipeg, for the erection of the station building in Regina, Sask., which is to be used by the Canadian Northern Ry., under the terms of an agreement with the C.P.R. The building will be three stories high, with two wings, and is to be completed by May 1, 1912. The contractors started clearing the site June 12.

Hawarden to Saskatoon.—We are advised that a reconnaissance survey has been made from near Hawarden, Sask., on the Outlook branch running from Moose Jaw northwesterly, to the Pheasant Hills branch, on the east side of the Saskatchewan River. The survey work was done this season, but there is no possibility of any construction being done this year.

Swift Current, Southeasterly.—The Department of Railways has approved revised location maps of the branch from Swift Current, Sask., for 45 miles.

Estevan Westerly.—Press reports state that 33 miles of grading on the branch line under construction westerly and northerly from Estevan, Sask., had been completed June 8. The point of junction with the Weyburn extension had not then been determined.

Weyburn-Lethbridge Line.—The Vice President of the Lethbridge, Alta., board of trade received a letter, June 8, from Wm. Whyte, Vice President, C.P.R., to the effect that he hoped the company would be able in the near future to arrange for the construction from Lethbridge easterly to meet the extension westerly of the Weyburn branch.

Bassano to Langdon Branch.—Press reports state that a contract has been let to J. G. Hargrave & Co., Winnipeg, and J. Timothy, Edmonton, Alta., for the building of a line from Bassano, Alta., to a junction with the line running northerly from Langdon, Alta. The branch will be about 40 miles long and serve a large section of the irrigation block. This line will complete a loop through the irrigation block, between Langdon and Bassano, passing through Irricana.

Langdon Branch.—The revised route maps of the branch from Langdon, Alta., northerly, for 62.1 miles, have been approved by the Department of Railways.

Lacombe Station.—A contract has been let to J. McLaughlin, Lacombe, Alta., for the building of a station there. It is to be erected opposite Dolmage St., and will be of brick and Calgary sandstone.

Medicine Hat to Calgary.—Press reports, June 4, state that C.P.R. engineers are making surveys about 40 miles north of Taber, and south of the Bow River, Alta., for the location of a new line into Calgary. The party is in charge of J. R. Paget.

Shops in Alberta.—We are advised that the proposal to build car and other repair shops at some point in Alberta is at present under consideration. The interests of Medicine Hat, Bassano and Calgary are being advocated by residents and deputations have waited upon the company's officials. Sir Thos. G. Shaughnessy is expected to make a trip to the West shortly, when a decision will probably be reached.

BLAUGAS

Blaugas is bottled gas shipped in steel cylinders, sold by the pound.

It has 1800 B.T.U. and by this enormous heating power can do things which no other gas can. Blaugas is used, not only for house lighting, cooking, and water-heating, but for lighting of railway cars, buoys, railway stations, lighthouses. It is extensively used for all industrial purposes, as

Soldering
Brazing
Heating Appliances

of all kinds, and with oxygen, for

Welding

aluminum, bronze, copper, cast iron, etc.,

Cutting

of any kind of metal.

Blaugas is the safest gas ever invented. Explosion limits only within 96 to 92 per cent. of air and 4 to 8 per cent. of gas.

TITANIUM

The Wonder-Working Alloy

Specify It in Your Rail Steel for Safety and Economy

Titanium Alloy increases toughness, durability and ductility of steel. It reduces brittleness. Rails made from Titanium open-hearth steel are practically unbreakable. They show most unusual qualities of endurance and power to resist shock and impact.

Open-hearth rails having carbon content as high as 0.85 are being used with wonderful success in the United States by use of Titanium Alloy. One railroad recently ordered 21,000 tons of such rails. Titanium Alloy increases cost of rails $1 to $5 per ton, depending upon amount of alloy used.

Booklet No. 30 is of vital interest to every user of steel and iron. Send for it.

DAKE ENGINE CO., Grand Haven, Mich.

Calgary Station, Etc.—General Superintendent Price is quoted as stating, June 8, that contracts will be let at an early date for an extension of the station building at Calgary, Alta. The present building will be utilized for ticket offices, washing rooms, etc., and in the new wings there will be a lunch counter, express rooms, offices, etc. The west wing will be built to within 40 ft. of the proposed new hotel.

The ratepayers of Calgary voted, June 29, upon a bylaw confirming an agreement under which the city agrees to accept $4,000 a year in lieu of all taxes upon the hotel to be built by the company, and also accepting certain sums towards street paving works.

Kaslo to Three Forks.—No definite decision, we are advised, has been reached with reference to the proposal to build a line of four miles from Kaslo to Three Forks, B.C., to serve some mines.

Wharf at New Westminster.—Plans have been filed with the Minister of Public Works at Ottawa, and at the Registry Office, New Westminster, B.C., of the new wharf which the company proposes to build on the Fraser River at New Westminster.

Kootenay Central Ry.—Work has been started on the bridge across the Kicking Horse River at Golden, B.C. Grading is also being pushed in the direction of the Crow's Nest Pass branch.

Vancouver Improvements.—In an interview at Vancouver, B.C., June 14, G. J. Bury, General Manager, Western Lines, is quoted as saying that the present plans for the station at Vancouver, have been abandoned and that the whole situation was being reviewed so that the new plans could be prepared upon a larger scale than had previously been contemplated.

W. Whyte, Vice President, who returned to Winnipeg, June 17, stated in an interview that certain improvements would have to be undertaken at Vancouver, and alternative plans were being considered. The proposed yards at Coquitlam would be sufficiently large to provide for the development of many years. The plans provide for a series of 90 tracks, paralleling the main tracks for two miles, making in all 180 miles of side tracks. On the opposite side of the track there is an area equally large for the shops with a tract a mile long on the Fraser River for industrial sites.

Victoria Wharf.—Tenders are under consideration for the building of a 240 ft. extension to the wharf at Victoria, B.C. The wharf will also be extended to 60 ft., in order to relieve the congestion of traffic.

Esquimalt and Nanaimo Ry.—We are advised that it is the company's intention to proceed immediately with the construction of the Cowichan Lake branch, a contract for which was expected to be let by the end of June.

The press reports as to the construction of the extension to Comox, we are advised, are premature, as nothing has yet been decided.

Seattle, Wash.—Negotiations are reported to have been completed by which the C.P.R. will lease pier no. 1 at Seattle, Wash., for the accommodation of its steamers, from the Northern Pacific Rd. The company has hitherto used the Pacific Coast Steamship Co.'s docks.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Track is reported laid on the bridge over the St. Croix River, west to Withrow, Minn., on the cut-off from New Richmond, Wis., and it was expected to have the whole cut-off completed by June 30. The construction of the line from Frederick, Wis., to Duluth, Minn., is being pushed forward by the contractors, Foley, Welch and Stewart, and it is expected it will be completed in the fall. (June, pg. 515.)

Railway Contracts for 1911.

In his annual address to the shareholders of the Imperial Bank recently, President D. R. Wilkie said: "It must be borne in mind that the prosperity of the country at the moment is largely due to the enormous expenditures of money borrowed from abroad for railway construction. At the present moment there are no less than 1,681 miles of railway actually under construction, and no less than 10,000 men employed in the work, in addition to which a further mileage of about 3,000 will shortly be under way."

The mileage mentioned is a very conservative estimate, when the fact is taken into consideration that on the National Transcontinental Ry. alone there is some 400 miles of grading to be completed, out of the total of 1,804 miles, all of which is under contract. Up to June 20, we had been advised of the letting of contracts this season for upwards of 1,400 miles of new lines. Tenders are under consideration for the construction of over 650 miles of lines for the Canadian Northern Ry. system, and it is understood that tenders will be asked at an early date for something like 650 miles of other lines, including the 450 mile section in British Columbia to link up the prairie section of the G.T. Pacific Ry. with the section under construction easterly from Prince Rupert.

Following is a list of the contracts for new lines already let this season, with the names of the contractors:—

Alberta Eastern Ry.—This line was formerly known as the Manitoulin and North Shore Ry. A contract for the section from Crean Hill to White Fish Bay, 46 miles, has been let to the Lake Superior Construction Co.

Canadian Northern Quebec Ry. — Short line from Hawkesbury, Ont., to Montreal, 55 miles; J. P. Mullarkey, Montreal.

Canadian Northern Ontario Ry.—Toronto to Deseronto, Angus Sinclair; two short pieces of grade revision on Bay of Quinte Ry. between Deseronto and Sydenham, about four miles, Angus Sinclair; Sydenham to Ottawa, 163 miles; J. P. Mullarkey, except so far as the grading and timber work from mileage 180 to mileage 200, which will be done by Ewen Mackenzie.

From Gowganda Jct. northerly for 15 miles, Angus Sinclair.

Tenders were received to June 30 for the construction in three sections of the line from Port Arthur easterly to Sellwood Jct., Ont., about 500 miles, the work to be completed in 1913

Canadian Northern Ry.—New contracts have been let as follows:—Completion of Vegreville-Calgary line, from Red Deer to Calgary, Alta., Northern Construction Co.; Brazeau extension westerly from the Vegreville-Calgary line near Stettler westerly for about 100 miles, Northern Construction Co. Completion Maryfield extension to Moose Jaw, Sask., 30 miles, Cowan Construction Co. Completion of the Rossburn extension to near Canora, Sask., about 12 miles, Molloy Bros., Winnipeg. Main line from Pembina River westerly towards Yellowhead Pass, for 100 miles, Cowan Construction Co.; from Onoway, on the main line, for 40 miles towards Peace River, Northern Construction Co.; from Morinville to Athabasca Landing, Alta., 73 miles, Northern Construction Co.

Canadian Northern Pacific Ry.—From Port Mann to Hope, B.C., 77 miles. The Northern Construction Co. has a considerable portion of the grading completed. Tenders were received to May 12 for the grading, etc., on 163 miles from Hope to Kamloops, B.C., but the contracts had not been awarded on June 20.

From near Victoria for 40 miles in the direction of Alberni, Grant, Smith and Co.

Canadian Pacific Ry.—In addition to second track work at Montreal and Fort William, which is being done by the company's own staff, second track work between Smiths Falls and Bathurst, Ont., under contract to Jones and Girouard, Ottawa, and easterly and westerly from Moose Jaw, in all 23 miles, under contract to J. G. Hargreave, Winnipeg, the company has put the following new lines under construction:—

Georgian Bay and Seaboard Ry.—Completion of line to Bethany Siding, Ont., 38 miles, Toronto Construction Co.

South Ontario Pacific Ry.—From Hamilton to Guelph Jct., Ont., 16 miles, Toronto Construction Co.

Branch Lines in West.—Estevan to Forward, 35 miles, J. D. McArthur. Extension of Weyburn branch towards Lethbridge, 20 miles, Foley, Welch and Stewart. Swift Current southeasterly for 45 miles, and from Swift Current southwesterly for 35 miles, Foley, Welch and Stewart; extension of Moose Jaw branch to a junction with the Lacombe branch, about 35 miles, Foley, Welch and Stewart; from Wilkie north to Cut Knife district, 25 miles, and from Wilkie south to Tramping Lake district, 25 miles, Dutton and Timson; from Castor easterly for 65 miles, Foley, Welch and Stewart.

Kootenay Central Ry. — From 10 miles out of Golden, B.C., for 25 miles, and from 30 miles out of Galloway to Baynes Lake, B.C., 12 miles, Janse and McDonald.

Great Northern Ry. Lines in Canada.—Manitoba Great Northern Ry.—From Winnipeg to junction with C.N. Ry. Emerson line, four miles, A. Guthrie and Co., St. Paul, Minn. Vancouver, Victoria and Eastern Ry.—From Abbottsford to Chilliwack, B.C., 12 miles, J. W. Stewart. A contract is expected to be let shortly for the extension of the line from near Princeton, westerly to Hope.

Ha Ha Bay Ry.—From Riviere du Moulin to La Terriere, Que., seven miles, Boulianne and Boulianne.

Kootenay and Alberta Ry.—Grading, etc., of a line at Pincher, Alta., 13 miles, Grant, Smith and Co., Spokane, Wash.

Grand Trunk Pacific Ry. Branch Lines.—Regina to International boundary, an additional 90 miles to complete the line, J. D. McArthur, Winnipeg; Regina to Moose Jaw, to complete about '9 miles, Rigley, Hyland and Plummer; Biggar, Sask., towards Calgary, Alta., 50 miles, Foley, Welch and Stewart; Mountain Park branch of the Alberta Coal branch, 54 miles, Foley, Welch and Stewart.

Prince Edward Island Ry.—Branch from Harmony to Elmira, 9.9 miles, Whitehead Bros., Fredericton, N.B.

Quebec and Saguenay Ry.—From terminus of Quebec Ry. Light and Power Co.'s line near Cap Tourmente to Pointe a Pic, Que., 56 miles, O'Brien and Doheny, Quebec; from Pointe a Pic to East Canada Power and Pulp Co.'s mills, 7.5 miles, Bishop Construction Co., Montreal and Toronto.

Reid Newfoundland Co.—The company is building, under charge of its own staff, a branch from St. John's to Trepassey, about 100 miles.

Temiskaming and Northern Ontario Ry.—An extension of the newly built Porcupine Branch (29 miles in length from Iroquois Falls to Porcupine Lake, Ont.) is being built by the Commissioners' staff to the Hollinger Mines, about five miles.

EDISON BSCO

PRIMARY BATTERY

is the logical solution of your railway signal battery problem.

As a matter of reliability, you must have the battery in which the best of materials are combined under the best of workmanship, the battery in which the latest scientific principles are used, the battery in which internal resistance is reduced to the lowest possible point, in which premature polarization is impossible—the battery which delivers highest voltage up to the minute the elements are completely exhausted.

As a matter of economy, you must have the battery in which the inactive parts, jar and cover, are permanent the one in which the time required for inspection and attendance if 50 per cent less than that of other batteries, the one in which renewals cost less and which delivers the juice at a lower cost per ampere hour than any battery on the market.

Edison BSCO Primary Batteries meet every requirement along these lines.

Let us send you our convincing booklet number 51. It shows why.

CANADIAN NORTHERN

The Great Advantage

of reaching Muskoka by way of the Canadian Northern Ontario Railway lies in the fact that it skirts the Lakes right to the head of Lake Joseph, with boat-side stations at Bala Park and Lake Joseph, thus giving direct access to the most important summering places.

The Lake Shore Express

with its excellent parlor-observation and dining cars, is the best appointed and most popular train in the Muskoka service. It provides the quickest, most comfortable way to reach Lake Simcoe, Sparrow Lake, Parry Sound District, the Georgian Bay, the Maganetawan Country, and

The Muskoka Lakes

A new and improved service will be inaugurated on the Canadian Northern Ontario this season from Toronto to Point-au-Baril on the Georgian Bay.

Canadian Northern Ry. Construction, Etc.

In an interview in London, Eng., June 8, Sir Wm. Mackenzie, President, is quoted as saying the company's construction programme for the present season was the largest yet undertaken. It will mean the addition of 700 or 800 miles of new lines or branches in the prairie provinces. These branch lines will open up large agricultural areas for settlement; the Stettler-Brazeau River line will open up large coal areas at the foot of the Rocky Mountains. During 1910 the company built about 600 miles of branch lines. The construction of the Port Arthur-Sudbury-Ottawa link would be pushed as fast as possible, and the end of 1914 would possibly see its completion.

Canadian Northern Quebec Ry.—W. A. Kingsland, Auditor, C.N.E. Ry., is quoted as stating, June 15, that it was the intention of the company to build shops at Limoilou, Que., and that land was being purchased as a site. The laying out of the plant would be proceeded with as soon as possible after the land had been acquired.

Some large purchases of land have recently been made on Montreal Island, along the route of the short line now being built from Hawkesbury, Ont., into the city. One report states that altogether some 8,000 acres has been purchased for between $7,000,000 and $8,000,000. One of the sellers said he had sold to the C.N.R. interests, while E. R. Decary, who does C.N.R. notarial business, states that the company had not either directly or indirectly purchased an inch of land on Montreal Island. The land is being acquired by a syndicate, a real estate agent states, the funds coming from London, Eng., but nothing is known of the purposes for which they are being acquired. The question of terminals in Montreal is yet unsettled, and it is stated that an arrangement may be made with the C.P.R. for the use of that company's terminals at Place Viger.

The revised location plans of the Hawkesbury-Montreal line through Chatham tp., Que., being mileage 7.58 to mileage 9.12 from Hawkesbury Jct., Ont., have been approved by the Board of Railway Commissioners. The contractor for the building of this line is J. P. Mullarkey, and it is understood that he has been instructed to push the line to completion as fast as possible. The work includes the building of a new bridge across the Back River, between Montreal Island and the mainland. The water is not deep at the point of crossing, the bottom is good, and there are no engineering difficulties in the way of construction. The line is expected to be completed and in operation within two years.

Canadian Northern Ontario Ry.—A start was made at Dwyer Hill, midway between Ottawa and Smiths Falls, June 12, upon the grading of the remaining section of the Toronto-Ottawa line. At this point a subcontract covering six miles has been let to Ross and McCombe. Another subcontract is reported let to —. Harrison, at Smiths Falls. Other contractors are reported to have their plants ready to move in as soon as the general contractors have assigned them mileage. The locating engineers are busy completing their work, so as to let the contractors start work.

The Board of Railway Commissioners has approved location plans for the line through Loughborough, Storrington, Bedford, South Crosby and Bastard tps. The line through these townships is an extension of the line from the terminus of the Bay of Quinte Ry. at Sydenham, towards Ottawa.

The Department of Railways has approved route maps of two small revisions of line between Deseronto and Sydenham, on the Bay of Quinte, which is being made part of the C.N.O.R. between Toronto and Ottawa. The deviations are about five miles and 1.5 miles respectively.

The Board of Railway Commissioners has dismissed the application of the ratepayers of Cobourg, Ont., for a subway under the tracks at William St., and has ordered the company to remove certain obstructions to the view near the crossing.

The Department of Railways has approved location plans for the projected lines through Wentworth and Halton counties, including Hamilton, about 30 miles.

Tenders are under consideration for the construction of that portion of the line from Port Arthur to Sellwood Jct., Ont., about 500 miles. The work is to be let in three sections, as follows: from Port Arthur to the boundary between Thunder Bay and Algoma; from the Thunder Bay-Algoma boundary to Kapuskasing Lake, and from the latter point to Sellwood Jct., on the line from Toronto northerly. The work to be done under the contracts will include clearing, grubbing, and grading, the erection of bridges, trestles, culverts and masonry work, the fencing of the line, tracklaying and ballasting, and the erection of a telegraph line. The contracts call for the completion of the work by Oct. 1, 1913. The eastern portion of this mileage, it is reported, will run through a comparatively easy country for construction, but on the western portion there is a good deal of very rough country to be gone through, involving a good deal of rock work and bridging.

The Board of Railway Commissioners has approved the revised route maps of the line from Port Arthur to Nipigon, 73.9 miles; the proposed crossing under the C.P.R. near Nipigon, and authorized the building of the line through unsurveyed territory in Algonquin district, mileage 280 to 300 from Sudbury Jct.

It is stated that plans for the construction of 240 miles westerly from Sellwood Jct., and for 150 miles easterly from Port Arthur have been completed ready for the contractors. By a slight deviation near Sudbury connection will be made with the Algoma Eastern Ry. (formerly Manitoulin and North Shore Ry.). A Port Arthur report states that the C.N.O.R. route between Port Arthur and Nipigon is so close to the C.P.R. that it is probable that an arrangement will be made by which the two companies will run their trains, as over a double track line.

Canadian Northern Ry.—The Department of Railways has approved the route map of the proposed connection between the C.N.R. at Fort Frances, Ont., and the International Bridge and Terminal Co., about 800 ft., at International Falls, Minn., and the Board of Railway Commissioners has approved the location of the connection with the Canadian Northern Ry. at Fort Frances, Ont., and the crossing of the Rainy River to International Falls, Minn., and for the International Bridge and Terminal Co.

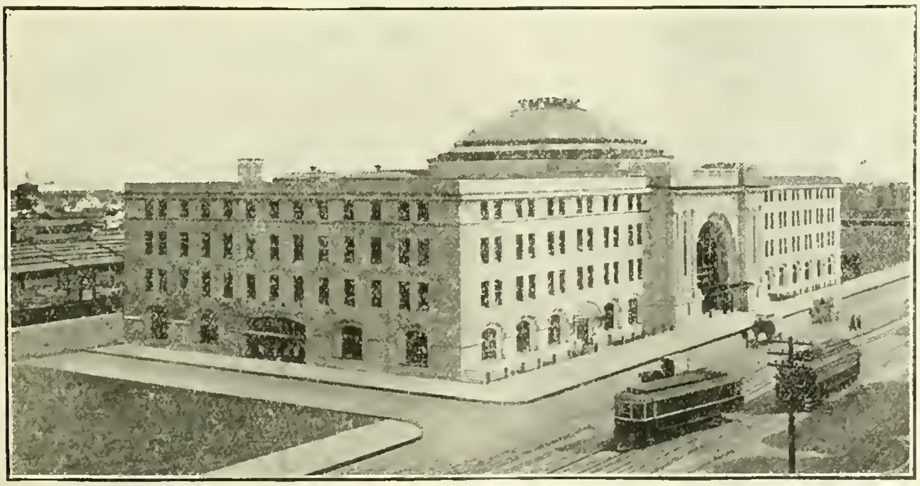
The company is desirous of securing permission from the Winnipeg city council to lay spur tracks across lots 8, 9, 10, D, and 11 of plan 208, and the city engineer has been requested to report as to the subways which would be necessary in order to secure public access to the river.

The question of the entrance to the new terminal at Fort Garry has not been settled. The city demands that the track coming from the freight yards and crossing Main St., should be elevated, so as to be brought in over the viaduct. This, the company's officials state to be impossible owing to the short distance in which to make the 15 ft. rise. As a result the building of the viaduct has been suspended, and temporary arrangements are being made for the entry of trains. The Board of Railway Commissioners has already approved plans showing location and entrance to the Union Station, and the crossings at River Ave., Main St., South and Bell Avenues, and a route map showing a piece of line 0.305 mile long, as an entrance to the Union Station, has been approved by the Department of Railways.

The question of the using of branch lines for the conveyance of freight before they had been passed for traffic by the Government officials was before the Board of Railway Commissioners at Winnipeg, June 15. J. H. Ashdown, on behalf of the board of trade stated that it had always been the custom to carry freight over new railways before they had been inspected. At present there were about 750 miles of C.N.R. lines, and 250 miles of G.T.R. lines which could be used for the freight, but which have not been inspected.

The C.N.R. mileage stated to be affected is estimated by one newspaper at 615 miles, on nine different lines. Following is a table showing the mileage laid on each of these lines, with the starting and terminal points:

	Miles
Vegreville to Munson, Alta.	162
North Battleford to Mervin	50
Maryfield to Lampman, Sask	68



Fort Garry Station, Winnipeg,
which has been built by the Canadian Northern Ry. for joint use with the Grand Trunk Pacific Ry.

Ferranti

TRACTION METERS

The demand for Car Meters has grown very rapidly and the economies effected by the installation of these instruments have more than justified their use.

The guaranteed accuracy of the Ferranti Traction Meter is 2½ per cent. from full load to 1-10th load.

Will stand 100 per cent. overload for ten minutes.

Luxton to Bienfait, Sask.	16
Paddington to Bird's Hill, Sask. ..	8
Hallboro to Beulah, Man.	75
Hudson Bay Jct. to Le Pas, Sask...	87
Shellbrook to Alsack, Sask.	49
Oak Point to Gypsumville, Man...	160

The Department of Railways has approved route maps of a line from Grosse Isle, Man., on the Oak Point branch, northerly for 36 miles; and of a line from Wassewa to Deloraine, Man., about 15 miles. It has also approved of revised route maps of part of the line from Davidson, Sask., westerly for about 20 miles, and of the line from Vonda, Sask., northeasterly for about 35 miles.

A contract has been let to Molloy Bros., Winnipeg, for the completion of the Rossburn extension to a junction with the main line at Canora, Sask., 12 miles.

A revised route map of the Prince Albert-Battleford line, between tp. 44, r. 8, and Denholm in tp. 42, r. 14, w. 3 m.; 73.9 miles has been approved by the Department of Railways.

On the Maryfield extension, which is being pushed westerly, approximately 60 miles of grading was done in 1910, and there is still about 30 miles to build. We are advised that a contract has been let to the Cowan Construction Co. for the completion of the line to Moose Jaw, Sask.

By an arrangement made, June 3, between M. H. McLeod, General Manager and Chief Engineer, the company's terminals in Calgary will be located on Seventeenth Ave. The arrangement was confirmed by the city council, June 12, and plans of the lay-out are to be submitted at an early date. The location of the line entering the city has not been finally disposed of, but it is expected that everything will be got in order so as to have the route pegged out by the fall. The company's engineers are making surveys for a line from Calgary to Lethbridge.

The Canadian Northern Alberta Ry. is being built under a Dominion charter, and being given by a guarantee of bonds to the amount of $13,000 a mile for the first 50 miles, and $25,000 a mile for the next 100 miles. The line proposed starts from near Strathcona, and proceeds in a generally southwesterly direction into the Brazeau River coal fields, and on to the headwaters of the McLeod River. M. H. McLeod, General Manager and Chief Engineer, in an interview at Strathcona, Alta., June 8, said construction would be started at an early date upon a line from Calgary southwesterly. The survey follows the C.P.R. for about six miles, bending northwesterly to east of Pigeon Lake, thence almost directly southerly to Red Deer, where connection will be made with other lines now under construction.

Press reports state that work was started June 1, by Macdonald and Davis, on the grading for a line from Strathcona to Camrose, on the Vegreville-Calgary branch. These contractors, it is reported, had expected to get to work on the line from Stettler, through Red Deer to the Brazeau River coal fields, but were stopped, and told to go on with the Strathcona-Camrose line.

The branch which has been in operation for some years from Edmonton to Morinville, Alta., 23 miles, is to be extended to Athabasca Landing, a further 75 miles. The contract for this has been let to the Northern Construction Co., and the work is in progress.

The line to Peace River starts at Onoway, on the main line, west of St. Albert, and near Lac Ste. Anne, and runs northwesterly. A contract has been let to the Northern Construction Co. for building 50 miles, and it is expected that 40 miles will be completed this year.

Canadian Northern Pacific Ry.—T. H. White, Chief Engineer in charge of construction and surveys, and S. H. Sykes, Assistant Chief Engineer, recently completed an inspection of the work in progress on the line under contract between Port Mann and Hope. The work is well advanced all the way and it is expected to have the track laid on the section by Nov. 1. An arrangement has been made by which the Great Northern Ry., through the Vancouver, Victoria and Eastern Ry., will connect with the C.N.P. Ry. at Sumas, run over the C.N.P. R. to Hope, 38 miles, switching off to its own line, which is now being pushed westerly from Peneticton to Hope.

We were advised, June 20, that contracts for the grading, etc., of the three sections from Hope to Kamloops, 163 miles, had not then been let.

The work of revising the surveys for the line between Kamloops and the Yellowhead Pass was begun, June 1, by a survey party in charge of W. I. Basset, who will work from the Pass to Albrida Summit, 183 miles, where he will meet a second party working easterly from Kamloops.

Vancouver Island.—A meeting has been held at Victoria, B.C., when the Minister of Public Lands and representatives of the various railways discussed the question of the utilizing of the Soughees Reserve, which has been acquired, under the authority of the Dominion Parliament for railway and other purposes.

The location surveys are reported to have been completed to Cowichan Lake, about 80 miles from Victoria, and four parties are working on the surveys between that point and the Alberni canal.

Canadian North-Eastern Ry.—We are advised that all grading and track laying will be completed to Red Cliff, B.C., mileage 13.5, the proposed terminus, by Aug. 1. The track end at June 1 was at Glacier Creek, mileage 5.7. A spur, 1,500 ft. long, to the Portland Canal concentration at Stewart, is expected to be completed July 1, when ore shipments will be started. Ore bunkers are under construction at Red Cliff, and are expected to be completed by Aug. 1. The following structures have been erected at Stewart: Station and freight shed, freight shed or wharf, engine shed, machine shop, blacksmith shop, storehouse, watertank and turntable. Freight sheds will be erected as necessity requires at Glacier Creek, Bitter Creek and Red Cliff.

A general meeting of citizens was held at Stewart, June 7, when a resolution was passed requesting the Provincial Government to aid in the building of the line from Stewart to a connection with the Canadian Northern Ry. (June, pg. 525.)

◆

C.P.R. Hotels.—The Hotel Kootenay Lake, at Balfour, B.C., which is expected to be open for business July 1, contains 50 rooms. T. Kenna, heretofore rooming clerk at Chateau Frontenac, Quebec, and formerly manager Roberval Hotel, Roberval, Que., has been appointed manager. A new hotel will shortly be erected at Calgary, Alta., containing 250 rooms. P. Shulz, formerly connected with the Hyde Park Hotel, London, Eng., has been appointed assistant manager, Royal Alexandra Hotel, Winnipeg. G. H. Rawlins, heretofore assistant to the manager, Banff Springs Hotel, Banff, Alta., has been appointed manager. H. L. T. Pigou, heretofore at Chateau Frontenac, Quebec, has been appointed manager, Mount Stephen House, Field, B.C. F. L. Hutchinson, manager, Chateau Frontenac, Quebec, will act as assistant to Hayter Reed, Manager in Chief, C.P.R. Hotels, during the summer, in the west, and will also be succeeded, temporarily, by F. McMahon, assistant manager.

N.T.R. Shops at Transcona.

The National Transcontinental Railway Commissioners will receive to July 11, tenders for the construction of the following car shops:—

At Transcona, near Winnipeg.

Scrap Platform and storage bins, 200 by 35 ft.

Dry kiln 40 by 70.

Wheel and machine shop, 74¾ by 164¾ ft.

Freight car shop, 604¾ by 199¾ ft.

Planing mill, 304¾ by 104¾ ft.

Paint storehouse, 39 ft. 7 ins. by 48 ft. 7 ins.

Coach paint shop, 344¾ by 91¾ ft.

Coach shop, 204¾ by 124¾ ft.

Car Department office, 68 by 60 ft.

Motive Power Department office, 68 by 60 ft.

Contractors are requested to send in a bulk price for the work. The 10 buildings, with their equipment, are estimated to cost about $2,500,000, which will bring up the cost of the whole of the shops at this point to upwards of $6,000,000.

A plan of the entire layout of the shop plant at Transcona was given in our issue of Sept., 1910, pg. 717, and a detailed description of the whole of the buildings was given in our issue of Aug., 1910, pg. 633. The buildings to be erected under the contract now being arranged are shown in the plans in our September issue as being north of the tracks running through the centre of the yard, north of the water tank and power house. The dimensions of certain of the buildings to be erected vary from the figures given in the article referred to, but the variation is unimportant. The contractors are also called upon to furnish an indirect heating apparatus and a yard crane runway for these buildings, together with the necessary lumber sheds.

◆

Locomotives for Government Railways.

The Minister of Railways, in answer to a question in the House of Commons recently stated that the following locomotives had been bought from 1896 to 1910. The figures in the column after the year show the number of locomotives bought. The price mentioned is per locomotive:—

INTERCOLONIAL RAILWAY

1898	2	Canadian Locomotive Co............	$14,500 00
	2	Baldwin Locomotive Works	10,000 00

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

White Pass and Yukon Ry. Rates.

13765. May 29. Re order 7246, June 16, 1909, made upon the application of the Board of Trade of Dawson, Yukon, directing the British Yukon Ry. Co., the British Columbia Yukon Ry. Co., the Pacific and Arctic Ry. and Navigation Co., and the White Pass and Yukon Ry. Co. to file with the Board (1) tariffs of the companies' tolls covering all through traffic received at Skagway and destined to White Horse, or to any intermediate point or points between the International boundary line between Alaska and British Columbia, upon the line of railway, and White Horse: covering all through traffic received at any point or points upon the railway between White Horse and the International boundary, and destined to Skagway. And re the tariffs filed in pursuance thereof: Upon reading the application of the companies, for an extension of time for filing the tariffs required by order 12783, Jan. 18, 1911, and order 13292, Mar. 23, 1911, and for the written reasons given, it is ordered that the application be refused, and that the companies are declared to be subject to a penalty of $100 a day for every day's default in compliance with order 12783, as extended or amended by order 13292.

Chief Commissioner Mabee gave the following judgment:—Under the order of March 4, formally issued on March 23, the effective date for the tariffs required to be filed under the order of Jan. 18, was extended to June 1, because it was thought that the appeal to the Governor-in-Council could not be heard and disposed of before the date that the tariffs were required to be put into effect. By letter of May 23, received by me on May 28, application is now made to extend this date to Nov. 15 or Dec. 1. No reasons are given for this extension, except it is alleged that "it is quite evident now that it will be impossible to dispose of the appeal to the Governor-in-Council until some time in the autumn." Nothing whatever is said about the delay from March until the present time. On the other hand the Board learns that when it made the order extending the time to June 1, Mr. Berdoe, General Manager of the road, telegraphed to White Horse as follows: "Application of order reducing rates suspended indefinitely." This was a misleading message, quite contrary to the fact, as the time was definitely fixed as June 1. The telegram, however, probably is an indication that it was thought all the company need do was to make another application and it could get further extensions, perhaps "indefinitely." In addition to this, the company, by a general notice, withdrew after April 1, all tariffs naming through freight and passenger rates between Seattle, Tacoma, Port Townsend, Vancouver and Victoria, and points on the White Pass and Yukon Route, and connecting lines via Skagway, the result of which is disclosed by the following telegram from the Secretary of the Dawson Board of Trade, dated May 25: "Dawson Board of Trade finds White Pass Ry. tariff April 1 has by the cancellation of through rates from Seattle, Vancouver, to Dawson, and abolishing of commodity group rates raised freight rates from $2 to $15 a ton on staples mostly used in the territory over rates of last season basing steamship charges from Seattle or Vancouver to Skagway at $10 a ton." The Board's order required tariffs filed effective April 1 reducing the tolls upon the railway by 33⅓%. As matters now stand the extension of time already given to these companies seems to have enabled them to increase their already burdensome tolls, as appears in the telegram from Dawson. The Board is asked to perpetuate this state of affairs until Nov. 15 or Dec. 1, if not "indefinitely." Instead of so doing an order should issue subjecting these companies to a penalty of $100 a day for every day they are in default in filing and bringing into effect tariffs in compliance with the order of Jan. 18, 1911.

The White Pass and Yukon Ry. appealed to the Governor in Council, and a press dispatch states that the Board of Railway Commissioners has been directed to re-open the matter.

Supplement to Canadian Classification

13850. June 2.—Re application of Canadian Freight Association, under sec. 321 of the Railway Act, for the approval of proposed Supplement 1 to Canadian Classification 15, and re application of the Philips Manufacturing Company, Toronto, for a reduction in the present ratings of plate or mirror glass. It is ordered that the new and amended ratings embodied in the said proposed Supplement 1 to Canadian Classification 15 be approved, with the exception of the proposed ratings of the following articles, the application with respect to which is hereby refused, namely:—Common window glass, united outside measurement over 120 ins., in carloads; cathedral glass, rolled, comprising all varieties of cast or colored glass, not framed or leaded; chipped or ground glass; wired glass, not polished; tin cans, oil, with or without woodboard jackets, or not otherwise specified; loose, in carloads; tin cans, not nested, in crates, boxes, or barrels, in carloads; tinware, loose, in carloads; empty crates. And it is also ordered that the following amended or new ratings be provided, namely:—(a), Glass, ribbed or rough, cathedral (rolled, comprising all varieties of cast or colored glass, not framed or leaded), chipped or ground, and wired (not polished), at the same ratings as provided for common window glass; (b), tin cans, not nested in crates, boxes or barrels, c.l., minimum weight 20,000 lbs. per car, 5th class; (c), crate stuff, in bundles or shooks, l.c.l. 4th, c.l. 10th class; to be added to the lumber list, also, the words "set up" to be added to the present ratings for empty crates; (d), cordwood and pole saws, l.c.l., set up, 1½ 1st class, knocked down, 2nd class, to be added to the agricultural implement list, with permission to add also to the machinery list should the applicant so desire; (e), lead washers, in boxes, c.l., 5th class. And it is also ordered that in view of the apparent misunderstanding and lack of evidence with respect to the proposed ratings for meats, etc., in glass or earthenware, the said proposed ratings be withdrawn, with leave to renew the application after reconsideration by the applicant. And it is further ordered that the application of the Philips Manufacturing Co. for a reduction in the ratings of plate or mirror glass, not exceeding 80 united inches, from l.c.l. 1st, c.l. 3rd class, to l.c.l. 2nd, c.l. 4th class, be refused.

Rates on Rice.

13852. June 1.—Re application of Mount Royal Milling and Manufacturing Co., of Montreal, complaining that the G.T.R. and C.P.R. Companies unjustly discriminate against rice manufactured in the province of Quebec by giving preferential rates to cleaned rice from Great Britain, arriving at Montreal by ocean steamships, and re-shipped from Montreal Wharf in competition with the product of the applicant's mills to the same Canadian destinations; and that the rates on cleaned rice from Montreal are unreasonably high in comparison with the rates from Boston to the said destinations in Canada, through Montreal. Upon the application of the Chairman of the Advisory Committee of the Canadian Freight Association, and the consent of the applicant, and upon the recommendation of the Chief Traffic Officer of the Board, it is ordered that "Rice, not otherwise specified, in packages," as described in item 15, pg. 37, Canadian Classification 15, be carried between all points in Canada east of and including Fort William, Ont., by all railway companies subject to the jurisdiction of the Board, at 4th class rates in less than carload lots; the said rates to be provided for by special commodity tariffs to take effect not later than June 15, 1911. And it is further ordered that order 12275, April 29, 1910, be rescinded

Trespassers on Railway Right of Way

—The following circular, signed by James Oborne, General Superintendent, Ontario Division, C.P.R., Toronto, has been issued to sectionmen, bridgemen, station and yard staff, signalmen, watchmen and constables on the division: "Government statistics having shown that 75% of the people killed in Canada during the past year were trespassers, you are hereby instructed that trespassing on the company's right of way must not be allowed, even though it may be necessary to invoke the aid of the law in suppressing it."

Manual of Statistics.—The 23rd annual issue of this valuable work of reference for investors has been issued. The new edition contains 1,092 pages of general information, and the annual reports of railway, steamship and industrial corporation, giving the latest available facts about them. The 200 pages at the end contain a large amount of information in tabular form, showing the movement of the principal stocks on the important exchanges during the year. Everything is so arranged that the information desired on any one point, or in reference to any single company, or any group of companies, is readily accessible. It is published by the Manual of Statistics Co., 20 Veysey St., New York City, and the price is $5.

Montreal to Hudson Strait.—A London, Eng., syndicate, the Canadian end of which is headed by Sir Wm. Mackenzie, Toronto, is reported to be promoting a scheme of development in northern Quebec. The reports state that the syndicate has acquired coal mining properties in Nova Scotia, large holdings of real estate in Quebec, and mining areas in the Porcupine district of Ontario. While these will be developed, it is stated that the principal undertaking will be the building of a railway giving connection between Montreal and Bearon Point on Hudson Bay Strait, about 1,000 miles. The report adds that this will be known as the St. Lawrence and Ungava Ry.

The Dominion Steel Corporation has declared a quarterly dividend of 1%, payable July 3 to shareholders of record June 20.

The G. T. Pacific Ry. is taking action in the British Columbia courts to have various companies restrained from using the words "Grand Trunk Pacific" as part of their titles. It is alleged on behalf of the railway that the use of the words gives rise to a belief that these companies are associated and operated in connection with the G. T. Pacific Ry.

Canadian Vickers, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $5,000,000, and offices at Montreal, to carry on a general business as steel makers and manufacturers and all operations incidental thereto; also the business of shipbuilders, shipwrights, etc., and to build, repair and deal in vessels of every description, and all kinds or ordnance, arms and ammunition. The incorporators are A. Vickers, Sir A. T. Dawson, Sir V. H. P. Caillard, of Vickers, Ltd., London, Eng.; F. O. and J. G. Lewis, Sir H. Montagu Allan and P. Mackintosh, Montreal.

Railway Rolling Stock Notes.

The Duluth, Winnipeg and Pacific Ry. has ordered 350 box cars and 150 flat cars in the U.S.

The Intercolonial Ry. has ordered three colonist cars from the Canadian Car and Foundry Co., Montreal.

Kennedy and McDonald, railway contractors, have received 10 flat cars from the Nova Scotia Car Works, Ltd., Halifax.

The G.T.R. has ordered 1,000 36 ft. steel under frame box cars from the Canadian Car and Foundry Co., Montreal.

The G.T.P.R. has ordered 20 consolidation, 15 Pacific type, and 10 switching locomotives from the Montreal Locomotive Works.

The G.T.P.R. has received four colonist cars, nos. 3020, 3025, 3026 and 3027, from the Canadian Car and Foundry Co., Montreal, and 10 sleeping cars from the Pullman Co.

The Grand Trunk Pacific Ry. has placed an order with the Montreal Locomotive Works, for 20 consolidation, 15 Pacific type and 10 switching locomotives, for delivery between July and October.

With reference to the report mentioned in our last issue that the C.P.R. was to build a number of observation cars for the Austrian State railway system, we are officially advised that the statement is entirely incorrect.

The C.P.R. is reported to be considering the question of installing soda fountains on its transcontinental trains. No definite decision has been arrived at, and we are advised that it is not improbable that such an innovation may be tried.

A mortgage agreement has been deposited with the Ontario Secretary, between the Algoma Central and Hudson Bay Ry., the Superior Rolling Stock Co. and the National Trust Co., regarding certain rolling stock covered by a conditional sales agreement, to secure a bond issue by the car company.

The Board of Railway Commissioners notified railway companies June 8 to file within 60 days a statement showing the number, class and weight of each locomotive on the line, and whether or not equipped with dump ash pans to avoid the necessity of men going underneath the locomotive.

The Canadian Northern Ry., between May 15 and June 15, ordered 40 flat cars, 30 tons capacity, from the Canadian Car and Foundry Co., Montreal; 10 second class coaches, from the Crossen Car Manufacturing Co., Cobourg, Ont., and 10 switching locomotives from the Montreal Locomotive Works.

In reference to the information published in our last issue as to the use of crude oil for fuel on C.P.R. locomotives on the Pacific Division, we are officially advised that it is the intention to use it between Vancouver and Revelstoke should it prove economical. The question is in abeyance at present, but will be again considered a little later on.

Following are the chief details of the 60 Hart-Otis steam shovel clay cars, which the Laprairie Brick Co. has ordered from the Hart-Otis Car Co., Montreal:

Length over end sills	8 ft. 9 ins.
Length inside	4 ft. 9 ins.
Width inside	4 ft. 6 ins.
Height inside	3 ft. 9 ins.
Height from rail to top	5 ft. 10½ ins.
Wheel base	6 ft. 6 ins.
Capacity	3 yds.

The Canadian Northern Ry., between May 15 and June 15, received the following additions to rolling stock: 50 box cars, five first class cars, from the Canadian Car and Foundry Co., Montreal; 190 box cars from the Nova Scotia Car Works, Halifax; four second class cars, 65 stock cars, from the Crossen Car Manufacturing Co., Cobourg, Ont.; 60 Hart cars from the Hart-Otis Car Co., Montreal, and 14 locomotives from the Montreal Locomotive Works.

The C.P.R. is building at its Angus shops, Montreal, some parlor-buffet cars, with observation room on each. This latter feature extends the full width of the car, with 12 chairs, and communicates direct to the observation platform. The main part of the car has seating capacity for 24 persons, with writing table and lavatory accommodation. Following are the chief dimensions:—

Length of car	72 ft. 8 ins.
Observation room	18 ft. 11¼ ins.
Main compartment	37 ft. 2 ins.

The C.P.R., between May 15 and June 12, placed the following orders for rolling stock: 12 switching locomotives, one first class car, 1,210 box cars, four freight refrigerator cars, 19 stock cars, six vans, one ore car and seven ballast cars, at its Angus shops, Montreal; 15 N. 3 locomotives, at the Montreal Locomotive Works; 500 steel frame box cars, and 13 steel flat cars at the Canadian Car and Foundry Co., Montreal; and 500 steel frame box cars, 402 steel coal cars in the U.S.

The C.P.R., between May 15 and June 12, received the following additions to rolling stock: Two D. 10 locomotives, one hump switching locomotive, one Mallett locomotive, 26 suburban cars, 230 box cars, 17 refrigerator cars (passenger), five sleeping cars, eight vans, 258 stock cars, 21 box baggage cars, and one superintendent's business car, from its Angus shops, Montreal; two D. 10 locomotives from the Canadian Locomotive Co., Kingston, Ont.; 329 steel flat cars from the Canadian Car and Foundry Co., Montreal, and one pile driver from the U.S.

Following are the chief details of the 20 Hart convertible cars, which the C.P.R. has ordered from the Hart-Otis Car Co., Montreal, and which are being built by the Canadian Car and Foundry Co., Montreal, as previously reported:

Length over end sills	36 ft. 8 ins.
Length inside as gondola	34 ft. 8 ins.
Length inside as hopper car	20 ft. 10 ins.
Width over side sills	8 ft 10 ins.
Width inside	8 ft. 8 ins.
Width overall	10 ft 2¼ ins.
Width st top	9 ft. 10 ins.
Height from rail to top of floor	4 ft. 4⅛ ins.
Height from rail to top of car	8 ft. 1⅜ ins
Height inside	3 ft. 9¼ ins
Bolsters and brake beams	Simplex
Side bearings	Susemihl

Following are chief details of the 15 Hart convertible cars, which the Prince Edward Island Ry. is building at its Charlottetown shops, under license from the Hart-Otis Car Co., Montreal, as mentioned in our last issue:

LeLngth over end sills	34 ft. 8 ins.
Length inside as gondola	32 ft. 8 ins.
Length inside as hopper	20 ft. 10 ins.
Width inside	7 ft. 5½ ins.
Width overall	9 ft.
Height from rail to floor	4 ft. 1⅝ ins.
Height inside	3 ft. ¼ ins.
Height from rail to top	7 ft. 1⅞ ins.
Length of hopper opening	16 ft. 9 ins.
Width of hopper opening	2 ft
Number of hopper doors	1
Number of side doors	12
Couplers	Tower
Brakes	Hand and Westinghouse air
Bolsters and brake beams	Simplex

The C.P.R. is building, at its Angus shops, Montreal, a number of sleeping cars, each consisting of seven state rooms with the corridor along the side, with drawing room and observation room. The staterooms, each 6 ft. 2¼ ins., are equipped with complete toilet accommodation, the drawing-room is located at one end of the car, and the observation room at the other. The latter, which is 10 ft. 11½ ins. long, the full width of the car, has eight chairs, and communicates direct to the observation platform. Following are the chief dimensions:

Length of car	72 ft. 8 ins.
Length over buffer beams	78 ft. 1 in.
Observation platform	3 ft.
Observation room	10 ft. 11½ ins.
State rooms, each	6 ft. 2¼ ins.
Drawing room	6 ft. 3 ins

Following are chief details of the 11 D-10g locomotives which the C.P.R. is building at its Angus shops, Montreal, 10 of which were mentioned in our last issue:—

Weight on drivers	142,000 lbs.
Total weight	193,000 lbs.
Cylinders, diar. and stroke	21 by 28 ins.
Valves	Piston, 11 ins.
Boiler, type	Extended wagon top
Boiler, pressure	200 lbs.
Heating surface, tubes	2,238 sq. ft.
Heating surface, firebox	180 sq. ft.
Heating surface, total	2,418 sq. ft.
Heating surface superheater	409 sq. ft.
Equivalent heating surface	3,032 sq. ft.
Tubes, no. and diar.	240 2 ins., 24 5 ins.
Tubes, length	11 ft. 2⅞ ins.
Firebox	8 ft. 6⅛ ins. by 5 ft. 9⅞ ins.
Grate area	49 sq. ft.
Capacity, coal	10 tons
Capacity, water	5,000 galls.
Axles, main	9½ by 12 ins.
Axles, other	9 by 12 ins.
Air brakes	Westinghouse ET 6
Headlight	Pyle National Electric
Valve gear	Walschaert
Superheater	Vaughan and Horsey

Following are the chief details of the five consolidation and five ten-wheel locomotives (nine being mentioned in our last issue), which the Duluth, Winnipeg and Pacific Ry. (C.N.R.) has ordered from the American Locomotive Co., and the Baldwin Locomotive Works, respectively:—

	Consolidation.	Ten-wheel.
Weight on drivers	165,000 lbs.	129,000 lbs.
Weight, total	186,000 lbs.	169,000 lbs.
Cylinders	23 by 26 ins.	22 by 26 ins.
Boiler, type	Extended wagon top	
Boiler, pressure	200 lbs.	
Heating surface, tubes	2,259 sq. ft.	1,746 sq. ft.
Heating surface, firebox	176 sq. ft.	183 sq. ft.
Heating surface, total	2,435 sq. ft.	1,929 sq. ft.
Tubes, no. and diar.		185 2 ins. 26 5⅜ ins.
Tubes, length	13 ft. 2½ ins.	
Firebox	114 by 41¾ ins.	113 by 40¼ ins.
Grate area	33.1 sq. ft.	31.6 sq. ft.
Capacity, water	6,000 gals.	5,000 gals.
Capacity, coal	12 tons	10 tons

The special equipment is the same in each case, as follows:—

Boiler lagging	H. W. Johns-Manville Co.
Brakes	Westinghouse
Brake beams	Simplex
Brake shoes	Diamond S
Journal boxes	McCord
Sight feed lubricators	Detroit
Springs	Wrought iron
Steam heating	Gold system 2 in. pipes
Superheater	Type B
Valve gear	Walschaert

The 10 sleeping cars which the G.T.P.R. has received from the Pullman Co. will be named Africa, Australia, Bermuda, Canada, Gibraltar, India, Tasmania, Trinidad, Victoria and Wales. They have steel underframes of the fish-belly type, with cast steel platforms and bolsters combined. The framing is a combination of steel and wood of the latest improved pattern, the bulkheads being re-inforced with heavy steel framing, representing an efficient anti-telescoping construction, sufficient to take all strains in the event of collision. The berths have been arranged to have increased head room, and are longer and wider than is customary. The inside finish is of polished Cuban mahogany, and the upholstering is of a closely woven plush, so that the chances of dust collecting are reduced to a minimum. The lavatories are equipped with all the most modern and most effective sanitary appliances. The lighting is a combination of electricity and gas, and improved oscillating fans and heating equipment with increased heating surface have been installed. Following are the chief details:

Length over end sills	73 ft. 6 ins.
Length over buffers	81 ft. 10 ins.
Width of body at lower deck crown moulding	10 ft. 3½ ins.
Width of upper deck	6 ft.
Height from rail to top of lower deck crown moulding	11 ft. 7½ ins.
Height from rail to top of roof	14 ft. 1 in.
Height from rail to top overall	14 ft. 5 ins
Height from rail to centre of coupler	2 ft. 11 ins.
Wheel base, on truck	10 ft. 6 ins.

MORISON Suspension Furnaces

The Universally satisfactory record of "THE MORISON" proclaims it the best furnace made.

With Plain Ends or Flanged to any required shape.

For Land and Marine Boilers

Uniform Thickness, Easily Cleaned, Unexcelled for Strength, Unsurpassed for Steaming Capacity.

Hoppers	Duner Co.

Railway Finance, Meetings, Etc.

Atlantic and Lake Superior Ry.—In the course of the proceedings arising out of the liquidation of the Charing Cross Bank, London, Eng., it was stated June 13, that the contract for the sale of the line to the Quebec Oriental Ry., which was financed by the bank, called for the payment of £50,000 cash to complete the purchase. It was understood that £20,000 had been paid.

Brockville, Westport and North-Western Ry.—An action has been entered in the Ontario courts by the Knickerbocker Trust Co. to recover $450,000 alleged to be due on account of principal of the company's bond issue, and $72,000 interest claimed to be due thereon.

The line was purchased at a foreclosure sale by U. S. interests, Jan. 20, 1903, and the company reorganized under this title, the only change from the old one being that "North-Western" replaced "Sault Ste. Marie." In June, 1910, the line was acquired by the Mackenzie, Mann and Co. interests, in connection with the development of the Canadian Northern Ontario Ry. and the Ontario and Ottawa Ry. Co. was incorporated with power to take over this as well as other lines.

Canada Southern Ry., Niagara, Grand Island Bridge Co., Niagara River Bridge Co.—The annual meeting was held at St. Thomas, Ont., June 7, under the chairmanship of N. Kingsmill, K.C. Following are the directors for the current year: W. K. Vanderbilt, F. W. Vanderbilt, C. M. Depew, W. H. Newman, W. C. Brown, J. E. Brown, E. A. Wilkes, L. C. Ledyard, New York, and H B. Ledyard, Detroit, Mich.

Canadian Pacific Ry.—There has recently been sold on the London, Eng., market $6,161,000 additional of the company's consolidate 4% debenture stock, to provide for the construction of 553 miles of branch line in Manitoba, Saskatchewan and Alberta.

Dominion Atlantic Ry.—Gross earnings for Apr., $82,400, against $86,236 for Apr., 1910. Aggregate gross earnings for 10 months ended Apr. 30, $1,046,600, against $1,136,171 for same period 1909-10.

Great Northern Ry.—An official announcement was made from the head office at St. Paul, Minn., May 31, of the issue of $600,000,000 of bonds to retire an issue of $330,000,000 of existing bonds, and to provide for the construction of new lines, additional rolling stock, etc. J. J. Hill, Chairman of the Board, stated that it was not intended to issue this amount of bonds at once, but to spread it over a number of years, according to requirements.

Quebec and Lake St. John Ry.—Total earnings for May, $46,881.11, against $44,804.13 for May, 1910. Aggregate total earnings for five months ended Mar. 31, $210,537.29, against $213,074.84 for same period 1910.

Quebec Central Ry.—Gross earnings for April, $103,715.54; expenses, $66,308.80; net earnings, $37,406.74, against $88,518.05 gross earnings; $57,184.77 expenses; $31,333.28 net earnings for Apr., 1910. Aggregate gross earnings for 10 months ended Apr. 30, $962,885.67; expenses, $660,355.63; net earnings, $302,529.94, against $885,440.80 aggregate gross earnings; $612,882.02 expenses; $272,558.78 net earnings for same period 1909-10.

Rutland Rd.—C. S. Mellen, L. C. Ledyard, and W. Skinner have been elected directors to represent the New York, New Haven and Hartford Rd. interests.

Temiscouata Ry.—Profit on operation for April, $5,194. Aggregate profit for four months ended Apr. 30, $6,964.

Temiskaming and Northern Ontario Ry.—Earnings for May, $113,515, and for week ending June 7, $37,284, against $116,889 and $26,971 for same periods, 1910.

United States and Canada Rd.—Following are the officers and directors for the current year:—President, C. M. Hays; Vice President, S. W. Foster; Treasurer and Assistant Secretary, F. Scott; Secretary, J. W. Gaudion; other directors, W. Wainwright, M. M. Reynolds, G. E. Britton, H. J. Elliott, F. J. Watson.

White Pass and Yukon Ry.—Gross earnings from Jan. 1 to May 7, $141,390, against $163,326 for same period 1910.

York and Carleton Ry.—The annual meeting was held at Stanley, N.B., June 6. Following are the officers and directors for the current year: President, D. R. Moore; Secretary, M. W. Crathy, other directors, F. Brown, Jas. Malone and Alex. Gibson, Jr. It is expected that this line will shortly be transferred to the Dominion Government to be operated as an I.C.R. branch.

A Few Words to Ticket Agents.

The following has been contributed by W. R. Russell, Agent, Canadian Northern Railway, Humbolt, Sask., who is a member of the Canadian Ticket Agents' Association, the International Ticket Agents' Association, and the National Association of Railway Agents:—

All ticket agents have a commodity to sell. It therefore behooves us to get all the information possible for the sale of that commodity. A great many never give a thought beyond the counter over which they hand the pasteboard, that the purchaser will ever come their way again. This is a very wrong idea, no matter who they may be, they have friends, and as such will talk about the treatment received from the ticket agent at such and such a point. This will travel very fast, and if not of a very cheerful nature, will travel more rapidly than that which will tend to raise the hopes in the breast of a ticket agent, therefore see that the talk is of such a satisfactory nature that it will get to the ears of the general passenger agent and other general officers of the company you represent, and will be of such a nature as to please the most fastidious official. If you are under the impression that you are not watched by the general officers, banish that from your mind. You are watched closely, and may never know it, therefore do as well as you can, give to each passenger as pleasant a smile as you possibly can, no matter whether they are dressed in silks, satins or cotton. Rich or poor, old or young, one passenger's money is just as good as another's. Never judge people simply by the clothes they wear.

Every ticket agent should take pride in his appearance. Look neat and clean, do not let your whiskers grow for a week without a shave. If you are at a small station and have baggage, etc., to handle, clothe yourself accordingly; it goes a long way with the travelling public. Show the knowledge you have, and impart it to those who are in need of it; sooner or later it will be appreciated.

When you get a tariff do not throw it in any old place and say to yourself, "I will never need that." This is a wrong idea, and the sooner you drop it the better. Place the tariffs when you get them in their proper place, if at all possible, or if your time is limited at the moment, place them where they will be seen by you when the duties of train service are past, then place them where they belong. You will need to refer to them some day sooner or later, then they will be where you can find them. Read them all, they are sent to you for that purpose. When you get a letter from the general passenger agent, give him all the information possible; you are on the spot, he is not; his duties are multifarious compared to yours, help him with your knowledge, he will appreciate it; if he does not he should. Keep a file for your correspondence, no matter how small it may be; see you have a copy of it, so you can refer to it at any time. In my opinion a great many remarks in this letter will apply to freight agents as well, or to those who act as freight and ticket agents.

There is one thing that should be taken into consideration by the managing officials of all railways, and that is, that each superintendent should have a division agent, who would be in a position to give his experience to the more inexperienced agent, and assist him in explaining things that he does not thoroughly understand. It would in time save a vast amount of work in the general offices. By a division agent I do not mean that he would be called upon to do the work of travelling auditor, special agent, or any duties that would be a drawback to that for which his appointment was made. Make his duties so that the average station agent would greet him with pleasure, and have a very friendly talk over matters in general and if anything should come up that would be of benefit to the company he would be in a position to lay the matter before the superintendent or other official who would require it.

I would like all ticket, freight, station agents and other employes to read the letter in the May issue of The Railway and Marine World, written by Mr. C. Murphy, General Superintendent of Transportation C.P.R. Eastern Lines, it has the right tone to it. To make a railway financially successful every employe must do his level best, and all work together, the same as all parts of a locomotive must work together, or it cannot do the work for which it is intended. All parts must work, therefore every employe must, or should do the same, to make it a paying investment for those who have their money invested. It is bread and butter for us.

The Canadian Freight Association will not have a trip in connection with its summer meeting this year, but will meet in Montreal.

The C.P.R. is offering a prize of $1,000 for the best 100 lbs. of hard red spring or winter wheat raised by any farmer in North or South America.

Coquitlam Terminal Co.—A company has been incorporated under the British Columbia Companies Act, with a capital of $750,000, to build electric or other tramways for the conveyance of passengers and freight: to build logging railways; to operate steam and other vessels; to build grain elevators; and to enter into agreements with companies carrying on similar enterprises. The offices of the company are to be in Victoria.

Let us quote you on your requirements.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—We were officially advised, June 14, that no appointment had then been made to fill the position of Assistant Chief Operating Officer, heretofore held by A. F. Dillinger, who has resigned.

Canadian Northern Ry.—W. Dixon, heretofore Soliciting Freight Agent, Montreal, has been appointed City Freight Agent, Montreal.

J. J. McKeown, heretofore in division freight office, C.P.R., Montreal, has been appointed Soliciting Freight Agent, C.N.R., Montreal.

R. W. Johnston, heretofore in the Freight Office, Canadian Lake Line, Montreal, has been appointed Soliciting Freight Agent, C.N.R., Montreal.

I. L. Boomer, heretofore train dispatcher at Port Arthur, Ont., has been appointed Chief Dispatcher, District 1, Port Arthur, Ont., vice W. A. Stuart, resigned to enter private business.

M. Helston, heretofore Chief Dispatcher, District 5, Saskatoon, Sask., has been appointed Chief Dispatcher, District 2, Winnipeg, Man., vice W. E. Roberts, promoted.

W. E. Roberts, heretofore Chief Dispatcher, District 2, Winnipeg, has been appointed Superintendent, District 6, with territory, Arizona Jct. to Canadian Northern Jct., Maryfield to Lampman, under construction; Luxton to Bienfait, under construction; M. & B. Jct. to Hartney Jct.; Brandon Jct. to Rossburn Jct.; Rossburn Jct. to Calder; Calder to Reihm, under construction; Hallboro to Beulah, under construction, a total of 701.1 miles. Office, Brandon, Man. This is a new district.

W. I. Munro, heretofore Chief Dispatcher, District 3, Dauphin, Man., has been appointed Chief Dispatcher, District 6, Brandon, Man. This is a new position.

F. T. Peebles, heretofore dispatcher at Dauphin, Man., has been appointed Chief Dispatcher, District 3, Dauphin, Man., vice W. I. Munro, transferred.

J. W. Crane, heretofore dispatcher at Saskatoon, Sask., has been appointed Chief Dispatcher, District 5, Saskatoon, Sask., vice M. Helston, transferred.

J. Madill, heretofore City Ticket Agent, C.P.R., Windsor, Ont., has been appointed City Passenger and Ticket Agent, C.N.R., Edmonton, Alta., vice W. C. Dodds, assigned to other duties.

Canadian Pacific Ry.—H. W. Newman has been appointed Travelling Freight Agent, Atlantic Division, St. John, N.B., vice C. J. Street, transferred to Montreal.

P. B. Motley, heretofore Assistant Engineer of Bridges, has been appointed Engineer of Bridges, vice C. N. Monsarratt, resigned, on his appointment as Chairman of the Board of Engineers in charge of the erection of the Quebec Bridge. Office, Montreal.

F. L. Ellingwood has been appointed Superintendent of Building Construction. He will have general charge, under the supervision of the Vice President, of such of the larger station buildings, hotels and other work as may be designated by the President or Vice President from time to time. He will appoint the requisite local superintendents, foremen and inspectors to insure proper workmanship on the part of contractors and others. Drawing and specifications for work under his charge will be issued through his office. Orders for extra work in connection with contracts will be issued by him and countersigned by the Architect. The circular announcing this appointment was signed by the President.

W. B. Way, heretofore Assistant Superintendent District 3, Eastern Division, Montreal, has been appointed Assistant Superintendent, District 3, Eastern Division, with jurisdiction over Quebec, St. Gabriel, Piles, St. Maurice Valley and Berthier subdivisions. Office, Montreal.

G. Curran has been appointed Assistant Superintendent, District 3, Eastern Division, with jurisdiction over Ottawa, Laurentian, St. Lin, St. Eustache and Buckingham subdivisions. Office, Montreal.

C. J. Street, heretofore Travelling Freight Agent, Atlantic Division, St. John, N.B., has been appointed Contracting Freight Agent, Montreal, vice W. O. Bovard, resigned to enter other business.

C. W. Lott, heretofore first trick dispatcher at Smiths Falls, Ont., has been appointed Chief Dispatcher, District 2, Eastern Division, Smiths Falls, Ont

F. W. Perry, heretofore Foreman Passenger Car Repair Shops, West Toronto, has been appointed Divisional Car Foreman, vice J. W. Kelly, assigned to other duties. Office, Toronto.

C. E. Rice, heretofore chief clerk, city ticket office, Brantford, Ont., has been appointed City Ticket Agent, Windsor, Ont., vice J. Madill, resigned to enter Canadian Northern Ry. service.

R. T. Moran, heretofore trick dispatcher, Sudbury, Ont., has been appointed Chief Dispatcher, District 1, Lake Supertor Division, Sudbury, Ont., vice J. O'Meara, who has been granted extended leave of absence.

E. J. Brien has been appointed Trainmaster, District 2, Lake Superior Division, Schreiber, Ont., vice W. Bartlett, transferred.

J. H. Hughes, heretofore acting Superintendent, District 2, Lake Superior Division, during the absence of W. B. Cronk, on leave, has been appointed Superintendent, vice W. B. Cronk, resigned. Office, White River, Ont.

W. J. Fidler has been appointed Storekeeper at Kenora, Ont., vice A. J. Forrest, promoted.

W. B. Lanigan, Assistant Freight Traffic Manager, Western Lines, issued a circular, June 15, announcing the organization of the Freight Traffic Department, Western Lines, as follows:—W. B. Lanigan, Assistant Freight Traffic Manager, Winnipeg, with general supervision of freight traffic, Western Lines, including British Columbia Coast steamers and Esquimalt and Nanaimo Ry., all matters relating to freight traffic under jurisdiction of the Board of Railway Commissioners, all questions relating to rates and divisions and transcontinental rates affecting Western Lines.

W. C. Bowles, heretofore General Freight Agent, Pacific Division, Vancouver, B.C., has been appointed General Freight Agent, Western Lines, covering all lines west of and including Port Arthur, Ont., in charge of interchange of traffic with connecting lines and freight solicitation. Office, Winnipeg.

G. H. Smith, heretofore District Freight Agent, Winnipeg city and terminals, has been appointed Division Freight Agent, Manitoba Division, with territory from Port Arthur and Fort William, Ont., to Harrowby, McAuley, Kirkella, Ebor, Sinclair and Pierson, Man., inclusive, and intervening lateral lines and branches. Office, Winnipeg. The position of District Freight Agent at Winnipeg has been abolished.

T. S. Acheson, General Grain Agent, in charge of grain traffic. Office, Winnipeg.

R. G. Holmes, Chief of Tariff Bureau, in charge of freight traffic publications and distribution of same. Office, Winnipeg.

D. C. Macdonald, heretofore City Freight Agent, Winnipeg, has been appointed Division Freight Agent, Saskatchewan Division, with territory, Marchwell, Welwyn, Fleming, Antler, Maryfield and Gainsborough to Macklin and Cummings, Sask., inclusive, and intervening lateral lines and branches. Office, Regina, Sask.

W. H. Allison, heretofore City Freight Agent, Regina, Sask., has been appointed District Freight Agent. main line Yorkton to Macklin, Sask., inclusive, reporting to Division Freight Agent, Regina, Sask. Office, Saskatoon, Sask.

John Halstead, heretofore Division Freight Agent, Western Division, Calgary, Alta., has been appointed Division Freight Agent, Alberta Division, with territory, Hayter and Walsh to Edmonton, Laggan and Sentinel, inclusive, and intervening lateral lines and branches. Office, Calgary, Alta.

H. C. McMullen, General Live Stock Agent, in charge of live stock traffic. Office, Calgary, Alta.

R. W. Drew, heretofore District Freight Agent, Saskatoon, Sask., has been appointed Division Freight Agent, Kootenay and Boundary Divisions, with territory, Crowsnest, B.C., to Kootenay Landing, Midway, Rossland, Trout Lake City, Nakusp to Sandon, and Slocan Jct. to Slocan City, inclusive, and intervening lateral lines and branches, including Arrow and Kootenay Lakes steamers. Office, Nelson, B.C.

R. E. Larmour, heretofore Division Freight Agent, Central Division, Winnipeg, Man., has been appointed Division Freight Agent, British Columbia Division, with territory, Stephen to Vancouver, inclusive, and intervening lateral lines and branches, and Esquimalt and Nanaimo Ry., Okanagan Lake service, B.C. Coast service, and all Pacific coast freight traffic. Office, Vancouver.

A. J. Cambie has been appointed District Freight Agent, with territory, Vancouver and Westminster terminals, Okanagan branch and Lake service. Office, Vancouver.

F. H. Clendenning, District Freight Agent, B.C. Coast service and Trans-Pacific steamers. Office, Vancouver.

W. H. Gardner. District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C.

A. J. Forrest, heretofore storekeeper at Kenora, Ont., has been appointed Assistant Stores Inspector, Western Lines, Winnipeg. This is a new position.

A. T. McKean has been appointed City Freight Agent, Winnipeg. Man., in charge of Winnipeg and St. Boniface terminal freight traffic.

R. A. Gamble, heretofore Fuel Agent, Calgary, Alta., has been appointed Car Service and Fuel Agent, Moose Jaw. Sask., vice R. R. Smart, who has been appointed a trick dispatcher there.

S. Lenard has been appointed Locomotive Foreman at Arcola, Sask., vice J. M. Mack, transferred.

K. Hove has been appointed acting Roadmaster, Mountain West and Arrow Lake Subdivision, British Columbia Division, vice T. H. Nichols, resigned.

R. K. Scarlett, heretofore city solicitor, Vancouver, B.C., has been appointed city ticket agent at Nelson, B.C., vice H. W. Edwards, transferred.

F. H. Daly has been appointed Travelling Passenger Agent, Western Lines west of Revelstoke, B.C. Office, Vancouver. B.C.

J. O. Goodsell, heretofore Travelling Passenger Agent at Toronto, has been appointed Travelling Passenger Agent, Detroit, Mich.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalant. Advertising contracts will not be taken with any conditiou that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Detroit Lubricator Co. has issued a leaflet about its "500" lubricator for air compressors.

The Ohio Brass Co., Mansfield, Ohio, has issued Catalogue K. devoted to Ohio valves and steam specialties, including the Ohio gauge cock, water gauge and pressure regulating valve.

The Baldwin Locomotive Works, Philadelphia, Pa., has been registered in British Columbia under the Companies Act, with C. W. Stancliffe, of Vancouver, as Agent.

The Buffalo Brake Beam Co., of New York City and Buffalo, N.Y., has established a factory at Brantford, Ont., to manufacture for its Canadian trade, brake beams for all classes of locomotives and cars, steam and electric.

The Consolidated Car Heating Co. held its annual meeting, June 12, when Cornell S. Hawley, theretofore Vice President, General Manager and Treasurer, was elected President and Treasurer, and C. C. Nuckols, theretofore Superintendent and Purchasing Agent, was appointed General Manager.

The Western Wheeled Scraper Co., Aurora, Ill., has issued a thoroughly illustrated catalogue of machinery for handling earth and stone, devoted to scrapers and plows, dump, quarry, rail and spreader cars, dump carts and wagons, ditching machines, elevating graders and wagon loaders, rock and oil crushers, and road graders.

The American Vanadium Co., Pittsburgh, Pa., in its American Vanadium Facts for May, gives a complete report of the address on vanadium in cast iron, before the American Foundrymen's Association, by G. L. Norris, the company's engineer of tests, also complete particulars of the exhibitors who co-operated in the production of cast vanadium products.

N. Curry, President Canadian Car and Foundry Co., visited Amherst, N.S., recently and arranged for the rebuilding necessary on account of the fire which occurred in May. A machine shop and grey iron foundry are to be provided for in one building 300 by 70 ft. Only a part of the forge shop was burned. This is being rebuilt; it will be 180 by 65 ft. The new buildings will be of concrete, with steel roofs, and are expected to be completed and in operation by Sept. 1. In the meantime operations are being carried on in the passenger car shop, rolling mill, axle shop, wheel shop, and malleable iron foundry.

The American Steel Foundries, Chicago, has issued a circular stating that the United States Circuit Court of Appeals for the Second Circuit has affirmed the decision of the Circuit Court in the case of the Simplex Railway Appliance Co. against the Pressed Steel Car Co. for infringement of the A.S.F. Simplex bolster patent. This makes permanent the injunction against the Pressed Steel Car Co. restraining it from the manufacture of the reliance bolster, and awards an accounting for damages for those already made. In the Circuit Court for the Northern District of Illinois, Judge Kohlsaat has entered a decree sustaining the Hardie patent, which covers the Andrews side frame, and holding that the Wolff truck frame, manufactured under the Harrington patent by the Scullin-Gallacher Iron & Steel Co. was an infringement.

Telegraph and Cable Matters.

The Canadian Northern Telegraph Co. has opened an office at Kakabeka Falls, Ont.

H. D. Windeler, heretofore at the Commercial Cable Co.'s station at Canso, N.S., has been appointed Superintendent at St. John's, Nfld.

The Order of Railway Telegraphers, which held its convention at Toronto recently, has decided to hold the next convention in 1913, in Baltimore, Md.

The C.P.R. has opened telegraph offices at French and Moffat, Ont.; Chelsea, Herbert and Ivry, Que.; Esk, Kandahar, Luseland and Salvador, Sask.

The cable steamer Mackay-Bennett recently completed the repairs to the cable between Port aux Basques, Nfld., and Canso, N.S., and proceeded to Halifax.

The Old Time Telegraphers' and Historical Association and the Society of the U.S. Military Telegraph Corps will hold their joint convention at Atlantic City, N.J., Sept. 5-7.

C. C. Wilson, President, United Wireless Telegraph Co., and four others have been sentenced to terms of imprisonment in U.S. penitentiaries for frauds in connection with the flotation and operation of the company.

A party of Western Union Telegraph Co. officials visited Vancouver early in June for an inspection of the company's property, and to arrange for the establishment of a faster and more efficient service with eastern and southern points. A new office is to be established at New Westminster, B.C.

The annual convention of the Association of Railway Telegraph Superintendents was held at Boston, Mass., June 26-30. A number of interesting papers were read and discussed, and an article was added to the constitution regarding the submission of various questions pertaining to railway operations as recommendations to the American Railway Association.

The Nova Scotia Telephone Co. decided, June 1, to accept the offer of the Maritime Telegraph and Telephone Co., to acquire its franchises and property, as from July 14. The terms offered are $135 for each $100 share, or in the alternative one $100 bond of the Maritime Telegraph and Telephone Co., at 6%, and $35 in cash, or $100 in 6% bonds, $30 in 6% preferred stock, and $30 in common stock, the option to be exercised by Sept. 20.

Press reports state that the Marconi Wireless Telegraph Co. has recently been conducting wireless telegraph communication with the west coast of Africa, by way of the Eiffel Tower in Paris, France, and that an efficient service was to be established between Canada and France. Our doubts as to the reliability of these reports have been fully justified, by an official statement, issued from the company's London, Eng., office, to the effect that no such communications have taken place, and that with the present plant, and under present conditions, the only points between which wireless communication is, and can be, efficiently carried on, across the Atlantic, are at Glace Bay, N.S., and Clifden, Ireland.

At the Imperial Conference held in London, Eng., during June, the question of cable rates and the laying of a cable between the United Kingdom and Canada, and the erection of land lines across Canada connecting with the Pacific cable, was under consideration. It was stated that the cost of laying a cable from Killala in Ireland to Newfoundland, with a connection to Nova Scotia, would be £480,000, and the cost of the land line across Canada, £120,000. The expense of operating was estimated at £215,000 and £32,500 respectively, and it was stated that there would be a saving of expense at present incurred, and an immediate revenue of about £36,000. After considerable discussion the following resolution was unanimously agreed to, on the motion of the British Postmaster General: "That in the event of considerable reductions in trans-Atlantic cable rates not being effected in the near future, it is desirable that the laying down of a State-owned cable between England and Canada be considered by a subsidiary conference."

Grain Elevator Notes.

The Goose Lake Elevator Co. is building an elevator at Wadena, Sask.

The Manitoba Elevator Commission has received tenders for dismantling the Winnipeg elevator at Roland, and rebuilding it at Jordan Siding.

The C.P.R. has awarded the contract for alterations and repairs to its Steel elevator D at Fort William, Ont., to John S. Metcalf Co., Ltd., Montreal. The work is to be completed in time for handling this year's crop.

W. White, in the employ of the John S. Metcalf Co., in the construction of

THE O-B THERMO BONDING PROCESS

[illegible] REACTION

APPLYING THE SOLDER

A simple, economical, rapid and effective method by which the terminals of our standard All Wire Rail Bonds can be soldered to the rail after being compressed in the ordinary way, thus combining the permanent extra contact afforded by soldering both head and stud of terminal with the mechanical strength and positive application obtained by compression. Our personal representative will call and explain in detail on request. Write for descriptive booklet.

The Ohio Brass Co., Mansfield, Ohio, U. S. A.

the addition to the G.T.R. elevator at Windmill Point, Montreal, was presented with a travelling bag recently, on his leaving for Fort William, Ont., to take charge, for the company, of the rebuilding of the C.P.R. elevator D.

The Saskatchewan Co-operative Elevator Co. will hold its first general meeting at Moose Jaw, July 6, the necessary 25 local companies having been arranged, as provided for by the act, before the company can be permanently organized.

The Dominion Flour Mills, Ltd., has awarded a contract to John S. Metcalf Co., Ltd., Montreal, for the construction of a re-inforced concrete grain elevator in connection with its new flour mill at St. Henri, Montreal. The capacity of the new erection will be 300,000 bush., and there will be a small working house built in connection with it.

The Montreal Harbor Commissioners have entered suit against the G.T.R., for an injunction to stop the erection of the extension to the elevator system at Windmill Point, on the ground that the site is the property of the Commission, and was leased to the company on the understanding that grain conveyors only would be permitted to occupy the ground, and that the ground on which the bins are being erected, is included in the general plan of amelioration for the harbor and covers what is proposed as a new opening to the Lachine canal, when the plan is fully carried out. The G.T.R. answers that the extension is required for its own benefit and for the benefit of the harbor, and that the work should not be held up by problematical works, to be carried out at an indefinite date. The application has been taken under consideration.

Among the Express Companies.

F. M. Smith has been appointed route agent for lines west of Fort William, Ont., with headquarters at Winnipeg, Man.

D. G. MacKenzie, heretofore Agent, Dominion Ex. Co., Calgary, Alta., has been appointed Agent at Brandon, Man., vice F. R. Jelfs, appointed to Calgary, Alta., as mentioned in our last issue.

The order of the Board of Railway Commissioners, extending the delivery limits of express companies, in cities, to the city boundaries, went into effect June 1.

Express companies in Canada are applying to the Board of Railway Commissioners to cancel section D of the classified rates, which covers general printed matter. It is stated that the hearing will not take place until the fall.

W. H. Plant, Traffic Auditor, Dominion Ex. Co., has been appointed Auditor in charge of all accounting, including the Western Ex. Co. The positions of Traffic Auditor and Auditor of Money Order Accounts have been abolished.

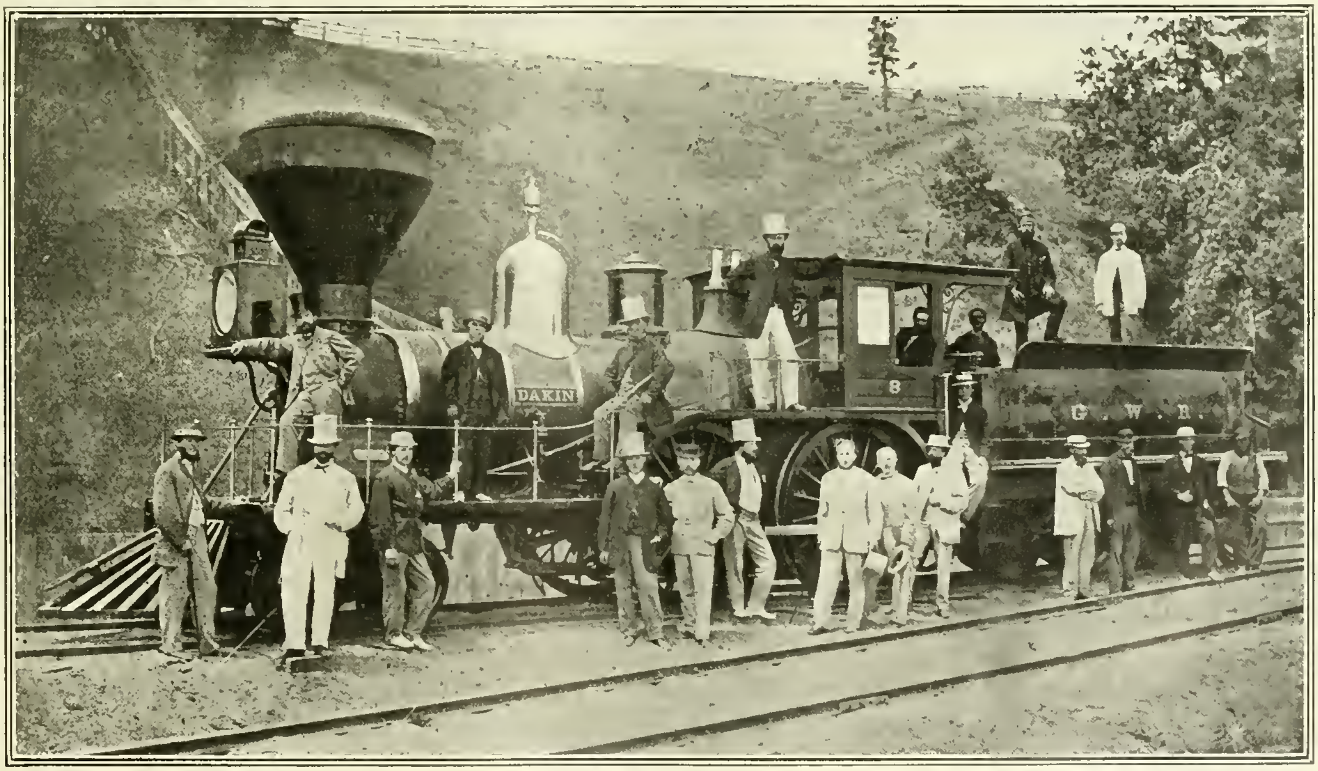
The Dominion Ex. Co. has announced that it has discontinued the practice of allowing shippers to use their own forms of receipt for shipments forwarded by express, and it has instructed its agents that its employes must sign no forms other than the regular forms supplied by the company.

The Canadian Northern Ex. Co. was fined $1,000, at Winnipeg, Jan. 12, for not obeying the injunction of the court restraining the returning officer in the Beautiful Plains election in 1909, from sending his official return to the chief clerk of the executive council. A stay was granted for 14 days.

The U.S. Treasury Department has approved placing on express way bills of the transportation entry numbers to appear in the upper right hand corner of the carriers' special manifests, and the placing on the special manifests accompanying goods, of the numbers of the express waybills, to aid in the identification of the goods covered by waybills.

The Dominion Ex. Co. notifies that it has made arrangements for the transportation of shipments to Gowganda and Wigwam. Value shipments will be held at Elk City and the consignee notified, and c.o.d. shipments will be held at the same place until the amount has been paid, after which, it will be forwarded to destination. All shipments are waybilled to Latchford, Ont.

The Board of Railway Commissioners has issued order 13881, June 7, re Note 18 to Scale N, Express Classification C.R.C. 2, substituting the following:—Note 12, includes grain (whole or cracked), chopped feed, bran, meal, ground meat (dried), dried bone, alfalfa meal, cut clover, ground screenings and crushed shells, but does not include condition powders, condiments or medicated or patented articles.



A LOCOMOTIVE ON THE GREAT WESTERN RAILWAY AT HAMILTON IN 1864.

The photograph from which this illustration is made, and for which we are indebted to the Hamilton Spectator, was taken at Hamilton in 1864, on the occasion of the visit to Canada of Sir Thos. Dakin, chairman of the G.W.R. Co., and Brackstone Baker, the Secretary, W. A. Robinson, of the D. Moore Co., Hamilton, who was then assistant mechanical superintendent of the line, has supplied the names of all the persons shown, except the conductor, whose name he cannot remember. The names are as follows:—

Upper Row—W. A. Robinson, Assistant Mechanical Superintendent; Geo. Forsythe, general foreman locomotive shops; Wm. McMillan, fuel buyer; Samuel Sharp, Mechanical Superintendent; J. Robertson, locomotive driver; W. Paine, fireman; conductor, name forgotten; —. Penny, attendant on official car.
